Q. I shall read you a figure which we have computed to represent the average monthly inventory of materials and supplies for the full year 1941 as reflected by the company's books and will ask you to check it. The figure which we secure is $93,768. This figure was arrived at by totaling the inventory, as shown by the books of the company, as of the end of each of the 12 months in the year 1941 and dividing by 12. Will you check that figure?

A. Yes, sir, I will.

Q. Perhaps we had better put it this way, Mr. Spitznagle, if there is no objection, suppose you accept the accuracy of these figures that I have been reading, unless you report back to the contrary. I think it would make for a better record. You check these figures and if you find any inaccuracies, please state them on the record.

A. Very well.

Mr. Baldridge: I think, Mr. Littman, to make the record complete in that respect he ought to state definitely whether he finds those figures to be accurate.

By Mr. Littman:

Q. All right.

You are keeping a list of these as we go along?

A. Yes, sir.

Q. Do you know the total of supplies and materials [fol. 8286] issued during the 1941?

A. No, sir, I do not.

Q. The figure which we calculate is $43,390. This figure was calculated by totaling the monthly issues during the entire year 1941, as shown on the company's 1941 financial statement, Exhibit No. 163. I should correct my statement, to the extent that the monthly figures were used they were taken from the company's books?

A. I think that is true, I do not think they appear in Exhibit 163 or in their financial report.

Q. That is right, the Exhibit No. 163 shows the figure for only one month, namely, December 1941. Is that right?

A. That is right, yes.

Q. Now, assuming the accuracy of the figures which I have just given, it is a fact, is it not, that the average monthly inventory of materials and supplies on hand dur-

ing the year 1941 was more than twice the amount actually issued and used during that year. Isn't that correct?

A. Yes, that is true.

Q. In other words, if the computations which we have made are correct, it appears that the company had a two-year supply on hand on the basis of the 1941 supply and use, isn't that right?

A. No, I do not think that is a proper deduction. The company actually has on hand a great deal of pipe and [fol. 8287] compressor parts and what not that do not turn over, as I have indicated.

Q. Well, I am speaking of an average term.

A. Well, you can call it on the basis of the figures you are using, a turnover of two, but I do not believe it is such, I think it is less than that.

Q. What investigation have you made of that matter, if any?

A. I examined the detail of the inventory account and ascertained the fact that the company was in the habit of carrying pipe replacements for future eventualities in their inventory account and more or less large items of replacements for compressor stations and that type of equipment.

Mr. Young, I believe, in direct testimony testified to the need of that practice and of following that procedure.

Q. What you are saying is that some of these materials and supplies are turned over more rapidly than others?

A. Or at a much lesser rate rather than more rapidly.

Q. Well, to state it conversely.

A. Well, that is true, some would be at a more rapid rate and some at a lesser rate.

Q. Well, but looking at the average of the materials and supplies, assuming the accuracy of the figures, the average monthly inventory of materials and supplies on hand during the year 1941 was on the average more than [fol. 8288] twice the amount actually used during that year?

A. Assuming the figures that you used, that is correct, yes. I might add, I do not think that a factor of that character is indicative of the amount of materials and supplies that are to be carried on hand.

Q. Are you expressing an opinion as to the amount of materials and supplies required to be on hand?

A. No, I simply expressed an opinion as to that factor indicating how much materials and supplies should be carried on hand. I do not know how many should be carried on hand. Mr. Young testified to the dollar amount and the quantities that should be carried on hand.

Q. You are not testifying that $100,723.78 is the amount that is actually required?

Mr. Baldridge: May I interject a question?

Mr. Littman: Yes, sir.

Mr. Baldridge: Do you happen to know how much materials and supplies are carried on hand at the present time?

The Witness: No, sir, I do not.

By Mr. Littman:

Q. And the next item which you show in Exhibit 94 is the amount of $116,303 for "Minimum Bank Balances Required to Support Check Privileges Based Upon Advice Received from Depositories." Will you please refer to Page 21-B of the 1941 financial statement of Michigan Gas [fol. 8289] Transmission Corporation, which is Exhibit No. 163? Will you state the amount that has been accrued by the company for Federal income taxes to December 31, 1941? A. $268,384.85.

Q. That money is in the bank, isn't it, or at least it was in the bank at December 31, 1941, was it not?

A. The company had funds in the bank in excess of that sum of money.

Q. And $268,384.85 of the amount which the company had in the bank was expressly for the purpose of paying Federal income taxes?

A. It was usable for that purpose, Mr. Littman, but it was not expressly for the purpose of the income taxes. In other words, you are asking me to match up dollars and I simply cannot do it for you.

Q. That amount was accrued for payment of Federal income tax?

A. That was accrued from the operations, there was cash on hand in the bank of the amount stated in this exhibit.

Q. Will you give us the total amount of cash in the bank at December 31, 1941?

A. Excluding working funds, the amount of cash on hand at December 31, 1941, as shown in Exhibit 163, is $172,585.11.

Q. When will the sum of $268,384 which has been accrued for Federal income taxes to December 31, 1941, be paid?

[fol. 8290] A. Well, it is payable March 15 or in quarterly installments starting from March 15, 1941, upon the election of the company. 1942, I beg your pardon.

Q. And what has the company elected to do in this regard in the past, to pay it all at once or to pay it in four installments through the year?

A. I cannot tell you that right offhand.

Q. What would you suggest that the company do in that regard?

A. Well, if the company had the money, because of the general conditions of the country, I would suggest that they pay it all on March 15, 1942. If they haven't the money I suggest they pay it in quarterly installments.

Mr. Goodman: You would give me the same advice, wouldn't you?

The Witness: I would. I am taking it myself, likewise.

By Mr. Littman:

Q. Our investigation shows, Mr. Spitznagle, that the company has followed the practice of making its income tax payments on the quarterly installment plan, as I think is true of most of us, but I want you to check that and report back. Perhaps Mr. Young—

A. (Interposing) Why not ask Mr. Young now?

Mr. Littman: Do you know?

Mr. Young: On a quarterly basis, I understand. I would [fol. 8291] like to check that, however, and see if it is true.

By Mr. Littman:

Q. Will you report back so that the record may be clear? A. Yes.

Q. As a matter of fact, hasn't the company followed a consistent policy of accruing more taxes than it actually has been required to pay in the past?

A. Yes, sir, that is true, however, the additional accrual is not reflected in the amount of taxes that you asked me to quote from Page 21-B of Exhibit 163.

Q. You mean it is not included in the amount of $268,384.85?

A. That is correct, yes, sir.

Q. What amount had the company accrued for Indiana 1941 property taxes as of December 31, 1941?

A. $114,000.

Q. And when will this be paid?

A. I do not believe I have, Mr. Littman, the payment dates of the Indiana property taxes.

Mr. Littman: Mr. Young, we ask you whether you can furnish us with some of those figures.

Mr. Young: Will you repeat that please?

Mr. Littman: We would like to know when the Indiana property taxes for the year 1941 will be payable?

Mr. Young: I cannot tell you that.

[fol. 8292] By Mr. Littman:

Q. Of course, Mr. Spitznagle, neither the Federal income taxes nor the Indiana property taxes which had been accrued to December 31, 1941, are payable until sometime during the year 1942? A. That is correct, yes, sir.

Mr. Wheat: Mr. Littman, the local property taxes are usually on a July 1 to 30 basis, I think, in most states and of course, whether they are in Indiana I do not know, therefore, the payments come at odd times, usually April and December, but I am not certain about Indiana, of course.

By Mr. Littman:

Q. It is a fact, is it not, that at the end of the year 1941 the company had accrued $114,000 for the Indiana property taxes? A. That is correct, yes, sir.

Q. Will you please ascertain for us the facts with respect to how these taxes are paid?

A. Yes, sir. I might add that property taxes in the various States vary greatly. I think I know when Indiana property tax is payable but I am not sure because I have not had occasion to check it recently.

Q. Of course, the amounts required for the payment of the 1941 taxes have already been collected from the customers, have they not?

[fol. 8293] A. That is on the assumption that the company has earned the taxes as well as all the other expenses and it appears that they have.

Q. Well, the income statement shows that they have, is that right? A. That is correct.

Q. And it shows that the company paid a 29 percent dividend on its common stock in 1941?

A. Not out of 1941 operations, Mr. Littman.

Q. Of course, Mr. Spitznagle, these accruals of taxes provide for more than enough cash to cover the minimum bank balance of $116,000, do they not? A. They do, yes, sir.

Q. What was the actual net working capital of Michigan Gas Transmission Corporation as of December 31, 1941?

Mr. Baldridge: As defined how?

Mr. Littman: As defined in the Accountant's Handbook and as defined by Mr. Coffman.

Mr. Baldridge: And previously referred to by Mr. Spitznagle in the terms used yesterday.

Mr. Littman: Yes.

The Witness: Well, I do not know what Mr. Coffman's definition is.

By Mr. Littman:

Q. Well, his is the same as the Handbook?

[fol. 8294] A. I can tell you what the net current assets are as shown in this balance sheet and I will be glad to give it to you.

Q. I beg pardon?

A. Net current assets, I can give you that figure, sometimes referred to as "Net working capital."

Q. Well, that is the figure we want as of December 31, 1941.

A. Yes. The amount is $58,762.87 determined as follows from the financial report, Exhibit 163, of Michigan Gas Transmission Corporation:

Current assets, $1,533,085.82;

Intercompany accounts receivable not included in current assets but which are of a current asset nature and are collected for currently, $29,323.77;

Current liabilities, $1,495,780.03;

Intercompany accounts payable which are for current liabilities and are paid currently, $7,866.69.

Q. Now, Mr. Baldridge, as you have observed, asked me to clarify and define the use of this term "Actual working capital." You have defined it, have you not?

A. I think I have as it is generally used, generally accepted.

Q. Now, is such a figure proper for rate making purposes, in your opinion, for working capital?

[fol. 8295] A. I have not any opinion on the subject, that is a matter for the Commission to determine what is proper. I have known cases where the net current assets were not a consideration in determining working capital at all.

Q. Well, the figure for working capital shown in your Exhibit No. 94 is $300,147.08, is it not? A. That is correct.

Q. Did you register any disagreement with Mr. Green when you presented this figure to him? A. Not at all.

Q. Of course, if you want to accept the $58,000 figure of actual net working capital arrived at in the manner which you have described it, there will be no objection. You make no such suggestion, do you?

A. I am not either accepting or giving in the matter of what is to be worknig capital, Mr. Littman.

Mr. Baldridge: As counsel of Michigan Gas Transmission Corporation I can assure you that we do not accept that $58,000 figure as being adequate.

Mr. Littman: In this proceeding?

Mr. Baldridge: Or any other similar proceeding.

Mr. Littman: I take it you do not propose to offer Mr. Coffman as a witness in this proceeding?

Mr. Baldridge: All we have done with respect to Mr. Coffman's testimony is to say that he presented certain [fol. 8296] statistical data which, to some extent, may prove the basis of some of the testimony presented on behalf of Michigan Gas Transmission Corporation.

Mr. Littman: You are referring to the data used by Mr. Drew in connection with his testimony?

Mr. Baldridge: Primarily Exhibits 63 and 64, as I recall it.

Mr. Littman: But not Exhibit 65?

Mr. Baldridge: Well, Exhibit 65 may have some statistical data which might be appropriate, but as I recall it, Mr. Drew testified that he had not even seen Exhibit 65 when he presented his testimony.

Mr. Littman: Well, it is Exhibit 65 that contains Mr. Coffman's estimate of so-called "working capital."

By Mr. Littman:

Q. Mr. Spitznagle, will you please turn to Exhibit No. 96 entitled "Estimated Annual Amortization, Short Lived Property—24 and one-half Year Amortization Period" for Michigan Gas Transmission Corporation? Is it your testimony that the sum of $7,802.08 will be required annually to amortize the short-lived property shown on Exhibit 98?

A. Yes, sir. Since I made the computations on this statement, I am charged with the responsibilty of the results shown on the statement.

Q. This is one exhibit for which you take the full [fol. 8297] responsibility?

A. I take responsibility for the computation, Mr. Littman, yes, as it is explained at the bottom and running across the face of the page. The factors that I have used with respect to original cost are my responsibility, the determination of percent condition and salvage is Mr. Haberly's responsibility.

Q. Well, was this exhibit your idea?

A. The average life of equipment is Mr. Haberly's responsibility. The philosophy behind the exhibit, I think, is Mr. Green's.

Q. You are not taking any responsibility with respect to the propriety of the method set forth in Exhibit 98 of amortizing the short-lived property there shown? A. No. [fol. 8298] Q. You understand, do you not, that the method used by Mr. Haberly to depreciate this property to June 30, 1941, which is reflected in column B headed, "Percent condition including salvage" was the so-called observation method?

A. I heard him testify to that fact, yes, sir.

Q. Well, at any rate, it was not the utilization of a straight line life method, was it?

A. I was under the impression when the statement was made up that he had so determined it on a straight line basis plus salvage. However, he testified here yesterday that he determined the amount on an observed depreciation basis.

Q. I had the same difficulty but, at any rate, his testimony is now a matter of record and you understand it as you have just stated? A. That is correct, yes, sir.

Q. Now, that means that we have one method used to arrive at the percent condition at June 30, 1941, namely, the observation method and from there on, we have a new method by which to depreciate it, do we not, or I should say a different method?

A. A different method of calculation, yes, calculating the amount of depreciation responsive to the short-term property.

Q. That is, before June 30, 1941, it is the observation method and after June 30, 1941, it is the straight line [fol. 8299] life method, is it not?

A. No, it is an amortization method, assuming that the property will have to be replaced a certain number of times during the period then applying the 25 years' finite life which was adopted in this presentation, we arrive at the average amount that would be required each year—I misspoke myself as to the 25-year period—it is 24½ years.

Mr. Baldridge: From June 30, 1941?

The Witness: From June 30, 1941.

By Mr. Littman:

Q. You mean the property is amortized in Exhibit No. 98 on the straight line basis?

A. Figuratively speaking, yes, that is true.

Q. What is figurative about my statement? I mean, what is wrong with my statement?

A. Well, you might consider that you would apply the theory of discounting the annual amortization of short-term property in the same manner that you discounted the annual amortization on the straight line basis for the long-term property. In the case of the short-term property, the funds will be used at short intervals and there is no point in amortizing them.

In other words, you do not have any use of that money between the time it is recovered and the time it is required for renewals and replacements.

[fol. 8300] Q. What method does the company use to depreciate this property? A. Straight line method.

Q. Did the company use the observation method of depreciating this property on its books prior to June 30, 1941? A. It did not.

Q. In your opinion, has the company depreciated this property in an improper manner on its books prior to June 30, 1941?

A. I have not any opinion. I see nothing wrong about the manner in which they did it. As to the amount, I haven't any opinion as to whether they fully depreciated the property or whether they did not fully depreciate it in accordance with what experience they might have had.

Q. You believe the company handled it properly, do you not?

A. Well, I have no quarrel with the way they handled it, Mr. Littman, if that is what you mean. Whether they fully recovered the amount which should have been recovered, I do not know. I haven't any idea.

Q. I cannot understand why it is necessary, for purposes of this proceeding, to deviate from the practices of the company in regard to setting up depreciation and I want you to enlighten me, if you can. Why is it necessary?

A. I do not know actually why it is necessary to [fol. 8301] deviate except to attempt to recover the dol-

lars that are invested in the property to be used during the 24½ year life. That is the only object I would know for asking for amortization or depreciation or any other factor.

Q. Isn't that precisely what the company is doing by the present method?

A. They are making a provision. Whether it will recover the property over a 24½ year life or their investment in the property, I do not know. I might add that I do know they are using for the major portion of the property a depreciation rate of 3 percent which infers a straight line period of 33½ years.

Q. Not on transportation equipment?

A. No, not on that.

Q. The transportation equipment makes up the largest portion of the short-term property? A. That is correct.

Q. And the same is true of furniture and fixtures, isn't that right?

A. That is true. You have an exhibit in evidence that gives you that information specifically.

Q. You mean Exhibit No. 99, Page 3? A. Yes, sir.

. . . . . .

[fol. 8302] The Examiner: Let's go forward.

By Mr. Littman:

Q. Before the recess, you made a reference to Page 3 of Exhibit 99 and you were going to tell us something about the manner in which the company has been depreciating the short-lived property shown in Exhibit 98. Will you proceed to advise us as to this company's own method?

A. I do not find that the Exhibit 99 to which you refer and to which I alluded shows the depreciation rate for anything but all items of property except automotive equipment and any transportation equipment and special equipment.

Transportation equipment is depreciated on the straight line basis based upon the life of that equipment and special equipment is determined in the same manner. All of the other plant of the company is currently depreciated at a 3 percent rate.

Q. Confining ourselves for the moment to transportation equipment which is shown on Page 3 of your Ex-

hibit 99, I refer you to Footnote 3 at the bottom of the page, which reads as follows:

"Amounts cleared from these accounts are not charged to depreciation account but to various operating expense and maintenance accounts, construction, etc., based on miles of use of automotive equipment and hours' use of special equipment."

[fol. 8303] It is apparent from that footnote that the company's operating expense accounts and construction accounts include the amounts required for the depreciation of this transportation equipment. Is that correct?

A. That is correct, yes, sir.

Q. In your pro forma statement which is Exhibit No. 104, you have included all of those operating expenses for the year ended June 30, 1941, have you not?

A. Yes, sir.

Q. So that you have already provided for the amortization of the transportation equipment through the medium of your expense accounts and your capital accounts, have you not?

A. Only partially. Some we related to Exhibit 98. Some portion of the amount of $2,484.58 and $198.96 appearing on Page 3 of Exhibit 99 was duplicated in the pro forma statement.

Q. Yes, I was coming to that.

A. Excuse me for anticipating you, Mr. Littman. It was evident that was what you were coming to.

Mr. Baldridge: To get me clear on that, I would like to ask is that the matter that was taken up by you with the representatives of the Commission in advance of the hearing?

The Witness: No, I would not say it was taken ap by me with them, no.

Mr. Baldridge: Wasn't that communicated to the repre-
[fol. 8304] sentatives of the Commission?

The Witness: No, I do not think so, not by me.

By Mr. Littman:

Q. Let me see if I understand your testimony. You provide in Exhibit 98 the amount of $7,802.08 annually for the amortization of short-lived property, do you not?

A. That is correct.

Q. You state that you have made a duplication in so doing, isn't that right? A. That is correct, yes.

Q. Can you state how much of the $7,802 is duplicated?

A. No, sir, I cannot. It would be something less than $2,683.54 which is the aggregate of the two amounts I quoted from Page 3 under the column designated, "H" in Exhibit 99.

Q. Isn't your provision for amortization of passenger cars and trucks and trailers shown in Exhibit 98 duplicated entirely?

A. Not with respect to operating expenses, Mr. Littman, I do not think so; not with respect to the item of amortization as an operating expense.

Q. Certain parts of the cost of amortizing the short-lived property has been charged to this capital, has it not?

A. In the past, that is correct.

Q. And that capital is included in your original cost statement, isn't it?

[fol. 8305] A. Yes, it is included in the amount of original cost.

Q. And you are claiming a return on that amount of capital, are you not?

A. Yes, sir.

Q. And amortization of that?

A. Yes, sir.

Q. So when you say you have duplicated only $2,000 out of $7,802, you mean that that is all you can trace to the operating expense accounts?

A. No, what I am saying is that the amount of duplication cannot be any more than $2,863.54 and that as it relates to operating expenses, it is something less than that amount, a rather small amount less, too.

Q. Then the difference between the $2,000 of duplication, approximately, and the $7,802 which you claim in Exhibit 98 is occasioned by reason of the higher rates of depreciation used by you over those used by the company?

A. That is correct.

Q. Now, Mr. Spitznagle—

A. (Interposing) Just a minute, I must explain my answer to that question a little further.

Q. Very well.

A. It is due to the fact that the rates may be somewhat higher and the fact that we are now making a provision for amortization of all of the cost that will be suf- [fol. 8306] fered during the 24½ years from June 30, 1941, rather than the cost of the equipment that the company presently has in its plant account at June 30, 1941.

Q. Isn't this one of the things that happens when you deviate from the accounting methods and policies followed by the company? Isn't this the inevitable result of tampering with the company's depreciation policies?

A. No, I do not think so, Mr. Littman.

Q. Well, it is what happened in this proceeding, isn't it?

A. Yes. It is entirely my responsibility. I neglected to apply as a reduction the amount of depreciation cleared through clearing accounts to operating expense accounts from the annual amortization of $7,802.08.

Q. If the company's records show $2,000 per annum for amortization of short-lived property against your $7,000, do you think the company has overstated their property?

A. No, sir, I do not. This is a rate case and this was made up for the purpose of being used in a rate case so that we had to know how much amortization you would have to have presently and every year of the 24½ year period in order to recover the total amount of the investment that was going to be made in property during that period. The company is not keeping its books strictly for rate case purposes.

Q. Well, if the company followed its own method, it [fol. 8307] would also recover its investment, would it not?

A. It would recover it at a later period if it continued to make the provision year in and year out for 24½ years and it will recover enough to take care of its property. Whether or not the recovery for the year ended June 30, 1941, would be sufficient to protect the company on the basis of determining what its rate should be based upon

that period is an entirely different factor and an entirely different approach to the problem.

Q. Apparently the company itself thinks that its own method is sufficient for the purposes of recovering its investment in short-lived property, doesn't it?

A. You will have to ask the company that, Mr. Littman. I presume they are because they have not changed it.

Q. Have you asked the company whether they are satisfied with their method?

A. No, I have not asked the company whether they are satisfied or not.

Q. You are not taking any responsibility for the philosophy back of this exhibit and whether Exhibit 98 reflects a proper method or not?

A. No, I have taken no responsibility although I have given you some philosophy in the last few minutes.

Q. But it is not the company's philosophy, is it?

A. The company subscribed to these statements so I [fol. 8308] presume they are satisfied with them.

Q. They are satisfied with the method that they have heretofore used?

A. I do not know about that, Mr. Littman. For this purpose, they subscribed to the presentation that we made and put confidence in me in the computation that was carried from Exhibit 98 to 104 and I let them down when I made a mistake here of roughly $2,400.

Q. Exclusive of the amount that will be found in the capital accounts?

A. That $2,400 would include any amounts that would be found in the capital accounts as well, Mr. Littman.

Q. But not for prior years, would it?

A. No, not for prior years, that is right.

Q. If the Commission were to take the company's own actual operating and maintenance expenses for the year ended December 31, 1941, as a guide for the future in testing the reasonableness of the rates of Michigan Gas, there would, by that process, be automatically included the company's own allowance for the amortization of short-lived property, isn't that correct?

A. In so far as the amount of short-lived property during the year 1941, yes, that is correct.

Q. Are you providing for amortization in Exhibit 98 of property that is not now owned by the company?

[fol. 8309] A. Yes, sir. I think the exhibit says that very distinctly, Mr. Littman.

Q. And that property, of course, is not purchased yet and is not used and useful in the rendition of service, is it?

A. It will have to be purchased and used in the continuation of the rendition of service.

Q. In the future?

A. In the future, yes, that is right.

Q. Would you think it proper to amortize cash in the bank, Mr. Spitznagle?

A. No, sir.

Q. You would not think of amortizing working capital, would you?

A. No, sir.

Q. You have not read Mr. Coffman's testimony on those subjects, have you?

A. I have a recollection I did.

Q. You do not agree with him in those regards at least, do you?

A. I think you had better let Mr. Coffman speak for himself. I do not know what his philosophy is.

Q. Neither do we.

Mr. Spitznagle, will you please turn to Exhibit No. 99, entitled, "Michigan Gas Transmission Corporation—Statement of Income and Expense per Books for Years [fol. 8310] Ended December 31, 1936, to 1940, Inclusive; 12 Months ended June 30, 1941, and 6 Months Ended June 30, 1941, and December 31, 1940."

The company has followed a policy of overstating on its books the Federal income tax and excess profits taxes, has it not?

A. I could not designate it as an overstatement, Mr. Littman. They have stated on their books an amount payable or reserve for those taxes in excess of the amounts they paid, but there is a very good reason for doing that.

Q. Why? What is the reason?

A. Well, you will note that—

Q. (Interposing) By the way, before you proceed with your explanation, may I interrupt to point out that the excess accruals on account of Federal income and excess profits taxes are set forth in Footnote B, are they not?

A. Yes, sir.

Q. Now, will you proceed with your explanation?

A. You will note that the excess of accruals of Federal taxes over amounts paid are not material until the year 1940 which is shown in the footnote at the bottom of Column G.

Q. Will you read into the record the amounts of those excess accruals?

A. All of them?

Q. For the year 1940 and for the year 1941.

[fol. 8311] A. The 12 months ended 1941?

Q. Yes.

A. For the year 1940, Federal income taxes, meaning normal tax, was over-accrued $16,184.67; Federal excess profits taxes were over-accrued $135,595.15.

For the 12 months ended June 30, 1941, the respective taxes were over-accrued $19,228.14 and $123,495.62.

Q. Now, these over-accruals or excess accruals had the effect of understating the true net income to the same extent as the taxes were over-accrued. Is that right?

A. Yes, that is correct.

Q. In other words, the net income figures shown in Line 19 and Line 12 are understated in your Column G, 1940, and for the 12 months ended June 30, 1941, in Column H to the extent of the amounts shown in Footnote B. Is that right?

A. That is correct.

Q. While we are on the subject of Federal income taxes, you have recomputed Federal income taxes for purposes of your pro forma statement, have you not?

A. Yes, sir, that is correct.

Q. That is shown on Pages 4 and 5, I believe, of your Exhibit 104?

A. Yes, sir.

Q. Was this computation based upon the pro forma allowable utility income determined by Mr. Green?

[fol. 8312] A. No, sir, it is not, Mr. Littman.

Q. Well, is it determined upon the pro forma allowable utility income?

A. It is determined upon the allowable utility income as it is set forth on Page 1 of Exhibit 104, adjusted to conform to the requirements of the Bureau of Internal Revenue under the Income Tax Laws.

Q. Well, it is based primarily upon the—

A. (Interposing) The utility income allowable is adjusted for Federal income taxes deducted in arriving at the pro forma utility income. You have to have that in the bank as one element and then there are some other items which are more or less detailed in Item 11 on Page 4 and Page 5 of Exhibit 104.

Q. If the allowable utility income shown in the pro forma statement, Exhibit 104, is too high, the amount of tax shown would have to be reduced, accordingly, would it not?

A. I think that would be the result, Mr. Littman, yes.

Q. That would naturally follow?

A. That would follow, yes, sir.

Q. Now, for rate case purposes, it is necessary to first determine the allowable utility income before you can begin to compute the allowable Federal income tax and the Federal excess profits tax, isn't that correct?

A. Yes, sir.

[fol. 8313] Q. Now, that is almost axiomatic?

A. It is axiomatic.

Q. You never determine Federal income taxes first and then, on that basis, determine what your allowable net income is going to be, do you?

A. Well, we might make the determination on the basis of what we thought the allowable income should be, but you must determine the allowable income first.

Q. That is the proper way to do it, isn't it?

A. That is correct. It is the only way you can do it, in fact.

Q. Mr. Coffman has another way, that is why I wanted to get your understanding of it.

Mr. Spitznagle, I think we should now go to Exhibit No. 104 which is the pro forma statement. What do you mean by "pro forma statement"?

A. What I mean by it is a statement which will adjust actual book figures for all events that may have transpired during the period that is being reviewed in the pro forma statement which were not fully reflected in the actual statements of the company and for those events that may have occurred subsequent to the period for which the pro forma statement is prepared and will materially

affect the company's future income with respect to the actual period reported on. If I have not made myself entirely clear, I will be glad to try to do better.

[fol. 8314] Q. You make certain adjustments of the actual figures shown on the company's books for the purpose of making a forecast of things to come in the future, is not that right?

A. That is right, that is one of the elements, yes, that is correct, and to reflect change in philosophy over the philosophy expressed in the company's books as distinguished from that which is expressed in this statement.

Q. You are not intimating that accountants are, also, philosophers, are you?

A. I have seen quite a few of them who claimed to be.

Q. At any rate, one of the major purposes of a pro forma statement is to tie all of the figures together in one place and present a forecast of the future?

A. No, not necessarily a forecast of the future but to express what the future will hold with relation to the present. In other words, we are reporting here on the 12 months ended June 30, 1941. We attempted to show that if all conditions that we know about plus those that existed in the 12 months ended June 30, 1941, were to take effect in the next year, this would be the result and we, also, injected the change in philosophy on amortization of the investment over what was done by the company on its books.

Q. Do you consider this pro forma statement a reasonable forecast of expenses in operating income for the future?

[fol. 8315] A. I really have little knowledge, Mr. Littman, about what the future will produce in the way of revenue, expense and gross income and net income. There is a slight forecast in this statement in that we tried to apply the effect of completing construction work in progress, which would be completed subsequent to the date of June 30, 1941. To that extent there is forecast in this statement as to the future.

Q. Well, perhaps, I could state your philosophy better in this way: You used the latest available figures on the company's book available to you at the time you prepared

the pro forma statement, Exhibit 104, for purposes of testing the reasonableness of the rates?

A. That is correct.

Q. And you made certain adjustments of those figures because you knew there were going to be certain changes to come in this succeeding period?

A. Some had actually occurred which had not been fully reflected in the actual figures and some we knew were going to occur. In fact, arrangements had already been made for them to occur and we knew they would affect the operations of the company had they been in effect during the 12 months ended June 30, 1941.

Q. You made certain adjustments in the operating expenses, did you not?

A. Yes, sir.

[fol. 8316] Q. For instance, one of the things that you did was to make retroactive certain pay rises?

A. Wage adjustments that were made effective on July 1, the day after the period covered by this statement, that is correct.

Q. And you projected those pay rises back a full year, did you not?

A. That is correct, yes.

Q. We will take these matters up in detail later, but I wanted to touch upon them briefly at this time.

You, also, took into effect certain purported reductions in rates that became effective from time to time through the 12 months ended June 30, 1941, and projected those back for the entire 12 months, did you not?

A. That is correct and some rates that were filed with the Federal Power Commission that had not yet been approved by them that would, again, affect that same period.

Q. Now, will you point out in this statement where you have given any effect to future changes in revenue?

A. We have not, only to the extent of Item 6 on this statement captioned, "Estimated Reduction in Utility Income Before Depreciation and Federal Income Taxes Resulting from Completion of Construction in Progress at June 30, 1941", which is an exhibit, the number of which I do not know, in this proceeding. Only to that extent, Mr. Littman.

[fol. 8317] Q. Well, you make a slight adjustment, do you not?

A. That is a slight figure by the way of net revenue less expenses.

Q. Well, you also made an adjustment shown in Item 4 of Page 1 of Exhibit 104 for an increase in rates to Kentucky Natural Gas Corporation in the amount of $3,333.

A. That is correct. That is a contractual arrangement and we knew definitely that that was going to occur, so we put it in.

Q. Well, you made no forecast of revenues in the future, did you?

A. No, sir.

Q. Well, what is pro forma about these revenues that are shown in Exhibit 104 other than the two small items that you mention?

A. There is nothing pro forma about them, Mr. Littman. There was no intention to pro forma them in the respect that you are now asking me.

Q. Well, you pro forma-ed, so to speak, the operating expenses, did you not?

A. Those changes that were apparent and we knew definitely about, yes. We did not pro forma the operating expenses for the indicated rise in cost of operation due to changing labor rates and changing cost of materials and supplies and what not. We did not pro forma those expenses.

[fol. 8318] Q. Now, that would not amount to much, would it?

A. I do not know, Mr. Littman. I do not know, it is a very difficult thing to determine.

Q. Well, you pro forma-ed, so to speak, the operating expenses and reflected the rise in wages, did you not?

A. To the extent that it was actually known that it had occurred.

Q. You, also, made a pro forma statement for purposes of depreciation, did you not, and amortization?

A. We reflected in the statement the changed philosophy that has been prosecuted in the Michigan Consolidated Gas case right straight on through.

Q. Well, you pro forma-ed, so to speak, the bad news, but you did not pro forma the good news.

A. That was not our purpose, Mr. Littman, to pro forma the bad news and not pro forma the good news. We thought we would put in the facts that were apparent that we knew about.

Q. Did you not know that M.c.f. sales and M.c.f. transported was going to increase in the next year?

A. I had every reason to believe that it would, yes, Mr. Littman.

Q. But you did not reflect anything for that, did you?

A. No, because it is very difficult to determine and, by the same token, I knew that expenses were going to increase by virtue of increased cost of wages, I mean generally, increased cost of materials and supplies and we [fol. 8319] did not pro forma those either which we would have to do. If we were going to pick up the trend in revenue, we would have to pick up the trend in all types of expenses and to make such a computation and defend it is a very difficult thing to do.

Q. Let's look at the gas operating revenues shown in the income and expense statement, Exhibit No. 99. Now, there has been a steady rise in those gas operating revenues from the beginning of the company to June 30, 1941, as shown in Line 4 of Page 1 of this exhibit. Is not that correct?

A. Yes, sir, that is true.

Q. And you fully expect the trend to be in the same direction, do you not?

A. Well, due to the nature of this particular company's business, it is very difficult to relate the trend to the operating revenues. For the 12 months ended December 31, 1941, the operating revenues are $5,527,794.76, whereas in the company's budget for 1941 they are greatly reduced for the reason that the company is changing its method of reporting revenues.

In other words, the company sells gas as such to some people and they transport gas for a service charge. If you change the ratios of those two classes of service you naturally change the resulting operating revenue.

Q. Well, the operating expenses go down, too, when they [fol. 8320] cease buying gas for resale. Then they transport it?

A. Yes, that is true.

Q. Let's not talk about revenues in view of that, let's talk about net utility income shown on Line 12.

A. That would be better.

Q. That shows a steady upward trend from the beginning of the operations of the company in 1936 through to June 30, 1941?

A. That is correct.

Q. Now, in your opinion, should not a pro forma statement give effect to the increased sales and volumes of gas transported in order to fully reflect changed conditions?

A. If the facts can be reasonably determined, both with relation to the income statement as well as to the additional capital that will have to be invested in connection with the maintenance of the present income as well as the future income, yes, I would say so.

Q. Well, we can now look in the budget for that, can we not?

A. Well, you have another 6-months' period. You can look at the results for that 6-months' period and see what the change is, Mr. Littman, yes.

Q. And the results of the last 6-months' period of 1941 are shown in the company's financial statement for 1941, which is now identified as Exhibit No. 163?

[fol. 8321] A. At least they can be adduced from that exhibit, yes, Mr. Littman.

Q. What was the total amount of gas in M.c.f. transported and sold by Michigan Gas during the year ended June 30, 1941? I believe you will find that in Line 25 of Column "H" of Exhibit 103.

A. I do not seem to have a copy of Exhibit 103. 38,555,662 M.c.f.

Q. What is the volume of gas in M.c.f. transported and sold per your pro forma statement? I take it it is the same amount?

A. It is not quite the same amount, because we did give consideration to taking in any income that would result from completing construction work in progress which involved, of course, the sale of some additional M.c.f. How many M.c.f.'s there are, I could not tell you.

Q. That did not amount to much, did it?

A. Not a great deal, no.

Q. In other words, there is nothing particularly pro forma about the number of M.c.f.'s transported and sold in your pro forma statement? A. That is true, yes, sir.

Q. What was the actual amount of gas in M.c.f.'s transported and sold in the year ended December 31, 1941?

I believe you will find that figure on Page 4-B of Exhibit
[fol. 8322] No. 163.

A. Yes, I have that, but these figures are confusing to me because of the delivery feature and the sale feature. I take it that the comparable figure to the one I previously quoted for the 12 months ended June 30, 1941, is 41,304,280 M.c.f.

Q. Will you please deduct the gas used by the company in the amount of 423,552 M.c.f.? A. Yes.

Q. When that is done, I believe you will have the comparable figure. A. 40,880,728 M.c.f.

Q. Now, there was an increase of 2,325,066 M.c.f. sold and transported for the year ended December 31, 1941, over the volume transported and sold for the period used in your pro forma statement, to wit, the 12 months ended June 30, 1941, is that correct?

A. That is the approximate figure, Mr. Littman.

Q. Now, Michigan Gas Transmission Corporation has made its own forecast of the quantity of gas which it expects to sell and transport for the year 1942, isn't that correct? A. That is true, yes, sir.

Q. Will you give us that figure?

Mr. Baldridge: May I interject there. In what form was that forecast made, Mr. Spitznagle?

[fol. 8323] The Witness: What do you mean by "form"?

Mr. Baldridge: Well, in what document is it contained?

The Witness: It is contained in the company's designated operating budget for the year 1942.

Mr. Baldridge: Will you read the date on the outside of that, please?

The Witness: I find the date on the fly sheet indicating that it was prepared December 5, 1941. Is that what you want? It is signed as of that date.

Mr. Baldridge: December 5, 1941, yes.

The Witness: Yes.

By Mr. Littman:

Q. Who signed it?

A. Mr. L. J. Mueller, Assistant Treasurer of the Company.

Q. Assistant Treasurer—

A. (Interposing) Of Michigan Gas Transmission Corporation.

[fol. 8326]

FRED A. SPITZNAGLE a witness, having been previously duly sworn, resumed the stand and testified further as follows:

Cross-Examination (Resumed)

By Mr. Littman:

Q. Mr. Spitznagle, yesterday I requested you to make a check of a number of figures, as the transcript of yesterday will more clearly show. Have you checked the accuracy of our calculations and the figures which I submitted to you to be checked? A. Yes, sir.

Q. And what did you find?

A. I found that the figures as you quoted them were correct. I also found that in connection with expenditures of the character detailed in Exhibit 93 which have been charged by Michigan Gas Transmission Corporation, that they have been charged on its books to sales promotion expense.

Q. You are now referring to the charges appearing in Exhibit 93 which are there characterized as "Contributions Made to Customers for Business Development for the Years 1936, 1937 and five Months Ending May 31, 1938"?

[fol. 8327] A. That is correct, yes, sir.

Q. I believe I also read some figures to you which we believed to be the amounts charged by Michigan Gas Transmission Corporation to sales promotion expense for the balance of the year 1938, for 1939, 1940 and 1941.

A. That is correct.

Q. Did you check the correctness of those figures?

A. Those are included in the figures that I just previously testified to, yes, sir.

Q. Mr. Spitznagle, I also asked you to ascertain for me the manner of payment of the Federal income taxes by the company. A. Yes, sir.

Q. What are the facts?

A. It has been the policy of the company to pay its Federal income taxes quarterly.

Q. What has been the policy of the company with respect to the payment of its Indiana taxes?

A. Those taxes are payable by the company on the first Monday in May and November following the year for which the accrual for those taxes is made, so that the 1941 accrual of taxes for Indiana property taxes will be payable the first Monday of May and November of 1942.

Q. That brings us down to date with respect to the checking of figures and your further responses to checking the [fol. 8328] information? A. Yes, sir, I think it does.

Q. At the close of yesterday's session, we were discussing Michigan Gas' forecast of the quantity of gas to be sold and transported for the year ended December 31, 1942. I believe you were about to refer to the forecast with respect to those sales and that transportation as contained in the 1942 operating budget of Michigan Gas Transmission Corporation. Do you have the figure before you?

A. Yes, sir. I would like to point out before I give you the figure that the company considers it a forecast, the document that you refer to as a budget. It is not a budget in the sense that it has been approved by the officers and Directors of the Michigan Gas Transmission Corporation.

Further, of course, the budget was prepared, the forecast was prepared, prior to the advent of the present struggle that we are now engaged in.

Q. Well, just a minute, Mr. Spitznagle. By the statement you just made, are you referring to the entire budget or to the forecast of sales and a forecast of the volume of M.c.f.'s to be sold and transported during the year 1942?

A. I am referring, more or less, to the entire budget with the possible exception of the capital expenditures set out in the budget, Mr. Littman.

Q. Who prepared this budget?

[fol. 8329] A. It is prepared by the officers of Michigan Gas Transmission Corporation, primarily Mr. Mueller, the Assistant Treasurer of the company.

Q. Well, if the officers of the Michigan Gas Transmission Corporation prepared it, why, they approved it, did they not?

A. Well, they think that it is as good as they could do at that time in forecasting the 1942 operations of the company. I am sure they feel that.

Q. You understand that it represents—

A. (Interposing) But it does not represent a budget in the sense that such budgets are prepared for formal approval by Directors and officers of the company. That was the only point that I wished to make.

Mr. Baldridge: May I interject a question, Mr. Littman?

Mr. Littman: Do you mind waiting just a minute, Mr. Baldridge? I want to clear up the point on this budget.

By Mr. Littman:

Q. You have stated that this budget has not been approved by the Board of Directors of Michigan Gas Transmission Corporation. Is it not a fact that none of the previous budgets have been submitted to the Board of Directors of Michigan Gas?

A. That is true, they have not followed that practice with respect to the annual forecast in the past periods, that [fol. 8330] is correct.

Q. This 1942 budget has been prepared and submitted to the officers of the company just as it always has been done in the past, is that not correct?

A. That is correct; yes.

Q. In other words, this 1942 budget is not any less formal or less complete than any of the other budgets?

A. That is correct, yes, sir.

The amount responsive to your original question is 47,014,779 M.c.f.

Mr. Littman: Mr. Baldridge, you said you wanted to clear up something.

Mr. Baldridge: You spoke of the officers preparing this budget. You did not mean to include the Directors in that, did you?

The Witness: Mr. Baldridge, I do not know really to what extent all of the officers have perused or examined the budget in any way, shape or form.

Mr. Baldridge: You have no information which would lead us to believe that Mr. Beckjord had any part in the preparation of the so-called budget?

The Witness: No, I have no such information, that is right.

Mr. Baldridge: Just to clear the record further, Mr. Beckjord was President of Michigan Gas Transmission Corporation up until February of this year, was he not?

[fol. 8331] The Witness: I do not know the exact date, but I know it was some date in February, yes, sir.

Mr. Baldridge: And at the present time Mr. Crevelling is President of Michigan Gas Transmission Corporation?

The Witness: That is my understanding.

* * * * * * * *

[fol. 8332] By Mr. Littman:

Q. What did you say with respect to Mr. Beckjord's known participation in the 1942 budget preparation?

A. I will have to have the question read back to me that Mr. Baldridge asked me. I do not recollect just right off, Mr. Littman. I have no knowledge whatsoever as to Mr. Beckjord's participation in this budget and I tried to convey that impression by my answer to Mr. Baldridge.

Q. Well, I thought the inference was being made that Mr. Beckjord did not participate in the preparation of this budget.

A. I do not know, Mr. Littman.

Q. You do not know whether he has or has not participated in the preparation of previous budgets, either, do you? A. Not specifically, no, I do not.

Mr. Baldridge: May I ask for a definition of the term there? When you refer to the budget, generally, I would like to point out the distinction between "budget" as it is ordinarily used and this so-called "operating budget" which is nothing more or less than a forecast.

* * * * * * * *

[fol. 8333] By Mr. Littman:

Q. Mr. Spitznagle, I hand you Exhibit No. 165 for [fol. 8334] identification and ask you whether this is the

document to which you have referred throughout your testimony as the operating budget of Michigan Gas Transmission Corporation for the year 1942? A. Yes, sir, it is.

Q. And it contains the forecasts to which we have been referring? A. Yes, it does.

• • • • • • • • •

[fol. 8335] Q. Mr. Spitznagle, who signed the original budget of 1942, a copy of which has been marked for identification as Exhibit No. 165?

A. The signature appearing on the copy that I have is L. J. Mueller, Assistant Treasurer, Michigan Gas Transmission Corporation.

• • • • • • • • •

[fol. 8337] Q. Now, you stated a few moments ago that the 1942 budget reflects a forecast of a total of 47,014,779 M. c. f.'s expected to be sold and delivered during the year 1942.

A. That is correct, yes, sir.

Q. Now, that represents an increase of 6,134,051 M. c. f. over the volume transported and sold during the full year 1941, does it not?

A. That figure is approximately correct.

Q. Now, do you know how that figure was arrived at by the officers of Michigan Gas Transmission Corporation who prepared this budget?

A. No, sir, I am not sufficiently familiar to give you the detail of the increase.

[fol. 8338] Q. Are you sufficiently familiar with Panhandle Eastern's Exhibit No. 40 which was submitted by Mr. Morton to state whether or not this forecast of gas sold and delivered closely approximates Mr. Morton's forecast of gas to be delivered east of Dana, Indiana, during the year 1942, by Panhandle Eastern Pipe Line Company?

Mr. Baldridge: Don't you want to change that question a little bit?

Mr. Littman: I am satisfied with it.

Mr. Baldridge. I will point out why it might not be entirely satisfactory. The gas delivered at Dana is not all delivered to Michigan Gas Transmission Corporation, as you may know. There is a delivery at Dana to somebody

else. Do you want to limit that delivery to Michigan Gas Transmission Corporation?

Mr. Littman: I shall clear that up.

By Mr. Littman:

Q. Are you familiar with Mr. Morton's estimate?

A. Mr. Littman, I have no familiarity with any of Panhandle's exhibits, including Mr. Morton's.

Q. In view of Mr. Baldridge's statement, I would like to point out that Mr. Morton's Exhibit No. 40 shows his estimated deliveries by Panhandle Eastern Pipe Line Company at Dana, Indiana, and into the lines of Michigan Gas Transmission Corporation for the year 1942 to be 50,711,870 M. c. f.'s.

[fol. 8339] Mr. Littman: I presume, Mr. Baldridge, that the difference between the 50 million figure and the 47 million figure contained in the budget would represent line loss, company use, and so forth?

Mr. Baldridge: I do not know whether it includes only that or something else, Mr. Littman. I just do not know.

By Mr. Littman:

Q. At any rate, Mr. Spitznagle, you are not familiar with Mr. Morton's estimate?

A. No, I am not, Mr. Littman.

Q. Will you please refer to your pro forma statement, Exhibit No. 104. I call your attention to Item 4 entitled, "Income from Rate Change—Kentucky Natural Gas Corporation", $3,333. Is my understanding correct that this amount has been added to the revenues of Michigan Gas Transmission Corporation for pro forma purposes?

A. Yes, sir.

Q. To reflect a rate increase?

A. It is to reflect a change in the rate under the contract that occurred on September 1, 1941, or in the period ended June 30, 1941.

* * * * * * * *

[fol. 8340] By Mr. Littman:

Q. What does it represent?

A. Are you asking me or Mr. Baldridge?

Q. I am asking you, Mr. Spitznagle.

A. The contract provides for an automatic change in the rate occurring on September 1, 1941. It is a fixed basis rate. In other words, it is $12,000 per annum starting September 1, 1941, whereas up to that time, it was $8,667. I do not have too much familiarity with the contract itself, Mr. Littman.

Q. Well, it is your testimony, is it not, as it appears on this pro forma statement, Exhibit No. 104, that the rate change to which you have referred would result in an overall increase in revenues derived from Kentucky Natural Gas Corporation for the full year of $3,333?

A. That is correct, yes.

Q. What you have done is to take the increase effective September 1, 1941, and project it back to June 30, 1940, have you not? A. That is correct.

Q. If the Commission were to use the revenues of Michigan Gas Transmission Corporation for the full year 1941, the figure of $3,333 would necessarily change, would it not?

A. That is correct.

Q. Is it also a fact that if the Commission were to use [fol. 8341] the revenues and expenses for the full year 1941, the Items 1, 2, 3 and 5 shown on Page 1 of Exhibit 104 would also change, would they not?

A. That is true, yes, sir.

Q. For the purpose of the record, Item 1 is "Depreciation per Books Adjusted"; Item 2, "Federal Income and Excess Profits Tax per Books Adjusted"; Item 3, "Reclassification of Donations per Books Adjusted to Deduct from Gross Income"; and Item 5 is "Increase During 12 Months Ended June 30, 1941, in Cost of Line Pack in Mains Not Capitalized." Is that correct?

A. That correctly describes the items you just referred to, yes, sir.

Q. Will you please refer to Item 6 on Page 1 of Exhibit 104, the pro forma statement, which item is called "Estimated Reduction in Utility Income Before Depreciation and Federal Income Taxes Resulting from Completion of Construction in Progress at June 30, 1941, on Exhibit 95". This item would also change, would it not, if the figures for the full year 1941 were used?

A. Yes, sir, that is true.

Q. As a matter of fact, the item would be practically eliminated, would it not?

A. Not entirely but a good portion of it would be already reflected in the last six months of 1941's operations.

[fol. 8342] Q. Isn't that because all but $30,000 of the construction that was in progress at June 30, 1941, was completed at December 31, 1941?

A. I think the amount of $30,000 is approximately the correct figure, yes, sir.

Q. That is my recollection of Mr. Young's testimony.

Looking at Item No. 7, "Amortization of Present Rate Case Expense," you have used the estimated figure for purposes of the pro forma statement which estimate was submitted by Mr. Young in Exhibit No. 96?

A. Yes, sir.

Q. What you have done for purposes of the pro forma statement is to amortize the estimated figure over a five-year period?

A. That is correct, yes, sir.

Q. Mr. Spitznagle, without referring to the amount which represents an allocated portion of the estimate contained in Exhibit No. 96 which has been stricken from evidence, I would like to ask you whether or not, in your opinion, you fully expect the estimate to change when the actual figures are in?

A. Yes, I do, Mr. Littman.

Q. It goes without saying, does it not, that the actual figures paid will be a much better guide for us than any estimates thereof?

A. I think that is generally true, yes, sir.

[fol. 8343] Q. Mr. Spitznagle, in your opinion, should rate case expense be included in a calculation which is made purely for the purpose of determining the reasonableness of existing rates?

A. It has been so included in rate cases that I know about before State Commissions. I am not very familiar with the practice of the Federal Power Commission toward that item. However, Mr. Green will support the philosophy of including it in this pro forma statement.

Q. You are not expressing any opinion on that subject?

A. That is correct.

Let us examine Item 9 on Page 1 of your pro forma statement, Exhibit No. 104, entitled, "Provisions for Wage In-

creases Made Not Reflected in Period Ended June 30, 1941."

Now, the amount shown for this item of $22,099 represents what?

A. It represents the amount necessary to reflect the existing payroll of the company on July 1 1941, for a full year ended June 30, 1941, in the operating expenses of the company.

Q. When were these wage increases effective?

A. The largest one was effective, as I recall, on July 1, 1941. I believe there were a few small ones made during the year ended June 30, 1941, as well.

[fol. 8344] Q. Now, the figures in the operating budget for the year 1942 which has been identified as Exhibit 165 reflect these provisions for wage increases, do they not?

A. Yes, sir, they do.

Q. Do you know whether they reflect any further increases for wages?

A. I do not think they do. In fact, I know the operating budget does not include the addition of some 18 watchmen at a cost of about $21,000 a year because the budget was made before the declaration of war and did not contemplate putting on watchmen, of course, in 1942.

Q. In other words, the budget reflects the forecast as of December 5, 1941, which was two days before Pearl Harbor?

A. That is correct, yes, sir.

Q. If the expenses for the full year 1941 were used for purposes of testing the reasonableness of the rate and those figures are now in the record in the financial statement which has been identified as Exhibit 163, there would be reflected the actual wage increases in effect throughout the entire year 1941, isn't that correct?

A. No, I do not think that is true, Mr. Littman. A wage increase made on July 1, 1941, would not be fully reflected in the year 1941 because you would only have a six-months' period during which the wage increase was paid.

Q. But you would have all wages actually paid during [fol. 8345] the year 1941?

A. All the wages actually paid, that is true.

Q. Including the wage increases actually paid?

A. Correct, yes sir.

Q. And, of course, your Item 9 would be reduced accordingly, would it not?

A. That is true.

Q. Let us now take up Item 10 on Page 1 of Exhibit 104 which item is called, "Reduction in Income Resulting from Changes in Contracts for Sale and Purchase of Gas" in the amount of $93,539.

There were certain rate reductions that became effective from time to time during the 12 months ended June 30, 1941, which is the period used by you for purposes of your pro forma statement, isn't that correct?

A. That is correct and, in addition, there were some contemplated and filed with the Federal Power Commission which have not been acted upon, as well.

Q. What did you do to arrive at this figure of $93,539 to reflect the reduction in income—first, you did not use the actual income for the 12 months ended June 30, 1941, did you, with respect to these rate reductions—that is to say, you projected them back, didn't you?

A. Yes, the actual income was used in determining the amount that is expressed in this statement. I am not suffi- [fol. 8346] ciently familiar with the detail of the computation to fully explain it to you. Mr. Young is and I believe will be very glad to do it for you.

Q. You understand, generally, what was done, don't you?

A. Yes, very generally.

Q. You testified on this subject at Pages 1968 to 1970 of the transcript, did you not?

A. Yes, sir.

Q. And there you show the effective date of the rate reduction applicable to each of the various companies?

A. That is correct, yes, sir.

Q. Where, for example, in the case of Indiana Gas Distribution Corporation a rate reduction became effective June 1, 1941, as shown on Page 1969 of the transcript, you made an estimate of the reduction that would ensue had that reduction been made effective July 1, 1940, did you not?

A. That is correct.

Q. And you did that in each instance?

A. Yes, sir.

* * * * * * * *

[fol. 8347] Q. Is there any confusion on this subject resulting from your direct testimony?

A. None that I know of, Mr. Littman.

Q. What is your understanding with respect to industrial sales by Indiana Gas Distribution Corporation?

A. Well, honestly, Mr. Littman, I am not sufficiently familiar with the types of rates that are in effect to give you very much intelligent information on the subject. I can check a computation, but to create that same computation I would have a lot of difficulty.

[fol. 8348] Q. I see. Well, who made the computation in the first place?

A. The computation was made by the staff of Michigan Gas Transmission Corporation.

Q. That is a computation of the $93,539 shown in Item 10 of Exhibit 104?

A. That is correct, yes, sir. I might add that the Commission was given the work sheets for that computation and their staff have indicated to me that it is a rather complicated affair and I just cannot relate it to you.

Q. Well, we did not intend to go into the intricacies of this $93,539, but so far as you know, this $93,539 represents all of the reductions that would have resulted, had these rate reductions been effective throughout the entire 12-months' period ended June 30, 1941?

A. That is correct.

Q. And do you know of others?

A. I wish to add this, that the $93,000 figure is an income figure rather than operating revenue figure. In other words, it is net of expenses. It is operating revenue less expenses.

Q. To what expenses do you refer?

A. To the cost of purchasing gas to the extent that that is involved in the change in revenue and other types of expense.

[fol. 8349] Q. Now, if the actual revenue figures for the full year 1941 were used, there would be fewer adjustments required. Isn't that right?

A. That is correct.

Q. And that is because many of these rate reductions were effective prior to January 1, 1941?

A. That is correct.

Q. And, of course, the $93,539 figure would be reduced?

A. That is correct, yes, sir.

Q. Now, the operating budget for the year 1942 which has been identified as Exhibit 165 reflects all of these rate reductions, does it not?

A. That is my understanding, Mr. Littman, but I am not positive about it.

Q. You would not have to make any adjustments for that factor at all if you used the 1942 revenues, would you?

A. That is my understanding, Mr. Littman. I am not right sure about it, though.

Q. Now, with respect to Item 11 entitled "Federal Income Tax on Pro Forma Income" in the amount of $181,492, what rates did you use in arriving at that amount?

A. The rates under the 1940 Act as amended by the 1941 Act.

Q. Well, are those the tax rates currently in effect?

A. Yes, sir, they are the rates in effect today.

[fol. 8350] Q. In other words, you applied today's rates to the last six months from the year 1940, at which time they were not effective, did you not?

A. Yes, that is correct.

Q. That is, to which period they were not effective?

A. Plus the adjustments that have been made in the pro forma statement, that is correct.

Q. Now, of course, if you were to use the 1941 figures for the full year 1941, you would have a full annual period that would require no adjustment except for an adjustment in net income. Do you follow me?

A. Not quite.

Q. Well, let me put it this way: You did not use for purposes of your pro forma statement the taxes actually paid during the 12 months ended June 30, 1941, did you?

A. No, sir.

Q. You had to make an adjustment there for the last six months of 1940, did you not?

A. That is correct, to the Act that was in effect at the time we prepared the pro forma.

Q. Now, with respect to the balance of the items on this pro forma statement, Exhibit No. 104, I take it that those

were developed by Mr. Green, were they not, except for Item 12 which we have heretofore discussed?

A. Yes, sir, that is true. Of course, I made some of [fol. 8351] the computations and converted the philosophy represented by the conclusion of those items into the dollar amounts there shown.

Q. Who is taking responsibility for Item 13 which has to do with the amortization of long-term investment and the cost of developing business?

A. Mr. Green has taken the responsibility for that act.

Mr. Littman: We have no further cross-examination of this witness.

I would like, at this time, to offer in evidence Exhibits Nos. 163 and 164.

• • • • • • • •

(Exhibits Nos. 163 and 164 Were Received in Evidence.)

• • • • • • • • •

[fol. 8352] Q. Mr. Spitznagle, will you first refer to your Exhibit No. 91?

A. I have it, yes, sir.

Q. Now, in making your examination of the accounts of Michigan Gas Transmission Corporation, you found that that company had been organized in November of 1935, did you not, and that Indiana Gas Transmission Corporation had been organized back in 1931?

A. I think that is substantially correct, yes, sir.

Q. And that they have been consolidated as of March 1, 1936?

A. That is correct, yes, sir.

Q. Now, you also found the books of account of Indiana Gas Transmission in the Detroit office?

A. Yes, sir.

Q. Indiana Gas Transmission Corporation began the sale of gas in 1931, did it not?

• • • • • • • • •

[fol. 8353] Q. I am handing you, Mr. Spitznagle, what I understand to be a copy of an exhibit filed with the Securities and Exchange Commission in recent hearings there in

which, among other things, there was involved the matter of the sale of Michigan Gas Transportation Corporation and I would like to ask that during the noon intermission you check that and see if those figures are correctly copied. I think that you can check everything except the last line, [fol. 8354] which is probably not in those records.

A. Yes, sir.

Trial Examiner: This tabulation will be marked for identification as Exhibit 166.

(Exhibit No. 166 Was Marked For Identification.)

• • • • • • • •

Q. Also, I would like to have you set down on this sheet the amount received for those sales.

• • • • • • • • •

[fol. 8355] Mr. Baldridge: I think if you ask us to do some work on this thing, I think we at least ought to know whether it has any bearing on our case or not. It does not seem to me that it does.

Mr. Chamberlain: If you would like to know, Mr. Baldridge, it will have this effect: It will show why Indiana Gas Transmission was not selling any gas. You introduced an exhibit which shows it fairly well, but that will confirm it.

Mr. Baldridge: What has that to do with the Michigan Gas Transmission Corporation case, Mr. Chamberlain, that is what I want to know. Aren't you really talking now about the Panhandle Eastern Pipe Line case?

Mr. Chamberlain: I am discussing exhibits already filed by Michigan Gas Transmission Corporation and introduced by you, as I understand it.

• • • • • • • • •

[fol. 8356] Mr. Littman: Weren't these sales made over the lines presently owned by Michigan Gas Transmission Corporation?

Mr. Chamberlain: They were made by the Michigan Gas Transmission Corporation because it is a consolidated and merged company.

[fol. 8357] Mr. Littman: I so understood.

Mr. Chamberlain: These were made by Michigan Gas Transmission Corporation under the name of Indiana Gas Transmission Corporation. This is a consolidation and merger. It is one company which has been operating since 1931 in the same way that Panhandle Eastern has been operating.

Now, if counsel wants a statement of what the purpose of this is, on Exhibit 101, he has introduced evidence here which shows that Indiana Gas Transmission Corporation, after five years of serving gas, had six customers. It shows the price that it was charging for gas, which was a prohibitive price, was purely and intentionally charged to defeat the sales of gas at that time.

Mr. Chamberlain: That is right, it shows right here and this completes the story throughout the years. It also shows from this exhibit that when the price of gas was reduced, sales increased very nicely. It shows fine salesmanship after 1936 but it will give this Commission a very potent reason why there is no going value with respect to attaching business.

Trial Examiner: I take it, Mr. Chamberlain, that that last part of your statement indicates the fundamental reason for this inquiry, that is, the cost of business development?

Mr. Chamberlain: That is right.

• • • • • • • • •

[fol. 8361] Q. Now, I want to call your attention to Exhibits 101 and 103. Are the two not companion exhibits?

A. If you mean does Exhibit 101 show the M.c.f. related to dollar amounts of the various companies described and detailed in Exhibit No. 103, yes.

[fol. 8362] Q. Now, I observe that you have listed the customers and sales of Indiana Gas Transmission Corporation on Exhibit 101 for the first two months of 1936. Is that correct?

A. That is correct, yes, sir, for the purpose of supplying information for the full year 1936.

Q. Yes, and that shows a toal of seven customers, does it not?

A. Yes, sir.

Q. Now, included in that is the Ohio Fuel Gas with some $209,000 of payment for the two months, is there not?

A. That is correct, yes, sir.

Q. Please refer to Exhibit 103 and state whether that indicates that purchases were kept up in any substantial amount after 1936 by Ohio Fuel Gas Company?

A. Your question is not entirely clear to me. I think you mean did the Ohio Fuel Gas Company continue to buy gas in the same volume?

Q. In any substantial quantity after 1936.

A. Exhibit 103 shows that Ohio Fuel Gas Company purchased in 1937, 13,185 M.c.f. and, in 1936, 2,767,835 M.c.f. from the two companies denoted in the statement under the column headed "1936".

Q. There were no large sales to Ohio Fuel Gas Company after 1936, were there?

[fol. 8363] A. That is correct.

Q. Now, did you notice the change in that account when you prepared the exhibit, in the way it dropped off?

A. Yes, I perhaps observed it.

Q. Did you make any injuiry as to what period in 1936 that gas was taken?

A. No, sir, I did not, except as is shown on here for the two months and ten months period described under the column "1936".

* * * * * * * *

[fol. 8366] Robert S. Drew; a witness, having been previously duly sworn, resumed the stand, was examined and testified as follows:

Cross-Examination (Resumed).

* * * * * * * *

[fol. 8367] By Mr. Littman:

Q. Mr. Drew, you are Vice President of Continental Illinois National Bank & Trust Company of Chicago?

A. Yes, sir.

Q. You are in charge of the Investment Trust Department of that institution?

A. Well, I refer to it as the Investment Trust Division. It is the Investment Department of the Trust Division. That is what you mean, I think

Q. As I understand your testimony, Mr. Drew, you were requested by Mr. Daniel C. Green to give an opinion as to the question, "What rate of return should a company like the Michigan Gas Transmission Corporation earn on its invested capital or fair value in order to be able to finance by public offering of securities?" Is that correct?

A. Yes, sir.

Q. What conclusion did you reach in answering that question?

A. I believe I stated in my direct testimony that in my opinion the rate of return which a company like the Michigan Gas Transmission Corporation should earn on its invested capital or fair value, in order to be able to finance itself at this time by public offering of securities, is at least eight and one-half percent.

Q. In other words, the eight and one-half percent rate [fol. 8368] of return which you have just given applies to to either invested capital or fair value?

A. Well, in my thinking with respect to the words "fair value" I relate that term directly to the market value of the company's securities, which is the primary thing that I was testifying on in this case.

Q. Well, do you understand that invested capital and fair value are equal to each other?

A. Not necessarily, but I should say that there is likely to be a pretty close relationship between the market value of the securities of the corporation and what may be regarded as its fair value.

Q. I take it from your answer that it would not make any difference in your estimate of rate of return whether invested capital or fair value were used as the rate base?

A. My opinion is not worth anything on that point. I am talking about market value of securities.

Q. Well, the thing I am trying to ascertain, Mr. Drew, is to what this eight and one half percent should be applied. In other words, to what is it referable?

A. For the purpose for which I use that expression here, it relates to the market value of securities of the corporation.

Q. And not to anything else?

[fol. 8369] A. Well, I think it would have some relationship to other figures and factors, but my use of it relates to the market value of the securities.

Q. Suppose the market value of the securities were less than the book value of the securities. You would still say that the eight and one-half percent rate should be applied to the market value of the securities?

A. Well, I would not say applied to the market value; I would say that, repeating my direct testimony, in order to finance itself publicly at this time, a company like Michigan Gas Transmission Corporation would have to have net earnings of about eight and a half percent, at least eight and a half percent on the market value of those securities.

Q. Well, at the time you made this study, Michigan Gas Transmission Corporation's securities were not bought and sold on the market, were they?

A. I believe not.

Q. So you did not have at that time any estimate of the market value of those securities, did you?

A. There were no market quotations for their securities, so far as I know.

Trial Examiner: I believe your testimony was given in this case previously on November 18, Mr. Drew, and I do not recall whether you stated when your study was made. Can you give the dates when your study was actually made?

The Witness: My working papers here, one set shows [fol. 8370] the date of October 25, 1941, and this work sheet is dated November 14, 1941.

By Mr. Littman:

Q. Didn't you, in reality, make your study as of November 12, 1941?

A. We used market prices as of November 12, 1941.

Q. Now, none of the securities of Michigan Gas Transmission Corporation are bought and sold on the market today, are they?

A. Not so far as I know, sir.

Q. Have you ever heard of a rate base for rate making purposes that was determined by the market value of securities of a public utility?

A. I do not recall having heard of any such case, but I am not in a position to know very many rate cases. I do not follow them, as a practice.

Q. Well then, it is your testimony that your eight and one-half percent is applicable and referable to market value of securities? A. Yes, sir.

Q. And there is no market value of the securities of the utility in question as of the date you made your study, or as of today?

A. There are no market quotations for the securities of the corporation so far as I know, but I should say that [fol. 8371] those securities could have a market value.

Q. You have not ascertained what that market value is, have you? A. No, I have not.

Q. Well, can this eight and a half percent return, which you have estimated, be properly applied to any other kind of a rate base besides the market value of the securities?

A. I have no opinion to offer on that, Mr. Littman.

Q. You understand, Mr. Drew, it is very important for the Commission to know, because, obviously, if the eight and one-half percent is applied to one rate base, it may produce a different amount of dollars of return than if applied to another rate base: You understand that, do you not? A. Yes.

Q. And you cannot help us out on that score?

A. I do not believe I am qualified to answer that question.

Q. Would your eight and one-half percent rate of return be properly applicable to an original cost rate base or don't you know that either?

A. I do not think I am qualified to answer that question, Mr. Littman.

Q. It is your testimony that the investor in natural gas pipe line companies' stocks would require an earnings-[fol. 8372] price ratio of 14%? I am referring to common stock. Is that correct?

Mr. Baldridge: I do not think you properly characterized that. There is some more to it. He said, "given certain other conditions."

Mr. Littman: I would like to have the witness's view on the subject. Do you want me to read your testimony to refresh your recollection, Mr. Drew?

The Witness: I think I have a copy of it here, a memorandum.

By Mr. Littman:

Q. Would you like to refer to it? I think it appears on page 1917 of the transcript.

A. I think I said in my direct testimony that my opinion was that the setup which I then described would be favorably received by the investing public.

Q. Of course, the investing public would receive favorably the highest possible return, wouldn't they?

A. I do not believe I can answer that question.

Q. Well, the investor wants as much return as he can possibly get on his money, doesn't he?

A. Consistent with the risk he is willing to assume in the investment.

Q. Well, you say at transcript 1917, "The rate of earnings on the common would be about 14% after interest, [fol. 8373] but before serial maturities, and about 7.7% after the serial maturities of the bonds."

Now, isn't the 14% to which you refer by that statement the earnings-price ratio which you feel would be required by the investor in the common stock of Michigan Gas Transmission Corporation?

A. I repeat that, in my opinion, such a setup as I gave which results in 14% of the common stock for serial maturities would be favorably received by the investing public.

Q. This 14% of common stock is comparable to an earnings-price ratio, is it not?

A. No, it is not strictly, for this reason: That the example hypothetical setup which I gave in that direct testimony provided for serial bonds, and those bond maturities would have to be met each year before there were dividends available on the common stock.

Q. Your statement now relates to the 7.7%, does it not?

A. Correct.

Q. I am talking about the 14%. Isn't it a fact that the 14% is frequently called "earnings-price ratio"?

A. I have never heard it called that.

Q. Isn't that the term used by Mr. Coffman?

A. I do not remember seeing the term used by him in his first two volumes.

[fol. 8374] Q. Is that the percentage to which Mr. Coffman referred as the investor's appraisal of the risks of capital in his exhibits?

A. I do not know.

Q. You used his Exhibits 63 and 64—

A. (Interposing) I will try to answer your question if you will show me the volume.

Q. Yes, of course.

Do you want the other volume, Mr. Drew? That is 63 and I can give you 64, if you want it.

(The volume indicated was handed to the witness.)

By Mr. Littman:

Q. Suppose you state on the record what you want to say with respect to Mr. Coffman's exhibits, and your own percent.

A. The 14% to which Mr. Littman has referred is generally termed the "rate of return" on the common stock.

Q. Termed by you as the rate of return?

A. Well, all right, by me. I am willing to restress it, although I think it is used generally.

Q. How is it termed by Mr. Coffman?

A. Off the record—

Q. (Interposing) I would prefer not off the record, Mr. Drew.

A. All right, I will do a little studying.

[fol. 8375] Trial Examiner: Before you make that answer, may I call your attention to your statement on page 1917 in direct testimony, "The price-earnings ratio for the first year would be about 13."

The Witness: Yes, sir; that is just the reverse figure of what Mr. Littman is referring to. The price-earnings ratio, in common investment parlance, is the market price divided by the earnings per share of the stock.

Trial Examiner: Now, he is discussing the earnings-price ratio?

The Witness: Yes.

Mr. Littman: Suppose you define that term?

The Witness: It is your own term, sir.

Trial Examiner: There is an accepted definition, is there not, Mr. Drew, for that term?

By Mr. Littman:

Q. You just said it was the reverse.

A. As I said, price-earnings ratio is quite a common term used in investment work, but I have never heard the term earnings-price ratio.

Q. Mr. Coffman used it, did he not?

A. I have not found it yet. I was looking for it.

Q. What term did Mr. Coffman use in describing the various percentages which he shows in his Exhibit No. 63 which you used as one of the bases for your study? [fol. 8376] A. I think this answers the question, Mr. Littman. On page 7 of Exhibit 63, paragraph 3, it states in part:

"The earnings, so determined under 2-A and B, were then divided by the indicated market value of all securities as determined under 1-A and B respectively, and a rate for the period in question was thus obtained."

Q. What does Mr. Coffman call that rate?

A. In paragraph 4, he states, in part, as follows:

"Having determined in the manner described above the investor's appraisal of the risks of capital employed in each company selected," and so forth, by which I take it that Mr. Coffman using the expression "appraisal of the risks of capital" to mean the "rate of return on the market value of securities."

Q. In other words, in order that the record may be perfectly clear, it is your understanding that Mr. Coffman's term "investor's appraisal of risks" is synonymous with your term "rate of return?"

A. Yes, that is correct.

Q. I might state for the purpose of the record that Mr. Coffman, at times, referred to that same rate as the "earnings-price ratio." I think it well that we define our terms at the outset so that we may have no misunderstanding and that is true when related to common stocks.

Mr. Baldridge: Mr. Littman, you said "that is true when related to common stocks." You also mean it is true [fol. 8377] when related to over-all investment of any other character of investment, don't you? I mean, the addition of those last words make it look like you are qualifying the whole of the last preceding sentence.

Mr. Littman: In order that there be no confusion, I am going to ask you, Mr. Drew, to assume that the term "earnings-price ratio" as used by me throughout this cross-examination is the earnings available for the common stock divided by the market value of the common stock. You understand me?

The Witness: Yes.

Mr. Baldridge: And you are limiting it to common stock only?

Mr. Littman: That is right.

Mr. Baldridge: Of course, I may state for the record that Mr. Coffman did not so limit it except in cases where he specifically stated he was limiting it.

Mr. Littman: I cannot agree with that at all.

Mr. Baldridge: That is my understanding.

Mr. Littman: I think you are confusing the record although I appreciate you are trying to assist in clarifying the record.

We have defined the term. That is the way in which we understand Mr. Coffman used it. We understand that [fol. 8378] when Mr. Coffman used the term "investor's appraisal of risk," he was referring to all of the outstanding securities for the company, and when he used the term "earnings-price ratio" he used it in the manner in which I just defined it as relating only to common stock.

Mr. Baldridge: My understanding has been that when he used "earnings-price ratio" it was in relation to all securities of the company taken together, and it may be that I simply short-cut in taking notes on what he said.

Mr. Littman: Of course, where a utility has only common stock outstanding, and no bonds, in that case, the two terms are synonymous.

Mr. Baldridge: Naturally.

Mr. Littman: Very well.

By Mr. Littman:

Q. We understand, do we not, when we use the term "earnings-price ratio," we are going to use it as referable to common stock? A. Yes, sir.

Q. And as we understand Mr. Coffman's exhibit.

In order to earn 14% on the market price of the stock which is selling at twice book value, a corporation would have to earn 28% of the book value of its stock, isn't that correct?

A. I think your arithmetic is correct there, yes, sir. [fol. 8379] Q. Is it a fact, too, isn't it, assuming the conditions which I have assumed?

A. Yes, I think your arithmetic is correct.

Q. Those conditions actually prevail in some stocks, particularly in some natural gas pipe line stocks, do they not?

A. I do not know, sir.

Q. Have you studied the situation in that regard with respect to the common stock of El Paso Natural Gas Company?

A. Not with respect to the relationship of market value to the book value.

Q. Don't you know that the market price of the common stock of El Paso Natural Gas Company is considerably above its book value?

A. No, I did not know it.

Q. Do you know that the same situation prevails with respect to the common stock of Interstate Natural Gas Company and Northern [Natual] Gas Company?

A. No, sir.

Q. You used the first two companies that I have named in arriving at your rate of return?

A. On market value of their securities, yes, sir.

Q. But you made no study of the situation which I have described?

A. I made no study of the relationship between the [fol. 8380] book value of their securities and the market value of their securities, no, sir.

Trial Examiner: Isn't that whole approach fallacious from the standpoint of the Natural Gas Act? I would like to hear from you on that, Mr. Baldridge.

Mr. Baldridge: I think not, Mr. Examiner. Here is what we are confronted with: You are confronted with the problem of finding out how many dollars should be returned to the investment on the rate base. In order to do that, you reach a percentage, then it is a percentage of what? It is a percentage of a certain number of dollars.

Now, the market values, the aggregate market values of all securities outstanding represent a certain sum of dollars. In other words, if $10,000,000 or $20,000,000 is being raised, we have to determine what kind of return on that $10,000,000 or $20,000,000 is needed in order to enable us to raise it.

Now, what, I take it, is in the Examiner's mind is that that necessarily relates to reproduction cost new. I take it that is the difficulty, is it?

Trial Examiner: Not necessarily.

Mr. Baldridge: I do not think it does.

Trial Examiner: Not necessarily, Mr. Baldridge, but is it not conceivable that the marke appraisal of the equity investment in any highly profitable company would give [fol. 8381] an utterly false basis and gauge for the determination of a fair rate of return, which is specifically required to be determined under the Nafural Gas Act?

Mr. Baldridge: Well, there, Mr. Examiner, I can go into a long series of cases, beginning with the Bluefield case. It has been held, and as far as I know never questioned, that in order to find what a public utility is entitled to receive, you have really two tests. The first is, you must give it a return which is not confiscatory; secondly, the courts have repeatedly said that the mere fact that a return is not confiscatory does not mean that it is necessarily reasonable.

I can remember one Commission said, "The margin between the two rates of return is between one and one-half percent and two percent." That is after you pass the line of confiscation, in order to reach the line of reasonable-

ness you have to add one-half percent, or two percent, somewhere between those two.

Another Commission, I recall, called it one-half of one percent.

Trial Examiner: Yes, but, Mr. Baldridge, you are not driving at the point that I have in mind. The testimony of Mr. Drew is that he has not taken into account book value which, in the sense it was used, indicates an actual investment. He has taken into account the market appraisal [fol. 8382] of the value, the investor's appraisal, if you will, of the value of the company.

Now, we are confined here to, perhaps, in the construction that the Commission has placed on the Natural Gas Act, a consideration of the actual cost. Aren't we dealing with entirely different factors when we take the investor's appraisal of the value of property?

Mr. Baldridge: No, not necessarily, because the aggregate of the market value is an actual sum of money which you raise by going to investors, $20,000,000, we will say, by offering to those investors something they are willing to buy. You may have that all in the form of common stock, you may have that in, partly, bonds and partly common stock, or you may have bonds, preferred stock and common stock, but you do not actually raise that money unless the investors are willing to take it at that rate or at the several rates which the market then shows.

Now, the value of the market appraisal, I take it, is this: In the case of every company, by multiplying its outstanding securities by the respective market prices, you reach a definite sum of money which you can say is the money which at that time you may consider as being raised in the market.

Trial Examiner: Now, just to get to the point of this, I did not ask this question to provoke discussion. I am [fol. 8383] seriously concerned about the relevancy and value of the testimony of this witness because he knows the investment and he applies a very definite rate of return to an utterly indefinite and unascertainable base.

Mr. Baldridge: I do not think the base is unascertainable in this case, Mr. Examiner. If you look at his direct

testimony, he used the words "actual investment or market value."

Trial Examiner: He was asked by the Chairman of the Bank or rather, by Mr. Green, who has referred to Mr. Drew by the Chairman of the Bank, to give an opinion as to the question of "What rate of return should a company like the Michigan Gas Transmission Corporation earn on its invested capital or fair value in order to be able to finance by public offering of securities?"

Mr. Littman: And he defined that term as the market value of the securities, and that cannot be ascertained in this case. Nobody knows what it is.

Mr. Baldridge: If I may be permitted a minute, I think from the standpoint of a man who is not in the untility business, the term "book value" is one which is extremely misleading. Those of us who have dealt with industrial corporations have found time and time again that book value has no relationship to the actual investment made. Perhaps some of the stock is sold at a premium, perhaps it [fol. 8384] is written down, perhaps it is written up. There are all kinds of factors that enter into the picture. What is important is the actual money that either would go into the enterprise today, if it were necessary to refinance today, or if we are not permitted to show that, at least the amount of money that actually was paid into the enterprise.

Now, I think that one way of estimating the amount of money paid into an enterprise, when you do not have all the facts showing your original investment, is to take the aggregate of the market value of securities, although that necessarily is related to the time when that value is taken, obviously.

Trial Examiner: Mr. Baldridge, we have the cost in this case. We have the actual investment; we do know that from exhibits.

Mr. Littman: It is one of the definite things that we have in this case.

Trial Examiner: The book value in this case means exact dollars.

Mr. Baldridge: I do not think he has been asked a question in that form yet, Mr. Examiner. I have been listening to the cross-examination and I think what the witness has been feeling is that he cannot tell whether the book value, as set up, represents something in the nature of cash actually had to be rated, or was rated.

. . . . . .

[fol. 8386] By Mr. Littman:

Q. You testified on direct examination at Page 1913 of the transcript that your bank, as a general policy, has not purchased natural gas pipe line securities for trust accounts, did you not? A. Yes, sir.

Q. However, you state that your bank has bought and does own in trusts a moderate amount of gas distributing company securities, is that right?

A. Yes, sir.

Q. What kind of gas distributing companies do you refer to by that statement?

A. Artificial, natural and mixed distributing companies.

Q. What are the proportions, generally, as among the three types? A. I have no idea.

Q. Is there any particular reason why your company [fol. 8387] has not purchased natural gas pipe line securities other than that stated by you in your direct testimony? What I have in mind is whether your company is limited in its purchase of natural gas pipe line securities by laws regulating trustees?

A. The Illinois statutes do not exclude natural gas pipe line securities.

Q. Do they exclude common stocks?

A. Yes, but I should add, if I may, that in a great many of our trusts, we are not limited in our investment policy to statutory investments.

Q. However, you do administer certain trusts which are under the statutory prohibition against the purchase of common stocks? A. That is correct.

Q. You know, do you not, that large life insurance companies have made heavy investments in natural gas company bonds?

A. I assume that they do. I do not recall seeing in the portfolios of insurance companies natural gas pipe line bonds, but I cannot say.

Q. You cannot give an answer one way or another?

A. No, sir, I cannot say that they do or do not.

Q. Does your bank purchase natural gas pipe line company bonds? A. Not on its own initiative.

Q. Insurance companies are strictly regulated as to [fol. 8388] investments, are they not?

A. I believe they are, in practically all States.

Q. You know, do you not, that banks have made loans to natural gas companies at very low interest rates?

A. I suppose they have in recent years. I do not happen to know of any of my own knowledge.

Q. You did not investigate that? A. No, sir.

Q. When I spoke of low rates, I meant rates as low as 2 percent or 1½ percent. You are not acquainted with the fact that banking institutions in this country have, from time to time, made large loans?

A. I suppose they have.

Q. Has your bank made any loans to natural gas pipe line companies?

A. Not to my knowledge in recent years, at any rate.

Q. Have you made any investigation of the capital structure of Panhandle Eastern Pipe Line Company?

A. No, I have not.

Q. Do you know something about its bonds and long-term debt?

A. I cannot say that I am familiar with its capital structure.

Q. Do you have a copy of Exhibit 64 with you?

A. No.

[fol. 8389] Q. I hand you a copy of Exhibit 64 and refer you to Appendix C, Page 131. You observe, do you not, Item (c) under the heading, "Indicated Market Value of Capital" reading, "Serial Notes, A, B, C and D 0.75-1.50% Due 4/1/42-45" in the amount of $5,000,000?

A. Yes.

Q. You know, do you not, that that amount represents a bank loan to Panhandle Eastern Pipe Line Company?

A. I see under the explanation that it was sold privately to several banking institutions.

Q. You are referring to Footnote C which reads as follows:

"Sold privately in January, 1941, at 100 to several banking institutions."

A. Yes.

Q. However, your bank does not deal—

A. (Interposing) So far as I know, we have not participated in that type of loan.

Q. Do you happen to know whether the Harris Bank & Trust Company of Chicago, the city in which your bank is located, does make such long-term loans?

A. No, I have no knowledge of that.

Q. Then you have not, in the course of your business and in the course of your own duties had any extensive experience with natural gas pipe line company securities or companies, have you?

[fol. 8390] A. Certainly not extensive, no, sir.

Q. Well, to what extent, if any?

A. As I said in my direct testimony, we have not, as a general policy, purchased but we have, from time to time, I believe, owned them in trust, the securities I am talking about, of natural gas pipe line companies. I cannot say offhand at the present time what securities of that character that we own at the present time but I am certain, if any, it is a small amount.

Q. When you did have them, they were in small blocks, were they not?

A. They were in small blocks, yes, sir.

Q. I note that in your direct testimony you stated that in the course of your study, you placed certain reliance upon information contained in Standard & Poor's published pamphlets, "Industrial Surveys" and "Security Markets." Is that correct?

A. Yes, sir. I also mentioned Moody's Manual in that same statement, I believe.

Q. I did not mean that that was the only source of your information. I meant that I understood you to state that that was one of the sources upon which you relied. Is that right?

A. Well, which I used, I should rather say than "relied".

Q. In your opinion, is the natural gas industry the best situated of the various divisions of the utility industry?

[fol. 8391] A. No, it is not.

Q. Is it better or worse than manufactured gas utilities?

A. From an investor's standpoint, I would say that natural gas securities are less desirable than those of artificial gas.

Q. Are they less favorable than the securities of traction companies?

A. I dislike to generalize on that question because I think there is such a wide variation among the companies in each group that I would hesitate to answer that question directly.

Q. Would you say that the natural gas industry is better situated than the electric industry?

A. No, I would not say so.

Q. Would you say that the natural gas industry is better situated than water companies?

A. In that comparison also, I would hesitate to reply to that question without having a more direct comparison by companies.

Q. However, you are certain that the natural gas industry is not as well situated as the manufactured gas industry, is that correct?

A. That is my opinion.

Q. I want to read you from Standard & Poor's "Bond [fol. 8392] Investments" dated September 6, 1941. The excerpt which I shall read appears on Page 612 under the heading "Gas Company Bonds. Natural gas companies in superior positions to manufactured gas units."

"The natural gas industry is probably the best situated of the various divisions of the utility industry at this time. It will benefit materially from rising general industrial activity and operating expenses are largely fixed. Thus, even with excess profits taxes, any decline in profits should be held to moderate proportions.

"The manufactured gas industry, on the other hand, is in a relatively unfavorable position. Its revenues will benefit little from rising industrial activity and rising operating costs will be adversely affected. A continued decline in profits is likely in this industry."

Did you read this statemnt in connection with your investigation?

Mr. Baldridge: Mr. Littman, may I ask the date of that?

Mr. Littman: September 6, 1941, which is at about the time Mr. Drew made his study for purposes of this investigation.

The Witness: I may have seen it, I do not remember specifically.

By Mr. Littman:

Q. One of the sources of your data and information was [fol. 8393] Standard & Poor's pamphlet, was it not?

A. That is correct.

Q. Do you consider it reliable?

A. The purpose for which I used Standard & Poor's was to obtain factual matter and not opinion.

Q. Isn't what I read a fact?

A. It is my opinion that it is not a fact, in the long-term view.

Q. Do you agree with this statement that I read from Standard & Poor's pamphlet?

A. I think it may be true as applied to a short interim period here.

Q. And it may be true as applied to a long period?

A. I believe not.

Q. The writer, as I hand you the article, does not limit this statement to any interim period?

A. I thought he said "at this time".

Q. Well, he talks about the future, too, does he not? About what may be expected in the future?

A. Well, I think if you will permit me, he is referring there to the rising armament activity, the rising general industrial activity because of rearmament and defense industries and it is my opinion and certainly my hope that that will not go on very much longer.

Q. What will not go on very much longer?

[fol. 8394] A. (Continuing) Several years perhaps. This rearmament and war industry.

Q. But it is your opinion that so long as the rearmament and war industry goes on there is a bright outlook for the natural gas pipe line industry?

A. No, I would not make it that strong. I would say there may be.

Q. In all probability there will be. Is that what you say?

A. I would not say that.

Q. These statements are intended for investors, are they not? These statements of opinions in Poor's?

A. They are intended, I believe, for buyers of securities. I would be a little careful how I used the word "investors" because it depends on the definition, and what I mean by that is simply this, that an individual with his own funds is perhaps justified in buying certain securities that institutions including trust institutions would not be justified in buying.

Q. Well, certainly, a prospective purchaser of securities would naturally be led to believe by this statement that the natural gas industry is probably the best situated of the various industries in the utility business at this time, would you not?

A. I cannot say what he would believe, that is what the article says.

[fol. 8395] Q. Are you familiar with the recent refinancing by Panhandle Eastern Pipe Line Company for the purpose, among others, of acquiring Michigan Gas Transmission Corporation?

A. I am not familiar with the details of the financing. I observed some weeks ago that the financing was being undertaken. Prior to that, I believe I had seen a press notice that the Michigan Gas Transmission Corporation was being sold.

Q. Well, you know, do you not, that within the past month Panhandle Eastern Pipe Line Company issued $10,000,000 of first mortgage and first lien 3 percent bonds and 150,000 shares of 5.6 percent cumulative preferred stock, having a par value of $100 per share?

A. Well, as I say, I did not remember the details of the transactions.

Q. But you heard about it?

A. Yes.

Q. You, also, heard, did you not, that no difficulty was experienced at all in this financing and the financing was readily accepted?

A. No, sir, I had not heard that.

Q. You know the bonds sold at the yield of 3 percent, do you not?

A. I do not recall the yield at the offering price.

Q. Didn't you investigate that subject at all, namely, the subject of the recent refinancing by Panhandle Eastern [fol. 8396] Pipe Line Company?

A. Not investigated, no, sir, I did not.

Q. Don't you think that this recent refinancing program has a bearing upon the rate of return to which Michigan Gas Transmission Corporation is entitled for the purposes of this proceeding?

A. Well, I cannot see the connection.

Q. You cannot see the connection? A. No.

Q. Do you know that Panhandle Eastern Pipe Line Company has recently acquired all of the outstanding stock and securities of Michigan Gas Transmission Corporation?

A. I understood that was a part of the purchase.

Q. Now, you used, for purposes of your study, certain earnings and rates of earnings earned by four other natural gas pipe line companies, did you not? A. Yes, sir.

Q. Will you name them, please?

A. El Paso Natural Gas Company, Southern Natural Gas Company, Memphis Natural Gas Company and Interstate Natural Gas Company.

Q. Did you consider those data relevant and material to the issue of determining the proper rate of return to which Michigan Gas was entitled? A. Yes, sir.

[fol. 8397] Q. But you do not consider the flotations by Panhandle Eastern Pipe Line Company within very recent days material to that issue?

A. The issuance of the Panhandle securities came several months after the preparation of my study, which I covered in my direct testimony.

Q. I understand that, Mr. Drew, but I understood your testimony to be here a minute ago that you cannot see the connection between the recent refinancing by Panhandle Eastern Pipe Line Company and the issue before us, namely, the issue of what is the fair rate of return. Wasn't that your testimony?

A. Well, I will correct that testimony, if I may. I think it has some relation, about the same relation as these other companies, perhaps, in an average way.

Q. Not any more relation than those of the other companies?

A. I would not think so.

Q. You have testified at Page 1916 of the transcript that you utilized the Dow-Jones industrial stock average in arriving at your 8½ percent rate of return for Michigan Gas Transmission Corporation. Isn't that correct?

A. That is not quite the full story. I used the companies whose common stocks are included in Dow-Jones industrial average and to those 30 companies I applied the same method which I had used in arriving at an average rate of return on market value of invested capital [fol. 8398] for the natural gas companies.

Q. You consider the Dow-Jones industrial stock average a reliable guide, do you not?

A. Well, I think it is the guide which is most closely followed by investors.

Q. In other words, it is reliable, in your judgment, for purposes of this proceeding?

A. I think it is useful in a proceeding of this kind, yes.

Q. Well, how useful, quite useful?

A. Yes, quite useful.

Q. Is the Dow-Jones index of industrial stock prices the most reliable index?

A. Well, I think that is a matter of opinion.

Q. It is at least one of the most reliable?

A. It is one of the best regarded, certainly.

Q. Now, the Dow-Jones industrial stock average is an average of 30 active stocks of representative companies in diversified industries, is not that correct?

A. Yes, sir.

Q. Would you expect the earnings' price ratios on the Dow-Jones stocks to be higher on the average than the earnings' price ratios on public utility stocks?

Mr. Baldridge: Mr. Littman, I am afraid I have to object to that question if you are going to limit it to common stocks because of the very obvious fact that common stocks [fol. 8399] play an entirely different proportion in the total investment of almost any company.

Mr. Littman: Well, that is what this witness used, Mr. Baldridge. I am asking this witness about what he did. He used the average of these 30 industrials, you see, that is, the average of the common stocks of these 30 industrials. I am not talking about something I did, I am talk-

ing about something the witness did. Are you objecting?

Mr. Baldridge: I do not know that he testified exactly that.

Mr. Littman: There is an objection pending to what I consider a perfectly proper question.

Trial Examiner: Is Mr. Littman's interpretation of your testimony correct, Mr. Drew?

The Witness: I would, again, amplify what he has just said, to this effect, that I used the companies represented in the Dow-Jones industrial stock index and applied to those companies the market values, market prices of their bonds, preferred stocks and common stocks in arriving at the figure that I gave in my direct testimony.

By Mr. Littman:

Q. In other words, your study of Dow-Jones was confined to common stocks?

A. No, sir, that is exactly what I am trying to say, it included the bonds and the preferred stocks of the companies represented in the Dow-Jones index.

[fol. 8400] Mr. Baldridge: May I, in that case, repeat my objection, Mr. Examiner, because I do not think the question has relevancy?

Mr. Littman: Will you please read the question again?

(Whereupon, the question indicated was read as follows:

"Q. Would you expect the earnings' price ratios on the Dow-Jones stocks to be higher on the average than the earnings' price ratios on public utility stocks?")

Mr. Baldridge: The witness has testified that he did not use simply the Dow-Jones stocks but used 30 companies and various kinds of stocks of those companies.

Mr. Littman: Have you seen this witness' working papers? I am sure if you took a look at them you would withdraw your objection.

Mr. Baldridge: I have heard his testimony, I have just heard his testimony.

Trial Examiner: I think the witness is entitled to answer the question in his own way. This does not necessarily require a yes or no answer and Mr. Drew may explain the factors that he wishes to discuss.

Mr. Littman: Will you please answer the question?

The Witness: Shall I answer the question, Mr. Examiner?

Trial Examiner: In your way, Mr. Drew.

The Witness: I would expect the earnings' price ratio of utility common stocks to be somewhat higher than that [fol. 8401] ratio on industrial stocks and I predicate my opinion on that score on Barron's, The National Financial Weekly, of February 23, 1942, Page 17, which shows the yields on the Dow-Jones averages for the previous week and it shows that the yield on the 30 industrials was 7.15 percent and the yield on the average on 15 utilities was 8.56 percent.

Now, I believe that those figures represent dividends divided by market prices, but I think I would find that the earnings divided by market prices would be in somewhat the same relationship.

By Mr. Littman:

Q. You have not investigated that, however, sir?

A. No, I have not.

* * * * * * * *

[fol. 8404] Mr. Littman: Mr. Drew, did you use your working papers in assisting you to arrive at your rate of return to which you are testifying in this proceeding?

* * * * * * * *

[fol. 8406] By Mr. Littman:

Q. What was the aggregate market value of the securities of the 30 industrials comprehended by the Dow-Jones averages?

A. The corrected figure is $17,244,000,000.

Q. What do you mean by "corrected figure"?

A. I should like to explain that by saying after I got back to my office from the hearings in Washington, I had the table rechecked and I found one error in the third item, the American Smelting & Refining Company.

Q. That was an error of about $74,000,000, wasn't it?

A. It was an error of $74,500,000.

Q. $74,500,000? A. That is correct.

Q. $74,250,000 to be exact, isn't it?

A. Yes, that is right. It was in the preferred stock.

Q. Of the American Smelting & Refining Company?

A. Of the American Smelting & Refining Company in which case, the man who prepared this for me put down the figure of 500,000 which is the number of shares of preferred stock outstanding but unfortunately, he put in front of that "$", so that he got a result there of $750,000 which is obviously out of line and we have corrected that.

As a matter of fact, it makes very little difference in the net result even though $74,000,000 is a lot of money. The aggregate amount is so large that the effect of the change [fol. 8407] itself is small.

Q. Suppose you give us the corrected figures to be inserted in your working papers. I shall go across your working papers for American Smelting Company and ask you to give me the corrected figures.

In the first column you show common stock—2,191,669 shares?

A. Yes, that is correct.

Q. Then you show the price to be $36?

A. No change there.

Q. Producing a market value of $78,900,084, is that right?

A. That is correct, yes, sir.

Q. Now, going to the columns headed "Preferred Stocks, Bonds and Other Securities", you have 7 percent cumulative preferred in the first column; in the second column, your working papers show $500,000 as the par value of the preferred stocks.

Now, what is the correct figure to be placed there instead of that?

A. 500,000 is correct but it is shares and not dollars.

Q. How many dollars belong there instead of the 500,000 that you show?

A. 500,000 shares is what it should be.

Q. That should be 500,000 shares?

[fol. 8408] A. That is correct.

Q. The dollar sign should be removed?

A. Yes, sir.

Q. Now, the next column shows the price at November 12, 1941, to be $150, does it not? A. Yes, sir.

Q. That is correct? A. That is correct.

Q. And the next column, and this is the one that has the error, shows the value to be $750,000. What figure [belong] in that place. A. $75,000,000.

Q. The next column of your working papers shows "Total market value", $79,650,084. What is the correct figure to be inserted?

A. That should read $153,900,084.

Q. Instead of $79,650,084?

A. That is correct.

Q. Are the figures that appear in the next column, "Estimated 1941 Net Income after Taxes and Depreciation Available for Interest and Dividends" are those figures all right? They are $9,895,000 to $10,995,000. Are those correct?

A. There has been a change made in here. Those two figures should be, $13,360,000 and $14,460,000.

Q. Where did you get that information, from Standard [fol. 8409] & Poor's?

A. Those two figures come from an estimate of Standard & Poor's for the 1941 earnings after taxes.

Q. And depreciation?

A. And depreciation, and to those estimates of Standard and Poor's, we have added back the dividends on the preferred and the interest, if any, on the bonds.

Q. Now, in the final column, your working papers show, "Return on market value" as 12.42-13.80 percent. Those figures are in error, are they not? A. Yes.

Q. What are the correct figures?

A. The corrected figures are 8.68 and 9.39.

Q. Percent? A. Percent.

Mr. Baldridge: I would like the record to show that the correction that has just been made in the working papers relate to matters that have not been offered and introduced in evidence.

The Witness: May I say just a word more?

Mr. Littman: Yes.

The Witness: In my direct testimony, I said that the average of the ratios of the net earnings to market value of capitalization was 9.6 percent. That should be changed to read 9.5 percent.

[fol. 8410] By Mr. Littman:

Q. Now, that change was occasioned by reason of the corrections which you just read into the record?

A. A tenth of one-percent occasioned by $74,000,000 error, because the grand total is so large, the error made little difference. The 8.7 percent which I gave in my direct testimony is approximately correct. The actual percentage corrected is 8.66.

Q. As you stated a moment ago, the active market value of the 30 industrials in the Dow-Jones average was $17,244,000,000, is that right?

A. $17,244,000,000, yes, sir.

Q. What was the net income for those 30 Dow-Jones industrials for the year 1941?

A. $1,494,000,000.

Q. As of what date did you take the market value figure of $17,000,000,000-odd which you read a moment ago?

A. November 12, 1941, in so far as they were available.

Q. You have just stated that you found from your working papers that the arithmetic average of the ratios of net income to market value of capitalization for these 30 Dow-Jones industrials was 9.5 percent. Is that right?

A. Yes, sir.

Q. Now, that is an arithmetic average, isn't it?

A. Yes, sir.

[fol. 8411] Q. And the weighted average was 8.7 percent? A. Yes, sir.

Q. Which of these averages would you consider the more reliable?

A. I think the weighted average is probably the better one to use.

Q. When you use the weighted average that, of course, takes into account and makes proper compensation for the differences in the size of the various companies, doesn't it?

A. Yes. A small company with a very high rate of return would be more or less ironed out in this weighted average.

Q. And, therefore, you consider the 8.7 percent a more truly representative average, do you not? A. Yes, sir.

Q. Now, the figures which you have just read with respect to market value and earnings relate to the total securities of these 30 industrials, that is, all of their long-term debt, preferred stocks and common stocks, isn't that correct? A. Yes, sir.

Q. Can you tell us from your working papers—and I am quite sure you can—the total market value of the common stock of these Dow-Jones industrials—do you want me to read the figure and then will you check it?

[fol. 8412] A. If you wish.

Q. May I ask approximately how long it would take you to check the figure?

A. Well, I have the figure right here.

Q. You have the figure there, I am sorry; $13,812,318,882?

A. That is the figure, yes, sir.

Q. What is the total gross income on that common stock as shown by your working papers?

A. I do not have any such figure available. It could be ascertained by the addition of that column 16.

* * * * * * * * *

[fol. 8413] By Mr. Littman:

Q. Now, the figure which I am about to read will represent the total gross income on the common stock of the 30 Dow-Jones industrials as taken from your working papers and as arrived at by deducting the total annual interest on bonds and dividends on preferred stock from gross income of $1,430,079,140 which is the figure before adjustment for the error. Do you follow me?

A. Yes.

Q. Now, the figure which we would like to have you check and assume for the time being is correct is $1,367,411,573—I will read that again, I am not accustomed to dealing with such large dollar amounts. If it were M.c.f., I would probably get along better—$1,367,411,573.

You understand how we arrived at this from your working papers, do you not?

A. Yes.

Q. And the method we have used is the correct method, is it not?

A. I am just feeling my way on that.

Mr. Baldridge: The right method of getting what, Mr. Littman?

Mr. Littman: The right method of getting the earnings available for common stock.

The Witness: I see quite a wide discrepancy there in [fol. 8414] just a quick check. I would like to go through it a little more completely.

* * * * * * * *

By Mr. Littman:

Q. Mr. Drew, during the recess have you had an opportunity to study the method which I suggested for the determination of the amount of income available for the common stock?

A. Yes, sir.

Q. And you agree that that is the correct method to be used to arrive at that amount from your working papers?

A. I believe it is.

Q. And you will check the amount, will you not, of $1,367,411,573 of gross income on the common stock, will you?

A. Yes.

Q. Assuming that the figure that I read is correct, what was the earnings-price ratio on the Dow-Jones common stocks as of November 12, 1941?

A. About 10 percent.

Q. 9.9 would be a little more exact?

A. I have not calculated, that is one thing I did not do, but I can see that it is about 10 percent.

Q. Well, suppose you accept our figure of 9.9 percent. [fol. 8415] A. Yes.

Trial Examiner: Subject to correction.

Mr. Littman: Yes.

By Mr. Littman:

Q. What date in 1941 did you use for the market price of the Dow-Jones industrials for purposes of your study?

A. November 12, 1941.

Q. I hand you a copy of the "Commercial Financial Chronicle" dated November 18, 1941, and ask you to state the Dow-Jones average for these 30 industrials for November 12, 1941. You can check from that "Chronicle".

A. 115.44.

Q. 115.44. Now, that relates to the common stock, does it not?

A. Yes, sir.

Q. Of these 30 industrial companies which you have heretofore referred to?

A. That is correct, yes, sir.

Q. I hand you a copy of Standard & Poor's securities statistics and ask you to state what was the average of the Down-Jones 30 industrials' common stock during the year 1936.

Mr. Culton: May I inquire, for information, whether or not those were the same stocks in 1936 and in 1941?

By Mr. Littman:

Q. Are the industries comparable?

[fol. 8416] Mr. Culton: That is not what I asked. I asked, for information, whether or not it was the same stocks.

By Mr. Littman:

Q. There were 30 industrials in 1936?

A. Yes.

Q. Were they the same industrials in 1936?

A. I cannot answer that question.

Q. Well, if they are not identical, they have been made comparable strictly by the Dow-Jones average, have they not?

A. I believe they are comparable.

Q. Will you please read the figures?

Mr. Baldridge: I object to that on the ground that nothing in the witness's testimony relates to the year 1936.

Trial Examiner: You may answer.

Mr. Baldridge: Exception.

Trial Examiner: Exception noted.

The Witness: The high of the Dow-Jones industrial average for 1936 is given in this publication as 184.9 and the low, 143.7.

By Mr. Littman:

Q. That would make an average of 164.30, would it not?

A. It would be close to that figure, I am sure. Do you want me to calculate it?

Q. Suppose you calculate it. Then we won't have to [fol. 8417] assume too many figures.

Mr. Culton: That is an arithmetical average, is it?

Mr. Littman: Adding 184.9 to 143.7, dividing by 2.

The Witness: 164.3.

Mr. Culton: It is an arithmetical calculation.

By Mr. Littman:

Q. You have no reason to doubt the reliability of the figures which you have just read which were published by Standard & Poor's?

A. No, I have no reason to doubt it.

Q. As a matter of fact, they are used in the industry and by you every day, are they not?

A. Yes, sir.

Q. Now, assuming, Mr. Drew, that an investor had purchased $164,300 worth of common stock in these 30 industrials in 1936 at the average prevailing price in that year, his investment would have declined to November 12, 1941, would it not?

A. Yes.

Q. And what would be the amount of the decline in market value of the securities which this 1936 investor purchased in the 30 industrials as between 1936 and November 12, 1941?

A. Well, if the investor bought the 30 stocks in the same proportions as those stocks are used in the industrial averages, then I should say that his investment today [fol. 8418] would be worth approximately $115,440.

Q. You mean as of November 12, 1941?

A. As of November 12, 1941.

Q. Rather than today?

A. Yes.

Q. And you caught precisely the point I am attempting to reach, that is the theoretical purchase equally and ratably throughout the 30 industrials.

Now, what is the amount of loss that this 1936 investor has sustained on his investments in 1936 of $164,300?

A. $48,860.

Q. Now, let me see if I correctly understand you.

Trial Examiner: What percentage is that, before you leave that?

The Witness: About 30 percent, sir.

By Mr. Littman:

Q. Now, let's examine the predicament of the 1936 investor, Mr. Drew, who invested his 1936 dollars in these 30 representative industrials. It is a fact, is it not, that he invested in 1936 $164,300 and he made that investment, of course, with 1936 dollars, did he not?

A. Yes, sir.

Q. No question about that?

A. No.

Q. And on November 12, 1941, he had sustained a loss [fol. 8419] in his investment of $48,860, had he not?

A. Yes, sir.

Q. And his present investment is worth $115,440 in present-day dollars, is it not? Is that right?

A. Yes, sir.

Q. Now, suppose that investor had invested in the common stock of Michigan Gas Transmission Corporation in 1936, which was the year in which it was first organized. He would not have suffered any loss on his investment in common stock, would he?

A. I cannot answer that question.

. . . . . .

By Mr. Littman:

Q. Let us look at it this way, what would the investor have received by way of a dividend since 1936 on his investment in the common stock of Michigan Gas Transmission Corporation? 89 percent, isn't that correct?

A. I cannot answer that question.

Q. Well, in your determination of this rate of return estimate, didn't you investigate the amount of dividends paid by Michigan Gas Transmission Corporation?
[fol. 8420] A. No, sir.

Q. And you cannot tell us whether the investor in the common stock of Michigan Gas Transmission Corporation in 1936 still has all of his present investment?

Mr. Baldridge: Judged by what criterion?

Mr. Littman: By the criterion of the sale by Michigan Gas Transmission Corporation to Panhandle Eastern Pipe Line Company here the other day, which sale price was measured by the net investment of the investors in the property. Does that answer your question, Mr. Baldridge?

Mr. Baldridge: Not entirely. Of course, the question I asked you, yes.

Trial Examiner: Of course, you must not assume that Mr. Drew is familiar with the testimony that has been received in evidence in this case the last few days. There are certain answers that have come into the record here by way of direct testimony with which you are not familiar, Mr. Drew, and when you encounter those, you are at liberty to call attention to them.

The Witness: I think I could answer your question fairly, perhaps, by saying this, that if Michigan Gas Transmission Corporation had had common stock publicly owned upon which there was an active market, an investor who bought that stock at average prices of 1936 would, in my opinion, today have approximately the same loss, paper [fol. 8421] loss, as is shown in these industrial stocks.

By Mr. Littman:

Q. I see. Now, if that investor has been allowed or is allowed a reasonable return upon his original investment from 1936 down to today, he would be better off, wouldn't he, than if he had been allowed a return on the purported market value of the stock through the years? Isn't that right?

The Witness: I would like to have you ask that question again. Perhaps you will read it.

Mr. Baldridge: I will have to point out, Mr. Littman, that that question is a little misleading because you are mixing two things, you are mixing the entire investment in the company, including all kinds of securities with investments in common stock alone.

Mr. Littman: Do you understand the question?

The Witness: I would like to have it read, please?

Trial Examiner: Read the question.

(Whereupon, the question beginning at Line 3 of this page was read by the reporter.)

The Witness: I do not think I can answer that question.

By Mr. Littman:

Q. What don't you understand about it?

A. I do not understand what you mean by an investor being allowed a return.

Q. If this Commission allows a fair rate of return on [fol. 8422] the original investment in this property from 1936 down to the present day, it is a fact, is it not, that the investor still has his investment today and has received a reasonable return from 1936 down to today, isn't that a fact?

A. Well, it seems to me that you are confusing a return allowed to the company and the return which the individual investor is going to receive or did receive during that period. I cannot correlate the two things very well.

Q. What return are you talking about when you speak of 8½ percent? Are you speaking about the return to the company or are you speaking about the return to the investor?

A. I am speaking about the return represented by the earnings of the company divided by the market, the aggregate market value of its securities.

Q. Well, who gets the 8½ percent, the company or the investor, according to your theory?

A. Well, it is not a question as to who gets it, it is a question of the rate of earnings necessary for a company to be able to finance itself publicly.

Q. Are you asking here for an 8½ percent return on 100 percent of the investment in 1936 or on 70 percent of the investment in 1936?

A. I am talking about an 8½ percent return as the net earnings divided by the aggregate market value of the securities of the company.

[fol. 8423] Q. As of November 12, 1941?

A. As of November 12, 1941.

Q. And that, according to your testimony, represented only 70 percent of the market value of those securities in 1936. Is not that right?

A. No, sir, I did not testify to that.

Q. Well, you said that that was what you would expect, did you not?

A. I said I would expect the common stock of a public utility company like the Michigan Gas Transmission Corporation outstanding in the hands of the public and actively traded to have declined in price about the same from the average of 1936 to November 12, 1941.

• • • • • • • •

By Mr. Littman:

Q. So that confining ourselves to common stock, you are asking for a return on only 70 percent of its 1936 market value?

[fol. 8424] A. Well, if I were dealing with common stock alone, I would raise that 8½ percent.

Q. We understand that, but I would like to have you answer my specific question.

A. But you are tying me down to 8½ percent on common stock.

Q. I have not said anything about 8½ percent in my question.

Will you read my specific question?

(Whereupon, the question indicated was read by the reporter as follows:

"Q. So that confining ourselves to common stock, you are asking for a return on only 70 percent of its 1936 market value?"

The Witness: Well, I am not asking for any return. I will have to state again that I think a public utility com-

pany like Michigan Gas Transmission Corporation, having common stock outstanding in the hands of the public, fairly actively traded, would probably have declined in market value in about the same proportion, perhaps a little more, than this Dow-Jones industrial average.

By Mr. Littman:

Q. What you are saying is that using 1936 as an index of 100, for market value of the common stock, it would have gone down to 70 in 1941, at November 12, isn't that correct?

[fol. 8425] A. I repeat my previous statement.

Q. Is that correct?

A. I think that is substantially correct, yes, sir.

* * * * * * * *

By Mr. Littman:

Q. Now, going back to your original proposition of the 1936 investor who had invested his 1936 dollars in $164,300 worth of the 30 industrials' common stocks, assuming that that investor held those shares down to and including November 12, 1941, his earnings-price ratio would not be 10 percent based upon his original purchase price, would it? A. No, sir.

Q. It would be something considerably below 10 percent, is that right? A. Yes, sir.

Mr. Culton: May I inquire if that would be the same figure if the purchase had been made in November, 1929? [fol. 8426] That would be a different situation, wouldn't it? Do you recall enough about what the market conditions were in 1929?

The Witness: Yes, it was chaotic. Of course, it did not reach its low until sometime in 1932.

By Mr. Littman:

Q. What would the 1936 investor's earnings-price ratio be on that basis, bearing in mind that the earnings as of November 12, 1941, amounted to 10 percent of the then-market value?

A. Well, I think it would be approximately 30 percent lower return.

Q. That would be something like 6.96 percent?

A. About 7 percent, I should think.

Q. Now, the 6.96 percent is the earnings-price ratio today of the man who had invested his money in 1936 in the common stock of these 30 Dow-Jones industrials, isn't that right? A. Using 1941 earnings.

Q. Using 1941 earnings and the return upon which the 6.96 percent is computed is in today's dollars, is it not?

A. Well, its percentage, its percentage. It is not in dollars. The income is payable in today's dollars, yes.

Q. The income was payable in dollars that would buy the amount of bacon and eggs that today's dollars will buy, is that right?

[fol. 8427] A. Yes, sir.

Q. Now, the investor has suffered a loss, you say, of $48,000-odd since 1936, has he not?

A. A paper loss, yes, sir.

Q. Well, he suffered a loss in 1936 dollars, didn't he, in dollars that bought bacon and eggs in 1936?

A. He has not suffered a loss until he sells his stocks. If he were to sell his stocks today, he would have suffered that loss.

Q. Of course.

A. Until he sells it, it is a paper loss.

Q. The paper loss is in 1936 dollars, isn't it?

A. Well, his purchase was made in 1936 dollars and the receipt of sale, if he were to sell as of November 12, would be in dollars of that date.

Q. The only comfort he has is the hope that some day the stock will go up again?

A. Are you asking me if I think that is correct?

Q. Yes.

A. I do not think it is correct.

Q. At any rate, if he wanted to sell those shares on November 12, 1941, he would be out of pocket $48,860, would he not? A. That is correct.

Q. And those are all 1936 dollars?

[fol. 8428] A. The stocks he would sell would have been purchased in 1936 dollars.

Q. So that his loss would be in 1936 dollars, wouldn't it?

A. I think you could say that, yes.

Trial Examiner: Has some distinction been claimed as to the values of the 1936 dollar and the 1941 dollar?

Mr. Littman: Yes, your Honor, there has been a considerable claim made in this proceeding on that account. I do not know whether Mr. Drew is familiar with it.

Trial Examiner: There have been various references to ascending costs.

• • • • • • • •

[fol. 8429] By Mr. Littman:

Q. Now, let's again examine the predicament of the 1936 investor to whom we have made reference heretofore. His real return on his common stock is down to 6.96 percent, is it not?

A. On his purchase price?

Q. Yes. A. Yes.

Q. Now, he has lost $48,000 and he has to get that back somehow out of his earnings if he is going to be made whole, isn't that right?

A. I think each investor's position would be different from the other. I cannot write a prescription.

[fol. 8430] Q. How is he going to get the $48,000 back that he lost if he is not going to get it back out of the 6.96 percent return which he is receiving upon his original investment?

A. Has he sold his stocks now?

Q. No.

A. Then he has not any loss.

Q. He does not feel very good about it though, yet, does he? A. I would not, in his case.

Q. All he has is a vague hope that sometime the stock may go back up, is that right?

A. I think he would have a hope for a later rise in the market value of his holdings, certainly.

Q. It has been your testimony, Mr. Drew, that the capital structure of Michigan Gas Transmission Corporation should be 50 percent bonds which should yield 3½ percent, is that correct?

A. I do not believe I said "should be".

Q. What did you say?

A. I said under present conditions, I believe the most economical method of financing publicly a company like Michigan Gas Transmission Corporation, assuming a total capitalization of $13,000,000, would be to set up a capitalization of one-half serial bonds and one-half common stock.

Q. What is wrong with my statement? I thought I said [fol. 8431] just that, except in much fewer words.

A. My opinion is, to finish that paragraph, my opinion is that the following setup would be favorably received by the investing public. I did not say the capitalization "should be" what follows.

Q. Do you consider that capitalization fair and proper?

A. Yes.

Q. For purposes of determining the rate of return for this proceeding?

A. I made that calculation, that hypothetical setup, for the purpose, among other things, of testing out the capitalization along the lines suggested to see where we would arrive in the matter of return, earnings divided by market value of capital.

Q. Then you did use a capital structure which comprehended 50 percent of bonds in arriving at your estimate of 8½ percent rate of return, didn't you?

A. My purpose there was more to test out my conclusion rather than to have it contribute to the conclusion.

Q. We want to do a little testing too, and we want to know whether you agree that it is right to test your method by the same test that you used, namely, the use of a capital structure with a 50 percent bond feature.

Now, do you have any objection to that?

A. Not in the least.

[fol. 8432] Q. Do you think it is fair to do it that way?

A. Certainly it is fair, indeed.

Q. Before we do that, you assume a 3½ percent return on the bonds, do you not? A. Yes.

Q. Now, assuming a capital structure having 50 percent of bonds yielding 3½ percent, such a set-up would require earnings of $1.75 per $50 of bonds, isn't that correct?

A. Yes.

Q. Assuming that 50 percent of the capital stock was floated through an issue of common stock, which I believe is one of the assumptions you made—

A. (Interposing) You mean 50 percent of capitalization in common stock.

Q. Yes. Now, assuming that 50 percent of the capital were floated through an issue of common stock having an earnings-price ratio of 6.96 percent, the cost of $50 of such capital would be $3.48, wouldn't it?

A. For each $50 of market value of the stock, yes.
Q. Of the market value of the stock, right.

Now, let's go back. We have $1.75 of earnings requirement for $50 of bonds and we have an earning requirement of $3.48 for $50 of common stock, do we not? I am merely summarizing.

A. Repeating, yes.
[fol. 8433] Q. Is that right?
A. Yes.
Q. What would be the cost of capital per $100 raised in that manner, expressed in percent?
A. 5.22 percent.
Q. 5.23 percent? A. 5.23 percent.
Q. Now, in this calculation, we have used your interest rate of 3½ percent on the bonds, haven't we? That is the interest rate that you used to test your rate of return?
A. The coupon rate, yes.
Q. And you have used the 6.96 per cent return which the 1936 investor in the 30 Dow-Jones industrials is today receiving upon his 1936 dollars, is that right?
A. That is the figure you suggest, yes.
Q. Yes, and the resulting rate of return indicated is 5.23 percent, is that right?
A. Yes.
Q. You used a coupon rate of 3½ percent on bonds for Michigan Gas Transmission Corporation, is that right?
A. Yes, sir.
Q. Isn't it a fact that Panhandle Eastern Pipe Line Company has, in the year 1941, paid an average rate of 2.74 percent on its outstanding bonds and long-term debt?
A. I have not made that calculation.
[fol. 8434] Q. Well, have you examined Mr. Coffman's exhibit which shows that?
A. Yes, but I do not recall the figure.

Mr. Baldridge: Which exhibit was that in Mr. Littman?

Mr. Littman: In Exhibit No. 65, and, also, I believe Exhibit No. 64.

Mr. Baldridge: The reason I asked is that the witness said he had never seen Exhibit 65.

By Mr. Littman:

Q. I hand you a copy of Mr. Coffman's Exhibit No. 64 and refer you to Appendix C, Page 131, and ask you to state whether it is a fact that Panhandle Eastern Pipe Line Company, as shown on that page, had no long-term debt that exceeded 3 percent in 1941.

A. I believe that is correct, in accordance with this statement.

Q. And it also had some long-term debt that was below 3 percent, isn't that right?

A. Yes,

Q. Does 2.74 sound reasonable or about right to you?

A. That sounds reasonable on the basis of that exhibit.

Q. Well, that is the amount that is shown in this Exhibit No. 65, but inasmuch as you examined his Exhibit 63 and 64 I wanted to show you where it appeared in those latter exhibits.

[fol. 8435] Now, do you know the interest rate on the $10,000,000 of bonds that were issued by Panhandle Eastern Pipe Line Company in February of 1942 in connection with its refinancing program?

A. Well, I think they were 3 percent bonds, were they not?

Q. Three percent. That is your understanding of it, isn't it?

A. Yes.

Q. Now, you know that the proceeds from those bonds are being used for the purpose of purchasing, at least in part, the securities of Michigan Gas Transmission Corporation, do you not?

A. Yes, that is my understanding.

Q. Now, in view of those circumstances, don't you want to revise your 3½ percent rate for bonds?

A. No, sir.

Q. Do you want to revise your 8½ percent in view of the changed conditions?

A. No, sir.

Trial Examiner: Would it be a fair inference, Mr. Drew, from your testimony, from the statement that you have made, that the financial situation from the standpoint of any future financing has deteriorated instead of being strengthened by the recent change in the ownership of securities?

[fol. 8436] In other words, a very important change in ownership has occurred during the course of your testimony and it is a fair question to ask you whether your conclusion are the same, irrespective of that new ownership.

The Witness: With respect to Panhandle Eastern or Michigan Gas Transmission Corporation?

Trial Examiner: Michigan Gas Transmission Corporation, I assume, is now a wholly-owned subsidiary of the Panhandle Eastern Pipe Line Company. Is that not right?

Mr. Littman: That is my understanding.

Trial Examiner: Does that fact in any way affect the prospective cost of money for capital which the future may require?

The Witness: I should not expect any change on that account, no, sir.

Mr. Lee: Despite the fact that the actual cost of the money and the transaction recently consummated is less than 3½ percent for the bonds?

The Witness: Yes, sir, that is correct.

Mr. Lee: Well, why should not actuality take the place of theory?

The Witness: Well, I think we can refer to actuality [is] this way: At the time that I made my calculations last fall for the direct testimony, in which I referred to the four natural gas pipe line companies, I originally had Panhandle [fol. 8437] Eastern Pipe Line Company in the group, making five in all. I decided that it was better to omit it because it was a related company tied in with the general pipe line system. I will be glad to refer to it now and I have here the calculation which I made at that time, about October 25, 1941, made at the same time that I made the other calculations and on the same basis.

At that time Panhandle Eastern had outstanding 6,250,000 first serial A bonds, 12,000,000 first mortgage 3 percent bonds, which had been offered to the public in January of 1941, and 5,000,000 of serial notes which had been sold at par to bankers in January, 1941.

Then, that was followed by two classes of preferred stock and 807,367 shares of common no par.

Applying market value to the 12,000,000 of bonds and using par value for the serial A bonds and the serial notes and using a price of $40 per share for the common stock, which seemed fair in view of the fact that in 1940 the price had ranged from 17½ to 41⅜ and on September 30, 1941, it was 41¾ bid,—applying then the $40 per share to the common stock we came out with a grand total capitalization of $68,245,000.

The company reported earnings for 1940 of $5,714,000 and dividing the one by the other we arrived at an 8.4 percent return of actuality in income divided by the market [fol. 8438] values of those securities, the aggregate market value of the securities as of approximately November 12, 1941.

Trial Examiner: In preparation for this testimony, did you make a similar analysis of Columbia's financial status?

The Witness: No, sir, I did not. This was made on the basis of its being a representative natural gas pipe line company similar to El Paso, Southern, Memphis and Interstate.

Trial Examiner: The reason for the last question was that you seemed to speak with confidence that there is no substantial effect from the change of ownership and I wondered if you had confidence in your own familiarity as a basis for that expression.

The Witness: Well, I must state, Mr. Examiner, that I am not familiar with the details of the financial structure of either Columbia Gas & Electric or Panhandle Eastern.

Trial Examiner: But it is customary, is it not, for changes of affiliations to change financial strength in the market?

The Witness: I do not think it necessarily follows, no, sir.

Trial Examiner: Not necessarily, but I say it frequently occurs, does it not, that a company may be strengthened by new affiliations, for instance?

The Witness: Well, I think that is correct, I think it also could be weakened.

[fol. 8439] Trial Examiner: And in this case you think there has been no substantial effect?

The Witness: Well, based on my limited knowledge of the two companies, I would not expect any change in that regard.

* * * * * * * *

By Mr. Littman:

Q. Mr. Drew, would you be willing to accept as accurate the representations made to the Securities and Exchange Commission with respect to whether or not the acquisition of Michigan Gas Transmission Corporation by Panhandle Eastern Pipe Line Company will improve the financial condition of Michigan Gas and of Panhandle Eastern?

A. If I were attempting to arrive at a considered opinion on that matter, I certainly would give great weight to the opinion expressed by the S. E. C.

Q. Do you mean by your answer that you have not arrived at a considered opinion in that regard?

A. On that point, that is correct.

Mr. Littman: Mr. Culton and Mr. Baldridge, is my impression correct that representations were made by the officers of Panhandle Eastern Pipe Line Company before the Securities and Exchange Commission to the effect that the acquisition by Panhandle Eastern Pipe Line Company of the outstanding stock and the securities of [fol. 8440] Michigan Gas would improve the financial condition of both those companies?

Mr. Culton: Why, Mr. Littman, counsel would not undertake, where they had never heard the proceedings of the investigation or read the proceedings of the investigation, to state a conclusion as to what representations were made.

My suggestion is that you have before you the press release, the opinion of the S. E. C., the documents filed by Panhandle Eastern with the S. E. C. and in evidence, most of them, and we stand by what they say. Manifestly, Panhandle Eastern thought that this would be a good deal for it or it would not have insisted that the deal be made. We know that.

Mr. Littman: And manifestly, the Securities and Exchange Commission would not have approved the acquisition had it not felt it in the interest—

Mr. Culton: (Interposing) I think they have some kind of a finding along those lines.

By Mr. Littman.

Q. Mr. Drew, in response to an inquiry by Mr. Lee, I believe, you stated that the over-all investor's appraisal of risk of securities of Panhandle Eastern Pipe Line Company was 8.4 percent?

A. That was my calculation, yes, sir.

Q. As of what date?

A. Approximately November 1.

[fol. 8441] Q. What were the earnings that you used in arriving at this 8.4 percent figure?

A. $5,714,218.

Q. Investors at that time knew that there was pending before the Federal Power Commission this rate investigation, did they not?

A. Investors, you say, knew that this litigation was pending? A. Yes.

A. Well, I am sure that there had been some notices in the press to that effect. They had the means of finding out, certainly.

Q. Certainly they were not in complete ignorance of that fact, were they?

A. My trouble in answering your question is that you generalize on the word "investors". That is a pretty broad term.

Q. You used the term "investors" when you state "investor's appraisal of risk" and I am using the precise term.

A. Then you mean the people who own the stock?

Q. People that own the stock—

A. (Interposing) Of this Panhandle Eastern?

Q. The bonds and preferred stock.

A. Yes, they should have known.

Trial Examiner: The advisory organizations all knew, [fol. 8442] of course, did they not?

The Witness: Yes.

Order of Securities & Exchange Commission Denying Applications in Part and granting Applications in Part	10842	4087
Supplemental Order of Securities & Exchange Commission amending Findings and Opinion	10844	4089
17, Miscellaneous Data concerning Property and Operations of Panhandle Eastern Pipe Line Company	10848	4090
Schedule 1, Panhandle Eastern Pipe Line Company System Compressor Stations	10848	4090
Schedule 2, List of Communities receiving Service directly or indirectly from Panhandle Company including Population and Number of Customers as of June 30, 1941	10849	4091
Schedule 3, List of Industrial Customers receiving Service direct from Panhandle Company System, June 30, 1941	10853	4099
Schedule 11, Panhandle Eastern System Summary — Miles of Pipe by Sizes, June 30, 1941	10926	4101
30, Testimony of Rufus M. Smith	10958	4103
Schedule 2, Estimated Original Gas Content in the Texas Panhandle Field under Acreage constituting Reserves of Panhandle Eastern Pipe Line Company as of July 1, 1941	10986	4125

	Original	Print
Schedule 3, Estimated Remaining Gas Content in the Texas Panhandle Field under Acreage constituting Reserves of Panhandle Eastern Pipe Line Company as of July 1, 1941	10987	4125
Schedule 5, Comparison of Open Flow Potentials in Texas Panhandle Gas Field	10990	4129
Schedule 6, Gas Acreage owned and under Gas Purchase Contracts held by Panhandle Eastern Pipe Line Company as of June 30, 1941	10991	4131
Schedule 7, Hugoton Production to Argus Natural Gas Company, Inc. by Panhandle Eastern Pipe Line Company, et al	10992	4133
Schedule 8, Texas Production to Panhandle Eastern Pipe Line Company	10993	4135
Schedule 9, Hugoton Production to Panhandle Eastern Pipe Line Company	10997	4143
Schedule 10, Hugoton Production to Panhandle Eastern Pipe Line Company	11000	4149
Schedule 11, Analysis of Cumulative Production to Main line to and including Fiscal Month of June 1941	11003	4155
Schedule 12, Comparative Statement of Production and Purchases from each District for the two Years ended June 22, 1940 and June 22, 1941	11004	4157
36, Testimony of Glenn G. Bartle	11010	4159
Schedule 3, Estimated Original Gas Content in the Hugoton Field, (Kansas, Oklahoma and North Texas Panhandle), under Acreage constituting Reserves of Panhandle Eastern Pipe Line Company as of July 1, 1941	11038	4176
Schedule 4, Estimated unmetered Gas from Panhandle Eastern Pipe Line Company Wells in the Hugoton Field Kansas, connected to Argus Natural Gas Company, Inc. as of July 1, 1941	11041	4181
37, Testimony and Exhibits, Market Value of Leases of Panhandle Eastern Pipe Line Co.	11042	4187
R. J. Wallace	11047	4187
Summary of Market Value of Leases	11064	4199
38, Basic Statistics used in calculating Interest, ad valorem Taxes and operating Expense attributable to unused Capacity	12159	4203
39, Reproduction Cost New of Plant, Property and Business of Panhandle Eastern Pipe Line Company and subsidiary Companies as of June 30, 1941	12162	4206
Letter P. McDonald Biddison, Consulting Engineer, to Panhandle Eastern Pipe Line Company, August 29, 1941	12163	4206
Statement relating to Reproduction Cost—New—June 30, 1941	12164	4207
Summary	12165	4207
39-A, Reproduction Cost New of Plant, Property and Business of Panhandle Eastern Pipe Line Company and subsidiary Companies as of June 30, 1941	13130	4208
Letter P. McDonald Biddison, Consulting Engineer, to Panhandle Eastern Pipe Line Company, August 29, 1941	13130	4208

	Original	Print
Statement relating to Reproduction Cost New—June 30, 1941	13131	4209
Summary	13133	4209
40, Table showing estimated Main Line Sales, years 1941-1946, inclusive	13149	4211
41, Graph showing Sales and Gas Plant by Years, Panhandle Eastern Pipe Line Company and Subsidiary Companies	13150	4213
42, Testimony of C. H. Hinton relating to Future Capital Expenditures and Operating Expenses in Production and Gathering System West and South of Liberal, Kansas	13151	4215
43, Schedules presented in connection with the written Testimony of C. H. Hinton	13193	4244
Schedule 1, Additional Capital Expenditures required to produce and gather Basic Load, or Present Requirements	13194	4244
Schedule 2, Additional Capital Expenditures required to produce and gather Anticipated Increased Load	13195	4244
Schedule 3, Estimate of Operation and Maintenance Costs -west of Liberal Panhandle Field — Basic Load	13196	4245
Schedule 4, Estimate of Operation and Maintenance Costs — west of Liberal Panhandle Field — Estimated Future Load	13199	4251
Schedule 5, Probable Production from Panhandle Eastern's own Wells and Wells under Gas Contracts (Panhandle Field) during the Period July 1, 1940 to December 31, 1956	13202	4257
47, Panhandle Eastern Pipe Line Company and Subsidiary Companies, future Capital Requirements, Gas Transmission Facilities, Liberal Station and Eastward	13206	4257
48, Statement showing Balance Sheets per Books Panhandle Eastern Pipe Line Company and Subsidiary Companies, as at each December 31, 1930 through 1940 and as at June 30, 1941	13207	4259
49, Income Statement per Books — Period from April 1, 1932 to December 31, 1941	13210	4265
50, Statement showing Earned Surplus per Books, Period from Commencement of Operations to June 30, 1941	13212	4269
51, Statement showing Capital Surplus per Books, Period from September 1, 1930 to June 30, 1941	13214	4273
52, Statement showing Investment in Gas Plant as at each December 31, 1930 through 1940 and as at June 30, 1941	13215	4275
53, Statement of Dividends paid on Class A and Class B Preferred Stocks from beginning to September 1, 1941	13217	4279
54, Statement of Dividends paid on Common Stock from beginning to September 1, 1941	13219	4280
55, Statement showing Comparison of Sales and Revenue, Principal Industrial Customers, years 1939, 1940 and 1941	13220	4281
55-A, Statement showing Comparison of Sales and Revenue, Principal Industrial Customers, years 1939, 1940, and 1941	13221	4283
56, Statement of Gas Produced, Period from April 1, 1932 to June 30, 1941	13222	4284
57, Statement of Gas Purchased, Period from April 1, 1932 to June 30, 1941	13223	4285

	Original	Print
58, Statement of Gas Revenue, Period from April 1, 1932 to June 30, 1941 and Schedule showing Detail of Sales to various Types of Customers, 1939 and 1940	13224	4287
Schedule 1, Statement of Gas Revenue, Period from April 1, 1932 to June 30, 1941	13224	4287
Schedule 2, Detail of Sales to Gas Utilities, years 1939 and 1940	13225	4289
Schedule 3, Detail of Sales to Industrial Customers, years 1939 and 1940	13227	4293
59, Statement of Gas Revenue by States, Period from April 1, 1932 to December 31, 1941	13229	4297

By Mr. Littman:

Q. The investors were, on that date, discounting the possibility of a rate reduction, were they not?

A. I cannot answer that question. I think there were notices in the press to that effect but I cannot say that the investors were discounting it.

Q. Can you state whether or not the investors on that date were anticipating higher taxes in 1942 and in 1941?

A. On what date?

Q. On the date as of which you computed your 8.4 percent "investor's apprajsal of risk."

A. I think they were anticipating higher taxes for 1942.

Q. Were they anticipating higher taxes in 1941?

A. The bill was already out at that time.

Q. Yes, and they knew at that time that that bill, with the higher tax provisions in it, would apply to the revenues in the next year succeeding, did they not?

A. I understood that bill to apply to 1941 earnings.

Q. When you purchased securities on behalf of your banking institution in 1940, didn't you have pretty definitely in mind a tax increase to be applied for the year 1941?

A. Yes.

Q. Yes, and you discounted the present earnings be- [fol. 8443] cause you knew that you could not expect to receive the earnings next year that you were receiving today, isn't that right?

A. I would not state is just that way.

Q. Suppose you state it in your own language. We all know it to be axiomatic.

A. First, let me ask you—are you speaking of bonds or stocks?

Q. I am speaking of stocks.

A. You are speaking of stocks?

Q. Yes.

A. Well, I should say that in the purchase of stocks in 1940, we certainly were anticipating higher taxes for 1941. We had no way of knowing whether the net after taxes would be higher or lower for the year 1941. As a matter of fact, I think in many cases they were higher after taxes.

Q. And the earnings which you required on the securities in your portfolio were discounted for the increased tax rates that you knew were coming in 1941 when you purchased those securities in 1940, isn't that correct?

A. No, that is not quite correct. When a trustee purchases common stocks for a trust account, he is more likely to take a long-term view of the value of the securities than is perhaps an individual who makes such a purchase because it is much more likely that the trustee will continue to retain that stock through lower markets and through [fol. 8444] higher markets, provided the condition of the company, the position of the company and the excellence of its management and the return in dividends on his purchase remain favorable.

Q. You mean to say you ignore the fact that taxes are going up?

A. No, I did not say that.

Q. You take it into account, don't you?

A. Certainly.

Q. When you consider the earnings?

A. Yes, but there are many other factors, is what I mean to say.

Q. I did not mean to be wholly exclusive when I mentioned the item of taxes. That is one of the items, isn't it, that you consider? A. Yes, sir.

Q. And when you buy utility stocks during the course of a pendency of a rate investigation, you take into account the possibility of a rate reduction, do you not?

A. Yes.

Q. Now, this 8.4 percent earnings price ratio reflects the earnings on the Class A cumulative preferred stock; does it not?

A. The 8.4 percent is the total income for 1940 after depreciation and taxes.

Q. Yes, and some of that income, a large part of it, as [fol. 8445] a matter of fact, went to service the Class A cumulative perferred stock of Panhandle Eastern, did it not?

A. Well, I repeat that the 8.4 percent is the earnings figure divided by the aggregate market value of all of the securities outstanding at that time.

Q. Now, at that time, how much cumulative preferred stock was outstanding of the Class A type?

A. Class A—100,000 shares.

Q. What was the market value?

A. There was no market for the stock and the only way I could get at the figure reasonably was to use its call price.

Q. What was the call price?

A. Par value $100 and call price $110.

Q. What is the total for that class of stock?

A. 100,000 shares—$11,000,000.

Q. $11,000,000. A. Yes.

Q. And none of that stock was outstanding in the hands of the public?

A. That is my understanding.

Q. The holding company, namely, Columbia Oil & Gasoline Corporation, owned all of that stock, isn't that right?

A. I believe that is correct.

Q. Then you do not have any real appraisal of earnings in so far as that stock is concerned, do you?

[fol. 8446] A. Not based on market quotations or sales.

Q. There were no market quotations and there were no sales, is that right?

A. That is my understanding.

Q. And you know that one of the things that the Securities and Exchange Commission was extremely anxious to get rid of was this $11,000,000 of Class A preferred stock, don't you, in the capitalization of Panhandle Eastern?

A. I do not know the story back of the recapitalization.

Q. Do you know whether Panhandle Eastern Pipe Line Company itself was extremely anxious to get rid of that $11,000,000 of Class A cumulative preferred stock?

A. No, sir, I am not familiar with their reasons.

Q. As a matter of fact, you know that that Class A stock had a participating dividend feature, do you not?

A. It is called a participating preferred.

Q. You know, do you not, that the holders of the Class A preferred stock had a right to participate in the dividends paid on the common stock, do you not?

A. I assume that that is the meaning of participating preferred. I do not know the terms.

Q. Do you know the Class A preferred stockholders had been receiving something like 10 percent on their holdings for the past few years?

A. No, sir.

[fol. 8447] Q. And assuming that to be the fact, all of that is reflected in your 8.4 percent, so-called "Investor's appraisal of risk", is it not?

A. I do not take it so, no.

Q. What would the 8.4 percent reflect, all of the earnings on all of the outstanding securities, doesn't it?

A. Yes, but it has no reference to where it goes. It might go to a 6 percent bond or 3 percent bond for interest charges or it might go to 6 percent preferred or it might be held over for common stock. It is a net figure available for capital uses, capital charges.

Q. And one of the reasons why we are here today is to determine whether or not Panhandle Eastern is entitled to have that much available, namely, 8.4 percent, isn't that a fact?

A. Well, Michigan Gas Transmission Corporation is the case, as I understand it.

Q. All right. Well, that is another one of the reasons why we are here, of course, but one of the reasons is because we are going to ascertain whether or not the 8.4 percent it reasonable in the first instance, is that not right?

A. Are you telling me if is the case?

Q. I am asking you.

A. I do not know.

Q. Don't you know that the reasonableness of the rates of Panhandle Eastern Pipe Line Company is one of the [fol. 8448] main issues in this proceeding?

A. Well, so far as my testimony and study of the situation is concerned, I am familiar only in a general way with the Michigan Gas Transmission Corporation.

Q. Well, I appreciate that you have not offered any testimony on the question of rate of return applicable to Panhandle Eastern, but I am asking you whether you know or do not know whether the rates of Panhandle Eastern Pipe Line Company are, also, being investigated here in this proceeding?

A. My impression is that they are.

Q. Assuming that to be the fact, and I assure you it is, the rate of 8.4 percent is, itself, in question here, is it not?

A. I think you might say that, yes, at least the figures which produce the 8.4 are in question.

Q. Now, if that is the very question before us, we certainly cannot use the 8.4 percent as a guide for the determination of the reasonableness of that percentage in the first place, can we?

A. I think that is correct and that is the reason we left it out.

Q. That is why you left it out?

A. I spoke of it only because Mr. Lee, I think, brought up the question of actuality which I tried to answer for him, so far as I was able.

Q. Mr. Drew, at Page 1917 of the transcript, you make [fol. 8449] the following statement:

"Now, as to the bonds, the interest the first year would be $22,500 which, I believe, would have to be covered at least five times after taxes."

Is that your testimony? A. Yes, sir.

Q. You have not changed your mind about that since you testified here on direct examination? A. No, sir.

Q. Notwithstanding the recent Panhandle Eastern financing?

A. No, sir.

Q. Now, will you show us any bonds that you consider comparable anywhere in the "Financial World" which has interest covered five times and is selling to yield at 3½ percent?

A. Well, I have not any comparable securities because there are so few natural gas pipe line bonds outstanding.

Q. Well, I ask you to give us one that you consider as comparable as possible. You have a list.

A. It is the same kind of thing, I believe.

Q. May I ask what you are now reading?

A. This is called "The Bond Tabulator", published by Nathan Publishing Company of New York City.

Q. Mr. Drew, may I interrupt for a moment, please?

A. Yes.

Q. Did you have any such company in mind when you [fol. 8450] testified on direct examination in this proceeding?

A. I had no one company in mind, no, sir.

Q. And you do not have any in mind, offhand, now, either, do you?

A. Not offhand, no. On that point, however, I think you would have to give some consideration, considerable weight to the fact that this would be a serial bond issue and the company has to make earnings to gradually retire the bond issue as well as to cover interest charges.

Q. Well, that would tend to make the bonds more secure than otherwise, would it not?

A. Well, on the point that we are talking about, it would tend to raise the necessary coverage of the interest rate of the bond.

Q. Would such a bond cost more than another kind.

A. Cost more.

Q. I refer to cost as interest.

A. You mean a serial bond?

Q. Yes, wouldn't the interest cost on a serial bond be greater than the interest on one without the serial provision, all other things being equal?

A. All other things being equal, I think it would be a little lower interest on the serial bond.

Mr. Baldridge: So we are clear on it, you used interest cost, Mr. Littman, and the witness used interest rate.

[fol. 8451] Mr. Littman: We are talking about the same thing.

Mr. Baldridge. Yes, but from different angles.

By Mr. Littman:

Q. Have you been able to find a bond in your bond list that has an interest coverage of five times which yields 3½ percent?

A. Well, I perhaps could find some bonds of that character, but I would want to make a little further study to see whether I considered the companies comparable and the issue comparable.

Q. Well, didn't you first consider that before you testified on direct examination and used that factor in arriving at your claimed 8½ percent rate for this company?

A. Not in a specific way, no, for the reason that my work is pretty much inclusive of that sort of a consideration almost every day.

Q. Suppose you just name one or two bonds that you can find in your list or anywhere in the financial world, pipe line companies or otherwise, that have an interest coverage of five times and an interest yield of 3½ percent on its bonds?

A. Well, without claiming that they are comparable to Michigan Gas Transmission Corporation, just looking this over, in order not to take too much time, here is Public Service Electric and Gas, first mortgage bonds, rated [fol. 8452] AAA covering their fixed charges 4½ times and yielding 3.6 percent.

Q. What is the call price on that bond?

A. It is non-callable.

Q. What is it selling for?

A. This gives the market as 221, it is a high coupon bond, you see, it is a 4½ percent coupon.

Q. You mean it is selling at, did I understand you to say, 221?

A. Yes. No, I am sorry, the interest rate is 8 percent on this particular bond, long-term, due in 2037, covers its fixed charges 4½ times and yields 3.6.

Q. Are you giving the current yield or the yield at maturity?

A. The yield at maturity.

Q. The bond is selling at more than twice par, is it?

A. That is right.

Q. Incidentally, you would not make any claim that that is anything like comparable to Michigan Gas Transmission Corporation, would you?

A. No, I do not think so.

Q. What is the next one? By the way, the coverage is 4½ times there, is it not?

A. Yes.

Q. You have used 5.

A. Yes, I was picking them when they were close. These [fol. 8453] are grouped by classification, so I have to step down to a 2A and a 1A to get your figures for you.

Q. By the way, isn't Public Service kind of stuck with that bond?

A. Well, of course, they would like to have it callable at about 105.

Q. Your answer to my question is yes?

A. Yes.

Q. You would not suggest that Michigan Gas Transmission Corporation be inflicted with that kind of a bond, would you?

A. No, sir.

Mr. Baldridge: Mr. Littman, while you are waiting between questions, I would like to suggest that if you want a real answer to that question about similar bonds, that you give Mr. Drew a little time to look them up because that is something that cannot be picked up in a few seconds.

Mr. Littman: We have been unable to find any comparable bonds of this character and we would like to have our curiosity satisfied with, at least, one example before Mr. Drew leaves the stand, if he will do it for us.

The Witness: Well, as I say, I would like to have more time to satisfy myself that they are comparable. That is the most difficult part of it.

By Mr. Littman:

Q. I hand you Standard & Poor's "Bond Invest- [fol. 8454] ments", issue of September 6, 1941, and ask you to peruse that and see if you can find such a bond. If you find even one we would like to have you give that.

A. I do not see any on this list from a rapid examination of it.

Q. Thank you. Are you still searching for—

A. (Interposing) Shall I continue to do so?

Q. For just another minute, if you wish.

Mr. Drew, I believe you have been looking for about six or seven minutes. About how much longer will it take you to go through that list?

A. Well, to give you a real answer would take quite a time, because I would rather not try to reply without a pretty careful study of it.

Q. Yes. If you find any of such bonds, even if you can find one, we would like to have you advise us.

A. All right.

Q. How long would it take you to conclude your study?

A. Oh, three or four hours, I should think.

Q. Could you do that upon your return to Chicago?

A. Yes.

Q. And let us know next week?

A. Yes.

Mr. Baldridge: Does that mean you are going to want Mr. Drew back?

[fol. 8455] Mr. Littman: No, he can write a letter.

By Mr. Littman:

Q. Now, am I correct in understanding that the one bond to which you have referred that has an interest coverage 4½ times, namely, the Public Service Electric and Gas Company bond, imposes an undue burden, does it not, upon that company?

A. I do not believe it is a very important burden. There is only $7,600,000 outstanding and it is quite a large company.

Mr. Littman: Will you read that answer?

(Whereupon, the last answer was read by the reporter.)

By Mr. Littman:

Q. What is the amount of bonds that you propose under your assumption from the capital structure for Michigan Gas?

A. 6½ million.

Q. About the same amount?

A. Well, it is about the same amount, but it is half the capitalization, whereas the company I just referred to is quite a different situation.

Q. In other words, it would be an extremely heavy burden on a company where 50 percent of its capital structure is represented by such character of bonds.

A. Certainly.

Q. And your suggested capital structure for Michigan Gas Transmission contemplates a 50 percent bond struc-

[fol. 8456] ture, does it not?

A. Yes, sir. The Fitch Bond Record, Mr. Littman, shows the total debt of Public Service Electric and Gas is $175,000,000 debt alone, therefore, that was the reason for my remark that $7,600,000 is a small part of it.

Q. Now, can you show us any bond that you consider comparable anywhere in the financial world which has interest covered four times and selling to yield 3½ percent?

A. Shall we handle that the same way as the other?

Q. Suppose you look for the four times bond now.

A. Providence Gas Company, first mortgage 4 percent bonds, covering the charge 4.6 times and yielding 3.59.

Q. What is that bond selling for?

A. 106 bid.

Q. What is the callable price?

A. 103.

Q. The bond is selling well above call price, is it not?

A. Yes.

Q. Do you know what the prospects of its being called are?

A. No. You see I am only picking these out of a chart. I haven't had a chance to study these, obviously.

Q. You would not consider that comparable to Michigan Gas?

A. I cannot answer that without further study.

Trial Examiner: It is clear you will not conclude your [fol. 8457] cross-examination of Mr. Drew today and I suggest, if you have some other similar requests, you submit them now and, as a matter of saving time, get the answers in the morning.

Mr. Littman: Yes, I have this request.

Can you show us any company anywhere in Mr. Coffman's Exhibits No. 63 and No. 64, which earns its interest requirements five times and whose bonds are selling to yield 3½ percent?

. . . . . .

[fol. 8461] Fred J. Spitznagle a witness, having been previously duly sworn, resumed the stand and testified further as follows:

Cross-examination (Resumed).

By Mr. Chamberlain:

Q. Mr. Spitznagle, Indiana Gas Transmission Corporation had its line of some 122 miles in operation throughout the year 1932, did it not?

. . . . . .

The Witness: It was in operation the whole of the year 1932.

[fol. 8462] Q. That is sufficient; and the line in 1932 extended as far [wast] as King measuring station near Muncie, did it not?

A. Is that information in Exhibit 91?

Q. Yes, I think that is factual, too. At the very bottom of Page 13 it states there were 52.4 miles of 18-inch line extending from Zionsville to a point known as King measuring station located adjacent to Muncie, Indiana.

A. That is right.

Q. Referring to your Exhibits 101 and 103, let me ask whether the sale of gas by Indiana Gas Transmission Corporation and, for the moment, we will confine ourselves to the first two months of 1936, were made wholly to gas utilities or what we know as distributing utilities?

Mr. Baldridge: Are you including in that municipalities?

Mr. Chamberlain: Yes, Mr. Baldridge.

The Witness: That is correct, yes, sir.

Q. Now, in 1936, if the two affiliated companies to which Indiana Gas Transmission was selling gas be eliminated, it had five customers?

A. On the assumption that the only affiliations are Indiana Gas Distribution Corporation and the Ohio Fuel Gas Company. I make that qualification because I am not familiar with these names in relation to the Columbia system.

[fol. 8463] Q. Yes. Now, at that time and I speak again with reference to the first two months of 1936, Indiana Gas Transmission Corporation had a connection with the properties of the Central Indiana Gas Company, did they not?

A. That is one of the companies being served by Indiana Gas Transmission Corporation.

Q. And it is still being served by them?

A. Yes.

Q. They also had a connection with the Indiana Ohio Public Service Company?

A. Yes, sir, that is true.

Q. And, in each instance that I will quote here, they are still serving them, are they not?

A. That is true, yes.

Q. Pendleton Natural Gas Company, they are still serving that company, are they not?

A. Yes, sir.

Mr. Baldridge: As of what date was that, Mr. Chamberlain?

Mr. Chamberlain: The first two months of 1936.

By Mr. Chamberlain:

Q. At that time, they had connections with the properties of the Public Service Company of Indiana, did they not? A. Yes, sir.

Q. And they are still serving them?

A. Yes, sir.

[fol. 8464] Q. Then the only additional customer was that of the Montezuma, the only additional customer?

A. In the first two months of 1936, that is correct.

Q. And they are still serving that municipality?

A. That is correct.

* * * * * * * * *

Mr. Witness, your exhibits show that up to the present time, do they not, that Michigan Gas Transmission is serving each of these five customers?

The Witness: The exhibit shows that, yes. Not up to the present time?

* * * * * * * * *

Q. Now, Mr. Spitznagle, you have divided the year 1936 into two parts, the first of which shows the sales by Indiana Gas Transmission Corporation during the first [fol. 8465] two months of the year and, under the name of Michigan Gas Transmission Corporation, for the latter part of the year. There are certain changes in the second period caused by additions of customers, are there not?

A. Yes, sir.

* * * * * * * * *

[fol. 8466] Q. Now, what amount of gas was sold by Indiana Gas Transmission to these consumers during the two month period?

* * * * * * * * *

[fol. 8467] A. The M.c.f. sales in the first two months of 1936 made by Indiana Gas Transmission Corporation to all companies except Indiana Gas Distribution Corporation and Ohio Fuel Gas Company were 480,776 M.c.f.

Q. May I suggest a correction there? You may be right, but I have 490,776, if you will check that. I may be wrong.

A. You are right, 490,776 M.c.f.

Q. Yes.

A. The dollar amount responsive to those M.c.f. sales I determine as $155,059.31.

. . . . . .

Yes, I see I picked up a wrong figure. $159,161.31 is correct.

Now, the revenue per M.c.f., between 34.4 and 34.5 cents per M.c.f. Is that close enough?

Q. I am afraid it is against you, Mr. Spitznagle. I have 32.43.

. . . . . .

[fol. 8468] A. The figure is 32.43 cents per M.c.f.

Q. Now, that was the average price which was collected during that period for gas sold to those whom we termed to be non-affiliates?

. . . . . .

[fol. 8469] Q. (Interposing) If you will do that, I shall change the question and ask for them in order. No. 1 is Central Indiana Gas Company. What was the revenue per M.c.f.?

A. 30.976 cents.

Q. The revenue from Indiana Gas Distribution Corporation, which is the affiliated company?

A. 50 cents.

Q. The revenue from Indiana-Ohio Public Service Company?

A. 50 cents.

. . . . . .

[fol. 8472] Q. Now, what was the revenue derived during this period from Ohio Fuel Gas Company?

A. 22½ cents per thousand cubic feet, that is.

Q. Yes, and that, as was indicated, was a large account of apparently a temporary nature?

A. I do not know how temporary it was. It was an account that did not continue after 1936 in any large quantities.

. . . . . .

What was the revenue per M.c.f. from Pendleton Natural Gas Company?

A. 55 cents per thousand M.c.f.

Q. And from the Public Service Company of Indiana?

A. 35.611 cents per thousand M.c.f.

Q. And from the Town of Montezuma, Indiana?

A. 52.035 cents per thousand M.c.f.

Q. Now, I would like to get in the record the results of the year 1936 both with respect to the sales, sales revenue and revenue per M.c.f. and the additional customers [fol. 8473] that were procured during that year. What customers were added in the year 1936 after the first two months of the year?

A. Kentucky Natural Gas Corporation, Lynn Natural Gas Company, the Town of Lapel, Indiana, the Town of Pittsboro, Indiana, and the Town of Roachdale, Indiana, and the Michigan Consolidated Gas Company, Detroit.

. . . . . .

[fol. 8474] Q. Now, to make that comparable, would [would] read in the revenue per M.c.f. for each one of those customers?

A. Central Indiana Gas Company—30.199 cents,
Indiana Gas Distribution Corporation—29.003 cents,
Indiana-Ohio Public Service Company—50 cents,
Kokomo Gas and Fuel Company—26.5 cents,
Lynn-Natural Gas Company—50 cents,
Ohio Fuel Gas Company—22.296 cents,
Pendleton Natural Gas Company—55 cents,
Public Service Company of Indiana—34.446 cents,
Town of Lapel, Indiana—49.629 cents,
Town of Montezuma, Indiana—50.461 cents,
Town of Pittsboro, Indiana—53.021 cents,
Town of Roachdale, Indiana—52.368 cents.

. . . . . .

[fol. 8477] Q. Now, with the understanding, Mr. Spitz-
[fol. 8478] nagle, that the detail of the sales in M.c.f., the revenue and the revenue per M.c.f. for the years 1937, 1938, 1939 and 1940 and for the 12 months ending June of 1941 will be set out in a detail to be later presented to you, I wish to ask you to state into the record the total sales per M.c.f. for each of these four or five twelve-months' periods and at the same time give the revenue derived per M.c.f.

* * * * * * * *

[fol. 8479] Q. With the exclusion of the two affiliates.

A. With the exclusion of the two affiliates.

For the year 1937 the M.c.f. sales, excluding the Indiana Gas Distribution Corporation and Ohio Fuel Gas Company, were 6,700,042, the revenue per M.c.f. was 27.316 cents;

For the year 1938 the M.c.f. sales were with the foregoing exclusions, 6,558,681, the revenue per M.c.f. was 28.218 cents;

For the year 1939 the M.c.f. sales were, with the foregoing exclusions, 9,142,406 and the revenue per M.c.f. was 26.952 cents;

For the year 1940 the total M.c.f. sales, with the foregoing exclusions, were 10,096,976 and the revenue per M.c.f. [fol. 8480] was 27.903 cents;

For the 12 months ended June 30, 1941, with the foregoing exclusions, the total M.c.f. sales were 11,344,051, the revenue per M.c.f. sales was 27.7 cents.

* * * * * * * *

[fol. 8481] Q. I would like to have you state one more thing and that is for each of the five annual periods that you have just covered give the sales in M.c.f. without deduction for the affiliates and the revenue per M.c.f. resulting therefrom.

A. For the year 1937 the M.c.f. sales to other gas [fol. 8482] utilities were 7,078,054, the revenue per M.c.f. of those sales was 27.375;

For the year 1938 the M.c.f. sales were 7,680,735 and the revenue per M.c.f. was 28.152 cents;

For the year 1939 the M.c.f. sales were 10,355,402 and the M.c.f. revenue per M.c.f. was 27.066;

For the year 1940 the M.c.f. sales were 11,364,929 and the revenue per M.c.f. of sales was 27.775;

For the 12 months ended June 30, 1941, the M.c.f. sales were 12,692,888, and the revenue per M.c.f. sales was 27.429 cents.

Q. Mr. Spitznagle, the same information with respect to the year 1941 is found in Exhibit 164, is it not?

A. Yes, sir.

Q. And in that exhibit there is a division between the sales to affiliates and non-affiliates?

A. Yes, sir.

Q. Now, in order that this page of the record may be complete to the year 1941, will you give the same figures with respect to the quantity of sales and the resulting price per M.c.f. as a total and, also, without the affiliates?

A. Excluding the afore-mentioned affiliates, the M.c.f. sales for the 12 months ended December 31, 1941, were 13,145,792; and the revenue per M.c.f. of those sales was 27.21 cents.

[fol. 8483] Including the afore-mentioned affiliates, the sales in M.c.f. were 14,458,013 and the sales per M.c.f. responsive to the M.c.f. sales was 26.97 cents per M.c.f.

* * * * * * * * *

[fol. 8484] Q. All right. Now, just one more question. Did you have time to check the figures on Exhibit marked for identification as No. 165?

A. 165 or 166?

Trial Examiner: 165 is the prospective budget.

Mr. Chamberlain: Exhibit 166.

The Witness: Yes, sir, I did.

By Mr. Chamberlain:

Q. To what extent were you able to check them, Mr. Spitznagle?

A. I found all of the information shown in that exhibit correct. I was not able to check the last line captioned, "Indiana Gas Distribution Corporation", for the

reason that no information is in the offices of Michigan Gas Transmission Corporation with respect to that transaction.

[fol. 8485] Q. That is as I anticipated. Otherwise, the quantities shown there are correct?

A. Yes, sir.

Mr. Chamberlain: The Intervenor then offers in evidence Exhibit 166 with the exception of those figures contained in the last line entitled, "Indiana Gas Distribution Corporation" which may be stricken from the exhibit.

* * * * * * * *

Trial Examiner: I have heard no objection to the reception in evidence of this exhibit.

* * * * * * * *

Trial Examiner: The tabulation marked for identification as Exhibit No. 166 will be received in evidence, with the modification which was stated by Mr. Chamberlain, as Exhibit No. 166.

(Exhibit No. 166 was received in evidence.)

Q. Were you able to pick up the gas revenues for the years 1931 to 1935, Mr. Spitznagle?

A. Yes, sir.

Q. What then, were the gas revenues for those years of Indiana Gas Transmission Corporation?

[fol. 8486] A. Exhibit 166 shows both purchases and sales of gas and I am wondering if you do not wish to correct your question to include both so that I could give you the dollar amount responsive to M.c.f. in each of the Columns 1931 to 1935, inclusive?

Q. That is exactly correct, but I had assumed the figures you would find more easily would be the gas revenues which would cover all of the gas sold by each of the companies. If you have it broken down, I will be glad to have it.

* * * * * * * *

A. In Column 1931, the dollars responsive to 265,077 M.c.f.'s is $47,713.86.

The M.c.f. amount of 12,212 and the dollar amount is $2,747.70.

The Column 1932, the dollar amount responsive to the 1,834,120 M.c.f. was $330,141.60.

The dollar amount responsive to the 215,048 M.c.f.'s is $48,385.81.

The dollar amount responsive to the 1,521 M.c.f. is $760.45.

The dollar amount responsive to the 2,336 M.c.f. is $1,097.92.

In the column headed "1933," the dollar amount responsive to the 1,611,437 M.c.f.'s is $290,058.66.

[fol. 8487] The amount responsive to the 55,384 M.c.f.'s is $12,461.41.

The amount responsive to the 7,428 M.c.f.'s is $3,714.

The column headed, "1934", the dollar amount responsive to the 1,726,349 gives $310,742.82.

. . . . . .

[fol. 8488] The Witness: We were talking about the column headed "1934".

[fol. 8489] The 84,034 M.c.f.'s is responsive to the dollar amount of $18,907.67.

The dollar amount responsive to [to] 13,029 M.c.f.'s is $6,514.50.

The dollar amount responsive to the 3,370 M.c.f.'s is $1,583.90.

The column headed "1935", the dollar amount responsive to the 2,369,654 M.c.f.'s is $426,537.72.

The dollar amount responsive to the 315,964 M.c.f.'s—

. . . . . .

A. 315,984 M.c.f.'s is $71,096.42.

The dollar amount responsive to the 25,279 M.c.f.'s is $12,639.50.

The dollar amount responsive to the 37,195 M.c.f.'s is $17,481.65.

Q. Now, I am lacking one set of figures that I need to complete that and on which I think perhaps my question lacked clarity, and that would be the gas revenues of Indiana Gas Transmission Corporation. The exhibits which have been introduced in this proceeding on behalf of Panhandle Eastern have covered the period from April 1, 1932, to date, and, in order to work these up in a comparable way, I should like to ask you, upon your return [fol. 8490] to the stand, to give the amount of gas revenues received by Indiana Gas Transmission Corporation from the time of the commencement of business until the end of February 1936, by years.

* * * * * * *

Mr. Littman: Mr. Examiner, we have no further questions to ask Mr. Spitznagle at this time. However, during the course of his cross-examination, I asked him to state the names of the present members of the Board of [fol. 8491] Directors of Michigan Gas Transmission Corporation and the officers of that company. He stated he did not know but counsel suggested—

Mr. Culton: (Interposing) He is in a position to give them to you.

Mr. Littman: Do you have those now?

The Witness: Yes, I can give them to you.

Mr. Littman: Mr. Spitznagle, will you please give us the names of the present members of the Board of Directors of Michigan Gas Transmission Corporation?

The Witness: The names of the Board of Directors of Michigan Gas Transmission Corporation as of today, February 28, 1942, are: Joe D. Creveling, W. G. Mortland, R. C. Patterson, Jr., W. G. McGuire and H. H. Heimann.

Mr. Littman: Who is Chairman of the Board?

The Witness: That I do not know.

Mr. Littman: When were these Directors elected?

The Witness: Prior to today and after—I do not believe I have that information.

Mr. Littman: Perhaps Mr. Young has the information.

Could you give us the date on which these members were elected to the Board of Directors?

Mr. Young: I believe, February 6, 1942.

Mr. Lee: Are any of these Directors you have just named also Directors at the present time of Panhandle [fol. 8492] Eastern Pipe Line Company?

The Witness: Perhaps so, but I am not very well acquainted as to who the officers and Directors of Panhandle Eastern Pipe Line Company are.

Trial Examiner: Does counsel care to complete that statement?

Mr. Culton: I think all of them are but I would not say that definitely. I know some of them are.

Mr. Lee: Are any of these Directors whom you have just named Directors of Columbia Gas & Electric or Columbia Oil Company or any of its affiliates?

The Witness: I would have no information on that.

Mr. Culton: None so far as I know. Mr. Baldridge answers the same way. How about you, Mr. Young?

Mr. Young: I do not believe any of them are on the Board of Directors.

Trial Examiner: These statements are a bit vague. I do not know what Mr. Littman has in mind but the statement is vague and I think—

Mr. Littman: (Interposing) I was going to have him next name the present officers of Michigan Gas Transmission Corporation.

Trial Examiner: Do counsel care to supply the information just suggested?

Mr. Culton: If I am wrong and there are any of these [fol. 8493] Directors who are not also Directors of Panhandle Eastern Pipe Line Company, we will advise the Examiner. As I stated, my understanding is that all of

them are also Directors of Panhandle Eastern Pipe Line Company.

Trial Examiner: The point is, we should not have to waste any time on the record to get those simple facts.

Mr. Culton: I don't know.

Trial Examiner: You will supply the information?

Mr. Culton: We will advise you if there is one of them who is not a member of Panhandle Eastern's Board and, frankly, we know nothing about any of them being members of either of the Columbia Boards.

Mr. Littman: In other words, we may assume, unless advised to the contrary, that all of the present members of the Board of Directors of Michigan Gas are also members of the Board of Panhandle Eastern Pipe Line Company, is that right?

Mr. Culton: That is right. That is your understanding, Mr. Young?

Mr. Young: Correct.

Mr. Littman: Mr. Spitznagle, will you please give us the names of the officers of Michigan Gas Transmission Corporation?

The Witness: The officers of Michigan Gas Transmission Corporation as of today, February 28, 1942, are: Joe D. Crevéling, President; Gerard J. Neuner, Vice-President; [fol. 8494] George S. Young, Vice-President; Leith V. Watkins, Secretary; Louis F. Sperry, Treasurer; Charley D. Jellings, Assistant Secretary; Norman F. Paxton, Assistant Secretary; L. J. Mueller, Assistant Treasurer; and Norman F. Paxton, Assistant Treasurer.

Mr. Littman: We have no further questions.

Mr. Lee: Are all of these officers at the present time of Michigan Gas Transmission likewise officers of Panhandle, holding a corresponding position in Panhandle as they do in Michigan Gas?

Mr. Culton: Except for Mr. Young and Mr. Mueller, that statement is true.

* * * * * * * *

[fol. 8525] GEORGE S. YOUNG, a witness, having been previously duly sworn, resumed the stand and testified further as follows:

Cross-Examination (Continued)

By Mr. Littman:

Q. Mr. Young, when you were last on the stand, I requested you to supply certain information and I shall now take up the items—

Mr. Culton: Don't you have that in written form?

The Witness: Yes, I have.

Mr. Culton: Would you hand it to him? Would it be satisfactory to put it in and cross-examine from that?

Mr. Littman: I believe it would be better to put this information in by question and answer.

Mr. Culton: I thought it might expedite it.

By Mr. Littman:

Q. I ask you to state the leakage on Line D and its laterals which lines have, until this month, been owned by Ohio Fuel Gas Company and operated by Michigan Gas Transmission Corporation. Do you have those figures?

A. I do.

Q. Will you please give them at this time?

[fol. 8526] A. The leakage from Line D extending from Muncie to the Indiana-Ohio State line and from the lateral extending from Line D to a point near Winchester, Indiana, was, for the year 1937,—34,300 M.c.f.

For the year 1938—50,600 M.c.f.;

For the year 1939—24,800 M.c.f.;

For the year 1940—18,100 M.c.f.

In October of 1941, the City of Richmond, Indiana, commenced to take natural gas from the Panhandle Eastern Pipe Line Company and, for the year 1941, the leakage of 28,200 M.c.f. includes the leakage from the lateral serving Richmond and from the short length of additional 16-inch pipe line in the State of Ohio which ties in with the Richmond lateral.

Q. You are speaking of the lines which have recently been acquired by Panhandle Eastern Pipe Line Company from Ohio Fuel Gas Company?

A. That is correct.

Q. Do I understand these leakage figures to represent the difference between the input at King station near Montezuma and the amounts delivered at the various border stations of the various towns served?

A. That is correct. King station is located near Muncie instead of Montezuma.

Q. The figures that you read for the years 1937 to 1940, inclusive, are comparable, are they not?

[fol. 8527] A. That is correct.

Q. But the figure that you read for the year 1941 is not strictly comparable because of the additional lines that were operated in Ohio?

A. By reason of the Richmond delivery, that is correct.

Q. And in the operation of taking over the new lines, to which you have just referred, was there any leakage, I mean to say in making the physical connection?

A. Yes, there may have been some which is not included in this figure.

A block valve which was located very close to the State line has been moved to east of the point where the Richmond lateral takes off and in connection with that shift, as well as in connection with the shift of a measuring station, there was some loss of gas but that is not included in this figure. It was estimated.

Q. That particular loss of gas was occasioned by line purging, was it not?

A. Line blowing, I understand, rather than line purging.

Q. You were also going to furnish data with respect to the repairs made by Michigan Gas on Line D and its laterals. Will you please give us that information?

A. Michigan Gas Transmission Corporation assumed the operation and maintenance of the pipe lines referred [fol. 8528] to in 1936. Our records show that between August 11, 1936 and February 5, 1942, a total of 938 draw bands were installed on the 16-inch pipe line to stop leak-

age and two collar leak clamps have been installed to close leaks in the couplings.

Q. Mr. Young, can you give us the number of those draw bands and leak clamps installed by years?

A. I could furnish that. I do not have it broken down here. It could be furnished, however.

Q. Will you please do that? If you are not available on Monday you may supply it to your counsel who can read it into the record.

A. Very well.

Q. Are any of these repairs which you have just mentioned called coupling repairs?

A. Yes, the installation of the collar leak clamps are coupling repairs.

Q. Will you also furnish us the years in which the two collar leak clamps were installed?

A. Very well.

Q. Now, you have not as yet completed giving all the information with respect to repairs, have you?

A. No.

Q. Will you continue?

A. None of the 16-inch pipe in this pipe line has been replaced except in connection with the installation of an [fol. 8529] orifice meter setting and a main line valve. Since August, 1936, 16 draw bands have been installed to close leaks in the pipe wall and one sleeve has been installed to close a leak in a coupling on the 6-inch lateral pipe line extending to Winchester, Indiana, from the 16-inch pipe line.

A. You will supply the years in which those draw bands and sleeves were installed, will you not?

A. Yes, sir.

Q. Now, you just stated with respect to my request for data relating to whether any pipe was replaced on these lines, that certain pipe was replaced. Will you state where that pipe was replaced?

A. It was at the location where the block valve and the measuring station had been installed prior to the time that the Richmond market was attached.

Q. You mean that was at a point near the Ohio-Indiana State line?

A. That is correct.

Q. Which point was the terminal point of the 16-inch line in 1941?

A. In October.

Q. Now, you say no other pipe has been replaced on these lines?

A. No.

Q. This statement applies from the date in 1936 when [fol. 8530] your company began to operate this line down to date, does it not?

A. Down to the end of 1941.

Q. Do you know whether Ohio Fuel Gas Company made any replacements on these lines since 1936?

A. They have not except on the pipe line leading to Richmond, on the lateral pipe line leading to Richmond, and before that was taken over by us for operation and the Richmond market was attached, they made repairs and replacements in that pipe line—I am speaking of the lateral—in the year 1941.

Q. In the year 1941?

A. That is correct.

Q. Do you know the extent of the replacements made?

A. I have a record indicating changes were made. I do not know how correct it is or whether it represents what was actually done but I do have a map showing the changes that were purported to have been made.

Mr. Baldridge: That line was extensively rehabilitated, was it not?

The Witness: It was extensively rehabilitated.

Mr. Baldridge: That was in 1941?

The Witness: In the fall of 1941 prior to the time that the Richmond, Indiana, market was attached.

Mr. Baldridge: But that rehabilitation was not done by [fol. 8531] Michigan Gas Transmission Corporation?

The Witness: No, that was done by Ohio Fuel Gas Company.

Mr. Baldridge: And you have no direct knowledge of that?

The Witness: I have no direct knowledge. I have a map, though, indicating where replacements were made.

By Mr. Littman:

Q. Do you have any idea how many lengths of pipe were replaced?

A. I do not at this time.

Q. What is the length of that line, the Richmond line, approximately?

A. About 12 miles.

Q. You do not know how many miles of pipe were replaced?

A. I do not, at this time.

Q. Could you readily ascertain that?

A. Yes, that is, as can be ascertained from this map that I have.

Mr. Culton: Does the map show the number of pipe lengths?

The Witness: It was a 10-inch pipe line and, in rehabilitating it, they substituted 8-inch where replacements were necessary. The map which I have shows the amount of 8-inch line put into the pipe line.

By Mr. Littman:

Q. If you will furnish that to counsel, we will then have the statement in the record. I understand you are not [fol. 8532] going to be in town next week.

A. That is correct.

Q. Now, what is the source of the data which you have given with respect to these repairs and replacements?

A. The source is from reports which have been furnished to the Detroit office of the Michigan Gas Transmission Corporation by our field men. I am referring to the repair work done on the 16-inch line in the State of Indiana and to the later D-172 going to Winchester.

Q. What is the manner in which that data has been supplied?

A. It is furnished on periodic reports submitted by the field foreman.

Q. And those reports are on file in your Detroit office?

A. They are.

Q. You were going to furnish us the location of a leak on Line A. Are you prepared to give us that information?

A. Yes.

Q. Very well.

A. One leak was located in Section 2, Union Township, Parke County, Indiana, at a point about 17 miles east of the Montezuma compressor station. A second leak was located in Section 20, Jackson Township, Putnam County, at a point about 31 miles east of Montezuma compressor station.

Q. Can you give us the station number?

[fol. 8533] A. I am unable to identify those by station numbers at this time.

Q. You could secure that for us, couldn't you?

A. Approximately, yes. I could get the approximate station number, but I do not think I could tie it down exactly.

Q. Were these two leaks on the new 24-inch loop line or on the old 20-inch line?

A. They are on the old 20 inch line.

Q. Both of them?

A. Both of them.

Q. Do you know how these leaks were repaired?

A. Yes, they were repaired by draw bands.

Q. I also requested you to advise whether all of the present lines of Michigan Gas Transmission Corporation were in service on March 18, 1941, which was the day of highest delivery in the winter 1940-1941. Do you have that data?

A. Yes. All were in operation on that date except the 6-inch loop line which partially parallels the Fort Wayne, Indiana, lateral.

Q. I also requested you to supply certain data with respect to your Exhibit 79. Have you prepared a schedule in accordance with my request?

A. I have.

Q. Do you have copies available for distribution?

A. Yes.

. . . . . .

[fol. 8534] Trial Examiner: Very well. This tabulation will be marked for identification as Exhibit No. 79-A because it is related to Exhibit No. 79 which was received in evidence on February 26.

(The Document Was Marked Exhibit No. 79-A For Identification.)

Mr. Littman: The title of this exhibit is "Michigan Gas Transmission Corporation-Comparison of Daily Provided Capacity to Deliver Firm Gas with Maximum Daily Delivery of Firm Gas and Total Delivery of Gas from Pipe Lines Owned or Operated by Michigan Gas Transmission Corporation for the Winter Period of 1941-1942 to Date, February 27, 1942".

I would like to have marked for identification as Exhibit 79-B a single schedule entitled, "Michigan Gas Transmission Corporation-Total Delivery of Gas from Pipe Lines Owned and Operated by Michigan Gas Transmission Cor- [fol. 8535] poration on Days on Which the Delivery of Firm Gas from System was the Maximum."

Trial Examiner: It will be marked as indicated.

(Exhibit No. 79-B was marked for identification.)

By Mr. Littman:

Q. Mr. Young, I hand you a copy of Exhibit 79-A and Exhibit 79-B and ask you whether you prepared those two schedules in response to my requests of recent date.

A. They were prepared under my supervision.

Trial Examiner: Do you wish to offer them in evidence Mr. Littman?

Mr. Littman: Yes, I would like to offer Exhibits 79-A and 79-B in evidence.

Mr. Baldridge: No objection.

Trial Examiner: These tabulations, marked, respectively, Nos. 79-A and 79-B, will be received in evidence without objection.

(Exhibits Nos. 79-A and 79-B were received in evidence).

By Mr. Littman:

Q. Now, Exhibit No. 79-A relates to the peak day that has occurred to date during the present winter, does it not?

A. During the winter of 1941-1942.

Q. Exhibit 79-B relates to the various peak days of the winter periods 1936 down to date, does it not?

A. Yes, Exhibit 79-B indicates the total deliveries from the pipe line system owned and operated by Michigan Gas [fol. 8536] Transmission Corporation in the winter periods to which you have referred.

Q. Now, will you please refer to Exhibit 79-A? You show in Column E, "Maximum total delivery of gas in M.c.f." to be a total of 175,435 M.c.f., do you not?

A. That is correct.

Q. Am I correct in understanding that that shows the total actual deliveries on that date?

A. That is correct.

Q. That is on February 27?

A. January 7, 1942. That is referred to in the footnote, Mr. Littman.

Q. In other words, January 7, 1942, is the day of highest demand that has occurred thus far in the present winter?

A. That is correct, that is as to total delivery.

Q. Yes. Now, in Column D you show the "Maximum daily delivery of firm gas, M.c.f.," to be 150,210, do you not?

A. That is correct.

Q. Am I correct in understanding that the difference between columns D and E represents industrial gas? That is to say, not firm gas?

A. That is correct.

Q. Does the difference, to wit 25,225 M.c.f. represent the interruptible gas?

A. That is correct.

[fol. 8537] Q. Now, in Column C you show "Provided daily capacity to deliver firm gas-M.c.f." in the amount of 162,240 M.c.f., do you not?

A. That is correct.

Q. It is apparent that you did not mean by that heading to say that that is the total amount of firm gas that you could deliver.

A. Yes, that is the total amount of firm gas which we feel that we could deliver under any and all conditions which might prevail with regard to the delivery.

Q. Well, you could deliver more than 162,240 M.c.f. of firm gas if you had the market, could you not?

A. Under certain conditions, yes.

Q. What are those conditions?

A. In the winter period of 1940 1941 as a result of the operations and our experience it was decided that it is advisable to have a spare unit, that is, a spare compressing unit in each one of the compressor stations belonging to the Michigan Gas Transmission Corporation not only to serve in case of failure of any one unit in a station but, also, to serve in case the pressure conditions obtaining are such that the units, compressing units in each compressor station cannot be loaded to the maximum rated horsepower.

Now, to the extent that the spare unit is available and to the extent that the conditions obtain which will permit [fol. 8538] utilization of all of that horsepower, we can deliver additional gas. That is indicated by the fact that under Column C, while we feel that we have provided for a delivery of firm gas amounting to 162,240 M.c.f.'s, we were able to utilize the spare horsepower, in part, and actually deliver 175,435 M.c.f.'s on January 7 of this year.

Mr. Culton: May I ask a question?

Mr. Littman: Yes.

Mr. Culton: I think it is appropriate. Does the hourly regularity with which the gas is taken have anything to do with your ability of delivery?

The Witness: It does. That is one of the reasons why we felt it was necessary to install spare horsepower in these compressor stations.

Mr. Culton: In other words, if it is all taken with the same regularity, your daily capacity would be substantially in excess of what it would be if there were irregularity in the hourly withdrawals?

The Witness: If you refer to Column K in Exhibit 79, it is shown there that the provided daily capacity to deliver firm gas is 159,850 M.c.f.'s. If that gas could have been delivered at uniform hourly rates, then the markets listed in that column could have been supplied with one less gas engine and compressing unit in each of the three compressing stations.

I might, also, add that this end of the line is a critical [fol. 8539] end of the line. If there is a break or inter-

ruption of any kind or if there is a failure in a compressing station, it is more critical than it is to have a similar outage farther west.

Q. Mr. Young, let's look at Line 13 of Exhibit 79-A, which shows the deliveries to Fairmount. You show a provided daily capacity to deliver firm gas of 1500 M.c.f.'s, yet you did, in fact, deliver on January 7, 1942, more than twice that amount, namely, 4,995 M.c.f.'s. Is not that correct?

A. That is correct.

Q. Now, suppose you had had a firm market for 4,995 M.c.f.'s, you could have delivered that quantity of gas, could you not?

A. Yes, provided this spare unit which I referred to had been available.

Q. Had been available?

A. Had been available, as it was in this case.

Q. It was available?

A. Yes, it was in this case, and provided the pressure conditions obtaining at the compressing stations were such that the horsepower which we utilized—

Q. (Interposing) You see the difficulty we had with interpreting the meaning of your heading in the columns in Exhibit 79 and in Exhibit 79-A, "Provided daily capacity [fol. 8540] to Deliver Firm Gas-M.c.f." You do not mean by that heading, do you, that Michigan Gas Transmission Corporation could not have delivered more firm gas than the amount shown under that heading?

A. I mean by that heading that that delivery of firm gas could be made under most any conditions that might prevail, that is, under most any conditions that might prevail providing none of these units are out of service. I am referring now to the rate of hourly delivery that might prevail.

Q. The same situation that I described for Fairmount is generally true with respect to Muncie, is it not?

A. That is correct.

Q. You claim that you had a provided daily capacity to deliver firm gas of 8,200 M.c.f.'s, yet you did, in fact, deliver 21,345 M.c.f.'s on January 7, 1942. Is not that right?

A. That is correct and if all of the conditions which prevailed on that date, January 7, 1942, would prevail on every other day when we would be called upon to make a heavy delivery, then it would be proper to say that the deliveries listed in Column E could be firm deliveries.

Q. Well, whether all of those precise conditions prevailed or not, you do not doubt that you could deliver more than 8,200 M.c.f.'s of firm gas to Muncie, if you had the market?

A. I doubt whether we could deliver more if these con- [fol. 8541] ditions which I speak of did not prevail.

Q. Well, what conditions?

A. For that condition to prevail all of the gas engine compressing units which have been installed in these compressing stations must be in condition to operate. The other condition that must prevail is that the pressure conditions at these compressing stations are such that all of the horsepower installed there can be utilized. I might amplify the latter part of that statement a little bit by stating that sometimes, because of pressure conditions in a station, possibly only 1,000 out of a possible 1,300 horsepower in one of these compressing units can be utilized.

* * * * * * * *

Q. Don't you think your heading, "Provided Daily Capacity to Deliver Firm Gas-M.c.f." is somewhat misleading?

A. No, I do not think it is, Mr. Littman. It is intended to provide capacity, it is intended to indicate that there is capacity to deliver the amounts of gas listed under it.

Q. Well, there is not any question in your mind, however, that if you had the market to deliver firm gas in the quantities shown in Column E of Exhibit 79-A you would have had the capacity to do it and could have delivered [fol. 8542] those amounts on January 7, 1942?

A. Yes, if the conditions which I have mentioned prevail—let me change that last, please—if the conditions which prevailed when that delivery was made—will you state that question again, please?

(Whereupon, the pending question was read by the reporter.)

The Witness: That is correct, if the spare unit is available and if all the horsepower in the stations could be utilized.

Q. You would not have any hesitancy in taking on additional firm gas markets, if you could have done so?

A. Yes, I would have.

Q. You would have hesitated?

A. I would have hesitated.

Q. Because of the margin of safety that you have just mentioned?' A. That is correct.

Q. And that is one compressor unit in each station?

A. In each of the three stations as of the date that Exhibit No. 79 was prepared.

Subsequent to that time two additional units have been added at the Edgerton compressing station to further insure that deliveries can be made north of Edgerton without in any way not complying with the contract re-[fol. 8543] quirements as to pressure and, particularly, with regard to the Detroit market.

* * * * * * * *

Q. When were those two units installed at the Edgerton station?

A. Construction of those two units was started June of 1941 and they were placed in service, I believe, in December of 1941.

Q. And they were in service, of course, on January 7, 1942?

A. That is correct. They were available for service on that day.

Q. Now, what you have said with respect to the figures appearing in Column C, appearing in Exhibit 79-A, "Provided daily capacity to deliver firm gas M.c.f.", applies with equal force to Columns D, E, G, I and K in Exhibit No. 79. Is that correct?

A. It does not. We did not consider it necessary to [fol. 8544] provide spare capacity at the compressing station until the summer of 1940.

Q. Well, what about your heading and figures shown under the heading "Provided Daily Capacity to Deliver

Firm Gas, M.c.f." in Exhibit 79? Is that a correct characterization of the figures you there show?

A. That is a correct characterization. That capacity to deliver firm gas was provided but no additional or no spare capacity was provided in those years to take care of the outage of compressors or to take care of this non-uniform hourly rate of delivery to Detroit.

Q. What I would like to know is this, Mr. Young: In Exhibit 79, you show that on December 7, 1936, your so-called "Provided Capacity to Deliver Firm Gas" was 70,600 M.c.f.'s whereas you did, in fact, deliver, as shown in Exhibit 79-B, Column C, on that day, 71,663 M.c.f.'s. It is apparent that you could have delivered more firm gas than that which you did deliver on that day, is that right?

A. Yes, but the slight difference there might have been taken out of pack. The point I wish to make is, Mr. Littman, that prior to the summer of 1940, we did not consider it necessary to provide any spare capacity in these compressor stations.

Q. Let's look at the maximum day of December 27, 1938. Column G of Exhibit 79 shows, "Provided Daily [fol. 8545] Capacity to Deliver Firm Gas" in Column G of 109,000 M.c.f.'s whereas you did deliver 113,347 M.c.f.'s of gas on that day; isn't that correct?

A. That is correct.

Q. You could have delivered 113,347 M.c.f.'s of firm gas if you had had the market?

A. Not for any length of time. That difference there was taken out of pack, as I recall it. We might have been able to do that for one day, maybe for part of a second, but we would not have been able to do that rather continuously.

Q. Let's look at March 18, 1941, the maximum day for the winter 1940-1941. You say you had a "Provided Daily Capacity to Deliver Firm Gas" as shown in Column K of Exhibit 79 in the amount of 159,850 M.c.f.'s whereas Exhibit 79-B shows you delivered approximately 20,000 more M.c.f.'s on that day. A. Yes.

Q. All that did not come from the line pack, did it?

A. No, we had this spare equipment installed at that time. It had been installed in the summer of 1940.

Q. But prior to that time you did not have the spare equipment? A. That is correct.

Q. Now, the difference between the amount of "Provided Daily Capacity to Deliver Firm Gas" and the [fol. 8546] "Maximum Daily Delivery of Firm Gas" throughout Exhibits 79, 79-A and 79-B represents the interruptible industrial gas, does it not?

A. That is correct.

Q. You were going to furnish for the record the amount of rate case expense paid to December 31, 1941, and which had been reported on the books of the company?

A. The expenses incurred in connection with the current proceedings before the Federal Power Commission total $39,801.13 as of December 31, 1941.

Mr. Baldridge: May I ask just one question, Mr. Littman.

That, I take it, does not include such amounts as may have been accrued up to that date but not paid, does it? I have in mind possible bills for services which were rendered prior to that date although the bills may not have been presented to you or paid at that date.

The Witness: That does not include the full amount of our obligations as of that date, Mr. Baldridge.

By Mr. Littman:

. . . . . .

[fol. 8548] If it is a brief examination—

Mr. Chamberlain: (Interposing) I think five minutes would do it and we might as well get it out of the way.

I would like to have this document marked for identification as Exhibit 167.

(Exhibit No. 167 was marked for identification.)

Cross-Examination (Continued)

Q. Mr. Young, I have handed you a document marked Exhibit No. 167 for identification which shows the number of the check, the date and the amount of each of the payments made by Michigan Consolidated Gas Company for gas purchased through Michigan Gas Transmission Corporation for its use in the Detroit district from August 1936 to December 20, 1941. I have heretofore shown

you that exhibit and ask you to check to see at what time funds were received by Michigan Gas Transmission Corporation and deposited to their account.

This exhibit shows the date of the cancelation of each of these checks and I would like to ask you as to whether, with the exception of some nine checks which you can hereafter identify, those checks were deposited by Michigan Gas Transmission Corporation on the dates which show the date of the cancelation of the check?

A. Except in the case of the nine checks which you have referred to, my information is that all of the checks [fol. 8549] on Exhibit 167 for identification were deposited on the same date that they are indicated as having been canceled.

Q. Will you state the nine exceptions and give the number of the check and the date upon which it was actually deposited?

A. Check No. 37720—

Q. (Interposing) I am going to have to change my question a little bit because those numbers do not run always consecutively. I will require the number of the check and the date of the check.

A. I see.

Q. Or the amount, that would do it.

A. I have the amounts here.

Q. Yes, the amount will do it.

A. Check No. 37720 in the amount of $110,641.17 was deposited on October 21, 1936.

Check No. 41286 in the amount of $307,881.32, was deposited on January 21, 1937.

Check No. 284, in the amount of $100,000, was deposited January 21, 1937.

Check No. 2384, in the amount of $150,000, was deposited January 21, 1938.

Check No. 52847, in the amount of $346,002.84, was deposited January 21, 1938.

Check No. 2506, in the amount of $150,000, was deposited [fol. 8550] February 21, 1938.

Check No. 53458, in the amount of $372,993.27, was deposited February 21, 1938.

Check No. 1383, in the amount of $353,553.71, was deposited on November 22, 1938.

Check No. 1140, in the amount of $85,000, was deposited November 22, 1938.

Q. I would like to clear up an apparent discrepancy in these dates. It is a fact, is it not, that three of the nine that you have mentioned were deposited upon the day that the check shows canceled but the reason they were included was because they were deposited with another check on the same day which was deposited one day before the cancelation date?

A. Yes, three of the nine checks which have just been mentioned were canceled on the same date on which they were deposited and they were included in this list because they were deposited with the other six.

Mr. Chamberlain: That is all.

. . . . . .

[fol. 8554] Mr. Littman: If your Honor please, before proceeding with the cross-examination this morning, I would like to have inserted into the record at this point a copy of an order issued by the Securities and Exchange Commission on February 3, 1942, which shows precisely the bid price from a group of underwriters headed by Glore, Forgan & Co. and Kidder, Peabody & Co., with respect to the recent financing of Panhandle Eastern Pipe Line Company. It is a very brief order and I believe it would be helpful to have this order in the record in its entirety.

. . . . . .

Trial Examiner: Very well, it may be copied in the record, at this point.

For Immediate Release Tuesday, February 3, 1942.

Securities and Exchange Commission Washington

Holding Company Act Release No. 3311

United States of America

Before the Securities and Exchange Commission

At a regular session of the Securities and Exchange Commission, held at its office in the City of Washington, D. C., on the 3rd day of February, A. D., 1942.

[fol. 8555] Supplemental Order Pursuant to Rule U-50.

In the Matter of

Columbia Gas & Electric Corporation, Columbia Oil & Gasoline Corporation, Panhandle Eastern Pipe Line Company, Michigan Gas Transmission Corporation, Indiana Gas Distribution Corporation, the Ohio Fuel Gas Company.

File Nos. 59-33, 70-263, 70-371, 70-387, 70-430, 70-431

(Public Utility Holding Company Act of 1935)

Panhandle Eastern Pipe Line Company, a subsidiary of Columbia Gas & Electric Corporation, a registered holding company, having filed an application pursuant to the Public Utility Holding Company Act of 1935, particularly Section 6 (b) thereof and Rule U-50 thereunder, regarding the issue and sale of $10,000,000 principal amount of 3% First Mortgage Bonds and [and] $15,000,000 par value of Cumulative Preferred stock, the proceeds to be applied toward the retirement of $10,000,000 par value outstanding Class A $6 participating Preferred stock, the acquisition of certain wholly-owned subsidiaries of Columbia Gas & Electric Corporation, and additional construction; Panhandle Eastern Pipe Line Company to publicly invite proposals for the purchase of the bonds and preferred stock in accordance with Rule U-50; and

Said application having been consolidated in the above-entitled consolidated proceeding, and the Commission hav-

[fol. 8556] ing, on January 21, 1942, granted such application pursuant to Section 6 (b) subject to the conditions, among others, that applicant report to the Commission the result of the competitive bidding as required by Rule U-50(c) and comply with such supplemental order as the Commission may enter in view of the facts disclosed thereby, jurisdiction having been reserved for this purpose; and

Panhandle Eastern Pipe Line Company having made such report to the Commission in the form of an amendment to the application herein, setting forth the action taken to comply with Rule U-50 (c) and specifying the proposals which have been received for the purchase of said bonds pursuant to the invitation for competitive bidding, and setting forth that Panhandle Eastern Pipe Line Company has accepted a bid from a group of underwriters headed by Glore, Forgan & Co. and Kidder, Peabody & Co., of 100.02% for the bonds which are to be resold to the public at 100.75%, representing a spread to the underwriters of .73%, and 100.2789% for cumulative preferred stock having a dividend rate of 5.6%, which stock is to be resold to the public at 104%, representing a spread to the underwriters of 3.7211%, of which 2.25% represents the spread to dealers; and

The Commission having examined the record and finding no basis for imposing terms and conditions with respect to the issue and sale of said bonds and preferred stock at such price and with such spread;

[fol. 8557] It is ordered that said application, as amended, be and it is hereby granted in regard to the price to the issuer, the spread, and the distribution thereof applicable to such bonds and preferred stock, subject, however, to the terms and conditions prescribed in Rule U-24.

By the Commission

(Seal) FRANCIS P. BRASSOR,
Secretary.

Mr. Littman: I would like to have marked for identification as Exhibit No. 168 a tabulation which has been furnished by Mr. Haberly pursuant to my request, entitled

"Michigan Gas Transmission Corporation-Tabulation of Measuring and Regulating Stations showing Stations Which were Inspected by Francis S. Haberly and Those Which Were Not Inspected."

(Exhibit No. 168 was marked for identification.)

Mr. Littman: I would like to ask that this exhibit be received in evidence at this time.

Trial Examiner: The tabulation marked for identification as Exhibit No. 168 will be received in evidence without objection.

(Exhibit No. 168 was received in evidence.)

* * * * * * * *

[fol. 8558] DANIEL C. GREEN, a witness, having been previously duly sworn, resumed the stand and testified [fol. 8559] further as follows:

Cross Examination

By Mr. Littman:

Q. Mr. Green, you are an engineer?

A. Yes, sir.

Q. You are President and Director of Central Service Corporation, a corporation which specializes in rendering consulting, advisory and special services to public utility companies?

A. Yes, sir.

Q. Your firm has been retained for the purpose of presenting certain exhibits in this proceeding relating to Michigan Gas Transmission Corporation?

A. That is correct.

Q. Your firm is retained by Columbia Gas & Electric Corporation?

A. By Michigan Gas Transmission Corporation.

Q. Who retained you?

A. The President of that company.

Q. You refer to Mr.—

A. (Interposing) Beckjord.

Q. Mr. Beckjord is an officer of Columbia Gas & Electric Corporation, is he not?

A. I think he is, yes.

Q. He is Vice-President, is he not, of Columbia Gas & [fol. 8560] Electric Corporation?

A. I am not certain of that. Whether he is an officer of Columbia Gas or whether he is an officer of their service company, I do not know.

Q. I read from pages 2018 and 2019 of the transcript where Mr. Beckjord testified as follows:

"In 1938 I became President of Columbia Engineering Corporation, still continuing as Vice-President and General Manager of the Columbia Gas & Electric Corporation."

A. Yes.

Q. Does that refresh your recollection?

A. Yes. On second thought, I believe he is Vice-President and a Director.

Q. He says, "Vice-President and General Manager."

A. Yes.

Q. Will you please refer to Exhibit No. 92, entitled "Michigan Gas Transmission Corporation-Original Cost Depreciated to Present Conditions as of June 30, 1941, and Observed Depreciation as at June 30, 1941"? This exhibit shows, does it not, that you have deducted from the original cost new of the plant of Michigan Gas the sum of $310,226.50 which represents the "Observed depreciation"?

A. Yes, sir, that is correct.

Q. Now, this amount of "Observed depreciation" was determined in the first instance, percentage-wise, by Messrs. Riddle, Lehn and Haberly. Is that correct?

[fol. 8561] A. Correct.

Q. You are taking responsibility for this exhibit, are you, Mr. Green?

A. Yes, sir. That is, I directed its preparation.

Q. Yes, I understand that you made no determination of your own of the observed depreciation. Is that right?

A. That is correct.

Q. But this exhibit is your idea?

A. Yes, sir.

Q. Does the sum of $310,226.50 represent all of the depreciation that has accrued to date on the original cost of the property of Michigan Gas Transmission Corporation?

Mr. Baldridge: By "to date" you mean as of the time of the preparation of the exhibits?

Mr. Littman: I mean as of June 30, 1941.

The Witness: The amount of $310,226.50 deducted from the original cost figure of $12,261,260.55 expresses the value of the physical property as of June 30, 1941.

By Mr. Littman:

Q. Now, will you please answer my question, Mr. Green?

Trial Examiner: Read the question, please.

(Whereupon, the question commencing at Line 11 of this page was read by the reporter.)

The Witness: In the opinion of these engineers that [fol. 8562] amount represents, in their judgment, the observed depreciation of the property as of June 30, 1941.

By Mr. Littman:

Q. What I would like to have, Mr. Green, is your opinion of whether this amount of $310,226.50 represents all of the depreciation that has accrued to June 30, 1941, on the original cost of the property of Michigan Gas Transmission Corporation.

A. Where we are confused or where I am confused is your use of the term "accrued." Now, if you are referring to the books of the company and some device of accounting which the management might adopt, on a straight line method or any other method or retirement reserve method, that would be one thing, but that is not this figure, that is not what this figure purports to represent.

Q. Mr. Green, when I use the term "accrued depreciation", I mean all of the depreciation that has accrued down to June 30, 1941. Does that help you?

A. No, it does not. My answer that I first gave as to what the $310,000 odd figure represents is as I have stated it.

Q. It merely represents that depreciation which has been observed?

A. That is correct.

Q. But not all the depreciation that has, in fact, accrued?

[fol. 8563] A. It is all the depreciation that actually has accrued or occurred up to that date,—not accrued, I think our use of the word "accrued" confuses both of us. "Ac-

crued" means more or less per books, an accounting expression, I would think.

Q. Well, did Mr. Haberly's Exhibit No. 82 confuse you?

A. 82?

Q. Which is entitled "Accrued Depreciation".

A. No, because—

Q. (Interposing) On compressor station structures and so forth.

A. No, because these amounts found by the engineers were at my direction to determine the depreciated value as against original cost as of June 30, 1941.

I will give this example which might help. We will assume that a piece of pipe has an estimated life of 75 years. If you would use straight line depreciation you would divide the total cost of that pipe by the 75 years and you would get an amount which, for convenience in accounting, you charge against earnings and set up in a reserve account each year that fixed amount.

Now, my point is that we will say ten years, that the pipe has been in the ground ten years, and the actual value of that pipe will not decrease on a straight line basis, its value will not decrease.

[fol. 8564] Q. How about its original cost as distinguished from what you have termed "value"?

A. I am referring to original cost here. When I speak of "value", "value" means original cost.

Q. Now, you just said if I would depreciate the property on a straight line method I would get the result which you just gave in your hypothetical statement.

A. That is right.

Q. What method does Michigan Gas Transmission Corporation use to depreciate the property on its books? The straight line method, isn't that correct?

A. I think they do. I would not want to say definitely that they used the straight line method.

Q. Didn't you investigate that?

A. I know the amount they are setting up is approximately 3 percent of the plant account.

Q. Mr. Green, do you mean to say you do not know for certain that Michigan Gas Transmission Corporation uses the straight line method of depreciation on its books?

A. They are setting up 3 percent of the plant account.

Q. On a straight line basis?

A. They are charging against income and earnings 3 percent of the plant account and setting it up in reserve.

Q. Which is the straight line method, isn't it?

A. No. A company might be charging 3 percent of its [fol. 8565] plant account and be on the retirement reserve method but, during the early years of the life of the property, they determined 3 percent would be ample, whereas, against the straight line method, the actual depreciation might be 4 percent.

Q. What method does the company use?

A. I do not know. I can tell you what they have done but whether they are accruing on a straight line method of depreciation, I do not know.

Q. I take it from your answer you have set up in your exhibit a different method than that followed by the company in depreciating its property?

A. Yes, sir, we did.

Q. Let me refer you to Page 3 of Exhibit No. 99 which shows "Depreciation Provision per Books for Years Ended December 31, 1936, to 1940, Inclusive and Six Months Ended June 30, 1941," and ask you whether your examination of that page will refresh your recollection as to the method used by the company in setting up depreciation on its books?

A. I cannot change my original statement.

Q. You are at liberty to do so if you want to.

A. I do not.

Q. You do not want to?

A. I do not, no.

Let me say that suppose it is exactly 3 percent of their plant account each year that has been charged. That is not [fol. 8566] proof that they are using the straight line method. In the straight line method of depreciation, you determine the life of the property and divide the number of years by the original cost or value that you are depreciating. That is the straight line method and you set that amount up each year. Now, this company has been charging approximately 3 percent.

Mr. Lee: Wasn't that predicated upon the estimated life of the field?

The Witness: I do not know how they determined the 3 percent but I know the company could set up 3 percent in the early years and later set up 5, an average of 4 percent, if 4 is the proper amount based upon the life of the property. Of course, here, we have a property with a finite life which raises an entirely different question of depreciation and amortization because the life of the property is based on its usefulness and not on the number of years that it will stay in service.

Mr. Lee: Weren't you bound to consider that? Wasn't that the underlying consideration?

The Witness: Yes, we used in our Exhibit 24½ years as the finite life of this property from June 30, 1941.

By Mr. Littman:

Q. Having defined the straight line method, do you see anything on Page 3 of Exhibit 99 which would indicate that the company is not using the straight line method?

A. There is nothing here that would indicate to me on [fol. 8567] what basis they determined the depreciation that they have charged. I see nothing on this page that gives the method of determining the amount they have set up.

Q. If the company had been using a straight line method, for all that appears on Page 3 of Exhibit No. 99, that method could be used? In other words, there isn't anything on Page 3 of Exhibit No. 99 that indicates that the company is using other than a straight line method, is there?

A. There is nothing on that page that indicates that they are using a straight line method either.

Q. They have been setting aside 3 percent each year, have they not, since the beginning?

A. Yes, sir, approximately so.

Q. They have not changed that percentage at all in any year thus far, have they?

A. I think that is correct. They have been setting aside that amount.

Q. Wouldn't you do that by the straight line method?

A. If they are using the straight line method and they set up 3 percent of the property each year, that means the property has a life of 33⅓ years.

Q. That is what Page 3 of Exhibit No. 99 indicates to you, doesn't it?

A. No, it does not.

Q. Have you investigated whether the company pro- [fol. 8568] poses to change this depreciation rate of 3 per cent?

A. No, I do not know.

Q. You did not investigate it?

A. No.

Mr. Baldridge: Mr. Littman, just to be sure you aren't confused, may the record show that 3 percent does not apply to all the property but to most of it. There are certain types of property which, as I recall, consist of non-depreciable property on the one hand and short-lived property on the other, which is depreciated somewhat differently. I assume that you are talking about the great bulk of the property, to which 3 percent was applied.

By Mr. Littman:

Q. At any rate, you have undertaken, for purposes of this proceeding, to set up a new and different method of depreciating this property than that which has been followed by the company to date, is that right?

The Witness: Would you read that, please?

(Whereupon, the pending question was read by the reporter.)

The Witness: That is correct.

By Mr. Littman:

Q. What is wrong with the company's method that requires you to now change the scheme of things?

A. If this property has a life of 24½ years from June 30, 1941, 3 percent of depreciable property set up per year [fol. 8569] will not amortize the investment over that expected life of 24½ years so, if we would use operating expenses and the depreciation that could be charged per books as an item of expense and amortized on that basis, the company would be short in recouping its investment at the end of 24½ years.

Q. You propose, then, to substitute your judgment for the judgment of the company with respect to the life of the property, do you not?

A. Not at all and that is my point. The fact that they are charging 3 percent at the present time in the comparatively early years of the life of this property is no indication whatsoever in later years they might not charge 5 percent. As time goes along and they learn more about the life of this field, it might be found that it is a 20-year life or 40-year life, I do not know.

Q. Has any officer of the company indicated that they were going to change their depreciation rate policies?

A. In our opinion, it was not necessary to use those figures from the company's books in preparing the data which we thought would be useful to the Commission in determining the necessary revenues of this company.

Q. I am not speaking of what was necessary. What was proper? Would it have been proper to use the company's own depreciation rates and methods for purposes of this proceeding?

[fol. 8570] A. It would not. I will answer your question this way: Suppose this company had been setting up 6 percent in depreciation in order to cut down their earnings. They set up 6 percent. I think it would be manifestly unfair, in preparing the exhibits which we have here, if we were to use that 6 percent as a fair amount for depreciation.

Q. Of course, they have not set up anything like 6 percent, have they?

A. I said, if they had.

Q. I take it that you are saying, then, that you disagree with the depreciation policy followed by the company thus far?

A. I will say this, that if I were President of Michigan Gas Transmission Corporation or if I were a large stockholder in that corporation, I would want the company to increase its depreciation charges that they show per books and I would have them increase it so that we would recoup the investment in 24½ years.

Q. You are acquainted with Mr. Young, the Vice-President of this company, are you not?

A. Yes, sir.

Q. You know that he has testified in these proceedings that he is satisfied that the rates presently charged are reasonable, proper and adequate?

A. I do not know. I did not see that.

. . . . . .

[fol. 8571] By Mr. Littman:

Q. What amount has been accumulated in this depreciation reserves at June 30, 1941? You will find that in Exhibit 88, Page 2, Mr. Green.

A. $1,526,600.89.

Q. Now, according to your testimony, the probabilities are that that sum is not sufficient to cover the depreciation that has accrued on the property to date isn't that right?

A. No. In the exhibits which we have prepared here, the accounting method of the company and its practices and policies on the question of depreciation have no bearing whatsoever, in my opinion, on the amount that the Commission should set up here for depreciation.

Q. Didn't you just say a minute ago, Mr. Green, that if 24½ years represent the true remaining life of this property and you do believe just that, then the 3 percent rate which has been set by the company is too low. Hasn't that been your testimony thus far?

A. Correct, yes.

[fol. 8572] Q. All right. Now, if the 3 percent is too low, then this amount that has been accumulated in the depreciation reserve at June 30, 1941, of $1,526,600 is also too low according to your testimony, isn't that correct?

A. No, we are speaking here of amortizing the investment. That is the problem we had before us, to determine how much per year should be charged against income so that the investor will recoup his investment at the end of the 24½ year expected life of the property. What the company charged on its books for depreciation, what it accrued, in my opinion has no bearing whatsoever.

Q. Now, will you answer my question, please.

Mr. Littman: Will you read my question?

(Whereupon, the question commencing at Line 1 of this page was read by the reporter.)

The Witness: If the company had charged earnings and set up in reserve an amount in excess of 3 percent, this amount in this reserve would be greater to that extent.

By Mr. Littman:

Q. I am not asking you to assume any hypothetical state of facts. I am asking you to answer my specific question, Mr. Green.

A. I think I made the statement a little while ago if I were President of this company, I would be setting up on the books an amount for depreciation in excess of what [fol. 8573] this company has.

Q. And if you had been President of this company, you would have accumulated a larger amount than $1,526,600 in your reserve down to June 30, 1941, would you not?

A. If the company had charged more, there would be more in the reserve.

Q. Then your answer to my question is yes?

A. If they had charged more, the amount in the reserve would have been greater.

Q. Will you answer my question yes or no?

A. I think I have answered the question.

Q. The answer is yes?

A. You will have to read the question.

Q. Didn't you have my question in mind at the time when you were giving your answer, Mr. Green?

Mr. Littman: Read the question, please.

(Whereupon, the question was read as follows:

"Q. All right. Now, if the 3 percent is too low, then this amount that has been accumulated in the depreciation reserve at June 30, 1941, of $1,526,600 is also too low according to your testimony, isn't that correct?")

The Witness: If the company had charged a percent greater than the percent used each year and all charges, credits and debits against this reserve account had been exactly the same as they have actually been, this amount would be greater to that extent.

[fol. 8574] Q. And, in your opinion, should be greater?

A. Indeed so, yes, per books, and having nothing to do with this other question.

Q. You want to forget about the books when you come into this rate proceeding and determine depreciation, do you?

A. Absolutely, absolutely.

Q. Well, we don't, Mr. Green. Let's talk about the book depreciation for the moment. It is clear that Michigan

Gas has accumulated $1,526,600 to June 30, 1941. There is no question about that, is there?

A. That is the amount in the reserve account.

Q. And you say that, if anything, that is too low, not enough?

A. I say that I would amortize the investment over a shorter period than they apparently are, from this present amount being charged.

Q. And that would give a greater balance in the reserve if that had been done from the beginning?

A. That is correct, naturally it would. That is pure arithmetic.

Mr. Baldridge: That is assuming the straight line method?

The Witness: Yes, sir.

By Mr. Littman:

Q. Which the company has been doing?

[fol. 8575] A. As I testified in my direct testimony, to me there is no difference whether you use the straight line method or the sinking fund method.

Q. You get the same result, according to your testimony?

A. With proper application of all the principles, you will come out with the same answer.

Q. All right. In place of the $1,526,600 of depreciation which has been set up on the books of the company as represented by the balance in its depreciation reserves at June 30, 1941, you propose to deduct $310,226.50, do you not?

Trial Examiner: Will you read the question, please?

(Whereupon, the pending question was read by the reporter.)

The Witness: What we are attempting to do in this exhibit is to determine the value of this property as of June 30, 1941, its dollar value. I contend that the value does not follow the straight line method.

By Mr. Littman:

Q. All right. Now, are you saying that the amount of $11,951,034.05, which is the total of the column headed

"Original Cost Depreciated to Present Condition", represents the value of this property at June 30, 1941?

A. You had better read that to me.

(Whereupon, the pending question was read by the reporter.)

The Witness: Correct.

[fol. 8576] By Mr. Littman:

Q. Now, in arriving at this so-called "value" you have deducted the observed depreciation of $310,226 rather than the actual book depreciation of $1,526,600. Is that right?

A. Yes.

Q. Now, you are familiar with the fact that the Panhandle Eastern Pipe Line Company recently, as a matter of fact during the past three weeks, acquired Michigan Gas?

A. Yes, sir.

Q. In arriving at this purchase price, did they deduct your $310,226 of "Observed Depreciation" or did they deduct the book reserves of $1,526,600? Can you answer that directly, first, and then explain it, if you wish?

A. I do not know what method was used in their negotiations of that sale and purchase.

Q. Well, you know, do you not, that Panhandle Eastern Pipe Line Company paid Columbia Gas & Electric Corporation for Michigan Gas on the basis of the net investment?

A. I understand so, generally, yes.

Q. And the method of arriving at that price, which was the net investment, was by deducting the actual book depreciation from the gross investment?

A. I think the method used in this purchase and sale was a shotgun method, myself.

Q. Now, will you answer my question, please, and then [fol. 8577] we will talk about the shotgun marriage? Suppose you answer my question first. I want to, first, know whether that is the way they arrived at it?

A. You mean the calculation that was made to determine the purchase price of the property which Panhandle—

Q. (Interposing) Well, first, is it your understanding, as it is mine, that Panhandle Eastern paid for Michigan Gas on the basis of the net investment in the property?

A. I think that is correct, that is my understanding.

Q. And the net investment was arrived at by deducting the full depreciation reserve of the gross investment, is not that right?

A. Well, you naturally would.

Q. If there is any question about it, I want to clear that up.

A. That is correct.

Q. Now, you are intimating that Panhandle Eastern Pipe Line Company did not pay the value of the property to Columbia Gas & Electric Corporation?

A. In my opinion, the value of Michigan Gas Transmission would be in excess of the amount that the Panhandle Eastern company paid for it.

Q. Not in the opinion, however, of Panhandle Eastern?

A. Why, it means that they made a good buy, Panhandle Eastern. If they agree with what I am saying, they [fol. 8578] made a good buy.

Q. And according to your testimony, Michigan Gas Transmission Corporation did not make a good sale?

Mr. Culton: You mean Columbia?

Mr. Littman: All right, Columbia Gas & Electric Corporation did not make a good sale?

The Witness: From their own standpoint, probably, it was a good sale for them to make, under the conditions and unusual problems confronting them.

By Mr. Littman:

Q. They were satisfied, were they not, to accept this amount of money that was paid by Panhandle Eastern Pipe Line Company for Michigan Gas?

A. Why, I do not imagine that they would have closed the deal if they were not satisfied with it.

Q. Everybody seemed satisfied with it but you, Mr. Green. Now, I would like to have you tell me what causes you to be dissatisfied with the arrangement that was entered into between Columbia Gas and Panhandle Eastern.

A. Let me make this statement, it will be very broad, probably, you might think. I think that with most any

utility company, its sale value exceeds its net investment per books.

Q. Did Columbia Gas—

A. (Interposing) I will put it this way: I do not think you could go out and buy one out of 50 utilities, that is, [fol. 8579] if they are well managed, and earning on the rate base a fair return, on the proper base. I do not think you could buy the property in normal times for its net investment per books. I think they usually sell in excess of that amount.

* * * * * * * * *

[fol. 8580] By Mr. Littman:

Q. Well, you just spoke about a shotgun marriage of some kind. Now, what was forced about this thing, this sale?

A. My thought was this, I do not believe that Columbia Gas & Electric Corporation would voluntarily sell this property, but on account of the Securities and Exchange Commission's rulings under the Holding Company Act they have to sell it and they were told that they had to dispose of it.

Q. They did not have to sell it to Panhandle Eastern at this price, did they? They could have sold it to somebody else at a higher price if they could have got a higher price?

A. From what Mr. Lee said, apparently, there was some commitment.

Mr. Lee: I was asking you if there was something of that kind that you knew about.

The Witness: I am not familiar with the law suits that are pending against Columbia Gas and Columbia Oil and Panhandle and Missouri-Kansas.

By Mr. Littman:

Q. But you have characterized this arrangement as a shotgun marriage. Now, I want you to point out what characteristic of this sale causes you to describe it in that way.

[fol. 8581] A. Well, the S. E. C., it is my understanding, has, perhaps, ordered,—I think they have ordered Columbia to dispose of this property and others under the Integration Act.

Now, how could they sell this property to anyone other than Panhandle, because you have a pipe line here stuck out in the Indiana-Illinois line hundreds of miles away from a natural gas field and the company with a contract only running 16 years longer for a supply of gas?

Mr. Baldridge: And the main contract is substantially less than that.

The Witness: Substantially less than 16 years, yes.

By Mr. Littman:

Q. Do you know whether Columbia Gas & Electric Corporation made any effort to sell to anyone else?

A. Not that I know of.

Q. Do you think they were negligent in selling Michigan Gas to Panhandle Eastern at the net investment?

A. No, their reasoning, I do not know what their reasoning was.

Q. The Securities and Exchange Commission approved this sale, did it not?

A. Yes, sir.

Q. Do you think the Securities and Exchange Commission would approve this sale if it felt that the owners of Michigan Gas were not receiving a fair price for Michigan Gas?

[fol. 8582] A. Well, under the Act if they approved a sale they have to approve the value amount.

Q. And they found the value to be proper, just and reasonable?

A. Proper and reasonable in their opinion.

Q. But not in your opinion?

A. That is correct.

Q. Do you think Columbia Gas could have got even more for Michigan Gas than it did?

A. I do not know.

Q. Do you know whether Columbia Gas & Electric Corporation appealed from the Securities and Exchange Commission's decision of approval of this sale?

A. Well not, to the contrary they must hav approved it in the hearings.

Q. All of which indicates that they were satisfied, does it not?

A. Certainly.

Mr. Culton: Whether contented or not.

By Mr. Littman:

Q. Regardless of what your opinion is as to the fairness of this price, Mr. Green, are not the consumers entitled now to derive any benefits that may flow from Panhandle Eastern's good fortune in purchasing Michigan Gas?

A. I do not think that that is the determining factor, [fol. 8583] this sale price. For example, suppose that Panhandle Eastern paid 50 percent greater in amount than they did pay for this property, I do not think that that would be the yardstick or the rate base under which rates would be fixed.

Q. Will you please answer my question, Mr. Green, whether it is determinative or not?

A. I say that rates are not based on the sale or purchase price of properties.

Q. They should not be based upon that?

A. Certainly not, they should not. It would be very much against the interest of the consumers all over this country if that would be held to be the method of rate making, to use the purchase price as the rate base, because I know of many properties that were purchased far in excess of a proper rate base.

Q. Do you think Panhandle Eastern Pipe Line Company is entitled to earn a return on something in excess of the price which it paid for Michigan Gas Transmission Corporation?

A. If you use original cost as the rate base, I think you have to take into account other factors in determining the percent return that the stockholders should receive.

Q. Can you answer my question yes or no, Mr. Green?

A. I cannot answer by saying yes or no, it would be misleading.

Q. There is some doubt in your mind about the question, is there?

[fol. 8584] A. I am not in doubt about my own opinion in this matter.

Q. What I am speaking is your opinion, Mr. Green.

A. I am saying that I do not think that rates should be based on the purchase price of properties.

Q. Even though the purchase price represents the actual cost less the depreciation reserve?

A. I do not think that is the point, no.

Q. That would not make any difference to you?

A. No.

Q. And, even though Panhandle Eastern Pipe Line Company paid on the basis of original investment less depreciation reserves, in your opinion, they are entitled to something in excess of that?

A. No. I am saying this, you take that figure then and on the other side of the equation in determining the per cent return then you have some other factors to consider which we have considered and have put into these exhibits.

Q. All of which results in giving Panhandle Eastern a larger rate base?

A. Not a larger rate base, no, because in our exhibits here we are using original cost of Michigan Gas Transmission Corporation.

Q. Mr. Green, you give considerable lip service to original cost. You are not using original cost at all, are [fol. 585] you, in your exhibits?

A. Absolutely we do, sir.

Q. I see. Well, we will come to that a little later, Mr. Green, and we will see what the effect is after you get through using it, but right now do you deny that after you get through with your arithmetic you come out to precisely the same result as though you had used reproduction cost?

A. That is correct, but that does not make our method or answer wrong.

Q. But you come out at the same place precisely as though you had used reproduction cost. Is that correct?

A. That is pure arithmetic. You can make the two calculations and they will be the same.

Q. Is that correct? Is your answer to my question yes?

A. I say the two answers would be exactly the same but a different method of calculation.

Q. Do you think it would be any comfort to the gas consumer that you started out with original cost if, in the final analysis, his rates are the same as though you had used reproduction cost?

A. Well, as I said in my direct testimony, there is no difference between the two. You can use reproduction

cost or you can use original cost if you properly define what is a fair rate of return.

Q. And as you define it, you get exactly the same re-
[fol. 8586] result [regardless] of which you use?

A. You mean the over-all amount that the company should receive in dollars figures out arithmetically the same. Correct.

Q. Almost to the penny, as a matter of fact, does it not?

A. If you use the same factors, yes, sir. Two times six is twelve and three times four is twelve.

Mr. Baldridge: Mr. Littman, what I was going to suggest was that I think you used the wrong word there. You may not have. I thought you used "original cost" at one point where you meant [so] say "reproduction cost." I may be wrong. I think the record will show.

Mr. Littman: I think the record will show that we understand each other on this point.

By Mr. Littman:

Q. Let's exam ne Exhibit No. 92, again. Now, you have an item under "Transmission Plant" called "Land Rights" which has an original cost of $241,467.33. Is that right?

A. That is right.

Q. Now, that is what those land rights cost when first acquired, new. Right?

A. Yes, sir.

Q. Those are rights-of-way, are they not?

A. Yes, sir.

Q. For the main transmission lines and other lines?
[fol. 8587] A. Yes, sir.

Q. Now, at least five years have elapsed since they were acquired. Is that right?

A. Yes, about.

Q. Probably having been constructed in about 1936. How much do you deduct for depreciation on those rights-of-way?

A. There is no deduction made here by the engineers in this calculation. There is no deduction made.

Q. The company has been making some deduction on their books for depreciation on rights-of-way, have they not?

A. The over-all depreciation they have been setting up would be against all amounts in the capital account and this is in the capital account.

Q. At the 3 percent rate which the company has been applying to its lines the annual amount being set aside will amount to $7,244 per year or approximately $40,000 over the 5½ years of the expired life of the company. Is that about right?

A. That is correct. I do not know whether the company, though, in their calculations of percent,—sometimes in the plant account land is not considered a depreciable item, you see.

Q. Well, this is not land, this is land rights-of-way.

A. Yes, but I say I do not know whether they do use that or not.

Mr. Littman: Mr. Spitznagle may be able to advise us [fol. 8588] as to that.

Mr. Spitznagle, does the company depreciate its rights-of-way on its books?

Mr. Spitznagle: I am trying to check it, Mr. Littman, and see whether or not they included the figure in the computation.

Mr. Chamberlain: Refer to Page 76 of the new prospectus there and you will find that that is excluded.

Trial Examiner: Perhaps you should identify what you refer to as the "new prospectus."

Mr. Chamberlain: It is the prospectus for $10,000,000 of first mortgage bonds.

Trial Examiner: Can't you give the exhibit number?

Mr. Chamberlain: I do not know the exhibit number.

It is Exhibit 146. That refers, however, only to land; I do not know that it includes land rights.

It says, "It is the policy of the company to provide the reserve for the retirement of property by the accrual of an annual provision equal to 3 percent of the balance in the property account at the beginning of the year (exclusive of land and contributed property, and exclusive of

automobiles and special tools which are depreciated over their estimated useful lives)".

Mr. Baldridge: That is what I was pointing out earlier, Mr. Littman, when I said the 3 percent was not applicable [fol. 8589] to everything, but to the great bulk of property.

By Mr. Littman:

Q. Mr. Green, the statement which has just been read into the record by Mr. Chamberlain indicates that the company depreciates its rights-of-way, isn't that correct?

A. I would infer so from this statement, yes.

Q. But you do not?

A. What is that?

Q. You do not?

A. The engineers did not depreciate that amount.

Q. In setting up your annual allowances for depreciation in Exhibit No. 104, do you depreciate those rights-of-way?

Mr. Baldridge: Aren't you confusing two things there, Mr. Littman? Aren't you confusing depreciation and amortization?

Mr. Littman: I am not the least bit confused.

By Mr. Littman:

Q. Are you confused, Mr. Green? Do you have difficulty in understanding me?

A. In Exhibit 104, there is reflected a calculation which shows we amortized the full original cost of land rights over the period of 24½ years.

Q. You recognize that these rights-of-way do, in fact, depreciate after June 30, 1941, do you not?

A. That was not the purpose of our calculation. Our [fol. 8590] calculation was to amortize the expense of land rights over the 24½ year life.

Q. Have you deducted anything in Exhibit 92 for amortization by reason of the claimed exhaustion of the gas supply?

A. Michigan Gas Transmission Corporation owns no producing wells. I do not get your question.

Q. Have you made any deduction from original cost in Exhibit No. 92 for any amount which represents the accrued amortization to June 30, 1941?

A. Per books?
Q. Yes.
A. No.
Q. Well, for anything else, have you?
A. They are two entirely different items.
Q. You can tell me whether you did or did not, Mr. Green.
A. What we were determining in Exhibit No. 92 was the value of this property at the date that regulation began which, in this case, is June 30, 1941, and what happened in prior years when there was no regulation, what the company charged on its books for depreciation, I do not think is applicable here.
Q. Well now, you have set up in your provisions for annual allowances for depreciation, an amount with which to reimburse the investors by reason for the claimed exhaustion of the gas supply over the remaining purported 24½ year life of the Transmission Corporation?
[fol. 8591] A. As applied to the long-term investment.
Q. That is practically all of it, isn't it?
A. Percentage wise, yes. The long-term investment is a very large percentage of the total, correct.
Q. 90, 97, if not even more?
A. I should say in this property, pipe and compressor stations would represent 85 percent, maybe more, of the total plant account and the life of both of those items would be far in excess of the 24½ year period that we are using here.
Q. Now, when you go about setting up annual allowances for depreciation, you make those allowances sufficiently large to cover the amortization of the property by reason of the claimed exhaustion of the gas supply, do you not?
A. Yes, when you are amortizing the investment here over a fixed period. Depreciation, as generally used, refers to the life of the property continuing in business, if you are in a business that has an infinite life. Here, we have a business that has a finite life so it is really amortization of the investment rather than depreciation. I think we both would be clearer in our discussions if we used that definition.
Q. I am going to ask you a question and I would like to have you answer this question yes or no, Mr. Green, be-

cause I am fearful that this record is going to be utterly confused unless I have some direct answers to some of these questions.

I read from the Uniform System of Accounts prescribed [fol. 8592] for natural gas companies by the Federal Power Commission.

"Among the causes to be given consideration are wear and tear, decay, action of the elements, inadequacy, obsolescence, changes in the art, changes in demand and requirements of public authorities and, in the case of natural gas companies, the exhaustion of natural resources."

That statement appears on Page 4. In Exhibit No. 92, have you deducted anything whatever for that element of depreciation which is described in this Uniform System of Accounts as the "exhaustion of natural resources"?

A. I do not know how to answer that question with yes or no. This is not a depreciation—

Q. (Interposing) I do not know how we can even discuss this subject then. Don't you know what Exhibit 92 purports to represent?

A. I do.

Q. Have you or have you not made any deduction from original cost in Exhibit 92 for the element of depreciation which is described by the Federal Power Commission in its Uniform System of Accounts as "the exhaustion of natural resources". You either did or you did not.

A. I cannot answer the question the way you express it, Mr. Littman. I am sorry, but I cannot.

Q. All right, you say you cannot answer my question. Will you tell me why you cannot answer my question? In [fol. 8593] the first place, don't you understand it?

A. No, I am not quite clear just what you are referring to because you are trying to read something in this statement which is not in the statement. The purpose of this exhibit No. 92 is to determine the value of this property based on its original cost as of June 30, 1941. That is the purpose of this exhibit, to determine its dollar value.

Q. Mr. Green, if this property were to be abandoned tomorrow by reason of the claimed exhaustion of the gas supply, would it be worth as much as the original cost less depreciation which you show on Exhibit 92?

A. It certainly would not.

Q. Have you deducted anything from original cost by reason of that element of depreciation?

A. We begin with this figure of $11,951,000. We used that. That is the value as of June 30, 1941. We begin from there in our later exhibits and amortize that over 24½ years.

Q. Will you answer my question, please? Have you deducted anything from original cost in Exhibit No. 92 which would reflect the element of depreciation described in the Uniform System of Accounts as "the exhaustion of natural resources"?

A. There is no amount deducted in these calculations as shown on Exhibit No. 92 that is based on the life of the gas field. Does that answer the question?

[fol. 8594] Q. Yes, that answers my question.

A. Very good, sir.

Q. And that is a pretty important element in determining what the value of a property is, is it not?

A. This is the beginning point here. This figure is the beginning point and then we are going to amortize that, which we do in the other exhibits, over 24½ years. We determined the amount per year that should be charged against earnings to cover that.

Q. If you were purchasing a gas property, Mr. Green, and you had two propositions; you had one company whose gas supply was going to last 25 years and another one whose gas supply was going to last only 10 years and, so far as could be observed, the physical depreciation was the same and all other elements were equal, would you pay as much for the property whose gas supply was going to last only 10 years as for the company whose gas supply was going to last 25 years?

A. That all depends on what these two properties are earning, doesn't it? What I would pay for it would depend on what they are earning.

Q. I said all other things being equal, the same earnings.

A. If the conditions are all the same, there would be no difference because you get your money back at the end of 10 years on the one company and you get it back in 20 years, did you say, on the other company and you only get

[fol. 8595] a certain fair return per year on the amount you pay for the two properties.

Q. Would your answer be the same if there were only one year remaining gas supply on the property—

A. (Interposing) If the company was receiving all of these factors and elements that they should receive, there would be no difference.

Q. In other words, you would amortize in the last, single, remaining year of the life of the property which I have described, the entire investment and shut your eyes to the amount that has been accumulated on the books of that company for that purpose in the past?

A. What was accumulated on the books of the company prior to regulation, I do not think is important or of any use and we have not used it in any way in preparing these exhibits.

Q. Mr. Green, you started on June 30, 1941, notwithstanding the fact that the Natural Gas Act became effective in the middle of 1938, didn't you?

A. Yes, but I think in the Natural Gas Pipeline of America case, that the Circuit Court, at least, gave some statement on that. I have forgotten exactly what it was but the time element here is so short between the two dates, that it would not be material.

Q. Two and one-half years is not material?

[fol. 8596] A. What?

Q. Two and one-half years is not material, in your opinion?

A. It would not have made any difference in these calculations here.

Q. Probably not the way you calculated it, Mr. Green, but I am asking you why you did not start your calculation on the date the Natural Gas Act became effective rather than as of June 30, 1941?

A. We could have made calculations and determined value as of that date. It probably would make no difference.

Q. It probably would have been better, did you say?

A. No, I do not think it would make any material difference.

. . . . . .

Q. Mr. Green, if you sent your engineers out to make a depreciation study by the observation method one day be-

fore the exhaustion of the natural gas supply, would they find any different percent condition than that which they would find if there were an inexhaustible gas supply on that property?

A. Are you referring to this assignment here, the comparable assignment here?

[fol. 8597] Q. I am referring to the method used by your engineers, yes.

A. If the engineers would go out on this property, as they did, the percent condition that they would find would be the same whether the expected life of the gas reserves was one year or 100 years.

Q. Or one day or 100 days?

A. Correct. The life of the field has to do with the period of amortization. We are speaking here of determining values as of some date, which was June 30, 1941.

Q. Well, aren't your engineers, when they ignore the fact that the gas supply in one instance is to be exhausted within one day after they examine the property, ignoring a very important element that goes into the determination of the value of the property?

A. There is a percent condition based on the original cost of the property. Now, whether the property is going to be used one day or 10,000 days after that date is not an element that they even should consider in determining the percent condition of value. There is no relation between the two points. One has to do with determining value and the other thing that you are discussing is the period of amortization.

Q. In other words, when you go about to make a determination of the amount of dollars to be provided annually for depreciation, you take into account the important factor of the claimed exhaustion of the gas supply; [fol. 8598] but when you go about making a determination of the amount of depreciation to be deducted from the rate base for rate making purposes you ignore that fact. Is that what you say?

A. Not at all. I do not believe you have stated your own position there. I believe you have confused the two elements there.

Q. What is there about my question that seems to be confusing to you?

A. I am reminded of the story of the chap that says, "Do you see that big red house?"

"Yes."

"Well, that is not the one."

Q. Well, perhaps we can get at it this way, Mr. Green: You have stated that your deduction from original cost for depreciation does not reflect anything that has not been provided for in the past by way of amortizing the property over the life of the gas supply.

A. In Exhibit 92 the book depreciation is not reflected.

Q. But when you set up your annual allowances in Exhibit No. 104 you do include that element, do you not, namely, the element of making a provision for the amortization of the property over the life of the claimed gas supply?

A. Correct.

Q. Do you believe in harmonizing the annual allowances [fol. 8599] for depreciation with the amount to be deducted from original cost for depreciation?

The Witness: Will you read that?

(Whereupon, the pending question was read by the reporter.)

The Witness: I do not understand your question, Mr. Littman, and I am not trying to be evasive, sir.

By Mr. Littman:

Q. Yes. Well, I think I can make it clear by reading an excerpt from the Commission's Opinion No. 63 in the matter of Chicago District Electric Generating Corporation, Docket No. IT-5500:

"The true conception of depreciation leaves no room to doubt that annual depreciation expense and actual depreciation must be harmonized. Annual depreciation measures the diminution in service life, capacity or utility in one year—actual existing or accrued depreciation is the total diminished service life, capacity or utility to the date of inquiry. To accept the one while denying the other is to be illogical and guilty of employing dual standards

with resulting injustices to the public or to the utility. The principles are identical which govern the estimate of loss in service capacity for both accounting and valuation purposes'."

Do you subscribe to the principles which I have just read?

A. I do not as applied to the Exhibit 92.

Q. Well, of course, if you have not applied the Com- [fol. 8600] mission's principles for purposes of Exhibit No. 92, which is one part of the harmonizing feature, you, of course, are saying that you have not applied the Commission's rule at all, isn't that true?

A. I think in my direct testimony, as well as in my testimony this morning, that I answered that question.

Q. Affirmatively?

A. No.

Q. Well, have you in respect to Exhibits Numbers 92 and 104 harmonized annual depreciation with accrued depreciation as that term is defined in the Commission's opinion in the Chicago District Electric Generating case?

A. Exhibit 92 is determined value as of June 30, 1941. We used that value, which is original cost depreciated to percent condition, and determined the annual dollars necessary to amortize that original cost investment.

Q. Now, will you answer my question, please, Mr. Green?

The Witness: Will you read the question?

(Whereupon, the question commencing at Line 9 of this page was read by the reporter.)

The Witness: I cannot answer the question.

By Mr. Littman:

Q. Why can't you answer the question, Isn't it clear?

A. Well, I think I clearly stated how we had determined Exhibit 92, the figures shown there, and how we used them [fol. 8601] in Exhibit 104. Now, if you want to make any comparisons with the method that I have set up here as against any Commission ruling or any Court ruling, it is perfectly all right. That is your business, but I do not want to be interpreting some Court decision or some Commission's decision.

Q. Well, I have read you an excerpt from the Commission's opinion in the Chicago District Electric Generating case and I merely asked you whether you applied those principles to your depreciation studies which you have offered in this proceeding?

A. Mr. Littman the two cases are not comparable. The Chicago District Generating Electric Company is a utility with an infinite life. This property here is a property that has had regulation over many years, too, by the way.

Mr. Baldridge: You mean—

The Witness: (Interposing) In the Chicago District Electric Generating case.

Here you have a business that is taken over—I don't know, I am using the words "taken over" advisedly, but they have taken over the property as of the date of regulation when the Act was started. Prior to that there was no regulation of the natural gas pipe lines. Here we have a property with a finite life and the two cases are not comparable in any way, in my opinion.

Q. Are you saying that on a property with a finite life [fol. 8603] that the Commission's principles, which I have read to you, cannot be applied?

A. Well, the principles that they are referring to there, as I remember your reading that statement, they are referring to an entirely different situation, entirely different conditions than we have in this case here, entirely different; the two are not comparable.

Q. Do you agree with the statement, "Actual existing or accrued depreciation is the total diminished service life, capacity or utility to the date of inquiry"?

A. With a business that has been regulated throughout as the Chicago District Electric Generating Company has and which has an infinite life.

Q. Does Exhibit No. 92 have any figure thereon that represents "actual existing or accrued depreciation", as measured by the "Total diminished service life, capacity or utility to the date of inquiry"?

A. If the measured life that you speak of is on the straight line depreciation, it does not.

Q. Well, you do not agree with this principle anyway, do you, that I read to you from the Chicago District Electric Generating case?

A. I do not think that the value of all property in the public utility business, each item of property, decreases in the same amount from year to year as you would set up [fol. 8603] on a straight line basis. I think that is purely an accounting device for amortization of property values and that does not mean that the value of that property goes off in the same direct proportion, and it does not, either.

I will give an example. In my opinion a compressor station that is similar to the ones that are installed and in use by this company, that the actual value in dollars of one of those compressor stations is greater, the value is really greater one year after it is installed and operated than it is the day it is installed and has never been rolled over or used for the obvious reason that some use of that equipment should get all the bugs out and it really has a greater value than it did the date that it was first installed.

Q. You think that the consumer should pay a return upon the unearned increment which represents the additional value that you have just described?

Mr. Culton: I would like to know what that is.

The Witness: No. Mr. Littman, when we determined the annual amount here for amortization, it is based on straight line discounted.

By Mr. Littman:

Q. Now, Mr. Green, what I want to do is to discuss your example. What you are saying is that if a compressor engine is installed today at a cost of $100,000 that it is worth more a year from today by reason of the fact that [fol. 8604] it has been worked for a year and operates a little more efficiently than when first installed. Is that right?

A. May I state what I meant by that statement?

Q. Yes.

A. You install a compressor station today that costs $100,000 and it is placed in operation and we will assume

that that compressor station has a finite life of 25 years. The annual depreciation rate would be 4 percent of the $100,000 or $4,000. My point is that at the end of one year the value of that compressor station would be greater than $100,000 less $4,000 or $96,000.

Q. And you would have the ratepayer pay on the basis of what you call the present value. Is that right?

A. No. We were determining the value here as of June 30, 1941, that is what we were determining here. Then, we start from that day and we depreciate it on the straight line basis, discounting the amount to go into a fund compounded semiannually as shown later in the exhibits and which develops the sinking fund method.

Mr. Goodman: Well, you do not answer Mr. Littman's question. Now, who is going to pay you that appreciated value?

That is what I think he means.

The Witness: What we were trying to determine in Exhibit 92 is the value based on original cost of this property as of June 30, 1941. Now, let's get that clear. That is [fol. 8605] the purpose of this exhibit.

By Mr. Littman:

Q. Mr. Green, I am asking you to talk about your own hypothetical case of a compressor engine installed today, having a value of $100,000.

A. Yes.

Q. Now, you say that if it is five years old and has an over-all life of 25 years and has a remaining life of 20 years that for bookkeeping purposes the reserve would be 20 percent, let us say, 20 percent.

A. Yes.

Q. Of the original cost.

A. On straight line.

Q. Or $20,000.

A. On straight line, yes sir.

Q. Now, by the observation method, according to you, you would not find anything like $20,000 of depreciation on that station, would you, on that compressor engine?

A. If you were determining value, not amortization, but if you were determining value as of that date.

Q. By the observation method?

A. Yes, you would not. They would not be the same.

Let us put it this way: Suppose the compressor station cost $100,000 and we will suppose that the life of the gas field is only two years. All right, one year later you would [fol. 8606] have amortized 50 percent of that station, wouldn't you? It would be $50,000. I am claiming that the value of that compressor unit might be $75,000 as of one year hence, although the books would reflect that you have written off 50 percent of the amount.

Q. Now, Mr. Green, let's go back to your original illustration and not confuse the issue. We have a compressor engine installed today at an original cost of $100,000. The over-all life of the gas supply is 25 years and 5 years have elapsed. You will have provided 20 percent of the original cost or $20,000 in a depreciation reserve to take care of the amortization. Is that right?

A. Five years hence it would be that.

Q. That is right.

A. From now.

Q. You have that?

A. Yes, that is correct.

Q. Now, you have stated that for rate making purposes you would not use the remaining $80,000 as the rate base, because you say that does not represent the value of the machine. Is that right?

A. No, sir, that is not correct, for this reason: You get the two dates wrong. You say "if you built a compressor station today." If we built it today, the Natural Gas Act is in effect, so you spend the dollars today and you are as- [fol. 8607] suming that the life of the field is 25 years. Five years from today you will accrue 20 percent. Correct? But you would not determine any value then.

Mr. Goodman: Why not?

The Witness: What would use the figure for, sir? It has nothing to do.

Mr. Goodman: Suppose we have a rate case at that time now?

The Witness: It would not make a bit of difference. You would not use this percent condition at all under this case

now that you are going to build it today. You do not use percent condition.

Mr. Goodman: That is exactly what we want to find out. In other words, because the Natural Gas Act is in effect and for a property on which the Natural Gas Act has been in effect from the beginning, you would say that percent condition is inapplicable in determining the rate base?

The Witness: Percent condition would have nothing to do with the rate base; under the theory I have set up here you know what the original cost is. You built it today under the Natural Gas Act when it is in effect.

Mr. Goodman: And the only reason that you have used percent condition in this case is because you claim that, in the absence of regulation, the property is worth at least its original cost less an amount deducted dependent upon [fol. 8608] its percent condition?

The Witness: Correct, yes, sir.

Mr. Goodman: And that is the justification for your percent condition in this case, namely, you felt that you should determine a value apart from regulation?

The Witness: Apart from regulation?

Mr. Goodman: Yes.

The Witness: What do you mean "apart from regulation"?

Mr. Goodman: In the absence of regulation.

The Witness: No, the property was prior to regulation so what we are trying to arrive at here is the value as of the date of regulation.

Mr. Goodman: That is it. Now, you determined that, you say, on a structural value?

The Witness: Percent condition of original cost.

Mr. Goodman: By the way, is the term "structural value" familiar to you?

The Witness: No.

Mr. Goodman: I see, all right. Now, then, had regulation been in effect prior to 1936, you then are clear that that

method of determining the present value of the property would not be applicable?

The Witness: By this method?

Mr. Goodman: Yes.

The Witness: It would not.

[fol. 8609] Mr. Littman: By "this method," you mean the observation method?

The Witness: Yes. It would not.

Mr. Baldridge: That is based on the fact you used original cost as a rate base?

The Witness: That is correct. In other words, if the Natural Gas Act had been in effect in 1933—

Mr. Goodman: (Interposing) Yes.

The Witness: (Continuing) —or prior to when this property was constructed, you would not use this method at all, sir. I would not use it.

Mr. Goodman: Now, will you tell me what method you would use?

The Witness: As I have applied it here to Exhibit No. 104?

Mr. Goodman: No.

The Witness: I mean if I was running the whole show?

Mr. Goodman: No, assuming regulation had been effected since the inception of the investment.

The Witness: Yes.

Mr. Goodman: What method would you use to accomplish a revaluation?

The Witness: I would not have any revaluation, sir.

Mr. Goodman: You would not find it necessary?

The Witness: It would not be necessary, no. You would not determine the percent condition. It would not be needed.

[fol. 8610] Mr. Littman: You would use the original cost less the reserves for rate base?

The Witness: If you use original cost as the rate base as we have done here, with certain corrections due to the purchasing power of the dollar, if you use original cost as the rate base and the sinking fund method, you do not deduct book depreciation.

By Mr. Littman:

Q. Suppose you used the straight line method of setting up annual allowances for depreciation, would you then deduct the depreciation reserve from the original cost?

A. No, you use the average investment over the life. You get the average investment over life.

Q. Even then you would not deduct the depreciation reserve? A. Yes, you do.

Q. You do?

A. On the straight line method, say you have a property with a life of 25 years, it is 4 percent per year. Now, under the straight line method, you start off the first year with $100. You earn on $100, don't you? The second year, you have $96 left in the business, the third year $92 and so on down, but to determine the amount that this company should earn per year, you average that and you get the average investment. Otherwise, you would have to [fol. 8611] adjust rates each year which, of course, you would not want to do so you use the average investment.

Mr. Goodman: Now then, you have pointed out that, as you would apply it, there is little, if any, difference between the straight line method and the sinking fund method in its application, haven't you?

The Witness: In my opinion, there is no difference.

Mr. Goodman: You mean in their use in determining the proper price of service, that is the way you mean it?

The Witness: Yes, how much should this company earn—

Mr. Goodman: (Interposing) In a calculation of rates to determine the proper price of service, there is no difference in the result?

The Witness: Whether you use straight line or the sinking fund method—

Mr. Goodman: (Interposing) All right.

The Witness: (Continuing) —both properly applied.

Mr. Goodman: Now, is that comparability, in your mind, predicated upon the basic thought that you should, in applying the straight line method average the investment outstanding over the life of the property?

The Witness: That is correct.

Mr. Goodman: In other words, let's take this example: Let's get down to a 10-year, $100 value, having a 10-year life and no salvage. Now, on the straight line method, [fol. 8612] that property will decline in value from $100 to $10, is that right, or to zero?

The Witness: To zero, correct.

Mr. Goodman: So the average investment will be $50, is that right?

The Witness: That is right.

Mr. Goodman: Consequently, you would use $50 as your rate base?

The Witness: The average.

Mr. Goodman: For the price of service.

The Witness: That is correct, roughly.

Mr. Goodman: And that would make it comparable to a price of service determined by the application of the sinking fund method, is that correct?

The Witness: That is correct.

Mr. Goodman: Well now, let's try it a different way that I think will make the thing more clear because I am not sure about the applications of an average property value. This much is clear, that if you compute the price of service under the straight line method and assume that you want your concern or your unit or your enterprise to make 6 percent on its investment, it would have to charge,

in the first year, $10 for depreciation, $6 for return or $16, is that correct?

The Witness: Correct.

Mr. Goodman: Now, in the last year, you would have to [fol. 8613] charge for service $10.60, isn't that right?

The Witness: That is correct.

Mr. Goodman: Now, if you took $16 and $10.60 and you averaged that, you would get a figure of about $13.50, wouldn't you?

The Witness: Average.

Mr. Goodman: An average?

The Witness: That is right.

Mr. Goodman: Average price for service for annual output, is that right?

The Witness: That is right.

Mr. Goodman: And it so happens that that figure would compare with the result under the sinking fund method, isn't that so, which is exactly $13.59?

The Witness: Assuming your mathematics is correct, the principles, I agree with you. There is no difference at all between the two.

Mr. Goodman: There is no difference?

The Witness: Under the sinking fund method, you will come out with the same annual amount per year for amortization plus return on the investment.

Mr. Littman: Using the same rate of interest for the sinking fund as you used for a return, is that right?

Mr. Goodman: What happens—

Mr. Baldridge: (Interposing) I submit the witness can [fol. 8614] only be expected to answer one question at a time.

Mr. Goodman: The question is mine and I am going to rephrase what Mr. Littman has in mind.

Now, it happens that these figures come out approximately correct where a 6 percent rate is being applied. Would you say that they come out in the same way with respect to any rate of interest?

The Witness: Correct.

Mr. Goodman: They will?

The Witness: Yes.

Mr. Goodman: Have you figured it out? Have you tried the calculations?

The Witness: I mean the two, the sinking fund method as against straight line, would be the same whether you used 8 percent as a fair return or 4 percent as a fair return.

Mr. Littman: Provided you used the same rate of interest?

The Witness: In both calculations, yes. That is what I mean to say.

Mr. Goodman: Have you gone through those calculations to see if that is right at any time?

The Witness: I would not have to go through them.

Mr. Goodman: You are sure they would come out that?

The Witness: Yes, sir.

Mr. Goodman: Now you realize, Mr. Green, that your application of the straight line method is not the conven-
[fol. 8615] tional one, isn't that right?

The Witness: We have not used the straight line method—

Mr. Goodman: (Interposing). Nevertheless, you realize that your qualification of the straight line method, that is, by averaging the value at the beginning and end, from the initial value to zero or averaging the return requirement from, in the example I gave you, $6 to $10.60, is not the conventional application. You know that?

The Witness: No, in any rate case I have ever been in, it has always been done the way I say. You take the

average investment. Now, of course, a property with an infinite life, you have got different problems entirely than you have here with a property with a finite life. I want to say that again. They are entirely two different problems.

Mr. Goodman: Do you think, Mr. Green, that by using, in the example I gave you, the averages which you have mentioned that one can, with a fair degree of accuracy, calculate the decline in value year by year which would ensue under the hypothesis? Do you follow me?

The Witness: I do not.

Mr. Goodman: Would this method then—

The Witness: (Interposing) Which method?

Mr. Goodman: Would this method of computation by the straight line method which you advocate and its application which you advocate, result in an approximate determination of value year by year under the hypothesis of the problem, that is, the 10-year life, constant service and no salvage at the end? [fol. 8616]

The Witness: Well, if you were to charge the ratepayers per year the amount that you gave, $10 or $16 the first year?

Mr. Goodman: Yes.

The Witness: And down to the last year, the ratepayers would pay $10 plus 60 cents.

Mr. Goodman: You do not think that is right, do you?

The Witness: Well, I think it would be almost impossible to run a business that way because you are going to be lowering rates each year.

Mr. Goodman: Now, it would not occur to you, Mr. Green, that the freight consignee should pay a less sum depending on whether the freight was hauled in a new car or an old one?

The Witness: I would not think so, no.

Mr. Goodman: In other words, if the car was about to be retired the next day, he should not receive a discount

because his freight was hauled in an old car over what he would pay if the freight was hauled in a new car?

The Witness: I would not think so.

Mr. Goodman: In other words, the value of the service he received is the same, regardless of the age of that property, isn't that right?

The Witness: That is correct, and the cost of that serv- [fol. 8617] ice has been the average life of the car.

Mr. Goodman: And that is why, if you charge your customers approximately $13.30 then, that being the average figured on the straight-line method, you would say that that would approximately be a fair price for service to yield the utility 6 percent throughout the life of the unit?

The Witness: That is correct.

Mr. Goodman: And it will do that, too?

The Witness: It will do that, that is right.

Mr. Goodman: Now, on the basis of those facts, the unit will decline in value according to a certain mathematical rule, won't it? If you assume these facts to be true—

The Witness: (Interposing) I do not know why you are now bringing in this question of value.

Mr. Goodman: You do not want it?

The Witness: I see no application.

Mr. Goodman: All right. You would say there is no need to revalue that unit at any time?

The Witness: Not at all.

Mr. Goodman: That, once having established the correct price for service, there is no reason why that should not stay that way as long as our conditions are maintaining themselves in effect?

The Witness: And the value of the dollar remains the same.

Mr. Goodman: And if you got new conditions as, for [fol. 8618] example, an extention of life—

The Witness: (Interposing) Taxes.

Mr. Goodman: (Continuing) Or the need for some enhanced rate of return, that would be the time to make an application of some new rate?

The Witness: That is correct.

Mr. Baldridge: May I ask a question there? In speaking of the average investment, you mean to include, of course, the investment that is made during the remaining life of the enterprise, don't you, Mr. Green?

I mean, you have been talking about an assumed case where you had a certain investment in an enterprise.

The Witness: And no property additions are assumed.

Mr. Baldridge: And no property additions?

The Witness: That is correct.

Mr. Baldridge: But you would have to take all property additions into consideration?

The Witness: Yes, if there were property additions made, it would change your calculations, of course.

Mr. Baldridge: And if you started with a calculation based on averages over the life of the enterprise, that average, to be accurate, would have to include all property additions made in the future as well as those made in the past?

The Witness: That is correct.

[fol. 8619] By Mr. Littman:

Q. Mr. Green, I am going to read you from Mr. Haberly's testimony at Page 8096 of the transcript. Incidentally, you know Mr. Haberly, do you not? A. I do.

Q. And you consider him a competent engineer?

A. I selected him to do this work.

Q. I read from the transcript:

"Q. Now, where original cost is used, Mr. Haberly, you would feel that it was proper, would you not, to make a deduction for depreciation that has accrued by reason of the claimed exhaustion of the gas supply?

"The Witness: May I hear that question?" . . .

"The Witness: It would depend on whether the reserves for depreciation were being accrued on a straight line or sinking fund basis.

"By Mr. Littman:

"Q. Assume that the company in question is one which is accruing its reserves for depreciation on a straight line basis.

"A. My own personal feeling in that case is that the depreciation should be deducted.

"Q. For the assumed exhaustion of the gas supply so as to reflect that element, is that right? A. Yes."

[fol. 8620] Do you agree with Mr. Haberly's testimony which I have just read?

A. What was this line of examination about, determining what?

Q. Can't you understand what we are talking about, from the excerpt that I have read, Mr. Green?

A. No. What were you cross-examining him about then? Was it this exhibit here (indicating)?

Q. Yes, I was cross-examining him—

A. (Interposing) On Exhibit 92?

Q. I was cross-examining him about Exhibit No. 92, yes.

A. Well, if I understood correctly, I do not agree with that statement.

Q. Now, it has already been stated on this record that the depreciation reserves on the books of the company at June 30, 1941, amounted to $1,526,600. Do you remember that? A. Yes, sir.

Q. Now, the company has collected that amount out of its rates, has it not? A. They have.

Q. By charges to operating expenses? A. Yes.

Q. And through charges to its customers? A. Correct.

Q. Now, what you are doing is to request that, for [fol. 8621] purposes of this proceeding, the largest part of that, namely, all except $310,226.50 be again collected from the consumers, isn't that the effect of your method?

A. No. In determining the value as the date rate making starts here, you get a certain value. From there on, we want to amortize that value and that is what we have here when we get $11,951,034.05.

Q. And if we were to follow your method, we would then return to the company again all of the amount of $1,526,600 which the company has collected in the past except $310,226.50 which latter figure represents the observed depreciation. Isn't that the effect of your method?

A. The effect would be your returning to the stockholder the value of the property as of June 30, 1941.

Q. And you make the duplication that I have just indicated, do you not?

A. I do not. I am not saying there is any duplication.

Q. You are not saying there is not any duplication?

A. No. What happened prior to regulation, I think has nothing to do with this case. Whether they set up one percent or 10 percent depreciation per books would have nothing to do with this case and nothing to do with determining value of the property as of June 30, 1941.

Q. And under your method, the investor receives again the amount which he has heretofore collected for depreciation?

[fol. 8622] A. No, I do not know whether he has received this or not.

Q. He received a large part of it, has he not, Mr. Green, it is obvious.

A. If you mean to ask me this question, Mr. Littman: The original cost of this property less observed depreciation which is given at $310,000 leaves you a net amount of $11,951,000, is that amount, $11,951,000 greater than the original cost less the book depreciation as of June 30, 1941, my answer is yes.

Q. What I am asking you is whether or not, under your method, you are again providing for a return to the investors of the amounts which they have already recouped through their past charges to amortization? You can answer that yes or no.

A. I might be wrong, Mr. Littman, in my concept of how to determine value at the date of regulation here. I might be wrong about that. I am not trying to be evasive about answering your question. I am saying what the company charged on its books, whether it had any earnings in those prior years prior to regulation, I do not

think has anything to do with this question we are trying to determine.

Q. In other words, it has nothing to do with it even though the company has already collected?

A. It has nothing to do with it, whether they have collected or have not collected, yes, sir.

[fol. 8623] Q. And even though your method does result in a duplication in recoupment of those amounts?

A. I did not say that.

* * * * * * * * *

[fol. 8624] Q. Mr. Green, will you please turn to Exhibit No. 93 entitled, "Michigan Gas Transmission Corporation—Statement of Contributions Made to Customers for Business Development for the Years 1936-1937 and Five Months Ended May 31, 1938 (Effective Date of Natural Gas Act June 21, 1938)"?

Do I understand that you have assumed the responsibility of causing this exhibit to be prepared?

A. That is correct.

Q. You have excluded in your pro forma rate base the amount of $182,626.69 which represents the total of the contributions made by Michigan Gas to its customers for what you term "business development" during the years stated in the title of this exhibit? A. Yes, sir.

Q. And all of these amounts have been originally charged by Michigan Gas to operating expenses?

[fol. 8625] A. That is correct.

Q. Mr. Spitznagle has testified that these amounts have been charged to the operating expense account called "Sales Promotion Expense." Is that your understanding? A. Yes, sir.

Q. No such amount as $182,626.69 appears in the capital accounts of Michigan Gas? A. It does not.

Q. Weren't these amounts properly charged by the company to sales promotion expense?

A. That would be a matter of business judgment.

Q. What is your judgment on the subject?

A. Personally I think that an item, an expenditure such as these items here, which was to reimburse the local company for what we call change-over expense from arti-

ficial gas to the use of straight natural gas,—it was an inducement to customers to change-over to use the service of the pipe line company and the benefits of that expense on the part of the company should be spread over the life of the business rather than charged right off in the immediate year. That is my opinion. Since these expenditures were all made and charged off prior to regulation, I think it is a proper amount. If you are going to take over this business for regulation as of June 30, 1941, I think that this amount should be included in capital to be amortized over the 24½-year period.

[fol. 8626] Q. Now, if what you suggest be done were done you would have it both ways, first, on the books of the company as originally charged to expenses and now in capital, wouldn't you?

A. It was charged to expenses per books.

Q. And now you propose to put it in capital?

A. I propose to add it to an amount here which we build up as the rate base.

Q. Then, you answer to my question is yes?

A. Well, I am not proposing that we make any entry on the company's books here. That is why I hesitated to say yes or no. I do not recommend that they make any entry on their books to credit operating expenses and charge operating expenses, credit operating expenses and debit the capital account.

Q. Well, if what you suggest be done is proper, why don't you recommend that it be properly recorded on the company's book as capital?

A. Well, this company is a subsidiary of a holding company and comes under the Holding Company Act and I do not believe that those rules and regulations would permit any such journal entry.

Q. Neither would the Federal Power Commission permit any such journal entry?

A. No, they would call it a write-up.

Q. That is what it would be, wouldn't it, Mr. Green?

[fol. 8627] A. It would be, yes. Not as the word is generally used, "write-up," no, no.

Q. Are you proposing that this Commission include a write-up in the rate base for the purposes of determining the reasonableness of the rates in this proceeding?

A. I am proposing that this Commission add to the original cost. We have here shown this amount in order to determine a rate base for this company, yes, sir.

Q. And, as you have suggested, if this amount were put on the company's books in its capital accounts today, it would be a write-up?

A. I say you would call it a write-up.

Q. I would. Wouldn't you?

A. No, no, just correcting a former entry, that is all.

Q. Well, is there any doubt in your mind, Mr. Green, that the company has already recovered this $182,626.69 from the ratepayers through the medium of past rates?

A. It was charged to operating expenses, these items were, prior to regulation.

Q. Can you answer my question yes or no?

The Witness: You will have to read the question.

(Whereupon, the question commencing at Line 15 of this page was read by the reporter.)

The Witness: No, there is no doubt in my mind but what that is the case.

[fol. 8628] By Mr. Littman:

Q. As a matter of fact, Mr. Green, expenses of this character, which have been incurred since June 21, 1938, down to the present time, have been currently charged to operating expenses of Michigan Gas?

A. That is correct.

Q. You consider that a proper way of recording the matter on the books of the company, do you not?

A. No, as I say, I think an item such as these, such as shown here, it would be better accounting to charge them into capital than to spread them over the remaining life of the enterprise than it is to charge them all into current operating expenses.

Q. In your pro forma statement, Mr. Green, have you made an adjustment to capitalize the current expenses of this character?

The Witness: Will you read that please? I am sorry.

(Whereupon, the pending question was read by the reporter.)

The Witness: We have added these amounts to the original cost less the percent condition to build up a rate base.

By Mr. Littman:

Q. For rate making purposes?

A. For rate making purposes, correct.

Q. Let's look at Exhibit 104, your pro forma statement.

This exhibit was prepared for rate making purposes, [fol. 8629] was it not, Mr. Green? A. Yes.

Q. Now, look at the item of $969,993 appearing in the first line called "Utility Income—Per Books Adjusted—12 Months Ended June 30, 1941, Exhibit 100." Do you find that item? A. Yes.

Q. That item includes whatever sales promotion expenses were incurred by the company during that 12-months' period, does it not?

A. I imagine that it does, Mr. Littman.

Q. Mr. Spitznagle I believe has so testified.

A. Yes. I do not know whether there was any such change-over expense during that year or not. I do not know.

Q. You did not instruct Mr. Spitznagle to revise that figure so as to change the amount charged to operating expenses on that account to fixed capital, did you? A. No.

Q. In your Exhibit 104, Page 2, you apply a return of 7½ percent to the full amount of $182,626 of "Contributions Made to Consumers for Business Development."

A. I do not find that item.

Q. Exhibit 104, on Page 2.

A. Well, there is shown there the cost of developing business, Exhibit 93, $182,626.

Q. What ultimate rate of return do you apply to that? I [fol. 8630] will ask you not to read the factor but to read the ultimate rate of return applied against that amount.

A. 6½ percent.

Q. After adjustment it became 7½ percent?

A. Well, this formula that I have set up, using Mr. Haberly's testimony regarding the purchasing power of the dollar to get 7.54—

Q. (Interposing) That is what I meant.

A. That is applied to that amount, yes, sir.

Q. Now, when you apply this 7½ percent retirement—

A. (Interposing) I am sorry. I am not correct. It is 6½ percent when applied on the cost of developing business. 6½ percent. We did that for this reason, Mr. Littman: Theoretically, to be consistent all the way through with this formula, we should have applied this 7.54 but we did not have any testimony in the case referring to the purchasing power of the dollar and this cost of developing business, so, therefore, we used 6½ percent.

Q. As against this $182,626 item?

A. That is correct, yes. I was on the conservative side and we thought it would be more consistent.

Q. Now, will you please compute for me the rate of return per year on this cost of developing business that you allow in dollars for purposes of your pro forma statement? A. $11,870.

[fol. 8631] Q. Now, you propose that a return of 6½ be allowed each year for the remaining 24½ years of the claimed life of the business, do you not?

A. That is correct.

Q. That would come to $290,815, would it not?

A. I have not calculated it. I am assuming that your figure is correct, 24½ times $11,870.

Q. That is right? A. Yes.

Q. If our arithmetic should not be correct, you will correct us, will you? A. Yes.

Q. Now, you also provide an annual amortization allowance for each of the remaining 24½ years for the purpose of amortizing this base amount of $182,626, do you not?

A. That is included in the amount that we amortize on the sinking fund method, compounding at 6½ percent for 50 percent of the investment and 2½ percent on the remaining 50 percent of the long-term investment.

Q. According to our calculation, over the remaining life of the property your annual allowance would amount to $133,476, computed at the rate of 2.983126 percent.

A. What is that figure?

Q. That is the total amortization allowance to be charged to operating expenses over the 24½-year period [fol. 8632] which you allowed and the interest rate which I have read.

A. No, in Line 13 of Exhibit 104 the amortization of the long-term investment and cost of developing business, based with respect to each 50 percent of this investment at its respective annual amounts which were 6½ percent compounded semiannually and 2½ percent compounded semiannually, will recover the investment, the amount being $333,935 per year.

Q. There isn't any doubt that you did amortize this $182,626? A. Yes, yes.

Q. On a sinking fund basis, of course? A. Correct.

Q. Let us see what that amounts to, Mr. Green. The company has once recovered the amount of $182,626 through the medium of past operating expenses, is that right? A. That is correct.

Q. In addition, you propose to allow a return upon that amount at the rate of 6½ percent for purposes of your pro forma statement over the remaining claimed life of the property for 24½ years, totaling $290,815. Is that correct?

A. I do not know where you get that figure, Mr. Littman. That is 6½ percent times—

Q. (Interposing) Yes, 6½ percent times $182,626.

A. Times 24½ years?

Q. Times 24½ years, yes. If our arithmetic is cor- [fol. 8633] rect, you will allow a total return over the remaining 24½ years of $290,815 on this so-called cost of business development of $182,626.

A. No, you see, Mr. Littman, under the sinking fund method, you use the full rate undepreciated, don't you, throughout in determining the amount which you charge against operating expenses but part of that amount is a return in capital and that is how; if you are using 6½ percent in today's dollars, that is how you get the earnings into the company which must be returned to the investor annually.

Do I make myself clear?

Q. Well, regardless of that, Mr. Green, you are allowing 6½ percent return on this $182,626 down through each of the remaining 24½ years?

A. No, it is averaged. You come again there to the same thing we were talking about this morning, the average investment.

Q. You just explained that you made no deduction from the $182,626 through the years.

A. No, but that is not all income is what I am saying. You calculated it that way, 6½ percent times $182,000 and that amount is included in utility income allowable that I show on Exhibit 104 in the amount of $954,572.

Mr. Goodman: I think I understand Mr. Green's theory very thoroughly and it can be cleared up if I ask a ques-
[fol. 8634] tion or so for the purpose of bringing out what he means.

Mr. Littman: Go right ahead, Mr. Goodman.

Mr. Goodman: You mean that you take 6½ percent of your beginning value and you derive a result from that which you refer to, not as the depreciation for all the years, but as the amortization sum or amount, pure and simple. Is that right?

The Witness: Part of that.

Mr. Goodman: That is the amount that you are going to set aside, literally or figuratively, for purposes of amortization?

The Witness: That is right.

Mr. Goodman: But part of that is return and part of that is interest?

The Witness: Correct.

Mr. Goodman: But regardless of how much is interest of return in any one year as your base declines, the amount of interest is allocable or apportionable as 6½ percent on the declining base?

The Witness: That is correct.

Mr. Goodman: And it works out that way?

The Witness: That is right.

Mr. Goodman: I will say, too, it does also.

By Mr. Littman:

Q. You mean to say that this amount of $182,626 will
[fol. 8635] not remain constant through the remaining

24½ years but will grow less and less in terms of depreciation, that it will be depreciated through the years?

A. It is depreciated through the years.

Q. It is depreciated through the years? A. Yes.

Q. Does your annual allowance on this item increase or decrease or stay constant?

A. Your annual allowance—are you referring to interest or income?

Q. No, I am talking about the annual allowance for amortization on this $182,000. A. That is a fixed amount.

Q. That is a fixed amount? A. Yes.

Q. I thought you deducted only observed depreciation from your rate base. Can you observe any depreciation on sales promotion expense?

A. I say we did not. That is used—

Q. (Interposing) Mr. Green, you do propose to secure a 6½ percent return on this $182,626 of sales promotion expense right down through the years, don't you?

A. May I give you an example of that?

Q. Yes, I wish you would.

A. You start off with a $100 investment. Six percent [fol. 8636] on $100 is $6. That amount remains constant in this calculation that I have shown on Exhibit 104. The item of $954,000 is comparable to the $6 item now. We will assume a 25-year life of the business.

Mr. Goodman: Could you make it 10 with just as much convenience?

The Witness: All right.

Mr. Goodman: The reason for that is I have the 10-year figures in mind.

The Witness: Assuming a 10-year life, at the end of the first year, the investor gets 6½ percent on $100 and in operating expenses is another item for amortization which would be $10, using that amount.

Now, the second year you have only $90 actually invested in the business but we are allowing $6.50 each year. 6½ percent of $90 gives you the income that the investor is getting. That amount less the $6.50 is a return of capital and, for this sinking fund method to work,

the company must give a liquidating dividend each time the payments are made into this fund.

Mr. Goodman: Or you would say, having received the money, it is a matter of indifference to the customer what they do with it?

The Witness: That is right. If they would leave it in the company, then you are not earning on your capital, are you?

[fol. 8637] Mr. Goodman: But the customer, having paid the appropriate rate, is done with the transaction anyway?

The Witness: I think so.

Mr. Goodman: The money is lawfully the money of the company and they are paid out just as if they had taken the return of capital and stuck it in their pocket?

The Witness: That is right.

Mr. Goodman: So the transaction, for the purpose of calculating depreciation, is complete?

The Witness: Yes. I read a brief of the Federal Power Commission in, I think it was the Natural Gas Pipeline of America case where they say in there, this sinking fund method is merely a method of calculation to determine the amount the company should receive annually in earnings but has nothing to do with the books. You do not keep the books that way at all.

By Mr. Littman:

Q. Didn't the Commission use an undepreciated rate base there?

A. That would not make any difference. That would have nothing to do with the calculation.

Q. Didn't you say a few minutes ago, Mr. Green, that you use an undepreciated rate base in connection with the sinking fund?

A. I did not mean to express it that way, I do not believe.

[fol. 8638] Q. You certainly confused me when you expressed it that way.

Mr. Goodman: He means that you can conveniently calculate the amount that way.

The Witness: That is right.

Mr. Goodman: That is what he meant.

By Mr. Littman:

Q. Let me see if I understand you, Mr. Green. There isn't any question that so far as your pro forma statement, Exhibit No. 104, is concerned, you allow 6½ per cent on the full amount of $182,626 business development expense, do you not?

A. Per year, you mean. We allow 6½ percent on that per year.

Q. You allow it certainly for the first year?

A. Each year.

Q. You allow that same return the second year?

A. Pardon me, that is where you are confusing me. You say "return." I say it is that amount of 6½ percent that is allowed on the $182,626 which is shown as a proper item of expense of the company for each year but that amount does not represent—

Mr. Goodman: And that amount—

Mr. Littman: (Interposing) Suppose you go through that answer and make certain the reporter has it. Will you read it so far as you had gotten?

[fol. 8639] (Whereupon, the last answer was read by the reporter.)

The Witness: (Continuing) For each year but that amount does not represent income to the stockholder.

Mr. Goodman: You mean that it is always in each succeeding year 6½ percent on the unamortized balance?

The Witness: That is income. That would be income.

Mr. Goodman: That would be the income?

The Witness: Yes, sir.

Mr. Goodman: And the amount in addition to that is the return of the capital?

The Witness: Correct.

Mr. Goodman: I have your picture exactly.

The Witness: I did not want Mr. Littman to get confused and think that this 6½ percent, as a return to the stockholder, is that amount per year throughout the life of the project.

Mr. Goodman: The fact remains that when you attempt amortization by the so-called sinking fund method, you reach a result which will give you an amortization annuity, not all of which is return, but a portion of which is return of capital, another portion is earnings on the unamortized balance but if your add the two of those together, you will get a constant which constant is equal to the so-called sinking fund annuity on the original sum with which we start?

The Witness: That is well expressed.

[fol. 8640] Mr. Goodman: That is the mathematical working out?

The Witness: Yes, sir.

By Mr. Littman:

Q. Mr. Green, let's confine ourselves for the minute to the ratepayer. Is the ratepayer going to be required to pay 6½ percent on the full amount of $182,626 of business development expense in each and every one of the remaining 24½ years of purported life of this company?

A. No.

Q. He will pay it the first year, 6½ percent of $182,626?

A. Well, in the pro forma statements that we have prepared here, we compound the sinking fund payments semi-annually so, in our setup, you would have 6½ percent for the first six months and, for the second six months, it would be 6½ percent less the sinking fund amount.

Q. Is there any such calculation appearing in your Exhibit No. 104 such as that which you have just described?

A. The principle of the sinking fund basis is part of it. It is the only way you can do it.

Q. We are not talking about the sinking fund. We are speaking about rate of return converted into dollars and cents. Do you understand my question? A. Yes, sir.

Q. Let's not talk dollars, if it seems to disturb you. [fol. 8641] Are you going to apply your rate of return of 6½ percent on the $182,626 in each of the remaining 24½ years of the life of this property? A. No.

Mr. Goodman: If you will permit me, I think I can have the witness tell you exactly what he is doing so you will all understand.

Will you do that, Mr. Littman?

Mr. Littman: All right.

Mr. Goodman: I know what he is about.

Now, Mr. Green, your object was to regard $182,626 as a basis for determining a certain portion of the cost of service, right?

The Witness: That is correct.

Mr. Goodman: And you wanted to burden that cost with an amount which would yield 6½ percent on all of the $182,626 that was, from time to time, outstanding as an investment?

The Witness: That is correct.

Mr. Goodman: So that by the end of the period of amortization, your company will have received its $182,626 back plus 6½ percent on that amount and out of the allocable portions of that amount which were outstanding over the period they were outstanding?

The Witness: That is right.

Mr. Goodman: That is all there is to it?

[fol. 8642] The Witness: Yes, sir.

Mr. Goodman: Now, gentlemen, I suggest you have the reporter read my questions and Mr. Green's answers, you were in conference there, which I think will clarify just exactly how the witness treated the $182,626. He answered my questions there which tell you how he treated it.

(Whereupon, the questions and answers indicated were read by the reporter.)

By Mr. Littman:

Q. Is the return plus the amortization on this item constant each year? A. No, it would not be.

Q. The two items combined are not constant in each year?

A. The amount that we set up semiannually is a fixed amount each year to amortize this investment. It is a fixed amount.

Q. How much is it for each $1,000 of base?

A. On a base of $14,686,827 the annual amount is $333,954.

Mr. Littman: Will you read that answer, please?

(Whereupon, the last answer was read by the reporter.)

The Witness: That is for amortization.

By Mr. Littman:

Q. How much is it for return?

A. Referring to my direct testimony, some items are [fol. 8643] 7.54 and some are 6½, the over-all is $954,572.00.

Q. Does the sum of those two amounts remain constant throughout the life of the property? A. Yes, sir.

Q. So that the ratepayer will pay approximately $100 per year on each $1,000 of rate base, approximately?

A. Referring to Exhibit 104, Item 13, you see the total amount is $1,296,309.

Q. That is the annual return and annual amortization allowance combined, is it not? A. That is correct.

Q. On how much rate base? A. On $14,686,827.

Q. That is approximately 10 cents per dollar, is it not?

A. It would be about 11, wouldn't it?

Q. It would be a little less than 10 cents per dollar?

A. Nine, yes.

Q. About 9 cents per dollar? A. Yes.

Q. Now, we have $182,626 of rate base which is represented by these sales promotion expenses. Is that right?

A. That is correct.

Q. And in each year your return plus amortization will amount to something a little less than $182,626?

A. I imagine that arithmetic is correct. I have not [fol. 8644] checked it out.

Q. It sounds about right to you, does it not? A. Yes.

Q. So that you will give the company over the remaining 24½-year period something more than 2½ times the original amount of $182,000 by way of return and amortization? A. That is merely arithmetic.

Q. Well, that sounds right to you, does it not?

A. Approximately so, yes, but I hesitate to confuse income with return of capital.

Q. Now, let's see what you have done here for the ratepayer, Mr. Green.

Mr. Culton: You mean by that, Michigan Consolidated?

Mr. Littman: I mean the consumers of Michigan Gas Transmission Corporation.

Mr. Baldridge: We have no consumers. Mr. Littman, we sell only to distributing companies. I just do not like the use of "consumers" in this connection, because I think it gives an inaccurate connotation.

Mr. McRee: You have some very good customers.

Mr. Baldridge: I do not deny that.

Mr. Littman: I take it the issue here is the reasonableness of the rates of gas charged by Michigan Gas Transmission Corporation to its customers.

Mr. Culton: We have had no discussion of that at all [fol. 8645] during the entire proceedings.

Mr. Baldridge: The only purpose of my comment was to take up the use of the word "consumers."

. . . . . .

By Mr. Littman:

Q. Mr. Green, let's look at the situation in so far as it affects the rates of Michigan Gas Transmission Corporation with respect to this item of business development expense.

The company has already once recovered the sum of $182,626 through past operating expenses. Is not that correct?

A. That is correct.

Q. Now, you propose by your setup to give Michigan Gas Transmission Corporation that same amount approximately 2½ times through the medium of return and amortization allowance during the remaining 24½ years of the life of the property. Isn't that right?

A. What I propose is that the amount of $182,000-odd should be included in the rate base so that the company will receive a fair return on that amount and an amount in addition to the fair annual return that will amortize the investment.

Q. And the effect of that is to allow over the remaining 24½ years 2½ times the $182,626 which it has already [fol. 8646] recovered?

A. I said it had been charged to operating expenses.

Q. Well, is my statement true or false?

A. I see no relation—

Q. (Interposing) Can't you answer my question yes or no? Let's get that off the record, first.

A. I say it has been charged to operating expenses.

Q. Is my statement correct or is it not?

A. Well, if you add income to amortization, yes, and that is what you are doing.

Q. Well, that is what you are doing, is it not?

A. No, sir.

Q. What are you doing, if you are not doing that?

A. You cannot find that in Exhibit 104.

. . . . . .

[fol. 8648] By Mr. Littman:

Q. Mr. Green, let us look at your annual allowances for amortization which appear in your Exhibit 104 in the pro forma statement. The calculation appears on page No. 6 of that exhibit, does it not? A. Yes, sir.

Q. Your use a 24½-year term as the purported remaining life of this project, do you not?

A. That is correct.

Q. You are not personally assuming any responsibility for that period, are you? A. Yes, sir.

Q. Upon what do you base the 24½-year period?

A. I am advised that the Panhandle Eastern were using a 24½-year life of the field from the witnesses that they had and I am of the personal opinion that the expected

life of 24½ years is the proper amount, in my own judg-
[fol. 8649] ment, that should be used in this calculation.

Q. As I understand your testimony, you are basing the term upon the testimony of others in this proceeding?

A. Yes, but if I had not agreed, I would not have used in these exhibits here 24½ years.

Q. You did not make any independent investigation of your own with respect to the remaining life of the gas supply available to the Michigan Gas Transmission Corporation?

A. Not personally, no. I have familiarized myself with the opinions of others, experts.

Q. In other words, you are basing your judgment upon the opinion of others who have testified in this proceeding? A. That is right.

Q. Now, in your opinion, should the term be based upon the life of the gas reserves now controlled and owned by Panhandle Eastern or should it be based upon the life of the gas fields in which Panhandle Eastern operates?

A. I would say the life of the fields provided the Panhandle Eastern Pipe Line Company will have an opportunity of acquiring that gas.

Q. In other words, if the life of these gas fields, to wit, the Hugoton and Panhandle fields, should extend 10 or 20 years beyond the life of the presently-held reserves of Panhandle Eastern, it would be proper to use the life of the fields rather than the shorter life of the reserves now
[fol. 8650] held. Is that correct?

A. If Panhandle Eastern will be able to acquire that gas.

Q. You mean assuming a market?

A. Assuming it will be able to buy it. Someone else might own that acreage and want to use it for their own pipe line. I do not know.

Q. Do you know of anyone who has testified in this proceeding who has said that the life of the Panhandle Eastern's reserves is 25 years?

A. I think Mr. Ralph Davis testified, did he not, or Mr. Biddison? Now, I have forgotten which.

Q. Well, Mr. Biddison based his testimony on the opinion of Mr. Davis.

A. Of Mr. Davis, that is right.

Q. Mr. Davis said that the reserves had a remaining life of "more than 25 years." Do you recall that testimony? A. Yes.

Q. I am going to read you some testimony that was given by Mr. Creveling, the President of Panhandle Eastern and now the President of Michigan Gas Transmission Corporation before the Securities and Exchange Commission in connection with their recent refinancing of Panhandle Eastern. I am reading from Pages 518 and 519 of the transcript of that proceeding.

Trial Examiner: What docket number?

Mr. Culton: It is the same docket number as the Order [fol. 8651] heretofore offered in evidence.

Mr. Littman: It is the proceeding which culminated in the findings and opinions of the Securities and Exchange Commission shown in Exhibit 147, File Nos. 59-33, 70-263, 70-371, 70-387, 70-430 and 70-431 in the matter of Columbia Gas & Electric Corporation, et al.

By Mr. Littman:

Q. (Reading)

"Q. Could you tell us to what extent, or what limitations there are in purchasing those properties to increase your reserve?

"A. That is rather a difficult question to answer, Mr. Selig.

"We are strengthening our reserves in more than one way. Not only are we acquiring some additional acreage which has not yet obtained the position of being subject to any great drilling programs, and we are also blocking acreage by trading as well as by acquisition, in order to have satisfactory drillings in the Hugoton Field.

"We have a program, I think, in our budget, as I recall the figure as $40,000, and probably will have some such an item in our 1942 budget, although of course that has not been before the Board for approval, and we will

keep acquiring acreage and blocking acreage as our business judgment indicates we should."

"Q. And that is in the same Hugoton area?

[fol. 8652] "A. That is correct, but it is getting away from that part of it in which the production, the major part of the production is now coming.

"Q. And could you tell us what limitations there would be in acquiring this extra acreage?

"A. I could give you my thought on that matter. My thought is that we should acquire property, as much as 25 or 30 thousand acres of additional reserve within the next couple of years.

"Q. Well, is there any limitation upon your opportunity to acquire that amount of acreage?

"A. That is the reason, one of the reasons why we are doing it at this time, one, because the acreage is available now to the greatest extent anyone could figure we would need additional reserve, and, second, it is not in demand today by other existing or potential projects, and therefore it can be acquired on a more favorable basis.

"Q. Mr. Creveling, if it would be your program to get a reserve to last for that 25 years, say for 35 years, would you be able to get it in that field?

"A. I have no hesitancy at all in stating that it is my best judgment that we could, if you will accept my definition of the Hugoton area.

"Q. Well, will you describe the limitations, boundaries of the Hugoton area?

[fol. 8653] "A. If I had a map I could show you. Roughly it includes all southwestern Kansas, the Oklahoma Panhandle, particularly Texas County, and Sherman and Hansford Counties, Texas."

Have you heard of that testimony before the Securities and Exchange Commission before?

A. I just heard it.

Q. This is the first time. Do you want to change your opinion as to the term of years, Mr. Green? A. I do not.

Q. You still stand by the 24½ years, notwithstanding the testimony of Mr. Creveling, the President of both of these companies, who now says that he is acquiring additional acreage and can very readily extend the life of this project for 35 years from today?

A. Yes, if I had two experts and one says "30 years" and one says "24½ years" and I had the authority and responsibility of fixing the rates on that company, I would use the lesser amount, the more conservative. If, in 5 or 10 years from now, you find that the field is going to last these 25 years, I would readjust my costs at that time.

[fol. 8654] Q. You know that Mr. Davis, the expert upon whom you say you relied, based his estimate of "more than 25 years" upon the presently-held reserves of Panhandle Eastern, do you not, and not upon the over-all life of the fields?

A. As I understood, it was on the presently-held and present rate of withdrawals.

Q. Well, you are mistaken about the latter part of that, Mr. Green. The record will show what he said, of course.

Well, what effect did you then give to the life of the fields as distinguished from the life of the presently-held reserves?

A. We are using here 24½ years in this calculation.

Q. And you are going to stand by it in spite of anything that anyone tells you about it. Is that right?

A. I think, in the light of all the record and information coming to me, that is a conservative figure to use at this time.

Q. That is the trouble with it, isn't it, it is too conservative? A. No, I do not think so.

Q. The company, itself, uses an over-all figure of 33 years, does it not?

[fol. 8655] A. They are using at the present time, charging 3 percent of the plant account for depreciation.

Q. So the answer to my question is yes, is it not?

A. If that is straight line, it would be 33⅓ years.

Q. Then you think the company is in error in so doing?

A. I so stated this morning.

Q. You think Mr. Creveling is in error, too?

A. I do not know what they are charging Panhandle. I am not familiar with their bookkeeping methods.

Q. Well, do you think Mr. Creveling is in error when he says he has no difficulty securing sufficient gas acreage to last another 35 years? A. He is entitled to his opinion.

Q. You do not agree with him in that regard, do you?

A. I am not disagreeing with Mr. Creveling, I am saying that, in my opinion, a conservative figure to use here at this time would be 24½ years from June 30, 1941, in determining the rates that this company should charge.

Q. What do you think is the reasonable figure as distinguished from what you call "a conservative figure"?

A. I think that 24½ years is a reasonable figure. I really think that, Mr. Littman, I am not just making conversation either.

Mr. Littman: I am going to a new subject.

Trial Examiner: Before you leave this, referring to your [fol. 8656] original cost rate base on Page 2 of Exhibit 104, your recommendation is that the annual charges be sufficient to retire the present value of $12,779,802 in the 24½ years. Is that right?

The Witness: That is correct.

Trial Examiner: Now, assuming that Mr. Creveling extended the service for 10 years beyond that, what is the rate base beginning the 25th year?

The Witness: And the company had earned and charged off the amounts as shown here?

Trial Examiner: Surely.

The Witness: I imagine the rate base would be pretty low at that time, Mr. Examiner.

* * * * * * * *

Trial Examiner: Proceed when you are ready.

By Mr. Littman:

Q. You have used, as the amortization base, the original cost as adjusted by a trend factor to reflect the purported change in the value of the dollar between 1936 and June 30, 1941, is that correct? A. That is correct.

Q. Would your amortization base be any different if you had used Mr. Haberly's reproduction cost less observed depreciation?

[fol. 8657] A. On the long-term investment, you mean?

Q. Well, let's confine the matter to the long-term investment. A. Yes, that is correct.

Q. The long-term investment comprises—
A. (Interposing) The major portion of the property.
Q. In fact, substantially all of the property, doesn't it?
A. Yes, sir.
Q. In order that we have no mistake about that, the original cost new of the short-term investment is only $54,000, isn't it? A. That is right.
Q. There might be some slight confusion from a strict reading of the record thus far, Mr. Green, and I think I had better go over one point again in order that we may make certain that we understand each other.

Am I correct in understanding that your amortization base is the same as reproduction cost new less observed depreciation?

A. The dollar amount would be the same.
Q. By your method you are, of course, proposing to return to Panhandle Eastern, the present owner of Michigan Gas, something in excess of its net investment in Michigan Gas?
A. The amount which is determined by use of the formula which I have heretofore discussed in my direct testi- [fol. 8658] mony gives you an amount in today's dollars that should be returned to the investor for the original dollars invested.
Q. So that by your method, the amount which you propose to return to Panhandle Eastern Pipe Line Company, the owner of Michigan Gas, over the remaining 24½ years of the purported life of this project will be something in excess of Panhandle Eastern's actual investment therein, isn't that correct?
A. Panhandle Eastern's investment, you say?
Q. Yes.
A. Of course, that investment was made in today's dollars.
Q. Precisely.
A. Yes. What I have determined here is the dollars when spent by the prior owners, how many today's dollars should you give back to the investor for his original dollars invested.
Q. But Panhandle Eastern, the present owner of this property, did not invest any 1936 dollars in this project, did it? A. No, that is correct.

Q. Do you mean that Columbia Gas & Electric Corporation, the former owner of Michigan Gas, still has some money coming from this project?

A. No, I do not and I do not think that if Panhandle Eastern had paid twice the amount that they did pay for this property, that that amount should have no bearing [fol. 8659] on determining the amount of amortization that I have used in this formula.

Q. Panhandle Eastern Pipe Line Company purchased Michigan Gas three weeks ago, did it not? A. Yes, sir.

Q. And it purchased Michigan Gas with 1942 American dollars, did it not? A. That is right.

Q. What you are proposing to do is to amortize, not the amount which Panhandle Eastern has invested in Michigan Gas in 1942, but something in excess of that which represents the purported revaluation of the property as represented by 1936 dollars, is that right?

A. In my familiarity with rate cases over a period of many years, to my knowledge I have never known of a case where the purchase price of a property was the rate base, that it was taken as the rate base.

Q. Will you answer my question, please, Mr. Green?

The Witness: Read the question.

(Whereupon, the question commencing at Line 10 of this page was read by the reporter.)

The Witness: I answered the question a moment ago of how we used this formula and why it was used.

[fol. 8660] By Mr. Littman:

Q. Is your answer to my question yes or no?

A. I cannot answer it by saying yes or no.

Q. It looks like we are going to have to ask you to make a calculation then. What is the original cost of the amortization base that you used in dollars and cents?

A. Less the observed depreciation, Mr. Littman?

Q. That is the base you used before you began to apply the factor.

A. Original cost less observed depreciation less the short-term property?

Q. Yes, what that is.

A. $11,911,979 as shown on Page 6 of Exhibit 104.

Q. $11,911,979? A. Correct.

Q. Will you state the amount which you are amortizing?

A. $13,819,001, which is arrived at by dividing $11,911,979—

Q. (Interposing) Just a minute. I am going to ask you to cooperate and not read the factor which you applied because the factor has been stricken from evidence.

Mr. Baldridge: I do not think you could say that, Mr. Littman. Exhibit 97 has been excluded but I do not think the specific factor has been excluded.

Mr. Littman: Well, certainly we have not withdrawn any [fol. 8661] of our objections to Exhibit 104. Exhibit 104 is not yet admitted in evidence and is still subject to a motion to strike and I think, out of precaution, we should not have read into the record at this point figures that you well know will be subject to a motion to strike.

By Mr. Littman:

Q. In other words, you are amortizing $1,907,022 more than the original investment in this property, aren't you?

A. That is correct.

Q. Panhandle Eastern Pipe Line Company did not pay the $13,819,001 that you are now amortizing, did they?

A. They did not.

Q. As a matter of fact, they did not even pay the $11,911,979 either, did they, but something less than that?

A. That is correct, I think.

Q. Will you state for us the net investment by Panhandle Eastern in this property which you propose to amortize?

A. I do not know what that figure is, Mr. Littman.

Q. I am sorry.

A. I do not know that figure but I think it is in the record here. I think you put it in the record by asking questions of Mr. Spitznagle.

Q. It is something less than $11,911,000, isn't it?

A. Yes, it is.

Q. The depreciation reserve at July 1, 1941, was $1,526,604, wasn't it? A. That is correct.

[fol. 8662] Q. Referring to Exhibit No. 104, Page 6, I see a total in the right hand column at about the center of the page of $14,219,687 which is labeled "Total investment recoverable through amortization". Do you find that figure? A. Yes, sir.

Q. That is the total amount which you are amortizing in this exhibit? A. That is correct.

Q. For purposes of this proceeding, is it not?

A. That is right.

Q. Now, you have already stated that the depreciation reserve at July 1, 1941, of Michigan Gas was $1,526,601, have you not? A. Yes, sir.

Q. Now, that amount has been already amortized and recouped by the company to July 1, 1941, is that right?

A. That is the amount that is in their reserve account.

Q. Now, adding that to the amount which you propose to amortize gives a total recovery from the beginning of the life of the property to the purported end of the life of the property of $15,746,335, isn't that correct?

A. $14,219,687 plus that amount would equal the sum you mentioned.

[fol. 8663] Q. The actual gross investment in this property was $12,207,261, isn't that right, as shown on Page 6 of Exhibit No. 104? A. That is correct.

Q. The difference between the $12,207,261 of actual investment and the total of $15,746,335 which has been amortized and which you propose to amortize is $3,539,074, is that correct?

A. Your mathematics, I imagine, are correct.

Q. Yes, so that over the life of this property, if your method is adopted, the owners of Michigan Gas will have recovered, by way of amortization, $3,539,074 in excess of the actual investment therein, assuming the correctness of my arithmetic?

A. By such a process of arithmetic, Mr. Littman, you are confusing dollars spent in 1936 and dollars that we are speaking of here in 1941.

Q. Aside from that element—

A. (Interposing) That has no relation to this exhibit the way we have set it up here.

Q. Mr. Green, eliminating the element of the change in the valuation of the dollars from year to year, your answer to my question would be yes, wouldn't it?

A. If there had been no change in the valuation of the dollar, that would not be the case, no. We would not have [fol. 8664] had it. Instead of dividing by .862, the factor would have been 1.

Q. If we had not had a change—

A. (Interposing) In the purchasing power of the dollar.

Mr. Littman: I am going to ask that the .862 reference be excluded. My question did not call for it and, as your Honor knows, it is subject to objection.

Trial Examiner: I think the figure should be excluded from the record.

Mr. Baldridge: May I have an exception?

Trial Examiner: You may.

May I ask a question? I do not recall whether the testimony shows the actual excess of the total to be recovered by amortization, namely, approximately $15,000,000 over the price paid by Panhandle Eastern Pipe Line Company to Columbia for the property recently. Was that figure stated?

Mr. Littman: The $12,207,761 figure which I read gives effect to the purchase and reflects the total original investment in the plant and property of Michigan Gas.

Trial Examiner: But this inquiry was with reference to the comparison between the amount, in toto, to be amortized.

Mr. Littman: From the beginning.

Trial Examiner: To be recovered by amortization as compared with the recent purchase price of the property. What was the excess, was that stated?

[fol. 8665] Mr. Littman: Yes, I stated the excess to be $3,539,074.

Trial Examiner: And that is the difference between the total recovery by amortization and the price paid to Columbia?

Mr. Littman: That is right, yes, sir.

Trial Examiner: Thank you.

Mr. Littman: I wanted, however, to get the witness to agree with just that, if your Honor please, which is our understanding.

Do you agree with our understanding that the $3,539,074 represents the excess amount of amortization which you are providing for and which has been recovered by Michigan Gas over the entire life of the property over and above the actual investment in that property?

The Witness: The mathematics which you give are correct but it is my understanding that we begin the rate making when the Natural Gas Act came into existence. We want to start off from that date.

Trial Examiner: That is a legal question, Mr. Green, that you do not need to deal with.

By Mr. Littman:

Q. You see, I am merely trying to get at the fact through the medium of the dollars. I am taking your provision for amortization, that is, your amortization base, and I am adding to that the amount of depreciation reserves that have been accumulated to June 30, 1941, at [fol. 8666] which time you commenced to carry on.

I am asking you whether the total of those two items does not represent an excess of $3,539,074 over and above the actual gross investment in Michigan Gas?

A. That is correct, yes. I have said so several times.

Q. Mr. Green, I do not think the record showed that you answered my question directly. I am sorry if I have taken up a great deal of time needlessly but I wanted to be clear on that.

A. I do not know whether there have been any charges, Mr. Littman, against this reserve account. There might have been. There might have been more charged for depreciation. I do not know. You have got the net.

Q. Taking the books as we find them—

A. (Interposing) You are using the net.

Q. In your opinion, is Panhandle Eastern Pipe Line Company entitled to an excess of amortization of $3,539,074 over that which represents the amount which it paid for this property in 1942 dollars?

A. I have clearly explained, I think, how I made this calculation. Now, the Examiner tells me I should not be giving legal opinions, so—

Mr. Baldridge: (Interposing) I think, Mr. Examiner, now the question is put to him in that form, the witness would have the right to answer the question.

[fol. 8667] By Mr. Littman:

Q. Do you think that is a fair thing to do?

A. I think that the owners of this property should have the amounts that I set forth in Exhibit 104 earned in order for them to receive a fair return on the fair value of their property.

Trial Examiner: We are, however, Mr. Green, trying to arrive at the rate base of original cost.

The Witness: We have determined that or at least gave in an exhibit here what we considered the original cost rate base and that we have used throughout these calculations.

Trial Examiner: You used the term "fair value."

The Witness: No, I meant this whole exhibit. I assume that we are to try and determine the annual revenues of this company which will provide a fair return on the fair value of the property.

By Mr. Littman:

Q. Mr. Green, will you please refer to Exhibit 105 and I shan't read the title. It is very lengthy and I believe the context of my questions will elicit the nature of the exhibit.

A. I have it.

Q. In this exhibit, you make a calculation to ascertain the amount of Federal income tax and excess profits taxes that would be paid under what you call a "proposed capitalization." Is that correct?

[fol. 8668] A. Yes, sir.

Q. What is this so-called proposed capitalization?

A. 50 percent bonds and 50 percent common stock.

Q. You mean 50 percent of 3½ percent serial debentures due in 16 equal annual installments, is that correct?

A. That is correct.

Q. Who has proposed such a capitalization for Michigan Gas?

A. I had this calculation made on the assumption that if this company was sold to the public, in my opinion that

would be a sound capitalization, 50 percent bonds and 50 percent common stock.

Q. You call this a "proposed capitalization"?

A. Yes.

Q. And I am asking you who has proposed it?

A. I did. I say I proposed it.

Q. Do you expect anybody to act on that?

A. No, because the property was not sold to the public. It was sold to Panhandle Eastern and they acquired the securities and it is very much to their advantage to continue to operate this company as a subsidiary with the present capitalization.

Q. In the light of events that have transpired since you prepared this exhibit, No. 105, the exhibit is passe, is [fol. 8669] it not?

A. Not at all.

Q. Isn't this purely a hypothetical exhibit?

A. Yes, the company has not been refinanced and its securities sold to the public. That is the assumption here.

Q. Has anyone connected with Panhandle Eastern or Michigan Gas made any such suggested capitalization?

A. No, the purpose of this exhibit, I think, if you refer to my direct testimony, was to show that the Federal taxes of this company are much lower than they would be if the company was sold to the public.

Now that it is a subsidiary of Panhandle Eastern, you had better throw them all together and make a consolidated statement. We have not used this figure in any of our calculations, you understand that.

Q. Yes, I understand that and that is why I wondered why you put the exhibit in in the first place and I wanted to know what use it was intended to be put.

A. Well, it was to show this, Mr. Littman, that if this company, as long as it is a wholly owned subsidiary of a holding company, it was Columbia Gas and Oil was it?

Mr. Baldridge: Columbia Gas & Electric.

The Witness: Now, it is a wholly owned subsidiary of Panhandle Eastern, but if you take this company by itself now to determine rates, its Federal taxes are not com- [fol. 8670] parable to what they would be if the securities were sold to the public.

By Mr. Littman:

Q. Panhandle Eastern can, at its own discretion, consolidate and merge Michigan Gas, according to whether there is an advantage to such consolidation and merger after considering the tax situation, isn't that correct?

A. Yes, I do not think they will because it is to their distinct advantage to leave it as it is because they save Federal taxes.

Q. The company in computing Federal income taxes and excess profits taxes would, of course, compute them on the basis of the presently existing facts, would it not?

A. I think so. This was put in here merely for the benefit of the Commission.

Q. For illustrative purposes?

A. That is right. Here we are giving an income statement of a company, what it should be, its revenues and expenses, and yet there is an item of taxes in here which we know is out of line. You see.

Q. Which tax is out of line?

A. I mean the Federal taxes are lower than they would be with a company whose securities were in the hands of the public.

Q. Which one of these two tax figures is out of line, the one that is being paid now or the one that would be [fol. 8071] paid under this proposed capitalization?

A. Well, the amount being paid by the company today is less than it would be if the securities were sold to the public. This is merely informative only, Mr. Littman.

Q. And presents a situation which does not obtain today?

A. That is correct.

Q. And so far as you know will never obtain?

A. I do not know, I do not know.

Q. You do not have any reason to believe that it ever will obtain, do you?

A. I do not know, Mr. Littman.

Q. Neither do we.

Mr. Chamberlain: Mr. Green, how is the return affected by its being a subsidiary or holding company?

The Witness: I do not believe you could sell the amount of debentures that this company has outstanding to the public. The ratio of that debt to the total property is way

out of line, but you get a distinct saving in your Federal taxes.

Mr. Chamberlain: What is the saving?

The Witness: What?

Mr. Chamberlain: What is the saving, that is what I want to know.

The Witness: In amount of dollars?

Mr. Chamberlain: Yes. How is it affected in so far as these tax returns are concerned by being a subsidiary?

[fol. 8672] The Witness: The fact that its capitalization is different than it would be if you sold to the public.

Mr. Chamberlain: You mean it might change its form of capitalization or structure in some way?

The Witness: I think it would have to change its form of capitalization if it was going to sell to the public. I certainly know that the Securities and Exchange Commission would not let you issue such amount of securities against this company, outstanding debentures on open account, you know.

Mr. Chamberlain: Are you talking about Michigan Gas Transmission?

The Witness: Yes, sir.

By Mr. Littman:

Q. Will the Securities and Exchange Commission permit you to issue any securities on this amount which represents the difference in your rate base between the valuation of the dollar today and the valuation of the dollar in 1936?

A. I thought we were talking about taxes here.

Q. I know, but this is apropos here at this moment to your rate base.

Trial Examiner: Isn't the gold content of a dollar the same as it was in 1936?

By Mr. Littman:

Q. You are an expert in the change of the valuation of the dollar, Mr. Green. Can you answer that question?

[fol. 8673] A. Not now, I have had some experience—

Mr. Goodman: (Interposing) I think the Examiner means the price on newly-mined gold.

Trial Examiner: Unless we know something about it, I do not think we should refer to the different value of the dollar between 1936 and today. It is not in evidence anyhow. There has been some evidence offered here which has been excluded relative to the purchasing power of the dollar between those periods.

Mr. Baldridge: The evidence on the question of the purchasing power of the dollar runs all through the record. It was brought out by various counsel and was testified to by various witnesses. I do not believe it would be proper to exclude that in a hearing of this kind because, obviously, there are many things that the purchasing power of the dollar and the change in the purchasing power of the dollar may touch and affect. It may touch and affect the necessity for making additions to property.

Trial Examiner: I agree with you, Mr. Baldridge. We have in the record, without objection, some data indicating the change in the purchasing power of the dollar but the value of the dollar, technically speaking, I assume to be the same in 1936 as it is today.

Mr. Baldridge: Well, I do not believe that anybody on our side, at least, has raised any question of the gold con- [fol. 8674] tent of the dollar. I think that all of our discussion has been on the question of varying purchasing power. That is, if I may use this expression, the value of the dollar as weighed by what a dollar will purchase at different times.

Trial Examiner: That is, of course, the sense in which we have used it.

Mr. Baldridge: Yes.

Trial Examiner: Perhaps it is a bit loose.

* * * * * * * * *

By Mr. Littman:

Q. Mr. Green, you have not, thus far, in this proceeding expressed any opinion on the fair rate of return for Michigan Gas Transmission Corporation, have you?

A. I have not. I had better qualify that. You remember at the close of my direct statement I spoke of the present earnings of the company and so forth, but I did not give any percent return that I thought would be a fair return.

Q. You are not testifying on that subject, are you?

A. As to the percent return, no.

Q. You use a 6½ percent return in your Exhibit No. 104 as shown on Page No. 2 but, as I understand it, that rate of return is used for illustrative purposes because the Federal Power Commission used the 6½ percent rate [fol. 8675] of return in the Natural Gas Pipeline of America case. Is not that right?

A. Yes, with a rate base of reproduction cost new.

Q. For interim order purposes?

A. That is correct.

Q. Let's not forget that. Hence, we shall not cross-examine you on what is the fair rate of return.

At Page 2003 of the transcript you make the following statement:

"To use a homely illustration, if a person invests his money in a public utility and the company constructs property today for the public use, he is entitled to receive a fair return on his investment and that investment is equivalent to a certain amount of bacon and eggs. Each year thereafter he is entitled to receive the same amount of bacon and eggs, regardless of the purchasing power of the dollar."

You recall that testimony, do you not, Mr. Green?

A. I believe you must have made a mistake in quoting me, because you speak of investment whereas I am speaking of return, that the return will purchase a certain amount of bacon and eggs.

Mr. Littman: Will you please read the quotation back to the witness and have him check from the transcript?

The Witness: This is correct. Perhaps I misunderstood you, Mr. Littman, and that fair return is equivalent [fol. 8676] to a certain amount of bacon and eggs. I un-

derstood you to read it, "that investment is equivalent to a certain amount of bacon and eggs".

Q. What is the present capitalization of Michigan Gas?

A. As of June 30, 1941, 6 percent demand notes, $5,900,500; 6 percent loans payable to the parent company, $2,420,000 and 44,800 shares of no-par value common stock with a stated value of $2,240,000.

Q. The capitalization today is the same as it was prior to the sale of Michigan Gas to Panhandle Eastern, is it not, in so far as you know?

A. Well, I imagine there would be very little change, Mr. Littman. I do not know whether they have borrowed any money from the parent since this date or not, June 30, 1941.

Q. Will you please turn to Page 2 of Exhibit 88 which is the balance sheet? It is clear from the figures which you have read that 80 percent approximately of the capital structure of Michigan Gas is represented by these 6 per cent notes?

A. Yes, sir.

Q. How much of the capital originally invested in 1936 was secured by these notes, as shown on Page 2 of Exhibit 88?

A. What was your question now?

Q. How much of the capital originally invested in 1936 in Michigan Gas was secured by these notes?

[fol. 8677] A. In 1936 this statement shows as at December 31, $5,136,397.68 is the 6 percent loans payable.

Q. How much of the capitalization at December 31, 1937, was represented by 6 percent demand notes?

A. $6,391,094.30.

Mr. Baldridge: Mr. Littman, I am getting a little confused. You are treating with demand notes and 6 percent loans payable as being the same kind of thing?

Mr. Littman: I called them by the description used on Page 2 of Exhibit No. 88.

The Witness: I think that is correct, Mr. Littman. As of the end of the year they had no loans payable. They were all made in demand notes payable.

By Mr. Littman:

Q. Now, the common stock has remained constant throughout the life of the property?

A. Yes, sir.

Q. Now, those 6 percent demand notes that were outstanding in 1937 in the amount of $6,391,094 still remained unpaid at June 30, 1941, is that correct?

A. The 6 percent demand notes payable as of June 30, 1941, were $5,900,500 which is less than the demand notes payable December 1937.

Q. I see. In other words, there was still outstanding at June 30, 1941, $5,900,500 of the demand notes that had [fol. 8678] been outstanding in 1937. Is that right?

A. That is correct.

Q. Now, Panhandle Eastern Pipe Line Company has within the past three or four weeks acquired these 6 percent demand notes, is not that correct?

A. I understand so.

Q. And now Michigan Gas owes $5,900,500 of 6 percent demand notes to Panhandle Eastern. Is that right?

A. I assume that they do, yes.

Q. Now, is the holder of these notes, namely, Panhandle Eastern, entitled to receive payment therefor in anything other than present-day dollars?

A. No, I do not think so.

Q. In other words, you understand that under the law of these United States, if Michigan Gas Transmission Corporation were to tender to Panhandle Eastern the amount of $5,900,500 in United States currency today, Panhandle Eastern would be required to accept those dollars in full payment of those notes notwithstanding the fact that they were originally made in 1937. Is not that right?

A. I would think so.

Q. As a matter of fact, the entire amount of $8,320,500 of 6 percent demand notes and loans owing today to Panhandle Eastern are payable in 1942 dollars. Is not that right?

[fol. 8679] A. That is correct.

Q. And the interest on these notes and loans is payable each year in present-day dollars regardless of how many bacon and eggs those dollars will buy?

A. That is correct.

Q. What kind of dollars did Panhandle Eastern pay for these outstanding securities of Michigan Gas Transmission Corporation, 1942 dollars or some other kind of dollars?

A. I assume that they used 1942 dollars.

Q. Did Columbia Gas & Electric Corporation make any protest against receiving 1942 dollars in payment in full of the purchase price of all of the outstanding securities of Michigan Gas?

A. No. Such sales and negotiations are always carried on, I think, with the understanding that you pay in today's dollars.

Q. What you are proposing to do is to suggest that the Federal Power Commission predicate the rates in question in this proceeding, not upon the basis of present-day dollars, but upon the change in the purchasing power of the dollar that has ensued since 1936?

A. In determining the rate of return.

Q. And also in determining the amortization base?

A. That is correct.

Q. The effect of your bacon and eggs theory, Mr. Green, [fol. 8680] is to give the investor in this utility's securities, a complete safeguard against inflation, isn't that right?

A. That is right, it has that effect.

Q. Do you know of any security extant that carries with it a safeguard against inflation?

A. If I may be permitted to express my opinion as to what the Act means, a fair regulation meaning a fair return on the fair value of the property, I think this formula I have set up here will apply.

Q. Suppose you name one security extant that guarantees the repayment of the principal in terms of the purchasing power of the dollar as of the date in which the investment was made and which guarantees against inflation?

A. That is not the case. The formula I used here in determining the amount of dollars to amortize this investment is only applied once, Mr. Littman. Later on, you can have inflation or anything else and it will not affect that dollar amount that I use here for amortization.

Changing the purchasing power of the dollar was only used to determine the number of dollars as of June 30, 1941, that the investor should receive equivalent to the dollars that he spent in the prior years.

Now, if later on, the purchasing power of the dollar changes, you will not change that amount that we have determined here for amortization even though the purchasing [fol. 8681] power of the dollar changes.

Mr. Lee: You may not change the amount but, according to your theory, you would have to change the return?

The Witness: You would the return. I am speaking now of amortization. If the purchasing power of the dollar changes under the formula I have suggested, the percent return will vary. The fair rate of return today divided by the purchasing power of the dollar factor equals the percent return that this property should receive. That will change but not the amortization calculation.

Mr. Lee: That is now, according to your theory?

The Witness: That is right.

By Mr. Littman:

Q. I thought Mr. Drew was your witness on the question of the correct and proper rate of return to be applied in this proceeding. Is my understanding incorrect?

A. He was asked to give an opinion of what he thought a company of this sort should receive in percent return.

Q. Did you ask him to testify to the rate of return on an inflation-free investment?

A. No, I did not.

Q. That is what this would be, wouldn't it, under your theory?

A. Are you speaking now of return or are we talking about the amount to amortize, Mr. Littman?

[fol. 8682] Q. We are speaking of return exclusively.

A. Return?

Q. Yes.

A. I claim and the suggestion I have made here in the formula I have given the Commission to use is that we use the purchasing power of the dollar as one factor and the fair rate of return in today's dollars to arrive at the percent return that this investment should receive.

Q. When you asked Mr. Drew to testify in this proceeding, did you instruct him to give us a rate of return which comprehended and gave effect to a guarantee against inflation?

A. No.

Q. You know if you had instructed him to do that, he would have most certainly testified to a considerably lower rate of return than that to which he testified in this case, don't you?

A. I do not know what he would have testified to if I had asked him to do something [to do something] I did not ask him to do.

Q. Would you, as an investor, be willing to accept a lesser rate of return if you were guaranteed against inflation than otherwise?

A. And also if I was guaranteed a return?

Q. Would you require any return at all if you could get a good, safe guarantee against inflation today? You would [fol. 3683] be glad to invest your money without any return if you could get that kind of a guarantee, wouldn't you, Mr. Green?

A. I would not be much interested in investing my money without any return, Mr. Littman, no.

Q. It would certainly be considerably lower than 8½ percent, wouldn't it, if you could get a good inflationary hedge guarantee?

A. I have not fixed any 8½ percent.

Q. Can you advise me where I can find a security that will guarantee me against inflation even if it does not have any return at all?

A. No, I do not.

Q. I wish you could.

A. I do not know where your could be guaranteed anything.

Mr. Goodman: Maybe you know where I can buy some bacon and egg futures to protect me.

By Mr. Littman:

Q. Mr. Green, the Government itself makes no such guarantee upon its bonds, does it?

A. Why, a bond, that is a contract between the Government and some person who wants to make an investment.

The terms are set forth. Here you have an entirely different problem. We are speaking here about a fair return on the fair value of the property invested in the business, a regulated business.

[fol. 8684] Q. We want to get your opinion on the subject of a fair return on an inflationary-free investment. That is, an investment free from inflation.

A. My whole thesis here is that if you are going, on the one hand, to use original cost as a fixed item as the rate base, if you are going to use that, then you must vary the percent return to reflect the purchasing power of the dollar.

Q. Then, as I understand your theory, we must find a reasonable rate of return applicable and referable to original cost, must we?

A. No.

Q. Before we apply your factor to get what you call a reasonable return?

A. No, that is not the way this is applied.

Q. That is the way you applied it in Exhibit No. 104?

A. No, I did not.

Q. You took 6½ percent which the Commission found—

A. (Interposing) As a fair rate of return in today's dollars as related to reproduction new of that property. Now, I am saying if you used that figure, 6½ percent—

Q. (Interposing) Is that 6½ percent a fair return upon an inflation-free investment?

A. The 6½ percent against the reproduction new of the Natural Gas Pipeline of America case was held by the Commission to be a fair return. I am saying that if you [fol. 8685] are going to use original cost as the rate base, then take your 6½ percent, divide it by the purchasing power of the dollar factor and you get an amount which you relate to the percent return on original cost.

You refer constantly to inflation. This formula, with deflation, call it that, would work just the other way.

Q. We understand how your theory works, Mr. Green.

A. But it works both ways, doesn't it, not just with inflation.

Q. I understand you to say that, yes.

A. Yes.

Q You have never applied it, however, in any case that arose during the midst of the depression, did you?

A. I do not suppose I can refer to the exhibits. I can say this—

Q. (Interposing) Did you or didn't you?

A. I can say that during the past several years, the cost of pipe was considerably less than they paid for other pipe on this property.

Q. Have you ever applied this bacon and eggs theory at a period when the purchasing power of the dollar was rising?

A. No, I have not.

Q. We would like to know how to apply your theory, Mr. Green. Your factor has to be applied to a certain rate of return, does it not, in order to get what you call a reas-
[fol. 8686] onable rate?

A. Take return in today's dollars of what is held to be a fair return. That divided by the purchasing power of the dollar factor equals a percent return which I think this property should [—] received based on original cost.

Q. Will you tell us what is a fair return upon an inflation-free investment, and then I think we can apply your theory.

A. I cannot answer that. It is beside the point here.

Q. How is the Commission going to know if you don't know?

A. You can use this formula and if the purchasing power of the dollar goes the other way, you come out with a lesser percent return.

Q. What are we going to apply this formula to?

A. To the original cost as a rate base.

Q. How are we going to get the rate of return which you say is reasonably applicable to original cost?

A. Only by this formula.

Q. We have got to have a rate of return which must be divided by your factor to get what you call a reasonable rate of return. How are we going to get the first one?

A. The Commission fixed one in the Natural Gas Pipeline of America case, didn't they? It fixed it there, 6½ percent.

Q. But that was not on an inflation-free rate base?
[fol. 8687] A. That was on the dollars—whatever the case was decided—those dollars on reproduction cost which

naturally reflect the difference in the purchasing power of the dollar using that as the rate base.

Q. Mr. Green, until you advise us what is a reasonable return on an inflation-free rate base, we cannot apply your theory, can we?

A. I am stating that if the Commission finds a percent return which they consider a fair return on property constructed today, which means today's dollars, take that percent, apply it to this formula and you may derive the percent return that this investment should receive. Certainly no one would say that 6½ percent return they used in the Natural Gas Pipeline of America case, 6½ percent on original cost would be a proper amount for that company to earn. If so, why did they allow 6½ percent on reproduction cost which was considerably higher?

Q. Mr. Green, the first step that the Commission must do under your theory is to determine what is a reasonable return upon the reproduction cost of the property today guaranteed against inflation in the future. Isn't that right?

A. No, I do not think so.

Q. You are guaranteeing the investor against inflation, aren't you, when you apply your factor as you said a minute ago?

A. Let's put it the other way. The same formula, if [fol. 8688] conditions change, protects the consumer in the case of deflation.

Q. Suppose you answer my question, Mr. Green.

A. I have answered it.

Q. I submit you have not. You are, in effect, providing a guarantee against inflation in the future, are you not, by your method?

A. If the purchasing power of the dollar goes that way, this formula protects the investor, yes.

Q. Now, in order to apply your formula, we first must find what is a reasonable rate of return to an inflation-free rate base, must we not?

A. No, sir, you first find out what is the percent return that a utility should receive for property built today and then apply that percentage in this formula.

Q. If the Commission were to follow your theory, it is a fact, is it not, Mr. Green, that we would have the only securities extant that carried with them a guarantee against inflation. Isn't that right?

A. If the investor is entitled to a fair return on the fair value of his property, it is my judgment that that formula if applied and I have tried to explain it in detail, would give him a fair return on the fair value of this property.

Q. And would give him a hedge against inflation, wouldn't it?

[fol. 8689] A. And if the purchasing power of the dollar—

Q. (Interposing) Would it or wouldn't it?

A. Only if the purchasing power of the dollar went that way, Mr. Littman. Now, if it went the other way, it is protection to the rate payer, we will call it, in the event of deflation.

Q. If there is inflation in the future, your theory affords to the investor a hedge against that inflation, does it not?

A. If the purchasing power of the dollar in the future, as applied to this sort of property in this territory is constructed decreases greater than the amount that it is today then the percent return would be higher.

Q. Now, regardless of what happens to the dollar, today, tomorrow or in the future, you are guaranteeing to the investor that he will not be hurt by any inflation that may ensue, are you not?

A. This is a great assistance to the investor in case of inflation, yes, sir, it is.

Q. And would he accomplish that purpose, if this Commission were to adopt your method, we would have the first, one and only security extant that carried such a guarantee, would he not?

A. Well, in the past, we have had—

Q. (Interposing) Wouldn't he?

[fol. 8690] A. Many rate cases and decisions of the Courts and what not have used reproduction cost new as a rate base and that takes into account the purchasing power of the dollar.

Q. Can you imagine, Mr. Green, what kind of a scramble and rush there would be by investors to buy these inflation free investments that you suggest? They would be preferred, would they not, to the Government bonds?

A. Well, during the past—

Q. (Interposing) Can't you answer that question yes or no?

A. Just a moment. I can answer it, yes. During the past when reproduction new was used as the rate base I did not see any great scramble to buy the securities.

Q. Mr. Green, reproduction cost is not synonymous with fair value and never has been, has it? Even under Smythe versus An. it never has been, has it?

A. It is a factor that was used in determining the fair value of the property. Reproduction cost new was a factor which was given considerable weight.

Q. No court ever said that it guaranteed to the investor a fair return upon reproduction cost and that alone through the years?

A. No, indeed, I agree with you, but reproduction cost new in determining the rate base was a factor that was used by the Commission and courts and given, as I re- [fol. 8691] call, considerable weight.

Q. Mr. Green, what do you imagine would happen if the prospectus, which is in evidence as Exhibit No. 146, if this prospectus issued by Panhandle Eastern Pipe Line Company within the past month carried on its face a guarantee to the investors in Panhandle Eastern of a return upon an inflation-free investment? What do you imagine would happen?

A. I could not give any answer to a question like that, Mr. Littman.

Q. Would Panhandle Eastern Pipe Line Company have to pay anything like 3½ percent on its bonds or 3 percent on its bonds, rather?

A. I do not know, I could not answer that.

Q. Why, they might even charge the investor 3 percent as a price for the inflationary hedge, might they not?

A. What we are determining here is a ceiling, not a [guarantee]. The company has not guaranteed a dime of revenue, not a dime. In fact, in this particular company, —a transmission pipe line company I think is a very hazardous business.

Q. I have an insurance policy, Mr. Green, which does not guarantee that my beneficiaries shall be paid in anything but United States currency as of the date of my death. Can you advise me where I can buy an insurance policy that will guarantee me against inflation?

A. Well, that was a contract that you made with the [fol. 8692] insurance company, was it not, sir?

Q. I would like to make a contract hedging against inflation. Can you refer me to anyone that would give me that kind of a contract?

A. Mr. Littman, if the Commission should adopt the formula that I am setting up here, I am not saying that that is any guarantee against inflation.

Q. What you are asking the Commission to do here is to give Michigan Gas Transmission Corporation a contract against inflation, aren't you?

A. No, sir.

Q. What you are asking the Federal Power Commission to do is to protect the investors in Michigan Gas Transmission Corporation against inflation, aren't you?

A. I think as the purchasing power of the dollar changes and you are going to use original cost as the rate base, that you must have some method of varying the percent return.

Q. Now, Mr. Green, you have suggested a method by which we may protect the investors in Michigan Gas Transmission against inflation. Will you please suggest a method whereby the Federal Power Commission can protect the consumers or the customers, if you please, against inflation? What is fair, I presume, for the investor is fair for the consumer.

A. Do you understand in the application of this for- [fol. 8693] mula that as the purchasing power of the dollar goes down or, rather, goes up, that you would be lowering the rates under this formula, you would lower the rates to the consumer as against using the straight original cost as a rate base?

Q. Mr. Green, I do not understand your theory nor do I understand how it can be applied and I am asking you to explain how you may apply it in practice. Now, you have got the investor protected against inflation here by your method, haven't you?

Now, will you tell me what you are going to do for the consumer to protect him? What would you suggest?

A. I am stating that if the purchasing power of the dollar, I will say, becomes the factor, becomes 116, ap-

plied to this formula, the over-all earnings of this company will be less than if you used original cost as the rate base.

Q. Well, you cannot sell me this merely by pointing out that it might produce lower rates some day in the future. I would like to know about the validity of the theory regardless of—

A. (Interposing) It is based entirely upon the purchasing power of the dollar. As it varies, the percent return varies.

Mr. Lee: Rather, isn't your argument a perpetual argument for the reproduction theory as a rate base? That is what you are really striving after, all the time, aren't you?

[fol. 8694] The Witness: No, heretofore the rate base was a variable in all of these rate cases. That was the variable in the percent return as fixed.

Now, I am stating that if you are going to have the rate base to be fixed, in other words, original cost, I think that you have to vary the percent return and I have offered this in my humble way as some formula that would bring that about.

Mr. Lee: Because you are sold on the theory that the rate base should be the reproduction cost?

The Witness: No, I do not think much of that scheme because it is so difficult to determine reproduction cost. It is a difficult thing to do.

Mr. Lee: The rate base, if it were the reproduction cost, would always take care of the variation in the purchasing power of the dollar in the interval between the original expenditure and the fixing of the rate.

The Witness: It is supposed to do that, that is the theory.

Mr. Lee: So in the last analysis that is what you are always contending for, the reproduction cost as the rate base, aren't you?

The Witness: No, I am saying that under that theory it is supposed to take care of it, Mr. Lee, but I say, I think

personally that it is a very difficult thing to determine from time to time.

[fol. 8695] Trial Examiner: The figures that you are reading were adjusted by the use of an index figure obtained as the result of certain fluctuations specifically, I believe, affecting the cost of about six special articles of manufacture. Is that a sound basis for determining the purchasing power of the dollar when you approach the rate problem?

The Witness: Well, that is the way Mr. Haberly developed it.

Trial Examiner: I am just asking you if you accept that as a sound approach.

The Witness: I say that is the way he developed it. Now, on my own initiative I made some investigation on the question of the purchasing power of the dollar and I referred to exhibits introduced by Dr. Friday in this case.

You take his curve that he shows, which is the Department of Labor curve, prepared by the Department of Labor on wages paid over the period of years. Another curve was steel products and I took the curves, 1936 and I took the point "41", 1941, on the curves and found the difference there and it is a rather unusual thing. It came out .86.

Trial Examiner: And that is in accord with your testimony?

The Witness: Yes, sir, and had nothing to do with this property, you understand. That was just taking the purchasing power over-all of all labor of the whole country. [fol. 8696] It came very close to Mr. Haberly's figures.

By Mr. Littman:

Q. Will you give me a yes or no answer to this question: In order to apply your theory we must first ascertain the proper rate of return applicable to an inflationary-free rate base, do we not?

A. No.

Q. To an inflationary-free investment?

A. No.

Q. Well, that is what these investors would have, wouldn't they, if your theory were adopted?

A. I do not think so, Mr. Littman, no.

Q. Well, you have been saying all along that you were going to give them a guarantee against inflation, haven't you?

A. I have not.

. . . . . .

[fol. 8703] Mr. Littman: Mr. Examiner, before I continue with my cross-examination of Mr. Drew, I would like to take up another matter in connection with Mr. Young's testimony. When Mr. Young was last on the stand, I requested him to supply further information and he advised me in writing under date of March 2, 1942, as follows:

"On February 28, 1942, as shown on page 8528 of the transcript of the proceedings before the Federal Power [fol. 8704] Commission, I testified that in the period between August 11, 1936 and February 5, 1942, a total of nine hundred and thirty-eight (938) draw-bands and two (2) collar leak clamps had been installed on the 16" pipe line formerly owned by the Ohio Fuel Gas Company, but operated and maintained by Michigan Gas Transmission Corporation. A subsequent and less hurried check of our records shows that a total of one thousand, one hundred and three (1,103) draw-bands and three (3) collar leak clamps have been installed by years as follows:

August 11, 1936 to December 31, 1936	—63 draw-bands
Year 1937	—221
1938	—203
1939	—212
1940	—177
1941	—216
January 1, 1942 to February 5, 1942	—11
Total	1,103 draw-bands

September 3, 1937—1 collar leak clamp.
August 26, 1938—1
May 3, 1940 —1

Total 3 collar leak clamps

"As stated on page 8529 of the transcript, draw-bands were installed on the 6" lateral pipe line extending to Winchester from the 16" pipe line as follows:

[fol. 8705] Year 1938—1 draw-band
1939—3
1940—3
1941—3
1942—1

16 draw-bands

"The "6" sleeve was installed to close leak in a coupling on March 7, 1939.

"As shown on page 8531 of the transcript, you requested that I ascertain how much pipe was replaced when the Ohio Fuel Gas Company rehabilitated the lateral pipe line extending to Richmond, Indiana. A map furnished by the Ohio Fuel Gas Company shows that a total of 3.50 miles of the 10" lateral pipe line which was owned by Ohio Fuel Gas Company was replaced with 8" pipe during the work of rehabilitation. The length of the Richmond lateral between the 16" Line "D" and the Richmond measuring station is 12.44 miles.

"As shown on pages 8532 and 8533 of the transcript, you requested that I furnish station numbers for the leaks recently found on the 20" Line 'A'. We are unable to establish the exact station numbers, but these leaks were located approximately at Stations 1440/90 and 2200/33. (Station 0/00 is just east of Dana Measuring Station.)"

We accept this as the testimony of Mr. Young, who is now absent from the city.

[fol. 8706] Have I correctly read into the record, Mr. Baldridge, the information which was furnished to me by Mr. Young in writing?

Mr. Baldridge: Mr. Littman, I have assumed that you have. I have not even tried to check it.

Mr. Littman: And, of course, it is understood that this will constitute Mr. Young's testimony in so far as this record is concerned on the subject which I have covered?

Mr. Baldridge: Yes, of course.

Whereupon ROBERT S. DREW a witness, having been previously duly sworn, resumed the stand and testified further as follows:

Cross-Examination (Continued)

By Mr. Littman:

Q. Mr. Drew, when you were last on the witness stand, I asked you to check certain figures which we asked you to assume were mathematically correct during the course of cross-examination. Have you checked our figures?

A. You refer to this working sheet on the Dow-Jones 30 industrial stocks?

Q. There were some figures in that connection, yes.

A. The addition of the column showing the annual interest and preferred dividends resulted in a figure somewhat different from yours but not substantially so.

[fol. 8707] Q. Will you please read our figure and yours?

A. The figure which you gave me last Friday was $122,667,567. To that, because of the change relating to the error in the figure on American Smelting, I added $3,465,000 which makes a total of $126,132,567.

Our addition resulted in a figure of $126,110,007 so that there is a differential there of about $22,000 which is extremely minor in relation to the total figure.

Q. It would not affect the figures that we derived and used in connection with the cross-examination, would it?

A. No, sir, it would not.

Q. In other words, if I correctly understand you, your check of the figures which we asked you to assume when you were last on the witness stand would in no manner change your testimony in connection with those figures?

A. That is correct, yes, sir.

Q. I also requested you, when you were on the stand last, to supply a list of bonds yielding 3½ percent or more whose fixed charges are earned at least 5 times. You recall that this was the assumption you used for Michigan Gas in your rate of return study for that company?

A. Yes, sir.

Q. Have you prepared a list of such bonds which you deem comparable to the bonds proposed for Michigan Gas in your study?

[fol. 8708] A. Yes, sir.

Q. Do you have the list with you? A. I have.

Q. How many bonds do you have on your list?

A. There are fifty bonds on the list.

Q. Do you consider these bonds comparable to those which you propose in your setup for Michigan Gas?

A. I regard these bonds as comparable to the bonds I set up in my hypothetical capitalization in the sense that any public offering of such a hypothetical bond would be in competition for the investor's dollar with such bonds as these, as well as others.

Q. It is in that sense that you consider them comparable? A. Yes, sir.

Q. You do not consider them comparable in any strict sense as being the type of bonds which you would suggest Michigan Gas Transmission Corporation should have?

A. I made no study of these fifty bonds to determine their characteristics other than the figures taken from this printed volume.

Q. Without such a study, you could not determine whether they would be desirable for Michigan Gas, could you?

A. I think such a study would have to be very exhaustive in the case of each one of these bonds to establish com-

[fol. 8709] parability with the hypothetical setup for Michigan Gas.

Q. I would like to have this clear on the record. When you made your study for purposes of this proceeding, you did not prepare any list of bonds such as those which you

assumed for Michigan Gas for purposes of your study, did you?

A. I did not prepare such a list as this but, in my regular work, I have considerable contact and am, therefore, familiar with bonds of this character.

Q. But even as late as this date you were not at all certain that any of the bonds on your present list, which has been furnished at our request, have the characteristics of the bonds which you propose for Michigan Gas under your hypothetical rate-of-return setup?

A. I am certain that many investors, if they were considering the purchase of the hypothetical Michigan Gas bonds, would compare those bonds with such bonds as these as well as others before making the purchase of Michigan Gas bonds.

Q. Mr. Drew, I wish you would listen carefully to my question and endeavor to answer my specific question, please.

Mr. Littman: Will you read the question back, please?

(Whereupon, the question commencing at Line 9 of this page was read by the reporter.)

The Witness: The bonds on this list have two characteristics that are the same as the hypothetical bonds of Michigan Gas, namely, the coverage of fixed charges and the [fol. 8710] rate of the yield on those bonds.

By Mr. Littman:

Q. Now, what other characteristics do they have in common?

A. I cannot say because I have not examined each instance exhaustively in order to compare it with Michigan Gas bonds.

Q. Well, let's examine your list of bonds.

Does your Honor have a copy?

Trial Examiner: Yes.

Mr. Culton: Will you present copies of that list?

Mr. Littman: I do not know whether we shall or not.

Mr. Culton: The rest of us are in the dark.

Mr. Littman: I do not at this stage propose to offer this as an exhibit.

Trial Examiner: I do not think I have a copy of that.

Mr. Littman: I thought you said you had it.

Trial Examiner: No, I misunderstood you.

By Mr. Littman:

Q. You have a list here of 50 bonds. How many of them are public utility bonds, other than railroads?

A. Five.

Q. You have been unable to find any other public utility bonds than the five which you show in your list that have characteristics of 3½ percent yield and fixed charges that [fol. 8711] are earned at least five times. Is that right?

A. That is correct, yes, sir.

Q. All right. Let's examine the first one, which is "Providence Gas, First Mortgage 4 Percent, 1963 Bonds". Now, you show that the yield on these bonds is 3.59 percent and times charges earned is 6.4. Is that right?

A. Yes, sir.

Q. What is the capitalization of Providence Gas?

A. I do not have a record of that here.

Q. I hand you Moody's Public Utilities, 1941, and refer you to Page 67, which shows that information. Before you examine Moody's will you please state whether you consider this Manual of investments a reliable source of information? A. Yes, I do.

Q. What is the amount of common stock outstanding?

A. On December 31, 1940, Moody's Manual indicates that the company had 1,074,028 no-par shares outstanding.

Q. What is the dollar amount of the common stock of Providence Gas outstanding?

A. The book value of the capital stock is shown as $11,307,445.

Q. What is the surplus as of that date?

A. $1,452,540.

Q. What was the amount of bonds outstanding at that time? A. $3,250,000.

[fol. 8712] Q. Now, the total capitalization was $16,209,985. Is that correct?

A. Well, I did not add it, Mr. Littman. Shall I? $16,209,985 book value.

Q. So that the bonds represent less than 25 percent of the capital? A. Yes, sir.

Q. Now, you assumed a capitalization for Michigan Gas Transmission Corporation of 50 percent bonds?

A. Yes, sir.

Q. Now, for Providence Gas, which is the first public utility appearing on your list, you have a capitalization of 25 percent of bonds having a yield of 3.59 percent. Isn't that right? A. I beg your pardon, sir?

Mr. Littman: Will you read the question?

(Whereupon, the pending question was read by the reporter.)

The Witness: Yes, sir.

By Mr. Littman:

Q. Now, let's see what rate of return is indicated for this company based upon the coverage of 6.4 times and the yield. Will you calculate that for us?

Mr. Baldridge: This is a manufactured-gas company, is it not?

Mr. Littman: Do you mean to indicate by your question, [Vol. 8713] Mr. Baldridge, that this bond is not comparable to the one, to the type and character of the one assumed by Mr. Drew for the purposes of his study in this proceeding?

Mr. Baldridge: I do not mean to indicate that in the least but I mean the question of rate of return of a manufactured-gas company in a city like Providence is entirely different from the rate of return of a pipe line company such as Michigan Gas Transmission Corporation. The risks as to the one particular type of securities may or may not be comparable but the over-all return on the two companies certainly is not at all comparable.

By Mr. Littman:

Q. Perhaps we can get at it this way in order to save time. Now, with respect to Providence Gas we have a capitalization of $25 of bonds and $75 of capital stock for every $100 of capital, do we not?

A. Book value, yes, sir.

Q. Now, for each $25 of bonds, the interest requirement is 90 cents, is it not, per year? The calculation is 3.59¢ times 25.

A. Approximately 90 cents, yes, sir.

Q. Now, that is covered according to our list 6.4 times, is it not? A. Yes, sir.

Q. Now, let's multiply the 6.4 times the 90 cents. That [fol. 8714] gives us $5.76 for each $100 of capitalization. Is that correct? A. Yes, sir.

Q. Now, that indicates that Providence Gas is earning an over all rate of return of 5.76 percent, does it not?

Mr. Baldridge: On what?

Mr. Littman: On its capitalization.

The Witness: On its book value of capitalization.

By Mr. Littman:

Q. Yes. And that 5.76 for Michigan Gas Transmission Corporation is comparable to your 8.5 percent, is it not?

A. I would say that, according to our calculation here, it is the return being earned on the book value of the capitalization of a company whose bonds sell in the same market as would those of Michigan Gas Transmission Corporation if they were to be offered to the public.

Q. Now, the calculation that you have just made is the same character of calculation which you made for Michigan Gas Transmission Corporation in testing your 8.5 percent return, is it not? A. No, sir.

Q. Didn't you testify on direct examination that you were assuming—

A. (Interposing) I used market value in place of book value.

Q. But you used this calculation to check the validity [fol. 8715] and reasonableness of your estimate rate of return, did you not?

A. Not this calculation, no, sir.

Q. Well, if market value exceeds book value, the rate of the indicated rate of return would be even lower than the 5.76, would it not? A. That is right.

Q. And only if the market value is less, in fact very substantially less than book cost could you get a rate of return for this company up as high as 8½ percent. Is not that right?

A. I think that is right, yes, sir. I might add that at the end of January, Providence Gas Company's common

stock was quoted at about 7¼ per share whereas the book value including surplus was about $13 a share.

Mr. Culton: For my information, I wonder if the reference book you have there shows when the Providence Gas Company commenced business.

The Witness: The statement here is that the company was incorporated under the laws of Rhode Island in 1847.

Mr. Baldridge: And it is a manufactured-gas company, of course?

The Witness: Yes, sir.

By Mr. Littman:

Q. Well, is this bond or is this bond not comparable to Michigan Gas Transmission Corporation? Now, you un- [Tol. 8716] derstand I only asked for comparable bonds and I do not want to take up a lot of time on this record talking about bonds that are not comparable. Now, is it or isn't it comparable?

Mr. Culton: I think if you will go back, Mr. Littman, you will find that your question related to comparable coverage and comparable rates of return.

Mr. Littman: It related to that plus bonds which he thought were comparable. I will get the transcript and show you.

Mr. Culton: My recollection is that you used comparable in coverage and comparable in rates of return.

Mr. Littman: Well, your recollection is wholly faulty in that regard, I am sorry to say, Mr. Culton.

By Mr. Littman:

Q. Well, suppose you tell us whether you consider these bonds that you have submitted in this list comparable to those which you propose for Michigan Gas?

Mr. Baldridge: I think he has already answered that, Mr. Littman, earlier this morning.

Mr. Littman: I submit he has not.

The Witness: It seems to me the answer to that question depends almost wholly on the definition of the word "comparable". This is a company located in a different

part of the country. It is a manufactured gas company, it is a very much older company, it has a bond issue that is a much smaller proportion of the total capitalization than the one I suggested for Michigan Gas. There are many phases and factors that are different from those of Michigan Gas Corporation and yet I regard the bonds as comparable in the sense that they are sold and traded in the same general market for securities as would the bonds of Michigan Gas Transmission Corporation have to be sold if offered to the public.

[fol. 8717]

By Mr. Littman:

Q. Shall we then assume for purposes of your study that we are going to have 25 percent of bonds for Michigan Gas and 75 percent of capital stock? Do you want to assume that and agree with us on that?

A. It seems to me that that would be a rather expensive way for Michigan Gas Transmission Corporation to finance itself.

Q. Not if it gets down to something like 5.76 percent against your 8.5.

A. May I give you result of my calculation on Providence Gas on the same basis that I used for the other companies?

Q. Yes.

A. I come out with a figure of almost exactly 8 percent in 1940 on the market value of the securities of Providence Gas.

Q. Now, Mr. Drew, are you willing to agree that for purposes of this study we should have a bond comparable to that of Providence Gas in so far as the proportion of bonds to total capitalization is concerned?

[fol. 8718] A. Not so far as the most economical method of financing the company is concerned, no, sir.

Q. Well, let's see where we come out if we use this ratio. Now, your bonds have a yield of 3½ percent, for Michigan Gas, do they not?

A. Yes, sir.

Q. Assuming that we are going to have, as does Providence Gas, 25 per cent of bonds yielding 3½ percent, the interest requirement is 87½ cents per year for each $25 of capital raised through bonds?

A. That is correct, sir.

Q. Now, you have suggested a coverage of five times for Michigan Gas. Suppose you multiply that by five to get the over-all rate of return and tell us what the answer is.

A. $4.375.

Q. For each $100 of capital?

A. Yes, sir.

Q. In other words, if we had a bond like this for Michigan Gas which represented 25 percent of the total capital and we used your formula, we would have an indicated return of 4.37 percent, would we not?

A. On the basis of your assumption, yes sir.

Q. Well, the assumption that I have made is precisely the situation which exists with respect to Providence Gas, isn't that right?

A. Not quite. Providence Gas coupon is 4 percent.

Q. Well, its yield is 3.59, isn't it?

[fol. 8719] A. Yes, sir.

Q. Which is very close to 3½ which you have assumed for Michigan Gas.

A. That is right.

Q. And Providence has 25 percent of its capital represented by bonds. Is not that right?

A. Yes, sir.

Q. And that is the assumption that we have used in this last calculation. Is not that right?

A. I think that is right, but you are getting the two mixed up pretty well here.

Q. Well, just a minute, Mr. Drew.

Mr. Baldridge: Let him finish his answer.

Mr. Littman: I will give you an opportunity to explain, but I want you to tell me what is wrong with our calculation thus far. Thus far we are comparable, are we not?

The Witness: Not entirely.

By Mr. Littman:

Q. Why not entirely?

A. Well, because you are mixing up the two companies and the two bonds. The Providence Gas bond is a 4 percent coupon. My hypothetical bond for Michigan was 3½. Providence's bonds are 25 percent of capitalization. In my case they were 50 percent. Providence Gas bonds

[fol. 8720] earned their charges over six times and I estimate five times as necessary for the Michigan Gas bonds.

Now, what you are doing here is combining a 3½ percent coupon and a 25 percent ratio of bonds to capitalization and a five times coverage of interest charges.

Q. Do the Providence Gas bonds have any serial maturities?

A. The bonds are all one maturity. I will have to check and see if there are any sinking fund provisions.

So far as I can see, there are no sinking fund provisions of the Providence Gas bonds.

Q. And you have assumed a sinking fund provision with serial maturities for Michigan Gas bonds in your hypothetical setup in your study for this proceeding, have you not?

A. Yes, sir.

Q. Are the bonds of Providence Gas callable?

A. They are.

Q. At what price?

A. 105.

Q. They are selling on the market for more than that, are they not?

A. I am sorry, that is 103. I looked at the wrong figure.

Q. 103 is the call price?

[fol. 8721] A. Yes, sir. May I correct that.

Q. And they are selling for about 106, aren't they?

A. Yes, about 106.

Q. What is the yield to the first call date?

A. I have no way of calculating that.

Q. Is it something less than zero?

A. I cannot answer that question.

Q. It is much less than 3.59 percent, isn't it?

A. Well, the bonds are callable on 30 days' notice as a whole at any time or, in part, on any interest date to each February 1.

Q. And that is keeping the price of these bonds down, isn't it?

A. I think it is, yes, sir.

Q. Now, let's examine this bond for a moment. Here is a bond that is callable at 103 and has a market price

of 106. If I bought this bond today at 106, I would do so well knowing that within 30 days that bond might be called at 103 and might lose the $3 that I invested, might I not?

Mr. Baldridge: I do not think that is what Mr. Drew is saying, Mr. Littman. What I understood him to say was to each February 1.

Mr. Littman: Is that what you said?

Mr. Baldridge: I think it is ambiguous, at least to me.

The Witness: I read the provisions from Moody's.

[fol. 8722] Mr. Littman: Mr. Baldridge is incorrect, is he not?

The Witness: I will read the provisions again.

Mr. Baldridge: Read the commas too, the punctuation.

The Witness: "On 30 days notice as a whole at any time or in part"—and with no comma "on any interest date to each February 1 inclusive as follows" and then there is a list of the call prices.

By Mr. Littman:

Q. Let me pose my question again.

If I went into the market and bought this bond at $106 I would do so well knowing that within a very short time, the bond may be called at $103. Isn't that right?

A. That is correct but you would have the knowledge, if you looked into it, that the bond has been outstanding quite a while and has not been called and, in the meantime, has been sold up as high as 108 and a fraction.

Q. Would you, as manager of your Trust Department, advise a prospective investor that this bond would not be called?

A. I would have no way of giving him that assurance, of course.

Q. Now, if I bought this bond at $106 today at the present market price and if this bond were called within six months, I would lose $3, wouldn't I?

A. So far as principal is concerned, you would, yes, sir.

[fol. 8723] Q. How much interest would I have received?

A. You would have received $2 a hundred in the meantime.

Q. So I would have, under that assumption, a negative rate of return of $1, wouldn't I?

A. That is right.

Q. You did not suggest any such thing for Michigan Gas Transmission Corporation, did you?

A. No, sir.

Q. Now, the next public utility bond on your list is St. Louis County Gas, first mortgage, 5 percent, 1951, having a yield of 4.20 percent, which is earning 6.6 times the interest charges. Is my statement correct?

A. Yes, sir.

Q. Mr. Coffman eliminated this company from his list in his rate of return, Exhibits Nos. 63 and 64, did he not?

A. As I recall it, it was excluded from his study, because its common stock was owned by a holding company. I believe that is what he stated.

Mr. Culton: Mr. Littman, would you object to my reading a question which you asked the other day in order to clear my own skirts in this matter? On page 8451, your inquiry addressed to the witness was as follows:

"Suppose you just name one or two bonds that you can find in your list that you have anywhere in the Financial World, pipe line companies or otherwise, that have an in-
[fol. 8724] terest coverage of five times and in interest rate of 3½ percent on its bonds?"

That was the statement.

Mr. Littman: That was a follow-up question on the original question.

Mr. Culton: Your original question used the word "comparable" but you finally got down to "any bond". I just wanted to clear my own statement that I made a while ago in the record which you challenged.

Mr. Littman: I can understand why you came to the conclusion that you did, Mr. Culton, but that question must be read in connection with the full context of the transcript and the other questions that preceded it which used the term "comparable".

Mr. Culton: I thought you were wrong in your inquiry in that question there.

By Mr. Littman:

Q. Mr. Drew, you understood my inquiry to relate to comparable bonds, didn't you?

A. I remember your saying "Comparable bonds" and again I say that it depends upon your interpretation or definition of the word "comparable".

To me, the investor, in considering a bond for his own purchase, is very likely to compare that bond with many other types of bonds which are available in the market and not only that, but investment counsel and investment [fol. 8725] bankers are continually digging up bonds of various characteristics for the consideration of their clients.

Q. Did you undertake here in this list to supply a list of bonds which you considered comparable?

A. From the standpoint of my definition of the word "comparable", yes, sir.

Q. So you did not misunderstand my question, did you?

A. I put my own interpretation on the word "comparable" because my viewpoint is the investor's viewpoint which may be different from yours and because time did not permit; in any event, the exhaustive study which would have been required to establish the comparability of these or any other bonds with those of Michigan Gas Transmission Corporation.

Q. Is it your testimony that an investor would prefer to invest his money in these Providence Gas first mortgage bonds in preference to the bonds which you suggest for Michigan Gas?

The Witness: Will you read that, please?

(Whereupon, the pending question was read by the reporter.)

The Witness: That is by no means my testimony.

By Mr. Littman:

Q. In fact, the contrary would most decidedly be your testimony?

A. I believe it would on the basis of this price relative [fol. 8726] to call price. Yes, but I would say this, that if these bonds dropped one point in price or one point and a half, it is quite possible that you would find buyers for those bonds and I am speaking of the Providence Gas 4's.

Q. However, so long as any of the bonds which you have shown on your list are selling above the call price, you would say, would you not, that no investor would prefer such bonds on your list as against the bonds which you proposed in your hypothetical setup to issue for Michigan Gas?

A. No, sir, I could not make that statement.

Q. Let's look at St. Louis County Gas Company, first mortgage, 5 percent, 1951 bonds, having a yield of 4.20 percent and earning 6.6 times its interest. That is a rather high coupon rate, isn't it, Mr. Drew?

A. In present-day financing, it certainly is.

Q. Now, these bonds could be refinanced at a lower coupon rate, could they not?

Mr. Baldridge: May I have that last question read?

(Whereupon the pending question was read by the reporter.)

The Witness: Without having made an exhaustive study of the bonds themselves or of the company, my opinion is, from the figures readily available here, that those bonds could have been refunded anytime in the last two or three years. It is interesting to note that they have not been.

[fol. 8727] By Mr. Littman:

Q. What is the current market price of those bonds?

A. 106.

Q. That is above call price, isn't it?

A. One point, yes, sir.

Q. Now, what is the capitalization of St. Louis County Gas Company? You will find that on page 1323 of Moody's Public Utilities 1941.

A. Moody's Manual shows, for December 31, 1940, book value, first mortgage bonds, $1,500,000.

Q. What is the capital stock and surplus?

A. The capital stock is shown at $4,100,000 and the surplus as $2,288,948.

Q. So that these bonds represent less than 20 percent of the capitalization of the company, do they not?

A. On book value, yes, sir.

Q. What is the amount of interest required on $20 of these bonds per year in terms of yield?

A. Five percent.

Q. Isn't it 4.20 that the investor is getting?

A. The company has to pay 5 percent on a million and a half of bonds.

Q. All right. Let's take the 5 percent.

A. Five percent on $20, did you say?

Q. On $20 of bonds.

[fol. 8728] A. $1 for interest.

Q. Now, the coverage is 6.6 times, isn't it?

A. Yes, sir.

Q. Indicating a 6.6 rate of return for that company?

A. Based on its book value, yes, sir.

Mr. Baldridge: Mr. Drew, that is a mixed gas distributing company, is it not?

The Witness: Yes, sir.

By Mr. Littman:

Q. Well, have you been able to find any natural gas pipe line companies that have any securities, such as those which you suggest for Michigan Gas Transmission Corporation? I am speaking of bonds.

A. There are none in this list, no, sir.

Q. In other words, you have not been able to find any so far? A. That is correct.

Mr. Baldridge: You mean that have the characteristics you mentioned of times charges and yields?

Mr. Littman: Yes.

Have you been able to find any natural gas companies that have the bond characteristics of those which you suggest in your hypothetical setup for Michigan Gas?

Mr. Baldridge: You mean that are openly sold on the market? You must make that qualification.

[fol. 8729] Mr. Littman: I am not making any such qualification.

By Mr. Littman:

Q. You do not have any such bond on your list, do you?

A. Just a second—the sixth bond on the list, New Mexico Gas bonds, appear to be from the Manual here, although I have not had a chance to study the bond or the company, appears to be a natural gas distributing and transmission company.

Mr. Littman: Will you please read that last answer?

(Whereupon, the last answer was read by the reporter.)

By Mr. Littman:

Q. I hand you Standard & Poor's "Bond Investments", issue of September 6, 1941, and ask you whether the advice of Standard & Poor's with respect to Providence Gas 4's is to "switch"?

A. Yes, sir, it is.

Q. What does the word "switch" mean as it is used there?

A. It means to sell the bond to somebody else who is willing to buy it and then reinvest the proceeds of your sale in some other bond.

Q. In other words, in the words of a layman, to "get rid of it quick", isn't that right?

A. No, I do not interpret it that way.

Q. Would you say plain "get rid of it"?

A. No, sir.

[fol. 8730] Q. Get rid of it and invest your money in something else?

A. Well, I do not like the words "get rid of it", because I do not interpret Standard's "switch" recommendation to mean that. It means, as I said, to sell the bond to somebody else who is willing to buy it at a price that is mutually agreeable and reinvest the proceeds of your sale in some other security.

Mr. Littman: Mr. Examiner, I see the recess hour has come and gone. I hope we are not foreclosed from our usual brief recess.

Trial Examiner: We will take a five-minute recess.

The Witness: I should like to add one comment on Providence Gas, if I may, before we finish.

In Fitch Bond Record of February 24, 1942, Providence Gas Company bonds are quoted at 106½ bid, not asked but bid, and that means that somebody is willing to pay 106½ for those bonds.

By Mr. Littman:

Q. And if that "somebody" paid $106.50, his yield would be even lower than we have already indicated, would it not?

A. Very slightly.

* * * * * * * *

FRED A. SPITZNAGLE a witness, having been previously duly sworn, resumed the stand and testified further as follows:

* * * * * * *

[fol. 8732] Trial Examiner: Mr. Chamberlain has now handed to the Trial Examiner revised Exhibit No. 166 in accordance with our understanding. While the original was received, it was received last Saturday, the new exhibit may be marked 166 and substituted in the file for the original.

(The Document Referred To Was Marked No. 166 and Received In Substitution For The Original Exhibit No. 166.)

Q. Mr. Spitznagle, have you examined Exhibit 166 which is now handed you?

A. Yes, sir, I have.

Q. And have you checked the figures that appear on that exhibit?

A. Yes, sir, I have checked the figures both with the original exhibit, in so far as the original exhibit contains the same figures, and I have also checked the record which begins at Page 8486.

Exhibit 166, which you are now handing to me, has an error in the figure in the 1932 column under the caption "Amount". The last item should be $1,097.92 instead of 72 cents.

Q. And that has been corrected on all of the copies that have been presented?

A. Yes, sir, I gave it to you and I think it has been corrected.

Q. Now, this data relates to the sales of natural gas and [fol. 8733] purchases by the companies that are identified in the left hand column.

A. That is correct; yes, sir.

Q. And those you find to be correct both as to quantity and the amount of the purchase price?

A. Yes, that is correct.

Q. Now, have you obtained the gas revenues of Indiana Gas Transmission Corporation for the years 1931 to 1935, inclusive?

A. Yes, sir, and I will be glad to read them off to you.

Q. If you please.

A. For the year 1931, $79,063.62.

. . . . . .

The Witness: There are only five figures involved.

For the year 1932 such revenues were $596,898.57;

For the year 1933 they were $547,315.45;

For the year 1934 they were $604,434.81;

For the year 1935 they were $784,265.31.

[fol. 8734] By Mr. Chamberlain:

Q. I will ask you again the revenues for 1932.

A. $596,898.57.

Q. I now hand you the document marked for identification as Exhibit 169 and I wish to ask whether you have checked the figures as well as the percentages given in this document.

A. Yes, sir, I have, but I would like to have you refer to the percentages as revenue per M. c. f. They are really not percentages, they are percent amounts.

. . . . . .

[fol. 8735] Q. Now, will you state for the purpose of the record what the increase in the sales in M. c. f. for the year 1941 has been as compared with the year 1936? I am referring now to Michigan Gas Transmission Corporation's sales.

A. The percentage that it shows on the Exhibit 169 I believe excludes the non-affiliates, if I am correct.

Q. That is right.

A. Excluding the non-affiliates the percentage increase was 324.03.

[fol. 8736] Q. What was the percentage increase of sales of natural gas by Michigan Gas Transmission Corporation to non-affiliates in the year 1941 as compared with the year 1936?

A. Percentage increase of sales in M. c. f. was, as I stated, 324.03 percent.

Q. And what was the increase in revenue for 1941 over the year 1936?

A. With respect to the same companies the percentage increase in revenue was 268.68 percent.

Q. And with respect to the same companies and period, what was the increase as a percentage in the revenue received per M. c. f.?

A. 13.06 percent.

[fol. 8737] Q. Now, I wish to call your attention to the five customers of Indiana Gas Transmission Corporation as of the first two months of the year 1936 and to the percentage of gain or loss in their sales during the period from 1936 to the end of 1941, inclusive. What was the percentage of increase or decrease in the sales of natural gas by Michigan Gas Transmission Corporation to these five customers who continued to be customers throughout the period and all of which were non-affiliated in the year 1941 as compared with the year 1936?

A. The customers to which you refer are on the second page and the sales of Indiana Gas Transmission Corporation to those customers for the period 1936 to 1940, inclusive, appear on that page. The percentage increase in sales of M.c.f. to those customers in 1941 over the year 1936 is 247.93.

Q. And what was the increase in revenue with respect to the same companies and conditions?

A. The increase in revenue was 191.36 percent.

Q. And what was the percentage decrease in revenue per M.c.f. with the same companies and under the same conditions?

[fol. 8738] A. The decrease in revenue per M.c.f. was 16.26 percent.

Q. Now, what was the percentage decrease in revenue per M.c.f. derived by Michigan Gas Transmission Corporation from sales of natural gas to non-affiliated customers in 1941 under the revenue per M.c.f. to Indiana Gas obtained from Michigan Gas Transmission Corporation as compared to the same non-affiliated customers in 1936?

A. Such percent was 19.25 percent.

Mr. Chamberlain: The Intervenor now offers in evidence, as a part of the cross-examination of Mr. Spitznagle, Exhibit No. 169.

Trial Examiner: Any objection? (No response.)

The statistical table, consisting of two sheets, concerning which questions have just been asked, will be marked for identification as Exhibit 169 and will now be received in evidence as Exhibit No. 169, without objection.

(Exhibit No. 169 was marked and received in evidence.)

[fol. 8741] ROBERT S. DREW a witness, having been previously duly sworn, resumed the stand and testified further as follows:

Cross-Examination (Continued)

[fol. 8742] By Mr. Littman:

Q. Mr. Drew, you show on your list New Mexico Gas, first convertible 5½ percent. 1951, bonds. What is the capitalization of that company as shown by Moody's 1941 Public Utilities?

A. As I stated, I have not examined into the detailed characteristics of any of these bonds, Mr. Littman.

Q. It is important to do that, isn't it, to determine whether or not these bonds are reasonably comparable to those which you propose in your structure for Michigan Gas?

A. It would be, yes, sir, but I have made no attempt to do that.

Q. Is there any bond on your list which you consider as good an investment as the 3½ percent bonds which you have proposed for Michigan Gas Transmission Corporation?

A. Since I have not made a detailed study of these bonds, I think the best way for me to answer your question is to say that I would regard those hypothetical 3½ percent Michigan Gas Transmission Corporation bonds as entitled to a rating of BBB and on the list of 50 bonds which you have before you, the entire list down to and including Crucible Steel, 3¼, are rated BBB or better in the Bond Tabulator.

Mr. Baldridge: That constitutes about 25 different issues of bonds, does it not, Mr. Drew?

The Witness: Exactly 25, yes, sir.

[fol. 8743] By Mr. Littman:

Q. How would you rate Panhandle Eastern's recent issue of 3 percent bonds?

A. I think they are worth a AA rating, between A and AA, in my opinion.

Q. How would you rate Panhandle Eastern Pipe Line Company's 3 percent bonds of 1960?

A. I think I would rate them about the same, AA.

Q. The rating on those bonds, as shown in the September 6, 1941, issue of Standard & Poor's "Bond Investment" was A1. Isn't that correct?

A. That is AA. That is the same as AA or double A. Triple A is the same as A1 plus. Different Services use different codes.

Now, I have before me again this Fitch Bond Record and Fitch rates the new 3 percent bonds as A and rates the 3's of 1960 the same.

Q. How did you rate the Michigan Gas Transmission bonds which you have proposed for purposes of your study?

A. I think about BBB.

Q. Why is the Panhandle Eastern Pipe Line Company bond due 1960 a better one than the one you proposed to issue for Michigan Gas Transmission Corporation?

A. In my opinion, there are several factors that probably lead the Service organizations to rate Panhandle [fol. 8744] Eastern bonds either A or AA as compared to my opinion as to the ratings of these hypothetical Michigan Gas Transmission 3½'s.

Q. What are those factors that cause Panhandle Eastern's bonds to be rated better than your hypothetical bonds for Michigan Gas?

A. I think the fact that Panhandle Eastern owns certain gas reserves, is a company having been established longer than Michigan Gas Transmission, serving a wider territory and having, I think, more possibilities of branching off to reach other territories.

Q. Don't you know that all of the outstanding securities of Michigan Gas are now owned by Panhandle Eastern Pipe Line Company?

A. I understand that they are but you are asking me about the relationship between two pieces of property upon which are two separate bond issues, respectively.

Q. Isn't the natural gas supply of Panhandle Eastern Pipe Line Company available to Michigan Gas Transmission Corporation?

A. I would expect so, but I would say it was not necessarily so at the time that I set up this hypothetical bond issue.

Q. Would you change the rating on your hypothetical bonds today in view of the events that have transpired since you made your study originally?

A. No, sir. As compared to Panhandle Eastern, Mich- [fol. 8745] igan Gas Transmission Corporation, as I understand it, takes the gas at a certain point, transmits it up to another point, and has a contract for the delivery of the gas to one large customer and perhaps other smaller customers.

Q. You understand that these two companies are proposed to be operated more or less as a single unit, don't you?

A. I presume they will be.

Q. What exists today in respect of this situation that would cause you to rate Michigan Gas Transmission bonds below those of Panhandle Eastern?

A. Because the bonds, I assume, would be a lien on two separate parts of the property. Otherwise, we would

be talking about another issue of Panhandle Eastern bonds.

[fol. 8747] (Exhibit No. 167 was received in evidence.)

Q. Mr. Drew, you show on your list New Mexico Gas first convertible 5 percent 1951 bonds having a yield of 4.48 percent and earning 7.4 times interest earned.

A. Yes, sir.

Q. Now, I hand you Standard & Poor's "Bond Investment", dated December 6, 1941, and refer you to page [fol. 8748] No. 612. Will you please state what is shown thereon with respect to the interest coverage on those New Mexico bonds?

A. Standard & Poor's publication, which you have just described, shows a coverage of 3.45 times.

Q. Whereas your list shows 7.4 times, does it not?

A. That is correct, yes, sir.

Q. Can you explain the difference between the figure shown in your list and the figure shown in Standard & Poor's?

A. No, I cannot explain the difference. I verified, however, that the Bond Tabulator shows the coverage of 7.4 times.

Q. Well, they cannot both be right, can they?

A. Not if that coverage is for the same period, that is correct.

Q. It is for the same period, is it not?

A. The Bond Tabulator does not give the period covered while Standard & Poor's figure is for the year 1940.

Q. Well, if Standard & Poor's is correct, then clearly this New Mexico Gas bond would not be comparable and should not be shown on this list?

A. That is correct.

Q. Now, the only remaining public utilities which you have on this list, other than those which we have heretofore discussed, are two street-railway companies. Is that right?

A. You refer to the Cleveland Railway sinking fund [fol. 8749] 5's and the New York Railway 6's or '58?

Q. Yes. Are there any other public utilities shown?

A. I think those are the only ones remaining.

Q. Now, we have heretofore discussed three public utilities, to wit, Providence Gas, St. Louis County Gas and New Mexico Gas, have we not?

A. Yes, sir.

Q. The other two public utilities, as you have just stated, are street railway companies, making five public utilities in all on your list of 50 companies?

A. Well, I think they are both street railway companies. You made the statement, I described the bonds. I think, however, they are both street railways. It may be, however, that the New York Railway bonds may have some power business. I do not know. The Manual will show.

Q. Well, it is clear at any rate that the remaining 45 bonds shown on your list are not public utility bonds?

A. I think that is correct.

Q. The New York Railway bonds are selling above call price, are they not?

A. The bid price in the Bond Tabulator is shown as 105 which is also the call price.

Q. Now, with respect to the Cleveland Railway sinking fund first mortgage 5 percent bonds due 1945, that company has an issue of cumulative common stock, does it not? [fol. 8750] A. I do not know, sir. I have not the details of the capitalization before me.

Q. I hand you Moody's Public Utilities for the year 1941 and ask you to verify my understanding.

A. That is correct.

Mr. Baldridge: Mr. Littman, did you say "cumulative common stock"?

Mr. Littman: Yes. A rather startling and unusual thing. Have you ever heard of any such stock, Mr. Baldridge?

Mr. Baldridge: Am I off the record?

Mr Littman: No, you are on the record.

Mr. Calton: I thought all common stock was cumulative.

Mr. Baldridge: I really don't know whether I have or not, but it certainly is not the kind I am accustomed to hearing about.

Mr. Littman: If the inflection of your voice could be put on the record, I do not think there would be any doubt that you were surprised.

Mr. Baldridge: I thought you were going to say "cumulative preferred stock". "Preferred" is the word I expected to hear after "cumulative" and I thought you had just misspoken yourself.

By Mr. Littman:

Q. And that is a very unusual character of security, is it not?

[fol. 8751] A. It is to me, sir.

Mr. Culton: I wonder, just to satisfy our curiosity, if it is described any further there. Does it mean that there is a recapture clause of some kind? In what way is it cumulative?

By Mr. Littman:

Q. Are you ready to answer the question?

The Witness: Will you read the last question?

(Whereupon, the question commencing at line 2 of this page was read by the reporter.)

The Witness: I do not find in Moody's Manual any description of the cumulative provision of the common stock of Cleveland Railway Company.

By Mr. Littman:

Q. That cumulative characteristic of the common stock might have something to do with the investor's appraisal of these bonds, might it not?

A. I should not think so.

Q. You do not think that would affect the situation any?

A. No, sir.

Q. I note on page 60 of Moody's 1941 Manual of In-[fol. 8752] vestments for Public Utilities, that there was a deficit in the interest fund of Cleveland Railways of $5,358,101, that amount appearing on the liability side of the balance sheet as of December 31, 1940. I also see a notation with respect to the same item for 1939 reading as follows:

"After provision for unpaid dividends of $4,552,188" the Interest Fund is described as follows:

"Interest Fund, year ended December 31, 1940: Deficit at January 30, 1940 (after provision for accumulated unpaid dividends) $4,806,915. Add: Net loss for the year computed on the basis of franchise allowances (after provision of $1,883,064 for cumulative dividends on common stock), $1,016,383; total, deficit $5,823,279. Deduct: Balance transferred from operating reserve at February 28, 1940, $465,196; Deficit, December 31, 1940, $5,358,101."

Would an investor who contemplated investing his money in these Street Railway bonds take into account this very unusual cumulative common stock and the other facts which I have just read into the record?

A. I am quite sure an investor, considering the bond, would take those things into account but I should be very much surprised if the principal and the interest on these first mortgage bonds which are due in 1945, I would be very much surprised if they did not represent a prior lien on both the property and the earnings of the company.

[fol. 8753] Q. Speaking of liens, do you consider the liens on property important?

A. Yes, sir.

Q. Do you know whether there is any lien on property secured by the next bond shown on your list, to-wit, American U. G. Chemical Convertible debentures 5½ percent due 1949?

A. I would expect that there would be no mortgage lien on any property of the company.

Q. Is there any other kind of lien on the property?

A. Represented by those bonds?

Q. Is there?

A. I beg pardon?

Q. Is there any other kind of lien on the property that secures those bonds?

A. Without examining the indenture under which the bonds were issued, I would judge, by the description of the bonds, that it ranks as a general obligation of the company.

Q. And has no lien securing the payment thereof?

A. Well, it might have a lien on certain parts of the property.

Q. And it might not?

A. And it might not. I cannot determine because I have not looked at the indenture.

Q. But, offhand, it looks to you like merely a general obligation of the company?

[fol. 8754] A. Yes. It is, in that way, similar to certain other bonds of much higher rating that this one, such as American Telephone & Telegraph debentures which are a general lien but have no direct lien on property. They are general obligations of the company.

Q. What are the American Telephone & Telegraph debentures selling for and what is the yield?

A. Fitch Bond Record of February 24 shows those debentures selling at prices to yield around 246 to 288 percent to maturity.

Q. I note on page 2894 of Moody's Manual of Investments for Public Utilities for 1941, in [refering] to the American I. G. Chemical Corporation convertible debentures, 5½'s due 1949, contains the following statement:

"Security not secured by any lien".

You do not doubt the accuracy of that statement?

A. I think that is correct, no doubt.

Q. Isn't this the Chemical Corporation that is owned by German interests?

A. I believe not.

Q. And is now subject to an inquiry by the Department of Justice?

A. It may be.

Q. You did not [inquiry] into that?

A. No, sir, I did not inquire. I have not examined into [fol. 8755] the circumstances or the terms or the description of any of these bonds.

Q. Mr. Drew, can we agree that in order for these bonds which you show in your list to be reasonably comparable with the bonds which you have proposed for Michigan Gas Transmission Corporation for purposes of your study, such bonds should constitute at least 50 percent of the capital structure of the company?

A. No, sir.

Q. That is the ratio of bonds that you have assumed for Michigan Gas Transmission Corporation, is it not?

A. That is correct.

Q. And yet you say that that same feature is not required to render these other bonds comparable to that which you have assumed for Michigan Gas Transmission Corporation?

A. In answering your question, I would like to say this, that my viewpoint represents the investor's viewpoint and an investor who has funds with which he wants to purchase bonds does several things.

First, he looks at his portfolio and he determines whether or not he has the kind of diversification among different industries that he should have among his portfolio. He looks at his portfolio from the standpoint of diversification of maturities. A conservative investor would like to have or should have a ladder of maturities in his portfolio. [fol. 8756] He must decide for himself how much risk he is willing to assume from the purchase of a new investment.

He must decide for himself what income from that investment he wishes to obtain.

Having reached conclusions on these and some other points, he is not restricted to any field of investment. He is not restricted to gas pipe line securities nor natural gas securities nor to utility securities. Practically speaking, the entire field of investment is open to that investor and if he has decided that he would like to buy with this money at hand an investment which will pay him 3½ percent or better and if he feels that he would like to have a coverage of his interest charges in the neighborhood of five times or better and if he is willing to buy or, at least, consider some bonds which have a rating of less than BBB, then this entire list of bonds would be available to that investor for consideration for purchase and, as such, he will consider that list of bonds comparable to the hypothetical bond issue of Michigan Gas Transmission Corporation.

Q. Now, you say you have a list here of 50 bonds which might conceivably be comparable?

A. I did not say it that way. I said I thought every bond on this list might well be considered by the investor having reached the conclusions which I just stated.

Q. How many bonds did you examine in arriving at this list of 50?

[fol. 8757] A. At your request last Friday that a list of bonds be submitted which bore a return to present prices of 3½ percent or better on which companies were recovering their fixed charges five times or better, time permitted me only to look through "The Bond Tabulator" and to select bonds which qualified under that suggestion of yours and, as a result, these 50 bonds are submitted.

Q. How many bonds are there listed in that Bond Tabulator?

A. I have no idea, sir.

Q. It would run well into the hundreds, wouldn't it?

A. I am sure it would.

Q. Approximately how many?

A. Well, it would be several hundred.

Q. How many pages of bonds are listed in "The Bond Tabulator"?

A. Fifty-four pages.

Q. How many are there on each page, on the average?

A. About 84.

Q. That would be approximately 4,500 bonds, wouldn't it?

A. I think it would, yes, sir.

Q. Mr. Drew, I consider a bond to be reasonably comparable with those which you propose to issue for Michigan Gas when it has the following features:

[fol. 8758] 1. When the bond constitutes at least 50 percent of the capital structure of the company which is precisely what you assumed for Michigan Gas;

2. Where the bond is selling to yield 3½ percent or more, which is what you assumed, more specifically, you assumed 3½ percent;

3. The bond should be selling at or below its call price;

4. The bond should be earning charges five times and have prospects of such continued earnings. Furthermore, the company which has these bonds outstanding should have reasonable and adequate depreciation reserves on its books.

Now, that is my definition of "reasonably comparable" and I shall ask whether you have found any bonds

among the 4,500 which you examined which have all of those characteristics.

Mr. Baldridge: The witness did not say he examined 4,500, Mr. Littman.

By Mr. Littman:

Q. Didn't you examine 4,500?

A. "Examine" is too strong a word. As I say, I looked through this volume, "The Bond Tabulator" for the purposes I formerly stated.

Q. Did you find any bonds in the list of 4,500, approximately, that met the characteristics which I have described?

A. I made no such search.

[fol. 8759] Q. Do you think there are any in there that have these five characteristics which I have described?

A. I have no way of even guessing at that but I should say that from my own viewpoint, representing the investor's regard for investors, that a strict compliance to any set of specifications like this would be utterly unnecessary to the investor who is studying a number of bonds in order to select one for his own purchase.

Q. But you have imposed precisely every one of these five conditions and characteristics that I have named upon the proposed bonds for Michigan Gas Transmission Corporation. Isn't that right?

A. That is correct.

Q. What is unreasonable about my assumption that these five characteristics should appear in other bonds for those other bonds to be comparable?

A. In setting up that hypothetical capitalization, I was undertaking to do two things: I was undertaking to set up a capitalization which would be pretty close to the most economical method for Michigan Gas Transmission Corporation to use in financing itself entirely and, at the same time, to come out with securities which would be acceptable to the investing public.

Q. You would not have any difficulty finding bonds in this list of 4,500 which met the five characteristics that [fol. 8760] you have used for Michigan Gas which are selling to yield about 2.75 percent including the Telephone Company bonds which you mentioned?

A. Are you asking me a question, sir?

Q. Yes.

A. I think that is correct but I would have to add to that that this set of specifications which you have just described—

Q. (Interposing) They are your set of specifications.

A. All right, my set of specifications are only a part of the number of factors to which an investor would give attention in considering the purchase of securities.

Q. And where you would find those specifications, you will find a yield of 2.75 percent, wouldn't you, or thereabouts?

A. I should say that considering just these specifications, the yield would run anywhere from 2.75 to 6.89, perhaps. I have not studied that.

Q. Suppose you find some of those for us. We are using your own characteristics on these bonds. You cannot point to any now, can you?

A. I cannot, offhand, certainly. I cannot carry those details in my mind.

Q. Now, when you went about the task of fixing what you considered to be a reasonable return to which Michigan Gas Transmission Corporation was entitled, didn't [fol. 8761] you consider it important to first make a study of the situation?

A. No, sir, not beyond my everyday contact with securities.

Q. Well, at any rate, as you have heretofore testified, you have not made an investigation which would enable you to now say that the 50 bonds shown in your list submitted today are reasonably comparable with the bonds which you propose for Michigan Gas Transmissioin Corporation, considering the features which I [enumerated] a moment ago?

A. Well, I must make this condition, that I am looking at that question from the standpoint of the investor and from the standpoint of the investor, he would have the means and he probably would have the inclination to make a comparison of Michigan Gas Transmission bonds with these very bonds and others and, therefore, for my purposes they are comparable.

Q. Will you please answer my question? You said you were going to qualify your answer, but you have not answered my specific question.

Will you please read it?

(Whereupon, the question commencing at line 5 of this page was read by the reporter.)

The Witness: I have not made such an investigation.

By Mr. Littman:

Q. Mr. Drew, I would like to buy a bond at par that [fol. 8762] would yield me 3½ percent and will have the characteristics which you have prescribed are necessary for the bonds which you propose for Michigan Gas Transmission Corporation.

Can you advise me where I can buy such a bond?

Mr. Baldridge: Mr. Littman, you used the words "prescribed are necessary". That is not my understanding of the witness' testimony.

Mr. Littman: Whether it is your understanding or not, this witness has no difficulty understanding my question. I am satisfied. He thinks he is able to take care of himself.

Mr. Baldridge: It is not a question of taking care of himself, it is a question of confusing the record.

Mr. Littman: I think you have succeeded admirably in confusing this record all week, Mr. Baldridge, by countless, needless interruptions. Are you objecting to this question or not?

Mr. Baldridge: Unless you will rephrase it, I will. I was giving you an opportunity to rephrase it, out of courtesy. If you do not appreciate that, I will object.

Mr. Littman: Mr. Examiner, the objection is, of course, not well taken simply because counsel does not understand the question. The question is objectionable only if the witness does not understand the question and he has not so indicated.

Mr. Baldridge: I think that any question is objectionable when you state that the witness has testified to something that the record does not show he is testifying. If I [fol. 8763] am wrong, I stand to be corrected, but my understanding of the record is that the witness did not prescribe as necessary any conditions as to bonds. He recom-

mended certain kinds of bonds. I think there is a vast difference between those two uses of the words.

Trial Examiner: Read the question.

(Whereupon, the question commencing at line 25, Page 8761 of this transcript was read by the reporter.)

Trial Examiner: I think that question is clear. He may answer. Of course, you may qualify, Mr. Drew, if it is necessary. The testimony, as I recall it, a few moments ago was that the description of a bond, a hypothetical bond which Mr. Littman read by numbered paragraphs expressed the conditions of the bond which you had used in your suggested refinancing plan, that you assented to that fact, to that statement. Am I right?

The Witness: That is correct, Mr. Examiner.

Trial Examiner: You may answer.

The Witness: In my direct testimony the wording of the paragraph preceding that hypothetical setup was this:

"Under present conditions I believe the most economical method of financing publicly a company like Michigan Gas Transmission Corporation, assuming a total capitalization of $13,000,000, would be to set up a capitalization, one half serial bonds and one half common stock. My [fol. 8764] opinion is that the following setup would be favorably received by the investing public.".

By Mr. Littman:

Q. Will you please read on so that we may have these characteristics?

A. "$6,500,000 3½ percent serial bonds, one to 16-year maturities and $6,500,000 common stock."

Q. You mentioned something about coverage in there, too, did you not?

A. Shall I read the full paragraph?

Trial Examiner: Since it has been brought into question, Mr. Drew, it would be proper to read it if you wish.

The Witness: "$6,500,000 3-½ percent serial bonds, one to 16-year maturities. Interest the first year would be

$227,500 which would have to be covered at least five times after taxes. This would require a gross income of $1,137,500. Interest and serial maturities combined would be covered 1.8 times.

"I believe these bonds could be sold to net the company an average of about par. $6,500,000 common stock after $227,500 interest and $406,250 annual serial maturity total $633,750. There would remain $503,750.

"Price-earnings ratio for the first year would be about 13. The rate of earnings on the common stock would be 14 percent before serial maturities and 7.7 percent after [fol. 8765] such maturities. Total, $13,000,000 total capitalization.

"The $1,137,500 gross income required for this setup would be about 8¾ percent on the $13,000,000 capital."

By Mr. Littman:

Q. Now, will you refer me to a bond such as that which I have described a minute ago?

A. I cannot refer you to such a bond without considerable study and it would be only fortuitous circumstance if I were to find one of that exact specification, but I would say I never heard of an investor who set down such a strict set of specifications when he wanted to make an investment.

Q. Such a strict set of specifications which you, yourself, have prescribed for Michigan Gas?

A. That is correct.

Q. Mr. Drew, does your bank, when acting as Trustee, guarantee any of its beneficiaries against the effects of inflation?

A. No, sir.

Q. Do you know of any Trustee that does?

A. No, sir.

Q. Your bank would soon go broke if it did anything like that, would it not?

A. I cannot say as to that, but I would not want to take the risk.

[fol. 8766] Q. Certainly if it continued to pay current yields it would soon end up on the financial rocks, so to speak, would it not?

A. Your question is not clear to me, sir.

Q. Assuming that your bank guaranteed against inflation and, also, continued to pay the yields which it now pays on its trust funds, it certainly would get into financial difficulties very soon, would it not?

A. Your question still is not clear, but I can answer in the affirmative because I think it would ultimately get into trouble with any kind of a guarantee.

Q. Is any investor that you know of able to hedge his investments against inflation today?

A. So far as I know, there is no perfect hedge against inflation, no, sir.

Q. If the investor in public utility securities were to be given a complete hedge against inflation, he would certainly be the most favored of all investors, would he not?

A. I should say so, yes, sir.

Q. He would probably accept a nominal return or perhaps a negative return rate in order to get the benefit of the inflation hedge, would he not?

A. No, sir, because a part of the inflation hedge is the income that he derives from the investment.

Q. If his capital investment were guaranteed against [fol. 8767] inflation, would he require any income, in your opinion?

A. My opinion is that the vast majority of investors would want income from a security which they bought for the purpose of hedge against inflation.

Q. But that income would be much lower, would it not, than if he had no guarantee against inflation? In other words, he would be willing to accept a considerably lower return on his investment if the investment were, itself, guaranteed against inflation. Is that correct?

A. When you speak of having his principal guaranteed against inflation, I presume you mean that someone guarantees to this investor that the amount that he invests in this given security is going to appreciate at the same rate as, let us say, for simplicity, cost of living.

Q. What I am saying is precisely that, to-wit, that he will be guaranteed that his investment will continue to buy the same amount of bacon and eggs five years from today, for example, as that amount of bacon and eggs which he can purchase today with present-day dollars.

A. Well, in my viewpoint an investor does not buy bacon and eggs with principal, he buys it with income

and, consequently, the income, the rate of income, would have to be guaranteed to increase in the same proportion as the cost of living increases in order that he can buy out of income as much bacon and eggs at the peak of the [fol. 8768] inflation as he could when he bought the investment.

Now, that implies a rapid increase or a rise, at any rate, in the ratio of income to his original purchase cost.

. . . . . .

By Mr. Littman:

Q. Does the investor in Government bonds have a hedge against inflation?

A. Generally speaking, no, but there is one issue of Government bonds in which there is a moderate hedge against inflation.

Q. Which one is that?

A. That is the U. S. Savings Defense Series G, 2½'s due in 12 years, selling at par, under the terms of which there is set up a retirement schedule according to which the Government agrees to buy back the bonds at a given price, according to the time, from the original investor upon his demand. That is so framed that if interest rates should, because of inflation or for any other reason, rise to 5 percent, he could bring demand on the United States Government and get his money back at a discount, the maximum discount being a price of $94.70 per $100 and [fol. 8769] reinvest at the higher rate.

To a degree that is a hedge against inflation, but that is the only one I know of in the Government list.

Q. That is a very minor hedge against inflation, is it not?

A. It is a very important hedge for a 12-year period and it is so important to the trust companies of the United States that millions upon millions of dollars are being invested in those U. S. 2½ Series G.

Trial Examiner: Incidentally, that is a novel development, Mr. Drew, in ultimate finance?

The Witness: Yes, sir, as far as I know it is the first of its kind in our country.

By Mr. Littman:

Q. That is; however, not a complete hedge against inflation, is it?

A. I stated before, I think, that there is no such thing as a perfect or complete hedge against inflation.

Q. If I had deposited dollars in your bank in 1936 and I withdrew them on November 12, 1941, would my withdrawal be scaled up or down because of the change in the purchasing power of the dollar between those two periods?

A. Well, I am not an economist, but in answer to that question I should say that you would get the same kind of dollars when you withdrew as when you deposited. I [fol. 8770] should say, further, that the dollars that you withdrew would buy fewer commodities than those which you deposited, simply because I believe the average of commodity prices has risen during that period.

Q. The same is true of life insurance, isn't it?

A. A similar thing, yes. Of course, life insurance is paid for over a long period of years and usually pays out in a lump sum, it is a little different kind of thing.

Q. What rate of interest does your bank pay on these deposits which are not, of course, as you say, guaranteed against inflation?

A. Now, when you ask me that question, Mr. Littman, you are referring to our commercial deposits or our trust accounts?

Q. Your commercial time deposits.

A. Well, the savings account rate is 1½ percent and the commercial deposits by commercial corporations receive no interest payments by law.

Q. Now, Mr. Drew, if you were to guarantee your savings accounts against inflation, you would, in all probability, not pay any interest, would you?

A. Well, I find it hard to conceive that any such guarantee would ever be given.

Q. Well, if you can conceive of such a guarantee, and a certain witness in this case has conceived it with re- [fol. 8771] spect to Michigan Gas Transmission Corporation, you would not have to pay any interest to attract depositors, would you?

A. I see what you mean.

Q. You would not have to pay me any.

A. Well, I would just dislike to answer such a question that is so far from the realm of possibility in the banking field.

. . . . . .

[fol. 8821] Robert S. Drew a witness, having been previously duly sworn, resumed the stand and testified further as follows:

Cross-Examination (Continued)

The Witness: Mr. Littman, may I make a comment or two having to do with the subject we were discussing before the noon recess?

By Mr. Littman:

Q. Yes.

. . . . . .

[fol. 8824] The Witness: Then, may I make one more com-
[fol. 8825] ment with respect to our discussions of these 50 bonds? I got the impression from your questions that you feel that the smaller the ratio of the bond issue to the total capitalization, the cheaper and the more economical can be the financing of the entire company. If my impression is correct, I should like to say that I think you are not correct in that position because in time of low bond interest rates, it is obvious that the larger proportion of a capitalization which you can finance by bonds, the more economical is going to be the over-all cost of financing a company and while with a lower proportion of [bonds] there would be a correspondingly larger issuance of stock with less bonds proportionately ahead of it, yet, in spite of that, my firm conviction is that the over-all cost of such a financing job, namely, 25 percent bonds, 75 percent common stock, would be considerably more expensive and less economical than would the 50-50 ratio.

By Mr. Littman:

Q. You have testified heretofore that you used as the average market price of the common stock of Panhandle Eastern the sum of $40 per share, is that correct, in determining the over-all appraisal of risk of the investor?

A. Well, Mr. Littman—

Q. (Interposing) Is that right?

A. In my direct testimony I included the four companies which I used in determining the average of the in-
[fol. 8826] vestor's appraisal of risk but I excluded Panhandle Eastern from that study. It was during the cross-examination Friday that I spoke of the Panhandle Eastern study and I did use $40 as the price of the common stock.

Q. Yes, I believe it was in response to a question by Mr. Lee.

A. Yes, sir, I think so.

Q. And you consider the $40 per-share price for Panhandle Eastern a reasonable estimate of the market price?

A. I considered it so at the time I made the study which was at the same time that I studied the other four companies, namely, the latter part of October and early November and I considered that $40 was reasonable at that time. The present market price of the stock is around $35 to $36.

Q. But at the time you made your study, last September or October, you considered $40 per share as the fair market value of the common stock of Panhandle Eastern?

A. Yes, sir.

Q. Now, do you know what the earnings were on that common stock per share for the 12 months ended June 30, 1941, which was the latest available full 12-month period at the time you made your study? I hand you Mr. Coffman's Exhibit No. 65 and refer you to his table for Chart No. 20.

A. Yes, sir.

Q. What were the earnings per share?

[fol. 8827] A. $4.21 per share.

Q. Now, will you please state the earnings price ratio based upon the earnings per share of common which you have just read and the market value of $40 per share?

A. Approximately 10½.

Q. Percent?

A. Percent, yes, sir.

. . . . . .

[fol. 8853] By Mr. Littman:

Q. In your study you considered the earnings of four natural gas companies, to wit, Interstate Natural Gas Company, El Paso Natural Gas Company, Memphis Nat-

urai Gas Company and Southern Natural Gas Company did you not? A. Yes, sir.

Q. Have you made any study to determine whether the securities of those companies are selling at approximately an amount equal to a rate base for rate making purposes?

A. No, sir, I have not.

[fol. 8854] Q. Just answer that yes or no, please. Did you or did you not? A. I did not.

Q. So far as you know, they might be selling at five times what a commission or court would consider a rate base for rate-making purposes?

A. That is correct.

Trial Examiner: And Mr. Drew has also previously testified, if I recall, that he had no knowledge of the book value of either of these companies that he included or included in the study.

The Witness: Yes, sir, that is correct.

Trial Examiner: The original cost as represented or reflected by the books of the company, the capital accounts

---

[fol. 8887] LEITH V. WATKINS a witness having been previously sworn, resumed the stand and testified further as follows:

Direct Examination (Resumed)

By Mr. Wheat:

[fol. 8895] Q. Yes. Then will you proceed to the next item?

A. At page No. 859 of the transcript of proceedings in this matter of October 8, 1941, there was received and marked for identification Exhibit No. 48.

Q. What was the title of that exhibit, Mr. Watkins?

A. Exhibit No. 48, as received for identification, comprised the balance sheet, per books, of Panhandle Eastern Pipe Line Company and subsidiary companies for each December 31 from the year 1930 to and including the year 1940 and as at June 30, 1941.

[fol. 8896] Q. Have you, since the presentation of that exhibit and since the passage of time, been able to complete the balance sheet with respect to the year 1941?

A. I have and it was so completed in conformity with the witness' interpretation of a request made by Mr. Gorman, counsel for the Commission, at page No. 7444 of the transcript of testimony in this matter.

Q. Have you prepared an exhibit showing balance sheets, per books, for the years 1930 to and including the year 1941 in a form similar to the form shown on Exhibit No. 48 but including the full year 1941, from the books of the company? A. I have.

Q. And is that one of the proposed exhibits which you have had distributed this morning?

A. It is.

Mr. Wheat: Mr. Examiner, this three-page exhibit which is entitled "Balance Sheets—Per Books" of course is referable to Exhibit No. 48 and in all respects is similar to Exhibit No. 48 with the exception that, for the year 1941, the balance sheet as of the close of that year is taken from the books and, therefore, this exhibit contains no estimates with respect to that year nor does it contain a balance sheet as of June 30 of that year.

. . . . . .

[fol. 8897] (The Document Referred To Was Marked For Identification As Exhibit No. 172.)

. . . . . .

[fol. 8898] (Exhibits Nos. 48 and 172 Were Received In Evidence.)

. . . . . .

A. At page 871 of the transcript of proceedings in this matter of the session of October 8, 1941, there was received and marked for identification, Exhibit No. 49. Exhibit No. 49 was an income statement, per books, of Panhandle Eastern Pipe Line Company and subsidiary companies covering the period from April 1, 1932, to December 31, 1941, and the information there shown was as of December 31, 1932, and covered the period from April 1 of that year. There was also included the income statement

for the calendar years 1933 through 1940, both inclusive, as well as a cumulative total, an average for the period from 1932 to 1940 and the year 1941 which, however, was made up of six months actual figures and six months estimated figures.

Q. Have you, during the interim since the last hearing, prepared an exhibit which may be deemed referable to this Exhibit No. 49 which you have been describing but which includes, instead of the six months actual and six months estimated for the year 1941, an income statement from the books for the year 1941? A. I have.

[fol. 8899] (The Document Referred To Was Marked for Identification As Exhibit No. 173.)

Trial Examiner: The exhibits marked for identification as No. 49 and No. 173 will be received in evidence by corresponding numbers.

A. At page No. 8900 of the transcript of the proceedings [fol. 8900], in this matter, held on October 8, 1941, Exhibit No. 50, being a statement of earned surplus, per books, for a period from the commencement of operations to June 30, 1941, was offered and received in evidence—I beg your pardon, I believe it was offered and marked for identification.

Q. That is correct. It was marked Exhibit No. 50 for identification, I believe.

A. That is correct, sir. Since the witness' last appearance and, in conformity with a request made by Mr. Gorman, counsel for the Commission, at page 7444 of the transcript of a previous session of this matter, there has been prepared under my supervision a similar statement which includes an analysis of earned surplus for all of the period included in Exhibit No. 50 with the exception that the data for the year 1941 covers the entire year rather than the period from January 1 to June 30 of 1941.

(The Document Referred To Was Marked For Identification As Exhibit No. 174.)

. . . . . .

[fol. 8901] (Exhibits Nos. 50 and 174 were received in evidence.)

By Mr. Wheat:

. . . . . .

A. The next item upon which we have been working during the interim conforms to Exhibit No. 51 offered and received for identification at page 893 of the transcript of the proceedings in this matter held on October 8, 1941, and is a statement of capital surplus, per books, for the period from September 1, 1930, to December 31, 1941.

. . . . . .

It contains exactly the same information as Exhibit No. 51 except that column M covers the entire year 1941 rather than the period from January 1 to June 30, 1941, and is responsive to a request made by Mr. Gorman, counsel for the Commission, at page No. 7444 of the transcript of the proceedings.

. . . . . .

[fol. 8903] Mr. Wheat: And we also offer Exhibit No. 51 and Exhibit No. 175 in evidence.

. . . . . .

[fol. 8904] (Exhibits Nos. 51 and 175 were received in evidence.)

. . . . . .

There was offered, received and marked for identification at page No. 896 of the transcript of the testimony in this matter, session of October 8, 1941, Exhibit No. 52. Exhibit No. 52, as received for identification, comprised a statement of gas plant of Panhandle Eastern Pipe Line Company and subsidiary companies as at December 31, 1930, and at the end of each year thereafter up to and including the year 1940 and as of June 30, 1941.

In response to our interpretation of the request made by Mr. Gorman, counsel for this Commission, at page No. 7444 of the transcript of a previous session in this matter, there has been prepared and is available a statement of gas plant which is exactly the same as Exhibit No. 52 except that Column M thereof furnishes information as at December 31, 1941, whereas, in the case of Exhibit No. 52, the information shown in Column M was as of June 30, 1941.

[fol. 8905] (The document referred to was marked for identification as Exhibit No. 176.)

(Exhibits Nos. 52 and 176 were received in evidence.)

Q. Will you proceed to your next item, Mr. Watkins?

A. There was offered and received for identification at page No. 915 of the transcript of the proceedings in this matter on October 8, 1941, Exhibit No. 56. Exhibit No. 56, as there received and identified, consisted of a statement of gas produced for the period from April 1, 1932, to June 30, 1941, giving the amount of production segregated as to the various fields and by total for the years 1933 to 1940, inclusive, for the nine months April 1 to December 31, 1932, and for the year 1941, in which instance the data shown covered the six months period only.

Q. What have you done during the interim?

A. This exhibit, likewise, included the cumulative totals and an average for eight and three-quarters years. In [fol. 8906] the interim, in response to a request made by Mr. Gorman, counsel for the Commission, at page No. 7444 of the transcript of testimony in a preceding session in this matter, there has been prepared a revised "Statement of Gas Produced" which furnishes exactly the same information as that included in Exhibit No. 56 except that the production for the entire year 1941 is shown.

(The Document referred to was marked for identification as Exhibit No. 177.)

(Exhibits Nos. 56 and 177 were received in evidence.)

(Exhibits Nos. 53, 54 and 55 were received in evidence.)

[fol. 8907] A. The next item, sir, is a "Statement of Gas Purchased" which extends the information included in Exhibit No. 57, received and marked for identification, at page 916 of the transcript of the proceedings in this matter on October 8, 1941, and furnishes information similar to that included in Exhibit No. 57 except that it has been progressed through December 31, 1941, and the appropriate changes necessary to accomplish that projection have been made.

(The document referred to was marked for identification as Exhibit No. 178.)

(Exhibits Nos. 57 and 178 were received in evidence.)

[fol. 8910] At page 917 of the transcript of the testimony of the session of the proceedings in this matter on October 8, 1941, there was offered and marked for identification Exhibit No. 58. Exhibit No. 58 consisted of a "Statement of Gas Revenue" for the period from April 1, 1932, to June 30, 1941.

In response to the request made by Mr. Gorman of counsel for the Commission at page No. 7444 of the transcript of the testimony of a preceding session of this matter, there has been prepared a summarized statement of gas revenue which progresses the information included on Schedule 1 of Exhibit No. 58 through the year 1941.

(The document referred to was marked for identification as Exhibit No. 179.)

[fol. 8911] (Exhibits Nos. 58 and 179 were received in evidence.)

Mr. Littman: Mr. Watkins, you show several columns, to wit, Columns H, I and J in Exhibit No. 179 headed "Industrial". Is my understanding correct that those sales represent all of the direct industrial sales for those years?

Mr. Littman: In other words, your columns headed "Sales to Gas Utilities" include the so-called indirect industrial sales?

Mr. Littman: And by direct industrial sales, of course you understand me to mean the sales that are made directly by Panhandle Eastern Pipe Line Company and subsidiary companies in each of the years shown directly to the various industrials included under columns headed H, I and J?

The Witness: Yes, I so understand and that, as far as I know, is what those columns show.

Mr. Wheat: Mr. Littman, may I ask you whether you [fol. 8912] don't want to go forward and clarify also the columns headed "Residential" and "Commercial" as to whether those are direct or indirect so that we will have a clear picture of what this shows?

Mr. Littman: Very well, but before so doing, I would like the record to show clearly what we mean when we use the term "direct." By that we mean sales not for resale, isn't that correct?

The Witness: That is correct. Mr. Littman, the witness believes that reference to the testimony at or about page 917 would probably show that this matter had been covered there when the exhibit was originally introduced.

Mr. Wheat: You mean in Exhibit No. 58?

The Witness: That is correct, yes.

Mr. Littman: Yes, I recall that testimony, having read it recently, but I wanted to make certain the new figures contained in Exhibit No. 179 for the full year 1941 were shown in the same manner here in Exhibit No. 179 as in Exhibit No. 58.

The Witness: They are.

Is it possible that the thing that may be worrying you, Mr. Littman, is the fact that on or about July 1, 1941, both Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation filed certain rate schedules for sales in the State of Indiana by the terms and provisions of which Panhandle Eastern would begin the direct sales of certain gas in that State whereas, prior to those rate schedules, Michigan Gas Transmission Cor- [fol. 8913] poration had made such sales itself? There has been no action taken on those filings in all of this period by the Commission. As far as we know, there is some matter that gives rise to consideration on the Commission's part as to the termination of service in connection with those matters. It has been somewhat troublesome to us to have the thing unsettled all this period and it may very well be that, as a result of whatever pronouncement the Commission makes with respect to those filings, some of the material now included in Exhibit 179 with respect to the year 1941 would have to be changed if the rulings of the Commission make such change necessary.

I do not know whether that was the thing that prompted your questions or not because there can be no sales included in Exhibit No. 58 or Exhibit No. 179 as direct sales other than in the columns corresponding to the headings "Residential", "Commercial", "Industrial" and "Other".

Mr. Littman: What prompted my question, primarily, was the fact that the Federal Power Commission has no jurisdiction over sales not for resale, that is, over direct sales, and I wanted to make certain that your Columns

H, I and J represented the direct sales and did not represent sales for retail.

In connection with Mr. Wheat's suggestion, will you elaborate for us with respect to the columns headed "Residential" and "Commercial"?

[fol. 8914] The Witness: Perhaps we would save time if the witness simply stated that, outside of Columns K, L and M which have to do with sales to gas utilities, all of the gas revenue shown in either Exhibit No. 58 or Exhibit No. 179 represents direct sales.

By Mr. Wheat:

Q. Mrs. Watkins, while we are right on this point, I notice that under the heading "Residential", Column G, for example, "Amount", it is reduced from $186,018.44 in 1940 to $9,446.77 in 1941. That represents a very extensive shrinkage in that direct residential business, does it not?

A. That is correct.

Q. And, likewise, under the heading "Commercial", take for example Column G, the amount reduces from $76,497.50 in 1940 to $290.39 in 1941. That represents, does it not, an almost complete shrinkage of that particular type of sale? A. It does.

Q. Likewise, under the heading "Other", take for example Column P, the amount reduces from 1940, when it was $8,098.95 to an amount in 1941 of $327.50 and that is likewise an almost complete shrinkage of the item, is that not correct? A. That is correct.

[fol. 8915] Q. And, in 1941, except for the direct industrial sales, the total sales which were made direct by the company were less than $10,000, is that not true?

A. That is true, yes, sir.

I might explain that the reason for this shrinkage is due to the fact that as of January 1, 1941, Central Distributing Company ceased to be a subsidiary of Panhandle Eastern Pipe Line Company and the shrinkage in sales which you have just described were sales made directly by Central Distributing Company.

Q. So that, as a practical matter, compared to the total revenues, the amounts received from direct sales other than industrial are negligible, is that not true?

A. They are almost insignificant in addition to being negligible.

[fol. 8921] Mr. Lee: And these residential sales, for example, that are on the exhibit and are listed as direct sales, is that gas sold to a distribution company or sold direct to residential users by the Pipe Line Company?

The Witness: Panhandle Eastern Pipe Line Company and Illinois Natural Gas Company, which are the two main transmission organizations and have been the two main transmission organizations in the Panhandle system, do not hold themselves out as distributing organizations. There are, over the length of our lines, certain instances in which, as a matter of convenience and by virtue of right-of-way agreements and so forth, that both of those organizations make some incidental sales to certain residential or commercial customers and a good part—

—Mr. Culton: (Interposing) Just a moment. May we clarify that for the record. That means when you would get a right-of-way across a man's land, as part of the consideration for that right-of-way you would agree to sell him gas?

The Witness: Exactly so, sir.

Mr. Culton: For his residence on the farm.

The Witness: Otherwise, we have no interest whatever in such sales and we might go a step further, perhaps, and [fol. 8922] state that were it not compulsory that we make such sales, we would have none whatever in an exhibit of this sort that we furnished.

In further explanation of your question, Mr. Lee, the reference to revenue shown in Columns N, O and P under the general heading of "Other" is principally to sales made in the field in the producing field where we supply gas for drilling purposes or things of that nature.

Mr. Littman: Pardon me, I believe you perhaps misspoke yourself somewhat with respect to these residential sales. Shouldn't your last answer be confined to the year 1941? As I understand it, prior to 1941, Panhandle Eastern Pipe Line Company owned a number of subsidiary companies that were actually engaged in the business of distributing gas and isn't it a fact that in the years prior to 1941 shown in Exhibit No. 179, your Columns B, C and D under the heading "Residential" do show those sales and revenues?

The Witness: They do show those, Mr. Littman, and I was hopeful that my most recent answer confined itself entirely to Panhandle Eastern and Illinois Natural. I had no intention of making any reference to the years prior to the last year in which years there were subsidiaries which did have direct sales.

Mr. Littman: I think the record is clear now.

[fol. 8927] Trial Examiner: This exhibit which has been discussed will be marked as Exhibit No. 180 and that is a supplementary exhibit to one marked for identification as Exhibit No. 59?

Mr. Wheat: That is correct, is it, Mr. Watkins?

The Witness: That is correct except we have not discussed it yet.

Mr. Wheat: Yes, we have not yet come to that but we are about to come to it.

That is headed, is it not, Mr. Watkins, "Statement of Gas Revenue by States—Period from April 1, 1932, to [fol. 8928] December 31, 1941"?

The Witness: That is correct, sir.

(The document referred to was marked for identification as Exhibit No. 180.)

By Mr. Wheat:

Q. Is that document referable to Exhibit No. 59?

A. It is, sir, and has been prepared in response to our interpretation of a request made by Mr. Gorman, counsel for the Commission, at page 922 of the transcript of the testimony of the session of October 8, 1941, in this matter.

(Exhibits Nos. 59 and 180 were received in evidence.)

A. The witness' next item is a statement showing "Net [fol. 8929] Additions to Gas Plant—Per Books" of Panhandle Eastern Pipe Line Company and subsidiary companies from October 1, 1938, to December 31, 1941, and is similar in content to Exhibit No. 72 offered and received for identification at page No. 1470 of the transcript of the proceedings in this matter of the session held October 28, 1941, the difference between the two exhibits being only that of the period covered by them.

(The document referred to was marked for identification as Exhibit No. 181.)

[fol. 8930] (Exhibits Nos. 72 and 181 Were Received in Evidence.)

Q. Will you proceed to the next item, Mr. Watkins?

A. Before doing so, Mr. Wheat, may the witness call attention to the fact that the cessation of Central Distributing Company as a subsidiary of Panhandle Eastern Pipe Line Company is shown by the reduction in the additions to gas plant shown opposite lines 17 to 28 in Exhibit 181.

Q. Those are distributing system properties, are they not?

A. That is correct, sir. There may have been a very slight amount of such property belonging to some other one of the companies, but I should say almost 100 per cent of it represented distribution properties belonging to Central Distributing Company.

Q. In every instance, the amounts shown under Column B are net amounts, whether they be black or red amounts, is that correct?

A. That is true, sir, and that explanation, I believe, was given at the time Exhibit No. 72 was introduced.

Q. Before we pass to further documents, Mr. Watkins, do you have Exhibit No. 60 before you?

A. Yes, sir.

. . . . . .

[fol. 8931] Q. Will you state the title of Exhibit No. 60, Mr. Watkins?

A. The title of Exhibit No. 60 is "Gas Sales Agreements with Other Gas Companies as at June 30, 1941."

. . . . . .

(Exhibit No. 60 Was Received in Evidence.)

. . . . . .

A. The next document which has been distributed is a "Comparative Statement of Depreciation, Depletion and Amortization of Unoperated Leases Authorized by Board of Directors and the Amount Booked for the Years 1937, 1938, 1939, 1940 and 1941", and is responsive, the witness believes, to a request made at page No. 6237 by Mr. Goodman during the afternoon session of the proceedings in this matter on January 21, 1942.

Q. Will you state what this document shows?

[fol. 8932] A. This document, as its heading indicates, gives a comparison of the annual provision for depreciation, depletion and amortization of unoperated leases by the Board of Directors with the amount recorded on the company's books for the years 1937 through 1941, inclusive.

The comparison for the year 1937, as shown by line 1, is $1,350,000 authorized and $1,384,387.07 is recorded per books.

For the year 1938, as shown by line 2, the amount authorized by the Board was $1,700,000, the amount recorded being $1,728,607.16.

For the year 1939, as shown by line 3, the amount authorized was $1,800,000 and the amount recorded was $1,870,699.86.

In 1940, as shown by line 4, the Board authorized $1,900,000 and there was recorded $1,880,889.87.

Finally, for the year 1941, as shown by line 5, the authorization was $2,100,000 while the amount recorded was $2,102,857.31.

. . . . . .

(The Document Referred to was Marked For Identification as Exhibit No. 182.)

. . . . . .

[fol. 8933] (Exhibit No. 182 Was Received in Evidence.)

. . . . . .

[fol. 8934] By Mr. Wheat:

Q. Will you now turn to your next document and state what it is, at whose request it was made, if anyone's, and what the request was?

A. Perhaps I had better look at the transcript of testimony first.

There has been prepared and distributed a "Statement Showing the Amount of Depreciation Claimed in Federal Income Tax Returns and Settlement Basis for the Nine Months Ended December 31, 1932, and the Years 1933 to 1940, Inclusive."

This statement, as its heading shows, gives for the nine months ended December 31, 1932, and the years 1933 [fol. 8935] through 1940, the amount of depreciation claimed per Federal income tax returns and the so-called settlement basis therefor in the years described and specifically shown by the exhibit. It is in response to a request made at page No. 6239 of the transcript of the proceedings of the afternoon session of January 21, 1942, made by Mr. Goodman.

Mr. Lee: Mr. Witness, may I ask you, please, what you mean by the term "settlement basis"?

The Witness: Well, of course as you know, Mr. Lee, you do not just simply file an income tax return and proceed to pay your tax without the Internal Revenue Department having looked at the return.

As a result of their examination of the return, there arises some considerable discussion as to whether the findings they make in favor of revenue or in favor of the company are proper and legitimate and, as a result of the difference there may be between the company's representatives and the representatives of the Department, you eventually arrive at some basis of settlement. Whether or not you concede or believe that the contention of the Department is correct or whether they believe your contention is correct, there is a settlement made.

For the years 1936 through 1940—and they, by the way, are the only years in the history of Panhandle Eastern and its subsidiary companies in which there was taxable net income—the amounts shown in the columns headed [fol. 8936] "Settlement Basis" or Column C of—has it been numbered?

. . . . . .

(The Document Referred to was Marked For Identification as Exhibit No. 183.)

Mr. Wheat: You were speaking of Column C of Exhibit No. 183?

The Witness: That is correct, sir, and the amounts shown in Column C of Exhibit 183 are, as far as the company knows at this particular time, the basis of its present settlement with the Internal Revenue Department of the taxes for those years.

. . . . . .

Mr. Lee: After that settlement is made, then do you enter that upon the books of the company as the final determination?

The Witness: It becomes entered, Mr. Lee, in the normal accounting processes of the company. If you were to refer to previous testimony by this witness, you would find that there have been certain accruals made in prior years not ultimately required for taxation which were transferred to an account shown on Exhibit No. 148 on line 36 in Columns I, J, K, L and M which represented, as the witness has stated and stated in the previous sessions, were not required for that particular purpose.

Perhaps, to narrow the thing down and answer you more directly, if the company's accrual for Federal taxes [fol. 8937] or any other taxes or for any other purpose is not sufficient in the year for which those taxes are reported, it must, of course, increase its accrual in some subsequent period or it must decrease it. As these settlements are made, if the differences are such as not to distort the operations of the current year in which they are made, they are adjusted in the operating expenses of that year's business. Under the Classification of Accounts, prescribed by this Commission for natural gas companies, the treatment which the witness has just described is prescribed.

. . . . . .

[fol. 8938] Mr. Littman: I would like to ask a question to clarify the exhibit, if I may.

Mr. Watkins, will you define the term "depreciation", as it is used in Exhibit No. 183?

The Witness: We will have to get a copy of the income tax return, Mr. Littman, for each of those years. It is the amount required to be reported as depreciation in the returns.

Mr. Littman: Does it include and do the figures shown in Exhibit No. 183 include any claimed amortization of gas sales and purchase contracts?

The Witness: May I suggest that you have a look at Exhibit No. 182 along with Exhibit No. 183.

In Exhibit No. 182 in Column B, you will find, for the year 1941, that the Board of Directors authorized an overall provision for depreciation, depletion and amortization of $2,100,000. Now, this $2,100,000 did not include any [fol. 8939] amount which the company proposed to include in its operations for that year and amortization of any amounts included in its books as gas sales or purchase contracts, the reason for that being because, in the first instance, the Certificate of Incorporation of the company provides for the amortization over a ten year basis of certain of the gas sales and purchase contracts at the rate of $24,419.05 per month.

The amounts associated with the gas sales and purchase contracts acquired subsequent to the entering into a contract with Detroit City Gas Company, now Michigan Consolidate Gas Company, are being written off, as the record here will show in previous testimony, over the life of those contracts. None of that amortization is included, either in the $2,100,000 figure made a part of Column B of Exhibit 182 or Column C of the same exhibit and; in the year 1941, of course, we have not yet completed our income tax returns so I cannot give you comparable figures but, whatever is required by the Revenue Department to be reported as depreciation according to the definition in the income tax return, will be grouped together and there reported as depreciation. The definition is not our language.

We were asked at page No. 6239 of the transcript of the testimony of the afternoon session on January 21, 1942, to produce a statement showing depreciation claimed per returns and the settlement basis and that information we be-
[fol. 8940] lieve is shown in Exhibit 183. Unfortunately, I do not have with me the income tax returns and cannot tell you, specifically, just what items are included, for instance, in the amount of $2,381,293.48 in Column B of Exhibit No. 183 on line 8 but, referring to an amount appropriated or authorized by the Board for the year 1940 and shown in Column B of Exhibit No. 182, it is my opinion that the amount shown in Column B on line 8 of Exhibit 183 not only includes certain amortization but an entirely different basis than that either authorized by the Board or booked because the depreciation claim for income tax purposes does not necessarily coincide in this instance, with the amounts recorded.

[fol. 8944] (Exhibit No. 183 Was Received In Evidence.)

The next document prepared for the present hearing is a "Comparative Statement of State, Local and Miscellaneous Federal Taxes Paid with Amounts Accrued for the Years 1936, 1937, 1938, 1939 and 1940".

[fol. 8948] (The Document Referred To Was Marked For Identification As Exhibit No. 184.)

A. Exhibit No. 184 for identification was prepared in response to a request occurring at page 6239 of the transcript of the afternoon session of the proceedings in this matter held January 21, 1942, made by Mr. Goodman and shows, for the respective years, the amount of taxes accrued and taxes paid as well as the difference between the accruals and payments of all State, local and miscellaneous Federal taxes and seems self-explanatory.

(Exhibit No. 184 Was Received In Evidence.)

[fol. 8949] The next document is a "Statement of Taxes Paid for the Years 1936, 1937, 1938, 1939 and 1940" which was requested at lines 11, 12 and 13 of page No. 6364.

(The Document Referred To Was Marked For Identification As Exhibit No. 185.)

[fol. 8952] The Witness: Exhibit No. 185 is a statement of taxes paid for the respective years shown there regardless of when paid.

Mr. Littman: Perhaps it would further clarify the matter if you would explain why you have not shown this statement for the year 1941?

The Witness: All such taxes have not yet been paid and could not, therefore, be shown.

[fol. 8954] (Exhibit No. 185 Was Received in Evidence.)

A. The next document is a "Reconcilement of Federal Income and Federal Excess Profits Taxes Paid with the

Amounts Accrued for the Years 1936, 1937, 1938, 1939 and 1940", and is in response to an oral request made to you, Mr. Wheat, by Mr. Littman, counsel for the Commission, on or about March 9, 1942.

[fol. 8955] (The Document Referred To Was Marked For Identification As Exhibit No. 186.)

(Exhibit No. 186 Was Received In Evidence.)

[fol. 8975] By Mr. Wheat:

Q. Now, Mr. Watkins, will you turn to your next document and state what it is?

A. The next document is a "Comparative Statement of Operation and Maintenance Expenses" of Panhandle Eastern Pipe Line Company and subsidiary companies for the years ended December 31, 1940, and 1941 and consists of a proposed exhibit containing four pages.

(The Document Referred To Was Marked For Identification As Exhibit No. 190.)

The Witness: This Exhibit No. 190 has been prepared and is submitted in response to a request made by Mr. Gorman, counsel for the Commission, at page No. 7444 of the transcript of a preceding session in this consolidated matter.

Q. And what do the numbers shown in this exhibit prior to the titles of the various accounts indicate?

A. The numbers immediately succeeding the line number?

Q. Yes.

A. They are the account numbers prescribed by this Commission in its Classification of Accounts for natural gas companies subject to the Natural Gas Act. The title [fol. 8976] likewise is the name of the account prescribed in such classification.

(Exhibit No. 190 Was Received In Evidence.)

Mr. Littman: I would like to ask Mr. Watkins about one or two items which appear on page 4 of Exhibit No. 190.

Mr. Watkins, I call your attention to an item shown in line 8 on page 4 called "Special Services" in the sum of $19,572.84 for the year 1940 and in the sum of $22,358.80 for the year 1941. Can you inform us with respect to the character of those services?

The Witness: I have no specific information available at this time with respect to the two amounts to which counsel has just referred other than the fact that the charges made to this account, No. 795, the title of which is "Special Services" conform to the description for such account as given on page No. 131 of the Uniform System of Accounts prescribed for natural gas companies by the Federal Power Commission.

Mr. Littman: Can you enlighten us with respect to the items shown on line 9 of page 4 of Exhibit No. 190 entitled "Special Legal Services" in the amount of $76,018.19 for [fol. 8977] the year 1940 and $53,322.07 for the year 1941?

The Witness: The witness' response to that question, Mr. Littman, must, of necessity, be similar to that with respect to your question concerning the amounts included in Account No. 795.

Now, without being bound too closely to this, I should like to state that it is my belief that the charges in both instances do represent the cost of either special services or special legal services in connection with matters either before the Securities and Exchange Commission or before the Federal Power Commission in those two years.

Mr. Littman: You are not referring to rate case expense?

The Witness: The cost of the regulatory commission expense incident to the Federal Power Commission consolidated Dockets G-200 and G-207 have not yet put their appearance in any of the company's financial statements other than in a deferred charge on its balance sheet. The distribution of those costs to operating expenses began first with the month of January, 1942.

Mr. Littman: Will you endeavor to ascertain the nature and character of the expenses which we have just discussed and report back to us at your early convenience? I have in mind that possibly you can find out something about this account over the recess.

[fol. 8978] The Witness: If all you want is a general statement with respect to their content, I believe that can be accomplished and I do not believe it will vary from the explanation I gave a moment ago and asked not to be specifically bound to.

[fol. 8988] Leith V. Watkins a witness, being previously duly sworn, resumed the stand and testified further as follows:

Direct Examination (Continued).

By Mr. Wheat:

Q. Mr. Watkins, have you prepared also a document entitled "Reconcilement of Net Income Per Books with Net Income Per Federal Income Tax Return for the Year 1939"?

A. I have, sir.

Q. Has that document been distributed?

A. It has.

(The Document Referred To Was Marked for Identification As Exhibit No. 191)

Exhibit No. 191 for identification is a reconcilement of [fol. 8989] the net income per books of Panhandle Eastern Pipe Line Company with the net income per Federal income tax return for the year 1939 and is submitted in response to an oral request made by Mr. Littman of counsel for the Commission to Mr. Wheat on March 9, 1942; and if we may at this time refer to the next document—

Mr. Wheat: (Interposing) Yes.

Mr. Examiner, I suggest that the next document which is the same as Exhibit No. 191 for identification except that,

it refers to the year 1940 be marked for identification Exhibit No. 192.

(The Document Referred To Was Marked For Identification As Exhibit No. 192.)

As the witness was about to state, both of these documents have been prepared and are submitted in response to an oral request made by Mr. Littman of counsel for the Commission to Mr. Wheat on March 9, 1942. It is believed the two reconcilements are self-explanatory. However, if there be questions, the witness—

Q. (Interposing) I think, Mr. Watkins, you might explain briefly what is shown on these two documents and [fol. 8990] how the data was developed.

A. The two documents marked for identification as Exhibit No. 191 and Exhibit No. 192 begin with the statement of the net income per books for the years 1939 and 1940, respectively. These amounts are then adjusted by adding thereto certain provisions made on the company's records which are not allowable deductions for Federal income tax purposes and the amount so arrived at is then reduced by a series of deductions determined on the formulae and bases provided in the regulations with respect to the Federal income tax laws for the years 1939 and 1940 and thus finally arrive at the net income per the Federal income tax returns for those years, as adjusted, by the Bureau of Internal Revenue. That is true for the year 1939.

However, for the year 1940, the income and excess profits tax returns have not been completely examined by the Bureau of Internal Revenue. Its representatives are in the office of the company at this time in connection with the examination for the year 1940.

[fol. 8994] Mr. Littman: Mr. Watkins, I note from Exhibit No. 192, lines 22 and 23, that your deduction for income tax purposes for depreciation exceeded the book provision by $745,162.16 for the year 1940 as compared with

the similar item in Exhibit No. 191 for the year 1939 in the amount of $172,053.56.

Will you explain why there is such a great difference between the excess of deduction claimed for depreciation over book provision as between 1939 and 1940?

Mr. Wheat: Have you, Mr. Littman, by any chance consulted Exhibit No. 183 in that connection? I am not sure that would convey the answer but it might be helpful to consider it in connection with your question.

I am not sure, Mr. Watkins, that the answer to Mr. Littman's question is there but I thought possibly we might suggest that the items be considered in your explanation.

The Witness: Gentlemen, I had hoped that I would save complicating this matter by the avoidance of any explanation to you as to the fact that, in the determination of our net taxable income and the arrival at a basis for the proper deduction for depreciation, depletion and amortization over the years in which we first had net taxable income, [fol. 8095] come, that we had employed the so-called wasting assets method and, in making our filings up to date, with the exception of the year 1940 and with the exception of the return for the year 1941 which is in process of preparation although not yet filed, our depreciation claimed is on a wasting asset theory and basis whereas the amounts allowed in the settlement with the Department has been on an entirely different basis. That is quite complicated and is the explanation for the variation that you see in Exhibits No. 191 and No. 192 for identification. That is, that is the general explanation.

There may be some other factors that brought about the variation but I must again call attention to the fact that, for the year 1940 as shown by the note opposite lines Nos. 50 and 51 of exhibit for identification No. 192, the examination by the Department for that year has not yet been completed so that, in answering the oral request made to you by Mr. Littman on March 9, we have tried to give effect in Exhibit No. 192 to the same basis of settlement as shown by Exhibit No. 191.

It is quite possible that we may have improperly handled some of the additions or deductions on exhibit for identification No. 192 because of that fact.

By Mr. Wheat:

Q. But, as a matter of fact, you have done the best you could, have you; to follow the method adopted in the settle-
[fol. 8996] ment in 1939?

A. That is true. We have tried to outguess the revenue agents in the year 1940.

Q. May I suggest not "outguess", but "advance guess"; isn't that true?

A. Either way, you wish to put it. We have tried to make the reconcilement for the year 1940 comparable to the reconcilement for the year 1939.

[fol. 9001] (Exhibits Nos. 191 and 192 were received in evidence.)

Q. Now, Mr. Watkins, will you pass to your next document which I think is one entitled by you "Analysis of Reserve for Depreciation of Gas Plant" and state what is shown thereon?

A. Somewhere between pages 6226 and 6242 of the transcript of testimony on this matter of the session of January 21, 1942, Mr. Goodman asked for certain information with respect to depreciation. The document to
[fol. 9002] which you have just referred has been prepared in response to our understanding of this request.

It shows the balance in the reserve account at the beginning of the period; the retirements classified as to production, transmission and general; the annual provision during each period, and the balance at the end of the periods for the years 1932 to 1940, inclusive, and at June 30, 1941, the first page being somewhat a summary of the pages following and, on page 2, for instance, for the year 1932, there are further details given which show the cost of plant retired, the cost of removing it, the amount of salvage obtained and the net charge to the reserve account segregated as to production; transmission and general in Columns B, C and D and supplies a total in Column E.

(The document referred to was marked for identification as Exhibit No. 193.)

[fol. 9906] Mr. Culton: Mr. Watkins, you have heretofore testified that, in your judgment, when you complete your original cost study, there will be no substantial difference between the results of that study and the values shown on the books, is that correct?

The Witness: That was my judgment.

Mr. Culton: Is that your present judgment?

The Witness: Yes, sir, and I should state at the moment that the testimony given at page 923 of the transcript of the proceedings of October 8 and in the subsequent pages of that session are compatible to the present situation.

Mr. Culton: What is necessary to be done on these original cost studies, is to apply the values shown on the books to the Commission's Classification of Accounts, is that the principal thing?

The Witness: No, indeed.

[fol. 9907] Mr. Culton: What else is to be done?

The Witness: Well, there is set up in the Classification of Accounts itself a vast amount of work determining various and sundry items to conform to the Commission's classification and many studies have to be made because not a great number of the natural gas companies carried their accounts in exact conformity with the Classification prescribed by the Commission. The method in which that data is to be supplied to the Commission is set out in its Order No. 73 and Order No. 72 is a headache.

Mr. Wheat: Mr. Watkins, pardon me. When you said not many of the natural gas companies carried their accounts in the same manner prescribed by the Commission, what you meant there was, was it not, that prior to the issuance by the Commission of its Classification of Accounts, the natural gas companies which later became subject to that order were carrying their accounts according

to their own particular method and that, in many instances, those methods were not the same and could not possibly have been the same as the subsequently ordered Classification of the Commission. Is that correct?

The Witness: Yes, sir, that is correct.

Mr. Wheatley: I just wanted to make that clear. I think you had a further explanation?

The Witness: I was about to draw attention to the requirements of Order No. 73, whether that need be drawn into the record here in a very elaborate way. I think the order will speak for itself. Anyone who has an interest [fol. 9008] in seeing what it requires and knowing something about how records are developed and maintained will see that it is not a thing that can be accomplished in a very short period of time.

We very studiously and laboriously went over our records and our ability to comply with the reclassification work prescribed by the Commission's Classification long before the Classification ever became an actuality because we were among those that were working with the industry [illegible] with the N. A. R. U. C. Committee toward the possible development of such a classification and we could foresee what was ahead of us. We did not exactly await until the thing was thrust in our lap and start our work but began to make our plans long before that.

We developed a list of possible major requirements, possible collateral work and began working on that. Finally, the Classification came to us and we, as the witness has stated in the record before, selected, among the ones who were going to do the reclassification work and make the studies necessary to bring about the transition from our then present method of maintaining our records to that prescribed by the Classification, the better of our employees and released those lads from any other assignment. My remembrance is that up to about July of last year, we had six or seven boys engaged in that work at a cost of some twelve to fifteen hundred dollars a month, that cost having to do entirely with his development or [fol. 9009] development of this data.

The very nature of the experience of these lads was such that when we began to develop information for use in this consolidated proceedings, we had to use some of those boys. Furthermore, you just do not go out and pick up that type of employee even if they were available, which they are not at the moment.

Trial Examiner: I do not like to interrupt this, Mr. Watkins, but the Federal Power Commission has passed on this matter of an extension and, in this hearing, it is not involved.

The question was asked whether you could supply the information with reference to certain transmission retirements and, if you are unable to do so, please so state and let us go on from there.

Mr. Culton: Mr. Examiner, may I make just a short statement here for the purposes of the record in this particular case?

Trial Examiner: You may. I am not unsympathetic but, after all, you know we must confine ourselves strictly to what is before us in this proceeding.

Mr. Culton: This statement I shall make does have relation to this particular proceeding and that statement is this: Mr. Watkins has heretofore testified that, in his judgment, there would be no substantial difference. On behalf of the two companies, we now state, in open hearing so that it cannot be thought that this delay in our studies [fol. 9010] on original cost would be used by the company in any way to try to hold up this rate proceeding, we now state we will not in these proceedings contend for an original cost any different from the original cost which shows on our books at this time.

I want the Commission to understand that and that Mr. Watkins is just referring to a physical situation which confronts him.

[fol. 9019] Trial Examiner: Exhibit No. 193 will be received.

United States of America

Federal Power Commission

Commissioners: Leland Olds, Chairman, Basil Manly, John W. Scott and Clyde L. Seavey. Claude L. Draper not participating.

March 20, 1942

In the Matter of

Panhandle Eastern Pipe Line Company

Order denying application for Extension of time for compliance with the provisions of gas plant accounts instruction 2-D of the uniform system of accounts and the commission's Order No. 73.

[fol. 9020]

The Commission having under consideration the letter of Panhandle Eastern Pipe Line Company (hereinafter referred to as Applicant) dated March 6, 1942, requesting a further extension of time to June 30, 1942, within which to comply with Gas Plant Accounts Instruction 2-D of the Commission's Uniform System of Accounts and the Commission's Order No. 73, relating thereto, and:

It appearing to the Commission from the said application and other matters of record and in the files of the Commission, furnished by Applicant, that:

(a) In a letter dated November 29, 1940, Applicant advised the Commission that its reclassification and original cost studies would be filed with the Commission during the month of November, 1941; and

(b) Thereafter, by letter dated November 27, 1941, Applicant requested an extension of time to June 30, 1942, within which to comply with the aforementioned Instruction 2-D and the Commission's Order No. 73; and

(c) By the Secretary's letter of December 30, 1941, Applicant was granted an extension of time to March 31, 1942;

(d) The reasons cited in the Applicant's letter of March 6, 1942; viz., alleged interruptions to the original [fol. 9021] cost work due to pending rate proceedings (Federal Power Commission Docket Nos. G-200 and G-207).

and certain financial transactions in connection with the acquisition of properties and issuance of securities; also, the work entailed in the preparation of Applicant's Annual Report, Form No. 133, to the Commission, do not justify, or constitute good cause for, a further extension of time;

(c) Applicant has not exercised due diligence in the preparation of its reclassification and original cost studies;

The Commission finds that:

The granting of a further extension of time to Applicant for compliance with Gas Plant Accounts Instruction 2 D and the Commission's Order No. 73 would not be appropriate and in the public interest;

The Commission orders that:

The application of Panhandle Eastern Pipe Line Company for an extension of time to June 30, 1942, within which to comply with Gas Plant Accounts Instruction 2 D of the Commission's Uniform System of Accounts and the Commission's Order No. 73, relating thereto, be and the same is hereby denied.

By the Commission.

LEON M. FUQUAY,

Secretary.

[fol. 9023] C. H. Lewis, a witness called by the Commission, being duly sworn, was examined and testified as follows:

[fol. 9024] By Mr. Littman:

Q. As I understand your testimony, you were given no specific instructions with respect to what you were to find or to determine at the 37 inspection points?

A. Absolutely not.

Q. And am I correct in understanding that the conclusions reached and shown in Exhibit 81 represent your judgment and the judgment of Mr. Riddle?

[fol. 9029] A. That is right.

Q. I have examined each and every one of the 37 inspection sheets shown in Exhibit 81 and I find that the condition per cents shown at each of these points are the same for yourself and for Mr. Riddle. Is my observation correct?

A. I believe you are correct. I prefer, though, to look the exhibit over myself before saying yes. There might be some variance in one or two but I am assuming you have carefully gone over it and, if that is a fact, I shall agree but, before answering the question, I think I should be privileged to look over the exhibit.

Q. Suppose you look over the exhibit and verify my understanding, if you will.

A. That is correct.

Q. I note, Mr. Lewis, that on inspection points Nos. 1 to 29, inclusive, that these inspection sheets are signed by you and initialed by Mr. Riddle and that the reverse is true with respect to inspection points Nos. 30 to 37, inclusive. Is there any particular significance to that?

A. None whatever other than that the person signing the report and the person initialing the report, that just simply means we had to have someone as a bookkeeper, you might say, on the job. Somebody had to keep the records in the field, in other words, write up the findings. The person actually making the first inspection was the person who signed the report. The person who was then [fol. 9630] standing on the ditch or on the top of the ground was recording findings as called off by the man in the bell hole or excavation, you might say.

Q. In other words, the man who recorded the data initialed the report while the other went into the bell hole and made the actual inspection and signed the report?

A. That is right.

Q. The inspection sheet for that particular inspection?

A. That is right, and it also means he followed you into the bell hole and checked your work in the bell hole on each inspection.

Q. You were the first man in the bell hole on the first 29 inspections, is that right or at least on the inspections that are numbered 1 to 29, inclusive, in Exhibit No. 81. Isn't that correct?

A. I will have to look—that is right.

Q. Did the man who did the bookkeeping and went into the bell hole merely to check, did he make as thorough an inspection as the first man in the bell hole?

A. Yes, sir, he did.

Q. And did you and Mr. Riddle each know the results of the inspection by the other?

A. By results—will you clarify that?

Q. I mean conclusions reached with respect to ~~per cent~~ condition?

[fol. 9631] A. We did, yes.

Q. Was there a little collaboration?

A. Absolutely none.

Q. I beg your pardon?

A. Absolutely none.

Q. No collaboration?

A. I would say not. I could write my answer on a piece of paper and throw it down on the ground and Mr. Riddle could do the same thing and then, comparing the result, find there was no difference. I have done that to try to see if there would be any difference and there was none. There was absolutely no collusion. We discussed our findings after we had written down our opinions.

Q. But you each stuck to your finding at each point?

A. Well, I would say there might have been a slight variance in our opinions and it was discussed and threshed out immediately upon the ground and we came to a common agreement before we left the inspection location.

Q. As to the per cent condition?

A. That is right.

Q. In other words, it is not merely a coincidence that, at these 37 inspection points, you and Mr. Riddle arrived at precisely the same per cent condition?

A. I would not say you would term it a coincidence, no.

Q. In other words, there were some differences that [fol. 9632] arose but they were threshed out after discussion? A. And very minor ones at that.

Q. Now, will you describe what you and Mr. Riddle did at these inspection points as a matter of routine and also give some description of the bell hole and the situation existing there?

A. The bell holes were already excavated prior to our arrival at the point of inspection, the bell hole being of sufficient size to permit ready access to the top, both sides and bottom of the pipe. As to the excavation below the pipe, I would judge, in most instances, at least a foot of earth had been removed which made it quite easy to examine the bottom shoulders and the bottom of the pipe.

Q. How much of the pipe was exposed at each bell hole?

A. Approximately five feet of pipe was exposed and four feet of the pipe meticulously cleaned of all scale and rust or all earth that might have adhered to the line and, in instances where the pipe was coated, the pipe coating had been removed very carefully down to a point where the metallic surface of the pipe was exposed for examination.

We measured the depth of coverage in each bell hole, that is, to the top of the pipe, and so recorded it as well as the kind of soil covering the pipe. We calipered the outside diameter of the pipe in a horizontal and vertical plane, recording our findings and we made a very careful exam[fol. 9033]ination of the entire surface of the pipe for pitting or corrosion that might have existed. Any pitting found was measured with an Ames dial gage reading in mils.

Q. What pitting did you record on your inspection reports?

A. The maximum pitting found was recorded, as well as the estimated average pit depth at each inspection location.

Q. You mean the maximum pit was recorded?

A. That is right.

Q. And those are expressed in hundredths of an inch, are they not? A. That is right.

Q. You may continue with your description.

A. I am about to reach the end of that description. I have told you now down to a point where the report was finished other than the application of the per cent condition. After we had examined the pipe thoroughly and it was checked by the person who acted as the recorder of our findings, he then came into the bell hole and he made the same examination and checked the findings.

After the work was completed on the pipe, I then made the photographs of all locations, with the exception, I believe, of the last eight or nine inspections on line C on the Detroit end when I was called away and was unable to accompany the Federal Power Commission engineers and Mr. Riddle during their inspection. However, as soon as I [fol. 9034] returned from Pittsburgh, I made a complete inspection of those by myself, other than company employees who were assisting me, so that made a complete survey of all 37 locations that we have recorded.

Q. I gather that you and Mr. Riddle made the same character of observations on the pipe at the various inspection points? A. That is right.

Q. And did you and Mr. Riddle follow the same method in arriving at your condition per cents? A. We did.

Q. And that method is one which is commonly called the "observation method", is it not?

A. That is right.

Q. The conclusions reached by you and Mr. Riddle with respect to the per cent condition of the main pipe lines and the lateral pipe lines of Michigan Gas Transmission Corporation are summarized on page 2 of Exhibit No. 81, is that correct?

A. My pages are not numbered the same in this volume.

Q. It is the page headed "Summary of Inspection Data —All Transmission Lines Inspected".

A. If you will pardon me then—

Q. (Interposing) Suppose you read the conclusions shown on that page.

A. Under the caption "Summary of Inspection Data— [fol. 9035] All Transmission Lines Inspected—

(1) Average over all per cent condition main pipe lines —97.7 per cent;

(2) Average over all per cent condition lateral pipe lines —99.7 per cent;

(3) Average over all depth of cover—42.9 inches.

Q. In arriving at these percentages, did you consider any factors other than those shown which you actually observed at the 37 inspection points? A. No.

Q. Did Mr. Riddle consider any factors other than those which he acutally observed at the inspection points?

A. It would only be an assumption on my part to know what Mr. Riddle considered but I assume he certainly considered the inspection in the same manner that I did. I could not say what Mr. Riddle considered at all.

Q. To the best of your knowledge, you and Mr. Riddle used the same methods?

A. I would say yes to that.

Q. And as you have heretofore stated, you came out with precisely the same answer, is that right?

A. That is right.

Q. The title of your exhibit is, "Michigan Gas Transmission Corporation—Depreciation Study". Does Exhibit No. 81 purport to comprehend all elements of depreciation [fol. 9036] including functional as well as physical depreciation?

A. I would say any such depreciation study conducted of transmission pipe lines, buried or unburied, certainly cover all the elements that have to do with the lessening in value which is due to physical deterioration and action of the elements.

Q. You mean particularly with emphasis on the term that you just used "physical depreciation", is that correct?

A. That is right.

Q. I take it from your answer that your conclusions do not reflect any depreciation other than physical depreciation?. A. That is right.

Q. Did you give consideration to each of the following causes of depreciation: First—wear and tear?

A. Yes.

Q. Second—decay?

A. Yes.

Q. Third—action of the elements?

A. Yes.

Q. Fourth—inadequacy?

A. Yes.

Q. Did you observe any inadequacy?

A. That is not observable but it was considered or weighted, I would say, in my mind in making a depreciation study, but it certainly is not observable.

Q. Is the pipe line inadequate or is it not inadequate?

[fol. 9027] A. We did not make such a study.

Q. Then your conclusions do not reflect any such study of inadequacy?

A. Did I say they did?

Q. I am asking you.

A. If I did, I misunderstood the question.

Q. I think perhaps I misunderstood your answer.

A. I am not saying they reflected inadequacy, the per cent condition, absolutely not.

Q. I see. I am sorry but I think I misunderstood a previous answer that you gave.

Did you give consideration, in arriving at your conclusion, to the element of obsolescence?

A. In my answer to that, I would like to make more of a statement than yes or no.

Q. Very well.

A. I do not believe there is such a thing as obsolescence in pipe line systems so long as they serve to convey gas for the purpose for which they were originally constructed. Therefore, there would not be obsolescence in our pipe line systems.

Q. Certainly your condition per cents reflect nothing for the element of obsolescence?

A. Absolutely not.

Q. Absolutely not?

A. Absolutely not. My answer to that is no.

[fol. 9028] Q. Would the same be true of the factor of changes in the art? Did you make any study of that factor of depreciation?

A. No.

Q. What would you say with respect to the factor of changes in demand and requirements of public authorities.

A. In so far as such a depreciation study of pipe line systems, you cannot incorporate any per cent condition in your findings as to its physical condition due to demands of public authority because they are certainly unknown by the observer.

Q. At least they were unknown by you as an observer?

A. That is right.

Q. And by Mr. Riddle?

A. That is right now, I would not say for Mr. Riddle. I am speaking for myself only.

Q. In so far as you know, he used the same method?

A. That is right.

Q. What consideration, if any, did you give to the factor of exhaustion of natural gas resources?

A. None.

Q. Assuming the accuracy and the validity of a contention which is being made in these proceedings that the natural gas supply available to Michigan Gas Transmission Corporation will be exhausted 24 years hence, which of the elements of depreciation which I have named is most likely to bring about the retirement from service of the [fol. 9039] transmission mains of Michigan Gas Transmission Corporation?

A. I am not qualified to answer such a question.

Q. What is there about my question that causes you to say you are not qualified?

A. Any answer that I might give to that question, as put, would be an assumption on my part, purely an assumption.

Q. Haven't I given you enough assumptions, Mr. Lewis?

A. Absolutely based on assumption but I do not see that I could answer that question assuming the life of any property based on any findings of present day looking into the future. It would be valueless, any answer that I or any person might give, in my mind. We have not lived long enough to know the length of life of our properties.

Q. Mr. Lewis, you have answered hypothetical questions before, haven't you? I mean, don't be too much disturbed by some of these assumptions. I am going to ask you to assume, now, for purposes of this question, that the gas supply available to Michigan Gas Transmission Corporation will be exhausted 24 years hence. I want you to accept that as a fact for purposes of this question.

Now, assuming that to be a fact, which of the elements of depreciation which I have just enumerated is most likely to bring about the full depreciation and retirement from service of the transmission mains of Michigan Gas Transmission Corporation?

[fol. 9040] A. I would say this in answer to your hypothetical question? Physical deterioration should be the cause of the major portion of your retirements over the

years that we can look into the future. Personally, I have not lived long enough to even reach such a conclusion that I can pick out of thin air the life of our property.

Does that answer your question?

Q. I do not believe you have yet grappled with the question I have in mind. Let me put it this way.

Is there any doubt in your mind that these pipe lines of Michigan Gas Transmission Corporation will have a physical life extending beyond 24 years from the present?

A. Would you mind repeating that?

Mr. Littman: Suppose you read the question.

(Whereupon, the pending question was read by the reporter.)

The Witness: I believe no person can hope to make an estimate as to the life of the pipe line system of the Michigan Gas Transmission Corporation based on past experience and I also believe the life is many, many years more than 24 years, as you have expressed it. However, that is an assumption on my part in answer to your hypothetical question.

By Mr. Littman:

Q. But it is your best judgment, as I understand your testimony?

A. My best judgment would be that the life is far in [fol. 9041] excess of 24 years.

Q. From the present date?

A. I might add that age alone is no measure of depreciation.

Q. Well, we will come to that a little later.

A. Which I believe has a direct bearing on your question.

Q. It has no relation to your method of determining the physical depreciation of a property?

A. Absolutely not.

The character of study which you and Mr. Riddle made is the same as that which you would make on the mains of a water company, isn't that correct?

A. I am not qualified to answer that question, having never made an inspection of water mains.

Q. Did you ever make an inspection of manufactured gas mains?

A. Yes, sir.

Q. You made the same kind of inspection here as you would on manufactured gas mains, did you not?

A. To an extent, yes. In fact, manufactured gas mains are, as a rule, cast iron whereas we are dealing with steel pipelines in our Michigan Gas Transmission system.

Q. Assuming that Michigan Gas Transmission mains were being used for the purpose of transporting manufactured gas, you would have used the same method to de- [fol. 9042] termine the per cent condition as you used here?

A. That is right.

Q. Several of these inspection points are described by you to show pipe in 100 per cent condition. Will you tell us what you mean by the term "100 per cent condition"?

A. Well, a percentage condition is the condition found on the observed inspection, finding the pipe absolutely like new as compared to new alongside the pipe in the ground.

Q. Will you define the meaning of the term "zero per cent condition"?

A. Over a period of years—I do not know whether I can answer that question or not and having thousands of inspections—very few zero per cent conditions have I ever found.

Q. When did you find the last one?

A. I cannot remember that. It has been a long time ago, many years ago.

Q. Tell us what it means.

A. Well, in my mind, it would mean a pipe line which should be removed, absolutely could not be used further for the purpose for which it was intended. I would say it was hazardous to property and life in its location. It would be beyond any maintenance repairs that might be made on that particular piece of pipe in question.

Q. Assuming, Mr. Lewis, that this pipe line could not be used in place for the purpose of transporting gas, because [fol. 9043] there is no gas, and can no longer serve the purpose for which it was originally installed. What is the per cent condition of this line?

A. In so far as the pipe itself is concerned, it might be in 100 per cent condition. Just simply because you have

no gas to transport through a pipe line system does not change the percentage condition of the physical property.

Q. But if there is no gas for this line to transport, of what value is the line?

A. I made no such study in connection with our work on Michigan Gas. We simply made an observed depreciation study of the pipe line system as we found it in the ground.

Q. That is, of its physical condition? A. That is right.

Q. Zero per cent condition is related to that state of physical condition which is reached when the pipe can no longer serve its purpose physically, isn't that correct?

A. That is right.

Q. Now, Mr. Lewis, your condition per cents were not determined by any relationship to the service life of the pipe, were they? A. No.

Q. In other words, if you found 90 per cent condition, that does not mean that 10 per cent of the life of the pipe is gone?

[fol. 9044] A. You made a statement about "service life." I may have interpreted your question incorrectly. Your statement was service life, was it not, and my answer was no?

Q. Yes.

A. Maybe I do not understand your question, sir.

Q. Let's take a pipe that has a physical life of 50 years and assume that the pipe is 10 years old. You would not put that pipe in 20 per cent condition, would you?

A. I would not give consideration at all to the age of the pipe. Age would mean nothing to me.

Q. And the remaining physical life would also mean nothing?

A. It would mean nothing to me in establishing a per cent condition as found in an observed investigation as we now conduct it.

Q. Does your per cent condition in any manner reflect remaining life? A. No.

Q. In Exhibit No. 81, the various lines of Michigan Gas are designated A, B and C and also lateral lines. As I understand it, Line A, that is, the original Line A extends from the Indiana-Illinois State line eastward to Zionsville compressor station, is that correct?

A. That is correct.

Q. That is a 20-inch line, isn't it? A. That is right.
[fol. 9045] Q. And it was constructed in what year?
A. I have a record of the right-of-way date, 1930 and 1931 on Line A.
Q. Line A was constructed in the years 1930 and 1931, isn't that right? A. That is my understanding.
Q. And extends from the Indiana-Illinois State line to Zionsville compressor station, does it not?
A. That is right.
Q. That is a 20-inch line? A. Yes, sir.
Q. There is also a parallel line looping the old Line A which is a 24-inch line. Is that right? A. Yes, sir.
Q. Now, that is a new line. When was it installed, approximately?
A. I think about 1940, maybe some of it in 1941.
Q. You made no inspections on the new 24-inch loop line, did you? A. No.
Q. And neither did Mr. Riddle?
A. Not to my knowledge.
Q. What per cent of depreciation did you find on Line A, that is, the 20-inch line which was installed in 1930 and 1931? A. On Line A, 20-inch?
[fol. 9046] Q. Yes, I think you will find that on page 7 of Exhibit No. 81.
A. I found 100 per cent condition on the coated pipe, 92.2 per cent on the pipe not coated.

Mr. Littman: Will you please read back that answer?

(Whereupon, the last answer was read by the reporter.)

By Mr. Littman:
Q. What is the over-all per cent condition on Line A, 20 inch, both coated and uncoated?
A. I do not have that record here at all, the over-all per cent condition. The report was not set up that way. We have an over-all per cent condition on the main pipe lines which includes Line A.
Q. Can't you simply add the condition per cents shown on page 7 of Exhibit No. 81 and divide by the 8 inspection points?
A. Yes, I could, but I would prefer to do it off the stand, sir.

Q. You prefer to do it off what?

A. Any mathematics I would prefer to do off the stand, if permitted, if permitted to do it off the stand.

Q. How is my arithmetic— A. (Interposing) Yes.

. . . . . .

[fol. 9048] By Mr. Littman:

Q. Mr. Lewis, at the close of the morning session, I requested you to state what per cent condition you found for transmission Line A. Have you made the calculation?

A. I have. That amounts to 95.1 percent. That is the arithmetic average of coated and uncoated pipe on Line A.

Q. In other words, the 95 percent condition is the arithmetic average of the condition per cents shown on page 7 of Exhibit No. 81, is that correct?

A. My pages do not happen to be numbered the same as yours. I assume that it is.

Q. I hand you a copy of Exhibit No. 81 and ask you whether the figure you gave is the arithmetic average of the condition per cents shown on Page 7 of Exhibit No. 81? A. That is right.

Q. And I believe you have already testified that Line A was constructed in 1930 and 1931?

[fol. 9049] A. That is right, that is the right-of-way date.

Q. Inasmuch as Line A is 10 years old and inasmuch as you have found a percentage of depreciation on this line of 5 per cent, it is a fact that this depreciation on Line A has proceeded at an average rate of one-half of one per cent per year, has it not? A. Approximately.

Q. What over-all physical life of Line A is indicated by the average rate of one-half of one per cent depreciation per year?

A. The rate of depreciation, as observed at the time of our inspection, is not looking into the future life of Line A and the 95 per cent condition, as found at the time of the inspection, only represents the physical condition of the property on the observed date.

Q. Well, assuming that the depreciation which you found proceeds in the future at the same rate which you found that it proceeded in that past, the indicated physical life of that line would be 200 years, would it not?

A. Based on assumption only.

Q. Your answer to my question is "yes", based upon the assumptions that I have asked you to make?

A. I am not answering your question "yes". The life of any underground pipe line system cannot be based upon a per cent condition found as of today. It has been proven [fol. 9050] that pitting and corrosion do not accelerate or continue in a constant manner but rather pitting of our underground structures decelerates.

Q. Well, then I should conclude from your statement that the average over-all life of Line A would be not less than 200 years?

A. Much longer than 200, possibly, but no person has lived long enough to make even such a wild guess as to the length of life of an underground pipe line system.

Q. Well, Mr. Lewis, it is a fact that Line A is 10 years old, is that right? A. That is right.

Q. And you found only 5 per cent depreciation on that line, is that right?

A. That is right.

Q. The average rate of depreciation on that line over the 10 years is certainly one-half of one per cent per year, isn't that correct? A. That is right.

Q. Now, you say that in the future it could be expected that the depreciation would proceed at a decelerating rate?

A. That is right.

Q. Assuming that the depreciation proceeds in the future at the same rate as in the past, the indicated over-all life of Line A would be 200 [huindred] years, would it not?

[fol. 9051] A. That is right.

Q. And in view of your statement that it is expected that pitting proceeds at a decelerating rate through the years, it would be expected that the over all physical life of Line A would be in excess of 200 years?

A. Much in excess, possibly.

Q. Let's examine the facts with respect to Line B. Line B extends from Montezuma compressor station eastward to Kings Station, does it not? A. No.

Q. Will you state the facts?

A. Line B extends eastward from Zionsville compressor station—

Q. (Interposing) I am sorry, I am always confusing Montezuma with Zionsville—from Zionsville eastward to Kings Station?

A. That is right.

Q. What is the size of that line? A. 18-inch.

Q. And it was constructed in 1931, was it not?

A. That is the right-of-way date, 1931, yes, sir.

Q. Now, what condition per cent did your find on Line B? A. 86.7 per cent.

Q. In other words, the depreciation was 13.3 per cent, was it not?

[fol. 9052] A. That is right.

Q. It is evident that the depreciation which you found had proceeded in the past at an average rate of 1.33 per cent per year, isn't that correct?

A. I assume your mathematics are correct.

Q. Well, we have 10 years and 13.3 per cent depreciation over the 10 years, which would be 1.33 per cent per year, wouldn't it? A. That is right.

Q. Now, assuming that the depreciation were to proceed in the future at the same rate as in the past, your finding of depreciation would indicate an over-all life for Line B of 75 years, would it not?

A. Assuming again that your mathematics are correct, I will agree.

Q. Now, let us look at Line C. That line extends from Zionsville compressor station northward to Melvindale which is the Detroit City gate, isn't that correct?

A. That is right.

Q. What is the size of that line, sir?

A. 22-inch.

Q. When was that line constructed? A. 1936.

Q. What percent condition did you find on Line C?

A. 99.3 per cent.

[fol. 9053] Q. In other words, 0.7 per cent depreciation?

A. That is right.

Q. In other words, the physical depreciation which you observed on Line C has proceeded at an average rate of 0.14 per cent per year, has it not?

A. Assuming your mathematics are correct, yes.

Q. And that rate of depreciation, if it were to proceed in the future as in the past indicates an over-all life of Line C of 714 years, does it not?

A. I assume it does, yes.

Q. I wonder whether you would kindly verify my arithmetic as I go along, please.

A. What are the years you are applying to that, on Line C?

Q. Line C, constructed in 1936, your depreciation is 0.7 per cent.

A. Are you considering the age 6 years, sir?

Q. I think I used 5 years? A. Five years?

Q. I think I used 5 years. I do not have my working papers with me but I am quite sure I did not count the year 1936 because that was the year in which the pipe was constructed. A. 1.4?

Q. The average rate is 0.14 per cent per year, is it not?

A. All right, 0.14.

[fol. 9054] Q. That is right? A. All right.

Q. I want now the indicated over-all life.

A. What was your figure, 250 years?

Q. Just a minute—

A. (Interposing) How did you obtain the 250 years?

Q. I had an indicated life of 714 years.

A. All right.

Q. Is that correct? A. All right, I will agree.

Q. Now, let us look at the lateral lines. Michigan Gas Transmission Corporation has a number of lateral lines, that extend off the main transmission lines?

A. Yes, that is right.

Q. Did you or anyone else make any inspections of any of the lateral lines?

A. No, sir, not to my knowledge. I made no inspection.

Q. And, so far as you know, Mr. Riddle made none?

A. That is right.

Q. I am quite sure he so testified in his direct examination, Mr. Lewis. What per cent condition did you assign to the lateral lines?

A. Well, the per cent condition was arrived at by applying the per cent condition as found on the main lines into which the lateral lines were connected or tied into. In [fol. 9055] other words, the arithmetic average, as found on the main line, was applied to the lateral.

Q. Can you be a little more specific for me with respect to the mechanics of that procedure? I will tell you what disturbs me and perhaps you can help me. Which particular inspection points did you select for a given lateral branching off from the main line? Did you select the inspection point and take the results obtained at the inspection point on the main line closest to the point where the lateral extends from the main line?

A. That or the arithmetic average of several that might have been on that same section of line. For example, if we had a section of line that was coated and inspections had been made on that coated section of main line and a lateral tie in occurred within that section, the per cent condition as found on the main line was applied to the lateral line.

Q. And, in some instances, you used merely a single inspection point?

A. If that occurred in the inspection of the property and I do not have in mind that it did occur, but it may have occurred. I rather think, if my memory serves me, that there was always more than one inspection involved in the application of a per cent condition on the lateral line. That also, I might add, would have been worked out exactly the same should the line have been not coated, the main line not coated and a lateral tie in occurred. The [fol. 9056] per cent condition on the main line would have been applied to the lateral tie in line.

Mr. Littman: Would you please read back that answer, it is rather lengthy but I would like to have it read back.

(Whereupon, the last answer was read by the reporter.)

By Mr. Littman:

Q. I am still not altogether clear with respect to the mechanics of your method. Perhaps you can take a specific lateral line and give us the inspection points which you used for that lateral line.

A. I do not have that information with me. I could not furnish you that information today.

Q. How far on either side of the lateral did you go?

A. That would depend entirely—for example, if you had 10 miles of coated pipe and within that 10 miles one lateral tie in occurred; then that entire 10 miles—if you

had made, say, two inspections on the main line—that entire 10 miles of pipe would have been considered. The two inspections would have been averaged and the average applied to the lateral tie in.

Q. Now, is that because the lateral lines are coated? Are they all coated?

A. Not necessarily. It has nothing to do with whether they are coated or uncoated. That has no bearing at all whether the lateral line is coated or not coated. Later, that was worked out and a weighted average per cent condition was based on the tonnage of pipe in the coated [fol. 9057] and uncoated sections of the lateral lines.

Q. Why do you speak of taking two inspections?

A. It may have been more than two. It may have been several. There may have been 50 miles of coated pipe. Should we only have one lateral tie-in, in the 50 miles, we may have had only five main line inspections so that the five main line inspections would have been tied in with the lateral line.

Q. Why did you confine your inspections to the coated laterals?

A. We did not. It occurred with uncoated laterals. I am only describing that as coated but the same thing would have occurred for uncoated. In 50 miles, five inspections were made on coated or uncoated. That per cent condition was applied to the lateral tie in within that section.

Q. Why weren't inspections made on these lateral lines?

A. Personally, I had nothing to do with the locating of the inspection points. My part in the field survey work was to make a depreciation study of the 37 inspection points that were spotted by the Central Service Corporation and, so far as the lateral lines are concerned, I just simply could not answer why they made no inspections on the lines. They just simply did not make any. However, they were laid in the later years and much the same soil condition existed as in the main line sections that were inspected and the percent condition applied to the lateral.

[fol. 9058] Q. They were installed in 1937, weren't they?

A. Yes, sir, my understanding is they were installed at a later time. I made no survey of those lateral lines so I have no information on the age.

Q. The map, Exhibit No. 78, shows, does it not, that the lateral lines were constructed in 1937?

A. Which lateral are you speaking of? Say, for example, this one into Tipton?

Q. I am speaking of them all, collectively.

A. I am not familiar with this—red shows 1936, doesn't it, or 1937? This is so near the color, what would you say; is it 1937? I rather think it is 1937. Is that right?

Q. That is what I thought.

A. All right, I believe it is 1937. I believe that is also orange. (Indicating.)

Q. Yes. A. Orange, indicating 1937 construction.

Q. Certainly they were constructed not later than 1937 because there are two shades of orange used on this map, one for 1937 and the other for 1936 and so I am correct in concluding, if this map is accurate, that the laterals shown thereon were not constructed later than 1937. Am I correct?

A. I would add with the exception—

Q. (Interposing) Your answer is "yes" with the exception?

[fol. 9059] A. Yes, with the exception of this parallel line to Fort Wayne which was constructed in 1941, in part.

Q. Very well. Mr. Lewis, are you able to advise me, with respect to the loop lateral extending from Line C to Fort Wayne which is colored in purple on Exhibit No. 78, which color is designated "1941 construction in progress", whether your depreciation studies comprehended and included that line?

A. Will you mind giving me the map a moment—Line C-101, the original line was included—

Q. (Interposing) The original line that was constructed in 1937 was included?

A. That was included and my record before me indicates that the new line was not included.

Q. That comports with my understanding, namely, that the new line was a part of the construction work in progress as of June 30, 1941. A. That is right.

Q. Which was shown in one of Mr. Young's exhibits?

A. It had been completed to this point, it ended here and possibly continued on later (indicating).

Q. May we not conclude, Mr. Lewis, that the lateral lines which are covered in Exhibit No. 81 were those which were constructed not later than 1937? A. That is right.

Q. What percent condition did you assign to the lateral [fol. 9960] lines? A. The over-all per cent condition?

Q. Yes, I believe that is shown on page——

A. (Interposing) 99.7 per cent.

Q. 99.7 per cent?

A. 99.7 per cent was applied to all lateral lines.

Q. Now, that is 0.3 per cent depreciation, in other words, is that correct? A. That is right.

Q. Now, this 0.3 per cent of depreciation which you found, has accrued at the rate of 0.075 per cent per year on the average over the four years of life of these lateral lines, is that correct? A. That is correct.

Q. What over-all physical life of these lateral lines is indicated by the average rate of 0.075 per cent per year?

A. It has no bearing on the life of the line, the average rate, as you are applying it. The per cent condition is found by observed inspection. It does not indicate the future life of that property.

Q. Suppose you give me the indicated life which is comparable and similar to those which you have heretofore given me mathematically, based upon the assumption that the depreciation will proceed in the future at the same rate as it has proceeded in the past?

[fol. 9961] A. If I may furnish that calculation later, I would prefer to do it.

Q. It would only take a minute.

A. I would much prefer to do it off the stand, however.

Q. Well, the figure we get is 1333 years. A. Yes.

Q. Will you please check my calculation for me? Assuming the correctness of my arithmetic and assuming that the depreciation which you found proceeds in the future at the same rate as in the past, the indicated over-all age would be 1333 years, wouldn't it?

A. Assuming that your mathematics are correct.

Q. How many river crossings are there in the Michigan Gas Transmission system? I refer you to Exhibit No. 78, the map, to refresh your recollection.

A. Are you speaking of the navigable rivers or small streams, such as Raccoon Creek, White River and the Wabash?

Q. Let me read you a few that I took from the map and you can check me on them. A. All right.

Q. Line A—Wabash, Big Raccoon Creek.

A. All right.

Q. Sugar Creek. A. All right.

Q. Line B—White River crossing, do you know about that one? A. All right.

[fol. 9062] Q. Line C—Mississinewa. A. All right.

Q. Wabash River? A. All right.

Q. St. Mary's River, Maumee, Huron. A. All right.

Q. Tiffin and Raisen. A. All right.

Q. Now, did you make any inspections on any of those river crossings? A. No, sir.

Q. Nor did anyone else, did they?

A. Not to my knowledge.

Q. How many inspections did you make on the loop lines?

A. You are speaking of Line AA and BB, the 24-inch line, sir?

Q. Well, let's take the loop line extending parallel, approximately, with Line A and extending from the Indiana-Illinois line at Dana to Zionsville.

A. It extends to Montezuma, does it not, the end of the line that you mentioned extends to Montezuma compressor station, Line A?

Q. Well, suppose you verify that on the map.

[fol. 9063] A. However, the answer is "no" on that line.

Q. Now, that line was installed partly in 1939 and partly in 1940, was it not, that is, the loop line?

A. I have no information as to the date of installation on the loop lines.

Q. I think the legend on the map, Exhibit No. 78, will show that. A. 1941, Line A.

Q. Did you say 1941? A. Yes, sir.

Q. You have just consulted the map. Will you please state the fact with respect to the loop line A?

A. No inspections were made on loop line A, 24-inch.

Q. And that line was constructed for the most part in the year 1940 and a short section thereof was constructed in 1939, is that right, according to the map, Exhibit No. 78?

A. Yes.

Q. That is the loop line?

The Witness: You will have to read me that question to answer it correctly.

(Whereupon the pending question was read by the reporter.)

The Witness: That is my understanding from the map.

By Mr. Littman:

Q. Did you or Mr. Riddle make any separate determination of the per cent condition on the coating on the coated pipe? A. On the coating or coated pipe?

[fol. 9064] Q. Of the coating on the coated pipe.

A. If you will pardon me, if I may state the question did we make an inspection of the coating?

Q. Did you make a separate determination of the condition per cent of the coating? A. No.

Q. Will you please turn to page 7 of Exhibit No. 81?

A. What line is it, sir?

Q. Line A. A. All right.

Q. I note from inspection Nos. 1, 2 and 3 shown on the table on that page, that those inspections were made on coated pipe. Is that correct? A. That is right.

Q. Now, you found the pipe at those points in 100 per cent condition, is that correct? A. That is correct.

Q. This line was laid in 1930 and 1931, is that right?

A. Those are the right of way dates, 1930, 1931.

Q. Is it your testimony that the coating on this pipe, which is 10 years old is as good as it was when it was first installed?

A. I am not testifying as to the coating condition at all. I am testifying as to pipe condition, the material protected [fol. 9065] by the protective pipe coating.

Q. Now, you found that pipe in 100 per cent condition notwithstanding the fact that it had been in the ground for 10 years, is that right?

The Witness: Would you read that question, please?

(Whereupon, the pending question was read by the reporter.)

The Witness: That is right.

By Mr. Littman:

Q. And notwithstanding the fact that that pipe had already marched for 10 years along the road to the scrap heap, isn't that right?

A. Would you mind stating that question again? I do not seem to get your question clearly.

Trial Examiner: I believe he is quoting.

Mr. Littman: My apologies to Mr. Chief Justice Stone.

By Mr. Littman:

Q. I will rephrase my question. You found the pipe at this inspection point in 100 per cent condition notwithstanding the fact that it had marched along for 10 years toward the scrap heap. It is 10 years closer to the scrap heap today than it was when it was first installed, isn't it?

A. I would not say that it is.

Q. You would not say that it is?

A. No, sir, absolutely not. Ten years does not make a bit of difference. The time element has nothing to do with it. It is the physical condition we found at the time [fol. 9966] of the inspection. The pipe had been well protected by this protective coating at the points we inspected. The pipe was as good as new at the three points that are in question.

Q. But it is still 10 years closer to the date of its eventual retirement than it was when it was first installed, isn't it, even though it looks just as good as new?

A. Again age alone is no measure of depreciation.

Mr. Littman: Let me have that answer, will you please?

(Whereupon, the last answer was read by the reporter.)

By Mr. Littman:

Q. Well, it is a measure of how much service it is going to give as related to time, isn't it?

A. No measure at all of the future service of that pipe line.

Q. You will certainly concede, won't you, that that piece of pipe is 10 years closer to the date when the gas supply will be exhausted?

A. That may be true. However, the percentages applied to the three inspection points in question have no bearing on the future life of our gas supply.

Q. In other words, what you are saying is that you did not take that element into account? A. Absolutely not.

Q. In making your determination?

[fol. 9067] A. Absolutely not.

Q. Have you ever made a depreciation study wherein you have taken that element into account? A. No, sir.

Q. I want you to describe how you translate your data shown in Exhibit No. 81 to per cent condition?

A. I just do not understand your question, sir. What do you want translated?

Q. I want to know how you arrive at your percent condition at these various inspection points.

A. I understand you now.

Q. I want you to describe your method.

A. How we arrived at the per cent condition at each inspection point?

Q. Generally, yes.

A. Well, the pipe was carefully scrutinized for all indications of corrosion or pitting. The entire surface was so examined, the bottom half as well as the top half, sides, top shoulders and bottom shoulders. If any pitting was found at all in the cleaned section of the pipe that was measurable, these pits were measured and so reported on our field inspection form. An Ames dial gage was used for the purpose of measuring the pit depths. From the information gained at each inspection point, a per cent condition was applied which is purely a judgment figure, comparing in my mind the condition of the pipe under [fol. 9068] observation with new pipe alongside of that pipe.

Q. That is a judgment of what?

A. Judgment of the physical condition as compared to new pipe.

Q. Not a judgment of how much longer the pipe is going to serve? A. No, absolutely not.

Q. Not a judgment of how much service has departed

A. Absolutely no comparison.

Q. And it has no relation to time, according to your theory? A. Yes, I would say time enters the picture.

Q. Well, you cannot give us any further enlightenment as to the mental gyrations through which you went to reach the ultimate per cent condition from the data which you have described?

A. I would say, rather than the term "mental gyrations", they more truly could be termed "years of experience" working with pipes of similar materials, installing such pipes, actually making the installations yourself, supervising such installations in varying sizes of pipe over a period of time, being familiar with new pipe as well as pipe that has been in use for quite some time, basing my per cent condition entirely upon my judgment as to its condition as compared to new pipe.

[fol. 9069] Q. What does 95 per cent condition mean, 95 per cent of what?

A. As compared to a new piece of pipe alongside of it.

Q. You say 5 per cent is gone. Is that what you say when you find pipe in 95 per cent condition.

A. I would say it has depreciated 5 per cent.

Q. Was the depth of the maximum pit the controlling factor in your determination of per cent condition?

A. Not entirely, not entirely, not in every case. It only had part to do with the per cent condition which we have reported in our 37 inspections.

Q. How much weight did you give to the deepest pit?

A. There is no way in the world that I could explain to you or any other person the weight given to pitting other than it is my judgment, following my examination of the surface of the pipe presented for inspection of any corrosion or pitting that occurred as compared to new pipe.

Q. Where you found no pitting, you assigned a per cent condition of 100, is that right? A. Yes, that is right.

Q. Notwithstanding anything else that may have been found at the inspection point, isn't that right?

A. There was nothing else found. It was perfect pipe, the same as the day it came out of the mill.

Q. What significance do you attach to pitting which is [fol. 9070] described as "etched" or "small"? I note

those two descriptions appear opposite each other on these inspection reports.

A. In so far as they are appearing opposite, it has no significance, their appearing opposite. However, do you want a description of what I mean by "etched"?

Q. No, I want your to tell me what difference does it make if a pit is etched or if it is small?

A. In what way does it make a difference, do you mean, in per cent condition?

Q. Yes, in what way would it make a difference to you, assuming that the two pits are of equal depth?

A. Well, I believe I will have to describe the etching condition, as I see it, and small pits, as I may see it, in my observed inspection in order to make it clear.

Q. All right.

A. An etched surface found upon examination would be one we will describe as the most minute series of pittings possible to imagine, if you are familiar with pipe materials, possibly occupying a very small area on the entire surface of the pipe examined and closely related one to another in their location on the pipe, in more of a close knitted area, if I might say that. Small pitting would be described as very minute in diameter, very small, rather, in diameter and depth possibly. The term "small" is used in this inspection report as not having anything to do with the [fol. 9071] number of pits but with the size of the pits as found.

[fol. 9072] By Mr. Littman:

Q. Assuming that you have two pits at an inspection point of equal depth, one of which is etched and the other of which is small, within the meaning of your definition. What difference would that make?

A. In per cent condition?

Q. Yes. A. Possibly none.

Q. I will ask you the same question with respect to the two pits of equal depth, one of which is "large" and the other of which is "sharp". What difference, if any, would that make?

A. A larger pit being one that covered considerable area, affecting considerable area of the metal and sharp

being descriptive of the type of pitting we will find on steel pipe; the penetration being much sharper on steel pipe than on wrought iron pipe.

[fol. 9073] Q. What difference would it make in per cent condition?

A. I would have to see the particular pipe to answer your question, sir.

Q. Well, so far as I am concerned, you can write your own ticket, using your own definition of a large pit and a sharp pit, both of the same depth, what difference would that make in your per cent condition, whether one is large and the other is sharp?

A. I would still have to see the pipe in order to put a per cent condition on it.

Q. Suppose you had two pits, one of which was "blotchy" and the other of which is one of a number of "scattered" pits and both pits are of the same depth. What difference would that make in your per cent condition?

A. It might make none. I would have to see the pipe before I could put a per cent condition on it.

Q. What weight, if any, did you give to the character of the soil in arriving at your per cent condition?

A. At the time of the inspection, we made a record of the kind of soil covering our pipe line system.

Q. What weight, if any, did you accord to that fact?

A. None.

Q. Did you consider any factors in arriving at your per cent condition other than those which you recorded in your [fol. 9074] inspection sheets shown in Exhibit No. 81?

A. I think we have all the facts before us in the individual inspection sheets that were considered in arriving at the per cent condition.

Q. In other words, everything that you took into account in arriving at your per cent condition or condition per cents and all the data which you used in arriving at your condition per cents are shown in these inspection sheets in Exhibit No. 81, is that correct? A. That is right.

Q. In other words, if you had before you the data at the particular inspection point as shown in one of these sheets, you could determine a per cent condition therefrom?

A. If I have the pipe.

Q. What? A. If I had the pipe along with it.

Q. You would have to have the pipe along with it?

A. Certainly.

Q. I thought you said you did not consider anything other than the data which is shown on these inspection sheets.

A. I considered the data here—I obtained the data in the field from the pipe that I have recorded here, not from the sheet to the pipe. We recorded our findings in the field after observation of the pipe condition.

Q. Assume that at an inspection point, the wall thickness [fol. 9075] of the pipe, which is steel pipe, is 0.281 inches and the maximum pit depth is 0.05 inches and the average estimated pit depth is 0.01 inches; the pitting is etched, sharp, scattered and few; the soil is clay, loam and gravel and the pipe was painted in the mill. What is the per cent condition of that pipe? A. I would have to see the pipe.

Q. In other words, there are some data that you took into account that are not recorded on these inspection sheets?

A. The data that we have recorded on the inspection sheets was obtained in the field by observation and so recorded.

Q. That other factors that are not shown on these inspection sheets would change the per cent condition?

A. I know of no other factors that will change the per cent condition as shown on our inspection sheets. The facts are shown on the inspection sheets as recorded in the field at the time of observation.

Q. Why do you have to look at the pipe if you have all of the data here that you recorded which you felt was necessary to take into account to arrive at a per cent condition?

A. Those are the facts that we obtained in the field from observed conditions of the pipe at the time of inspection.

Q. What is there that you would have to see about the pipe?

A. The entire surface of the exposed section under test [fol. 9076] or inspection.

Q. You have all of that described on your inspection sheets, have you not?

A. That is right and we obtained it from the pipe that is in the ground that we observed. That is nothing more than a record of our findings, an exact record of our findings in the field.

Q. Well, your inspection sheet shows the character of pipe, the wall thickness and the depth of pit, does it not?

A. Yes.

Q. So far as that is concerned, you would not have to go out in the field to see that, would you?

A. How are you going to obtain depth of pitting, for example?

Q. I mean if I gave you the depth of pits, that is all you would need?

A. There is more to it than the depth of the pit, than just the physical measurement of one pit or several pits. It is the general condition observed over the entire surface of the pipe, the number of pits, the general corrosion.

Q. You have described all those matters here in your inspection sheets, haven't you? A. That is right.

Q. Why do you have to go out and look at it the second time if I give you your own description?

[fol. 9077] A. That certainly would be impossible, to make it even come close.

Mr. Wheat: Mr. Littman, Mr. Baldridge suggests that possibly a good analogy would be that of a man trying to judge a beauty contest from a series of typewritten measurements.

Mr. Littman: Yes, but the analogy is not at all proper.

By Mr. Littman:

Q. You have your own description here, have you not, of everything you saw?

A. That is right, obtained in the field from observing the pipe.

Q. And you say that is all you considered?

A. Absolutely recorded all we found in the field.

Q. What is there that you saw?

A. Exactly what you have recorded in front of you on each inspection.

Q. Well, if I read you those data, why do you have to go out and look at it again?

A. In other words, you can make a hypothetical case here and hand it to me and expect me to put a per cent condition on it or even take one out of our record and put a per cent condition on it—that is impossible.

Q. That is impossible?

A. Absolutely. We have got to see the pipe.

Q. I take it then there is some data that you considered [fol. 9078] that is not fully described in these inspection sheets?

A. Other than my judgment and that is the judgment figure in the per cent condition that you have.

* * * * * * * * *

Q. I take it from your testimony that the description of the data observed at the various inspection points as shown in the pipe inspection reports in Exhibit 81 are not sufficient upon which to base a per cent condition without actually going out and observing the pipe?

A. That is right.

Q. Now, the inspection point which I described is the one shown on page 14 of Exhibit No. 81, to wit, inspection report No. 8. Now, you found the pipe at that inspection point 40.95 per cent condition, did you not?

A. That is right.

Q. Will you turn to the inspection report No. 12 which is shown on page 19 of Exhibit No. 81. There you will observe the identical description as that which appears for inspection point No. 8, isn't that correct?

A. Were we comparing No. 6, inspection No. 6 and 12?

Q. We were comparing inspection No. 8 with inspection [fol. 9079] No. 12. Now, let's compare the two. At both these points, the pipe is painted. Is that right?

A. That is right.

Q. The maximum pit depth is 0.05 inches and the average pit depth is 0.01 inches. Is that right?

A. That is right.

Q. The pitting in both cases is described as "small, sharp, scattered and few", is that correct?

A. That is right.

Q. The wall thickness of the pipe in both cases is 0.281 inches, is that right? A. That is right.

Q. The soil is practically the same, but we need not discuss that because you did not take the soil into account in arriving at your per cent condition, did you?

A. No, I did not.

Q. Now, in the case of inspection point No. 8, you found that in 95 per cent condition, didn't you? A. That is right.

Q. Now, as to inspection point No. 12, you found that in 85 per cent condition, did you not? A. That is right.

Q. Why did you find the one in 85 per cent condition and the other in 95 per cent condition?

[fol. 9080] A. Again I would have to see the pipe.

Q. Can you tell me what you would see that would cause a variation of 10 points between the two inspections?

A. I cannot tell you from my memory what we would see in reference to these two inspections we are discussing, No. 8 and No. 12. My memory does not serve me that well to tell you what we found on one inspection as against what we found on the other inspection.

Q. Well, you have got the same data recorded for both, haven't you? A. That is true.

Q. What, in your opinion, could cause such a difference?

A. Now, we can get an answer maybe. It would be very easy to answer that. Possibly the pitting was more numerous on one inspection than on the other—

Q. (Interposing) Just a minute, right there. You describe the pitting exactly the same. You say "scattered and few". A. That is true.

Q. Don't those descriptions cover the same general character of pitting?

A. That is true but still you could have more numerous pitting on one than on another. We are not comparing one inspection point with another inspection point when we apply a per cent condition. We are comparing our observed condition with new pipe.

[fol. 9081] Q. You cannot tell us at this time what caused the variation?

A. Absolutely not. I would have to see the pipe.

Q. Let's look at inspection No. 5 which appears on page 12 of Exhibit No. 81. You found the pipe at that point in 85 per cent condition, did you not?

A. That is right.

Q. The maximum pit is 0.17 inches, is it not?

A. That is right.

Q. Now, that pit is slightly—that is the maximum pit, isn't it, 0.17? A. Yes, the maximum pit is 0.17.

Q. Now, that maximum pit is slightly more than 50 per cent through the pipe wall, is it not?

A. That is correct.

Q. Now, let's look at inspection point No. 9. What is the maximum pit depth at that point? A. No. 9, sir?

Q. Yes, which is shown on page 17 of Exhibit No. 81.

A. 0.05 is the maximum pit.

Q. Now, that pit is approximately 18 per cent through the pipe wall, isn't it? A. That is right.

Q. And your per cent condition at that point is 85 per [fol. 9082] cent, is it not? A. That is correct.

Q. In other words, in one place you have a maximum pit that is slightly more than 50 per cent through the pipe wall. A. That is right.

Q. And in another place at another inspection point, you have the maximum pit which is 18 per cent through the pipe wall and yet you place both of them in 85 per cent condition. Is that correct? A. That is correct.

Q. Now, looking at inspection point No. 8 which appears on page 14—

A. (Interposing) Inspection point No. 8?

Q. Inspection point No. 8, at that inspection point your maximum pit is 0.08 inches—

A. (Interposing) I beg your pardon, sir. My inspection point No. 8 shows 0.05.

Q. I am sorry, that is right, 0.05 inches. The maximum pit at inspection point No. 8 is 18 per cent through the pipe wall, isn't it, approximately? A. Approximately.

Q. Yet you find that inspection point in 95 per cent condition, do you not? A. That is correct.

. . . . . .

[fol. 9085] (Exhibit No. 81 was received in evidence.)

. . . . . .

(Exhibit No. 87 was received in evidence.)

. . . . . .

[fol. 9086] (Exhibit No. 92 was received in evidence.)

. . . . . .

[fol. 9087] (Exhibit No. 94 was received in evidence.)

(Exhibit No. 98 was received in evidence.)

(Exhibit No. 100 was received in evidence.)

Mr. Littman: I would like to take up next Exhibit No. 104 entitled, "Michigan Gas Transmission Corporation—Estimates" which is the pro forma statement offered by Mr. Spitznagle and also Mr. Green. I believe that this exhibit contains a number of objectionable figures and references. However, I shall not object to the admission of this exhibit simply because if any of the figures herein were to be stricken the entire exhibit would be meaningless.

[fol. 9088] The exhibit contains numerous calculations and derivatives comprehending the entire case of Michigan Gas Transmission Corporation. It serves to tie together and present in one summary statement all of the contentions of Michigan Gas. I merely want it understood that my failure to object at this point to certain of the figures for which the underlying exhibits have been already ruled upon as not admissible should not be taken to be any waiver by Commission counsel of its right to contend that reproduction cost evidence should be excluded from consideration.

I think perhaps I have made myself clear upon the record with respect to our position. I simply dislike striking any part of this exhibit because I fear that the entire exhibit would be meaningless if we were to have stricken certain objectionable features thereof.

Trial Examiner: It has been made clear in your statement and previously in the record that any evidence which might be directed to support the evidence of reproduction cost new will be disregarded in the analysis of this proceeding.

The proposed exhibit marked for identification as Exhibit No. 104 comprising six sheets will be received.

(Exhibit No. 104 was received in evidence.)

[fol. 9089] (Exhibit No. 105 was received in evidence.)

[fol. 9099] Mr. Baldridge: May I at this time, Mr. Examiner, go back and re-offer those parts of Exhibits 83, 84, and 86 and all of Exhibit 97 which have heretofore been excluded and, without entering into any extended discussion, I would like to point out that the recent opinion of the Supreme Court of the United States in the Natural Gas Pipeline Company case does not hold that evidence of this kind, whether you call it evidence of reproduction cost or whether you call it trends and indices, is improper evidence for reception by the Commission.

Mr. Littman: Are we going to use as precedent matters which the Supreme Court did not decide? I understood Mr. Baldridge to state they did not decide certain things and he was pressing that as an argument for the inclusion in evidence here of reproduction cost. Indeed, as the three Justices who wrote the concurring opinion stated, namely, Justices Douglas, Murphy, and Black, in their judgment the majority opinion holds that the Commission no longer need admit evidence of reproduction cost.

Mr. Wheat: Where does it say that?

Mr. Littman: The quotation upon which I am relying as authority for my statement is as follows, and I now read from the concurring opinion written by Mr. Justice Black:

[fol. 9100] "As we read the opinion of the Court, the Commission is now freed from the compulsion of admitting evidence on reproduction cost or of giving any weight to that element of 'fair value'. The Commission may now adopt, if it chooses, prudent investment as a rate base—the base long advocated by Mr. Justice Brandeis. And for the reasons stated by Mr. Justice Brandeis in the Southwestern Bell Telephone case there could be no constitutional objection if the Commission adhered to that formula and rejected all others."

Now, who am I or who is Mr. Baldridge to read or interpret the majority opinion any differently than that opinion was interpreted by three Justices who wrote the concurring opinion? Certainly I shan't undertake to disagree with

the three concurring Justices as to the proper interpretation to be placed upon the majority opinion. Certainly the opinion is authority for the proposition that this Commission need not accept any evidence of reproduction cost.

Trial Examiner: The Trial Examiner has referred to the record in regard to the exclusions of Exhibits 83, 84, and 86, which were excluded at page 8230 and page 8231 of the transcript and then exhibits as reformed responsive to Commission counsel's motion were afterward received with corresponding numbers. It would seem to the Trial Examiner that there is less question at this time than there was when the ruling was originally made so the renewed offer is again rejected and the original exhibits as offered, [fol. 9104] are again excluded with an exception if you wish it.

[fol. 9136] Leith V. Watkins, a witness previously called and duly sworn, resumed the stand and was examined and testified further as follows:

Direct Examination (Continued)

By Mr. Wheat:

Q. Mr. Watkins, will you please turn to the next document which you have prepared in connection with this matter and which I believe has been distributed, state what it is and what it shows. I believe it is the one giving effect to certain financing transactions consummated on February 6, 1942.

A. That is correct. The next document which the witness has had prepared for presentation in these proceedings is that consisting of pro forma consolidated balance sheet as of December 31, 1941, which gives effect to financial transactions consummated on February 6, 1942, by Panhandle Eastern Pipe Line Company and the acquisition on that date of the capital stock and debt of Michigan Gas Transmission Corporation and the Indiana Gas Distribution Corporation and the purchase of certain transmission properties of Ohio Fuel Gas Company by Panhandle Eastern Pipe Line Company. This document consists of five pages.

[fol. 9137] Pages Nos. 1 and 2 consist of a pro forma balance sheet as of December 31, 1941, while pages Nos. 3, 4, and 5 carry certain notes to such balance sheet and adjusting journal entries thereto.

Q. Mr. Watkins, are those transactions the ones which were dismissed by the Securities and Exchange Commission in the document which has been received in this proceeding as Exhibit No. 147?

A. I believe they are, sir. Is that exhibit an order of the Securities and Exchange Commission?

Q. It is, yes.

Mr. Wheat: Mr. Examiner, may the document just mentioned by the witness, consisting of five pages, be marked for identification as Exhibit No. 194?

* * * * * * * * * * *

(The document referred to was marked Exhibit No. 194 for identification.)

By Mr. Wheat:

Q. Mr. Watkins, will you state how Exhibit No. 194 for identification was developed and what you have shown thereon?

A. In the development of Exhibit No. 194 for identification, we first combined the assets and liabilities of Panhandle Eastern Pipe Line Company and its newly acquired wholly owned subsidiaries, Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation, [fol. 9138] as of December 31, 1941.

Q. Panhandle Eastern did acquire certain properties from the Ohio Fuel Gas Company, did it not?

A. Those properties are likewise included in the balance sheet under the column on both pages 1 and 2 which carries as its heading the word "Combined."

Q. When you say that you did this as of December 31, with respect to financial transactions consummated on February 6 of the next year, how did you accomplish that?

A. We took the balance sheets of the three companies and the properties acquired from Ohio Fuel Gas Company as though they had been acquired on December 31, 1941, and developed the figures shown in the column which the witness has just referred to, carrying as its heading the word "Combined."

Q. Then what did you do to get the final column headed "Consolidated"?

A. It was then necessary to make certain adjustments which are shown on pages 4 and 5 of this Exhibit No. 194 for identification.

As an illustration, the first adjustment required was that on page 4, through which we adjusted cash by $25,156,842.93 to record the sale of $15,000,000 principal amount of 5.60 percent cumulative preferred stock and $10,000,000 principal amount of first mortgage and first lien 3 percent [fol. 9139] bonds, series "C", of Panhandle Eastern Pipe Line Company, and the credits shown in adjusting entry No. 1, established for the purpose of this pro forma balance sheet as of December 31, 1941, give effect to such issue and sale of securities.

Q. And that item is shown with the figure one in parentheses, is it not, on page 1, opposite the item "Cash" and under the column headed "Adjustments and Eliminations Debit"?

A. As to that page, yes, sir, and it is likewise shown on page 2 followed by the numeral one in parentheses in the column headed "Credit" under the general heading "Adjustments and Eliminations" on that page.

Q. In other words, page 1 shows the asset portions of the balance sheet and page 2 the liability portions, is that true? A. That is true.

Q. Now, will you proceed with your explanation of what you did?

A. It was then necessary to record an adjusting entry to give effect to the purchase of stock and debt of Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation and certain transmission facilities from the Ohio Fuel Gas Company. To this entry, gas plant in service is charged with $439,326.08, the cost of securities acquired of associated companies amounting to $8,331,715.02 is taken into the records, the amount [fol. 9140] of the advances to associated companies being $2,445,000 is established and a small amount of expense incident to the acquisition of the new securities amounting to $896.40 is charged to other work in progress. To accomplish this acquisition, cash is credited with $11,206,937.50. These amounts are shown in appropriate places in the adjust

ments and eliminations columns on pages 1 and 2 of Exhibit for identification No. 194.

* * * * * * * * * *

In the general description of this proposed exhibit, mention was made of the notes on page 3. They are simply notes explanatory to the pro forma balance sheet and are not in the form of an adjustment.

Is that sufficient, sir?

Q. That, I think is, yes.

[fol. 9141] Will you proceed to your next adjustment?

A. Out of the cash arising from the sale of the securities represented by adjusting journal entry No. 1 shown on page 4 of this proposed exhibit, $10,000,000 was used for the redemption of the company's Class A preferred stock and the payment of dividends thereon to date of redemption. The effect of this use is represented by adjusting journal entry No. 3 on page 4 of the proposed exhibit and the entries appropriate to give effect to this entry in the balance sheet are shown in the appropriate columns under the general heading "Adjustments and Eliminations" on pages 1 and 2 of Exhibit No. 194 for identification.

Q. I think that sufficiently covers item No. 3. Will you now explain item No. 4 of the adjusting journal entries?

A. May I in such explanation combine entries 4, 5, and 6?

Q. Yes, I think that would help.

A. In order to properly portray a consolidated balance sheet it is necessary, of course, to eliminate intercompany items. Adjusting journal entries Nos. 4, 5, and 6 constitute the eliminations necessary in this instance, and it is believed the explanations to such entries clearly state the purpose therefor.

Q. Let me ask you if it is your opinion that Exhibit No. 194 for identification correctly shows what it purports [fol. 9142] to show as explained by you. A. It does.

* * * * * * * * * *

(Exhibit No. 194 was received in evidence.)

Mr. Littman: Mr. Watkins, before you leave Exhibit No. 194, I would like to know whether you meant to say

that you had included the item of "Gas Plant in Service" in the amount $439,326.08 shown as item 2 on page 4 in the combined amount of gas plant shown on page 1 in the sum of $82,652,330.74.

The Witness: If I did, sir, I thank you very much for correcting me because it surely should not be in there.

By Mr. Wheat:

Q. Will you state why, so the record will be clear?

A. Because, Mr. Wheat, the addition of this amount to gas plant did not take effect until the adjusting entries were made and, of course, the amount was not a part and parcel of any of the balance sheets included in the column on pages 1 and 2 of this proposed exhibit headed by the word "Combined."

[fol. 9143] Q. The effect of this, as well as all of the other items covered by the adjustments and eliminations, occurs and is shown in the columns on pages 1 and 2 headed "Consolidated", is that correct?

A. The general effect is there shown, yes, sir.

* * * * * * * * *

Q. Mr. Watkins, will you then pass to the next document prepared by you in connection with this proceeding and state what it is and what it shows?

A. The next document is a pro forma consolidated income account for the year ended December 31, 1941, and as shown by note No. 1 on page 3 of the proposed exhibit, is a condensed pro forma consolidated income account of the company and its subsidiaries, Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation, which has been prepared from the books of the companies on the basis that the financing of the cost of the acquisition of the outstanding stock and indebtedness of Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation resulted in an annual interest cost of $300,000, and which was consummated on February 6, 1942, had been effected January 1, 1941, and that the interest expense shown as applicable to the obligations of Michigan Gas Transmission Corporation and Indiana [fol. 9144] Gas Distribution Corporation to Columbia Gas & Electric Corporation, then their parent, would have aggregated the same amount had Panhandle Eastern Pipe

Line Company been the parent company and that the dividends had been paid by Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation to the extent of their net income for the year and is after giving effect to the estimated increases in Federal income taxes which would have resulted, had such interest and dividends been paid by Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation to Panhandle Eastern Pipe Line Company to the full extent of the net income of those companies.

Q. Mr. Watkins, did you not misspeak yourself at the outset of your last answer when you spoke only of Panhandle Eastern and its subsidiaries, Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation? Did you not mean Panhandle Eastern Company and its subsidiaries, to wit, Illinois Natural Gas Company and Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation? A. That is correct, sir.

* * * * * * * * * * *

[fol. 9145] (The document referred to was marked Exhibit No. 195 for identification.)

Q. Now, in the figures which are shown in pages 1 and 2 of Exhibit No. 195 for identification, have all of the items which you mentioned in your last somewhat lengthy answer been given their full consideration by you?

A. They have and the data shown in the column headed by the word "consolidated" shows the effect of the conditions explained in the answer which you characterized as a lengthy one as though that condition has existed throughout the entire year 1941.

Q. Now, are there any items which you believe ought to be explained in order that thorough understanding may be had of this exhibit?

A. Unless there be some misunderstanding on the part of someone with respect to the method of treatment of additional provision for Federal income taxes arising from the consideration in this pro forma consolidated income account of the receipt by Panhandle Eastern Pipe Line Company of the interest of the obligations of Michigan Gas Transmission Corporation and Indiana Gas Distribu-
[fol. 9146] tion Corporation and from the receipt by Pan-

handle Eastern of the remainder of the net income of those companies as dividends, the data should be self-explanatory.

When the witness refers to the word "receipt", it is in the light of the treatment with respect to this particular proposed exhibit. We know, of course, that there was no such constructive receipt for the year 1941.

Q. What is the elimination which is headed "No. 4" on page 2 and how does that come about?

A. In order to properly consolidate the operations of Panhandle Eastern and its subsidiary company, any inter-company transactions must be eliminated. The only inter-company transaction necessary in connection with this proposed exhibit is that represented by the sale of gas by Panhandle Eastern Pipe Line Company to the subsidiary companies. All eliminations between Panhandle Eastern and its subsidiary, Illinois Natural Gas Company, had been made prior to the development of the figures shown on Page 1 of this exhibit in the column headed by the word "Combined."

[fol. 9147] Mr. Littman: I have a few questions I would like to ask about Exhibit No. 195.

As I understand Exhibit No. 195 and also Exhibit No. 194, you have included certain figures reflecting a company called "Indiana Gas Distribution Corporation", is that correct?

The Witness: That is correct.

Mr. Littman: That corporation is not a natural gas company, is it, within the meaning of the Natural Gas Act?

The Witness: It is not.

Mr. Littman: In other words, it engages, strictly speaking, in the distribution of natural gas within certain city limits, isn't that correct?

The Witness: I do not know whether they could be characterized, really, as cities. They may be, under the laws of the State of Indiana. They are somewhat small if they are cities but, generally, your statement is correct. It has a few lateral lines. These lateral lines probably

have a recorded cost of not more than $50,000. Whether they are in a position similar to the lateral lines of Illinois Natural Gas Company in the light of the law, I do not know.

Mr. Littman: But the balance of its property, other than the lateral lines is purely distribution?

The Witness: That is correct.

Mr. Littman: Can you give us an idea of the size or amount of the property and income involved?

[fol. 9148] The Witness: My remembrance is that the total investment is possibly less than $200,000.

Mr. Littman: I think some of those figures are shown in Exhibit No. 145 but I would like to get an idea of approximately the magnitude and size of this Indiana Gas Distribution Corporation and to what extent it affects the picture?

The Witness: Would you like me to refer, in my response, to Exhibit No. 145?

Mr. Littman: Yes, I think it might be well to leave it stated at this point.

The Witness: Page No. T 14 of Exhibit 145—we may now refer to that as an exhibit, may we not?

Mr. Littman: Yes.

The Witness: (Continuing) Contains a balance sheet of Indiana Gas Distribution Corporation as of December 31, 1940, and as of September 30, 1941. It is my personal belief that the balance sheet as of September 30, 1941, is probably fairly representative of the company's assets and liabilities at the moment.

That balance sheet shows its property, plant and equipment as having a recorded cost of $195,000; its total assets $240,000; its demand obligations consisting of notes and open accounts $141,000; with outstanding capital stock of $1,000 and surplus at that time of some $11,698.20.

Is that sufficient, sir, for the balance sheet?

[fol. 9149] Mr. Littman: Yes, for the balance sheet, for the present.

Now, will you give us some idea of the size of the company with respect to the income statement?

The Witness: On page T-15 of Exhibit No. 145 is shown an income statement of Indiana Gas Distribution Corporation for the years ended December 31, 1938, 1939, 1940 and the nine months ended September 30, 1941, the year 1940 being the last full year of operation, may we refer to that rather than the nine months ended September 30, 1941?

Mr. Littman: I think it would be preferable because it gives us a full year.

The Witness: In that year the total gas revenue of Indiana Gas Distribution Corporation was $403,957.10; its total operation expenses amounted to $373,668.02 of which $335,747.54 represented cost of gas purchased from Michigan Gas Transmission Corporation. Its net income for that year, as shown by this income statement, amounted to $21,810.29.

Mr. Littman: Certainly it is not a very large company, is it?

The Witness: No.

Mr. Littman: And doesn't affect the ultimate picture very much?

The Witness: I should not think so.

There is included among the gross revenue, the sales to one large industrial customer. As a matter of fact, it is my [fol. 9150] information and belief that a great part of the approximate amount of gross revenue, $404,000 for the year 1940, came from the sale of gas to this industrial customer and the contract with that industrial customer was supposed to be changed, I believe, among some of the rate schedules which were filed with the Commission more than a year ago and if such change were made, the importance of this company would be somewhat substantially reduced even as an unimportant as it is taken into consideration with the total combined picture of all of Panhandle Eastern and its subsidiary companies as they existed after February 6, 1942.

Is that sufficient, sir?

Mr. Littman: That is sufficient for the present, thank you.

. . . . . .

(Exhibit No. 195 was received in evidence.)

Mr. Chamberlain: I am not clear, Mr. Watkins, as to just where you obtained your figure in your elimination No. 4 of $5,460,000. That is said to be the gas sold to subsidiary companies. What companies are included in that?

The Witness: That, sir, would cover the sales only to Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation and could include any intercompany sales between those two companies.

[fol. 9151] The intercompany transactions between Panhandle Eastern and Illinois Natural, as the witness has previously stated, were made before the data now shown on page 1 of this exhibit in the column headed by the word "Combined" was prepared.

. . . . . .

[fol. 9155] LEITH V. WATKINS a witness, having been previously sworn, resumed the stand and testified further as follows:

Direct Examination.

By Mr. Wheat:

Q. Mr. Watkins, I believe at the conclusion of the hearing yesterday afternoon you had just concluded your discussion of Exhibit No. 195.

Will you now pass to the next document which you have prepared, state its title and what it shows, briefly, and then we will ask that it be marked for identification.

A. The next document is a pro forma consolidated income account for the year ended December 31, 1941, adjusted to give effect to Federal income and Federal excess profits tax rates proposed in the recommendation of Secretary of the Treasury Morgenthau on March 3, 1942, before the House Ways and Means Committee and, except for the adjustment required for the provision in Federal

income and excess profits taxes is, in all respects, similar to Exhibit No. 195.

[fol. 9156] (The document referred to was marked Exhibit No. 196 for identification.)

By Mr. Wheat:

Q. Mr. Watkins, the content of Exhibit No. 196 for identification is briefly summarized, is it not, on page 2 of that exhibit? A. That is correct.

Q. And pages 3 and 4 contain certain adjustments. Will you state briefly what those are and the causes or the reasons which led you to make them?

A. Generally speaking, the adjustments on pages 3 and 4 of Exhibit No. 196 for identification are similar to the adjusting journal entries made a part of Exhibit No. 195 except in so far as the adjustments with respect to Exhibit No. 196 for identification deal with the change in the provision for Federal income and excess profits taxes to cause such provisions to conform to the recommendation made by the Secretary of the Treasury on March 3, 1942, before the House Ways and Means Committee and save for the three amounts shown on page 1 of exhibit for identification No. 196 opposite the caption "Charges in Lieu of Federal Income and Excess Profits Taxes" being $1,010,000 and $3,400,000 and $1,285,000, respectively, the information shown in the column headed by the word "Consolidated" on exhibit for identification No. 196, the two exhibits are very much the same.

Q. Mr. Watkins, what causes the difference in the net [fol. 9157] income in the column headed "Consolidated" in Exhibit No. 196 for identification as compared to the same figure in Exhibit No. 195 and what are the figures, respectively?

A. The figures that cause the difference are those included in adjustments Nos. 1 and 2 on page 3 of Exhibit No. 196 for identification and are brought about because of the increased rates and different treatment in the Secretary of the Treasury's proposal made on March 3, 1942, over and beyond the Revenue Act of 1941.

Q. And the respective amounts shown as Net Income after the adjustments and eliminations are what figures?

A. Before giving effect to the proposal made by the Secretary of the Treasury on March 3, 1942, the Net Income, as shown by Exhibit No. 195 on a consolidated basis including the operations of Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation, newly acquired subsidiaries, was $5,449,361.60.

Q. That is for the year ended December 31, 1941?

A. That is correct.

Q. And applying the 1941 Federal tax rates?

A. That is correct.

Now, the same figure for the same year and adjusting the Net Income for the proposals made by the Secretary of the Treasury on March 3, 1942, is $3,594,590.72 as shown by exhibit for identification No. 496.

. . . . . .

[fol. 9158] Mr. Littman: The proposed recommendation of the Secretary of the Treasury is, of course, not the present income tax law, is it?

. . . . . .

Mr. Wheat: We will stipulate that that is the fact.

. . . . . .

[fol. 9160] Mr. Littman: Well, let's see how factual this exhibit is.

First, it has been stipulated that this proposal is not the law?

Mr. Wheat: No, it has not.

Mr. Littman: That it has not yet become the law?

Mr. Wheat: That is better.

Mr. Littman: All right.

Mr. Watkins, if the proposal does become the law, it will not apply to the 1941 income, will it?

The Witness: I should not think so, no, Mr. Littman.

Mr. Littman: It will, of course, apply to the 1942 income, will it not?

The Witness: That is correct. If, however, the income for the year 1942 happens to be precisely the same as the net taxable income for the year 1941 and if the proposals made by the Secretary of the Treasury become the law, Exhibit No. 196 for identification would show the effect of that change in the Revenue Act.

Mr. Littman: Obviously, if there were a great reduction ordered effective some time in the year 1942, the amount of taxes applicable to the 1942 income would be decreased proportionately?

[fol. 9161] The Witness: Ordered by the Treasury Department?

Mr. Littman: Ordered by the Federal Power Commission.

The Witness: I presume it would have some such effect, yes.

* * * * * * * * *

[fol. 9162] By Mr. Wheat:

Q. Mr. Watkins, will you turn to the next document which you have prepared and state what that is and what it shows, in general?

A. The next document is the balance sheet, per books, of Panhandle Eastern Pipe Line Company and subsidiary companies as of February 28, 1942.

Q. Is that subsequent to the acquisition of the securities of the two other corporations you have mentioned?

A. It is, and is the first balance sheet which has been presented in these proceedings—

Q. (Interposing) And also subsequent to the acquisition [fol. 9163] of the Ohio Fuel Gas Company?

A. I assumed your previous statement included that and my answer was likewise intended to include it.

This proposed document is the first document, as far as this witness knows, in which there has been presented factual information in these proceedings showing the effect of the acquisition of the two new subsidiaries and the transmission facilities from the Ohio Fuel Gas Company.

* * * * * * * * *

(The document referred to was marked Exhibit No. 197 for identification.)

The Witness: I am quite sorry that it is necessary for the witness to ask that a correction be made on page 2 of exhibit for identification No. 197. In our haste to prepare and have available some of the material that is being now presented, it was necessary to forward it from our Kansas City office before complete verification had been had, for which reason I must ask that the figures on page 2 under the general heading "Reserves" opposite the caption "Reserve for Amortization and Depletion of Producing Natural Gas Land and Land Rights" in both the columns headed by the words "Combined" and "Consolidated" be changed from the ones now shown to $466,287.94; and that the figures shown opposite the caption "Reserve for [fol. 9164] Abandoned Leases" be changed from those now shown to $427,502.68.

These changes do not affect any other figures on this proposed exhibit. The total of the data originally shown is $893,790.62 and, if you will add the revised figures, you will find that their total is likewise $893,790.62.

By Mr. Wheat:

Q. Now, Mr. Watkins, will you please explain, in general, what Exhibit No. 197 for identification shows?

A. Exhibit No. 197 for identification is simply a consolidated balance sheet of Panhandle Eastern Pipe Line Company and its subsidiary companies, per books, as of February 28, 1942, with all intercompany transactions eliminated and shows in the column headed by the word "Consolidated" on both pages 1 and 2 the consolidated assets and liabilities of Panhandle Eastern Pipe Line Company [fol. 9165] and all of its subsidiaries as at that date.

(Exhibit No. 197 was received in evidence.)

Q. Mr. Watkins, will you turn to the next document which you have prepared in this matter and state what it is and what it shows?

A. Our next proposed exhibit consists of a pro forma consolidated income account for the twelve months ended February 28, 1942. In order to produce a consolidated income account for such a twelve-months' period, it became necessary to make the adjustments defined in Note A on page 2 of the proposed exhibit.

. . . . . .

[fol. 9166] (The document referred to was marked Exhibit No. 198 for identification.)

Q. Now, Mr. Watkins, will you go forward with your discussion of Exhibit No. 198 for identification?

A. Exhibit No. 198 for identification produces a consolidated income statement of the company giving effect to the acquisition of Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation and the properties from Ohio Fuel Gas Company on the basis that the earnings and expenses of those companies had been present throughout the entire twelve months' period on behalf of Panhandle Eastern Pipe Line Company and that the annual interest costs of $300,000, arising from the financial transactions consummated on February 6, 1942, had been effected March 1, 1941, and that the interest expense shown as applicable to obligations of Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation to their then parent company until February 6, 1942, would have aggregated the same amount had Panhandle Eastern Pipe Line Company been the parent company and that dividends had been paid by Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation to the extent of their net income for the twelve months ended February 28, 1942, after giving effect on the part of Panhandle Eastern Pipe Line Company alone, to the estimated increase in Federal income taxes which would have resulted had such interest and dividends been paid by [fol. 9167] Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation to Panhandle Eastern Pipe Line Company to the full extent of their net income or, perhaps more simply said, this pro forma consolidated income account assumes a full year's ownership and operation of the properties and business of Panhandle Eastern Pipe Line Company and subsidiary companies as

they existed, on February 28, 1942, and under the same revenue laws then in existence.

* * * * * * * * * * *

Q. Will you pass to your next document, Mr. Watkins?

A. Our next proposed exhibit is that of a pro forma consolidated income account for the twelve months ended February 28, 1942, prepared in exactly the same manner as exhibit for identification No. 198 except that the proposed exhibit, which I take it may be numbered 199 for identification—

* * * * * * * * * * *

[fol. 9168] (The document referred to was marked Exhibit No. 199 for identification.)

The Witness: (Continuing) —is adjusted to show the effect of Federal income and excess profits taxes if the rates proposed in the recommendation of the Secretary of Treasury Morgenthau made on March 3, 1942, before the House Ways and Means Committee, become actualities.

* * * * * * * * * * *

Q. Mr. Watkins, may I ask if, in all other respects, Exhibit No. 199 is similar to Exhibit No. 198?

A. It is, yes.

* * * * * * * * * * *

Q. Mr. Watkins, will you explain the document which has just been distributed?

A. The document just distributed is a comparative statement of gas plant as at December 31, 1939, December 31, 1940, June 30, 1941, December 31, 1941, and February 28, 1942, prepared on the assumption that Panhandle Eastern Pipe Line Company owned Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation on those respective dates.

[fol. 9169] Q. And also those properties acquired from Ohio Fuel Gas Company?

A. That is true only with respect to the period at February 28, 1942, as will be shown by page 2 of this proposed exhibit under the general heading "Other Undistributed Gas Plant".

* * * * * * * * * * *

(The document referred to was marked Exhibit No. 200 for identification.)

Q. Mr. Watkins, will you proceed with your explanation of Exhibit No. 200 for identification?

A. I am further embarrassed that I must ask that a correction be made in this exhibit for the same reason as the one made in Exhibit No. 197. This change occurs in two places on page 2 of exhibit for identification No. 200.

The last five digits opposite the caption "Total Gas Plant Classified" in the column headed "February 28, 1942:", should be—

Q. (Interposing) Just where is this? It is near the bottom of page 2, is it not? A. That is correct.

Q. Will you read first the total figures shown on page 2 [fol. 9170] and then the corrected figure?

A. The figure to be changed is $78,715,508.01.

Q. What is the corrected figure?

A. The corrected figure is $78,715,486.88.

Q. Does this proposed correction of yours change the total otherwise?

A. It changes the total opposite the heading "Gas Plant" in the February 28, 1942, column from $84,998,376.60 to $84,998,355.47.

Mr. Wheat: Mr. Examiner, these changes are relatively small but I ask that they be made by counsel on their copies of this exhibit and that the reporter be requested to make the changes on the original.

By Mr. Wheat:

Q. Mr. Watkins, I wish you would explain the totals shown at the bottom of the last two columns on page 2 and how they relate to the balance sheet figures which have already been explained by you?

A. Had the cost of gas plant purchased from the Ohio Fuel Gas Company, being $439,326.08 in the column for gas plant at December 31, 1941, of exhibit for identification [fol. 9171], No. 200, been included in that column, its total would have agreed exactly with the consolidated gas plant figures shown on Exhibit No. 194. The total gas plant, as

shown by exhibit for identification No. 200 at February 28, 1942, is exactly the amount of the consolidated gas plant reflected by Exhibit No. 197.

Q. In other words, the Ohio Fuel Gas Company properties, which were acquired, are included in the figures under the column for February 28, 1942, in Exhibit No. 200 but have not been included in those figures for prior periods?

A. That is correct, sir, and it might be further explained that exhibit for identification No. 200 is simply a detailed statement of the investment in gas plant according to the present Classification of Accounts.

. . . . . .

(Exhibit No. 200 was received in evidence.)

Mr. Littman: Mr. Watkins, is my understanding correct that the total distribution plant shown on page 2 of Exhibit No. 200 in the column headed "February 28, 1942", in the amount of $142,466.11 represents the distribution system of Indiana Gas Distribution Corporation?

[fol. 9172] The Witness: I think that is entirely correct. I would be surprised if you would find any distribution plant on the books of Panhandle Eastern Pipe Line Company or Michigan Gas Transmission Corporation or Illinois Natural Gas Company.

By Mr. Wheat:

Q. Just to make sure the record is clear—I think you did mention it before—but, on page 2 of Exhibit No. 200 in the column for February 28, 1942, after the words, "Gas plant purchased" under the heading "Other Undistributed Gas Plant", we find the figure $439,326.08 which figure does not appear in the other columns of the exhibit referable to earlier periods. I take it that that is the figure reflecting the purchase of the property of the Ohio Fuel Gas Company which you have been mentioning?

A. It is.

Q. And that was the purchase price for those properties, was it not?

A. It was.

Q. Mr. Watkins, will you pass to the next document which you have prepared in this connection, state what it is and what it shows?

A. The next proposed exhibit which the witness would like to introduce is that showing the gas plant of Michigan Gas Transmission Corporation stated as at December 31, [fol. 9173] 1931, through December 31, 1941, inclusive.

* * * * * * * * * *

(The document referred to was marked exhibit No. 201 for identification.)

* * * * * * * * *

By Mr. Wheat:

Q. Mr. Watkins, in that connection, have you recently become controller of Michigan Gas Transmission Corporation and, as such, the custodian of its books and records?

A. I have recently become secretary of that corporation, but not controller. It has no controller but, functioning as I do as controller of Panhandle Eastern Pipe Line Company, I take unto myself the same prerogative as to its subsidiaries.

Q. And the data contained on Exhibit No. 201 for identification was taken from the books of Michigan Gas Transmission Corporation?

A. It was so taken from the books of that corporation under my supervision and has been prepared in conformity with the preparation of Exhibit No. 52 which is a statement of gas plant for Panhandle Eastern Pipe Line Company and subsidiary companies as heretofore explained in these proceedings.

* * * * * * * * * *

[fol. 9174] By Mr. Wheat:

Q. Is there any further explanation which should be made with respect to Exhibit No. 201 for identification?

A. Yes. I was about to state further that Exhibit No. 201 for identification had likewise been prepared in a manner similar to Exhibit No. 176 and I believe treating with the information shown in Exhibit No. 176 and exhibit for identification No. 201, information with respect to the investment of Panhandle Eastern Pipe Line Company and its subsidiaries other than Indiana Gas Distribution Corporation would be available for any of the periods [fol. 9175] shown in those two exhibits.

Q. Exhibit No. 176 was similar to Exhibit No. 52, was it not, with the exception that the full year 1941 was shown for Panhandle Eastern Pipe Line Company?

A. Was exactly the same except for that difference.

. . . . . .

Mr. Littman: We would like to interrogate the witness briefly with respect to one item.

Mr. Watkins, isn't it a fact that you have made no adjustment in Exhibit No. 201 for an item which was referred to in Mr. Spitznagle's original cost study which is in evidence as Exhibit No. 91 and which was referred to in the Securities and Exchange Commission's opinion, Exhibit No. 147, at page 12 as follows:

"The one questionable item is the amount of $139,424 paid as a fee by Indiana Gas Transmission Corporation, a company subsequently merged into Michigan Gas, to the Columbia Gas Construction Company, another wholly owned subsidiary of Columbia Gas."

You have made no adjustment for that item, have you?

The Witness: Will you please refer to Exhibit No. 200, page 1, the next to the very last line?

[fol. 9176] Mr. Littman: Yes, I have it.

The Witness: You note there a deduction of $139,500 in the consolidated gas plant as at February 28, 1942, and as at December 31, 1941?

Mr. Littman: That appears on page 2 of Exhibit No. 200.

The Witness: So it does.

Mr. Littman: I find it now.

The Witness: This may be your question, Mr. Littman, if you will grant me the permission to proceed.

Mr. Littman: Certainly.

The Witness: There is in the gas plant of Michigan Gas Transmission Corporation and on its balance sheet an item on both sides of $139,500 which covers the matter concerning which your inquiry was directed.

Mr. Littman: That amount is included, of course, in the figures shown in Exhibit No. 201?

The Witness: Yes, because this is a statement per books.

Mr. Littman: Per books?

The Witness: That is right.

Mr. Littman: Unadjusted for this item?

The Witness: We have made no disposition of this $139,500 item. It having been included in the so called determination of purchase price, it might be necessary, although I am not sure, to obtain the sanction of the Securities and Exchange Commission before adjusting entries, if any, are determined to be necessary or made.

[fol. 9157] Mr. Littman: Yes.

The Witness: That might also involve this Commission.

Mr. Littman: The Securities and Exchange Commission in the next succeeding sentence following the portion of the opinion which I read, referring to this item, said:

"This item represents an intercompany profit."

I think the record is now clear that Exhibit No. 201 is unadjusted for that particular item.

The Witness: That is correct.

(Exhibit No. 201 was received in evidence.)

By Mr. Wheat:

Q. Will you turn to your next document, Mr. Watkins, and state what it is and what it shows?

A. The next proposed exhibit is that of a statement of estimated Federal income and excess profits taxes for the year 1941 and page 1 states such taxes based on the Revenue Act of 1941 for Panhandle Eastern Pipe Line Company, Illinois Natural Gas Company, Michigan Gas Transmission Corporation, Indiana Gas Distribution Corporation and the total resultant taxes.

On page 2, the same information is shown except that the data there has been adjusted to give effect to the rates

[fol. 9178] proposed in the recommendation of Secretary of the Treasury Morgenthau made on March 3, 1942, before the Ways and Means Committee.

On page 3, there is furnished a recomputation of Federal income and excess profits taxes for the year 1941 as explained in page 5 of the proposed exhibit.

Page 4 adjusts such recomputation by the inclusion of the rates proposed in a recommendation made by the Secretary of the Treasury Morgenthau on March 3, 1942, before the Ways and Means Committee.

. . . . . .

(The Document referred to was marked Exhibit No. 202 for identification.)

Q. Will you proceed with your explanation, Mr. Watkins?

A. Exhibit for identification No. 202 assumes certain estimated excess profits net income as well as certain estimated normal tax and surtax net income and, with such assumptions, supplies the impact of the taxes for the year 1941 as explained on each of the pages of the proposed exhibit. The pattern is simply that provided by the applicable regulations and the witness believes is somewhat self explanatory.

. . . . . .

[fol. 9179] A. The next document, sir, is the statement of operation and maintenance expenses for the year 1941 restated to include the operating and maintenance expense of Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation for the year 1941 and, by the amount shown opposite line 24 on page 4 thereof, furnishes the details of the total operation and maintenance expense of $3,829,611.53 shown by page 1 of Exhibit No. 195.

. . . . . .

(The document referred to was marked Exhibit No. 203 for identification.)

Q. Will you explain anything further you think should be explained with respect to Exhibit No. 203 for identification?

A. Mr. Wheat, this exhibit for identification No. 203 is so similar to two or three of the other exhibits of the same nature that have been introduced, for which explanation has been made and concerning which certain [fol. 9180] requests have been made, that the witness believes it requires no particular explanation unless there be questions.

. . . . . .

(Exhibit No. 203 was received in evidence.)

Mr. Littman: I would like to ask Mr. Watkins how the Commission may eliminate, if it desires, from the operation and maintenance expenses shown in Exhibit No. 203 those expenses applicable to Indiana Gas Distribution Corporation, a large part of which relate to purely distribution sales which are not subject to the jurisdiction of this Commission. Can you give us a suggestion in that regard?

. . . . . .

The Witness: The insignificant amount of operation of Indiana Gas Distribution Corporation can be eliminated, of course. The witness' viewpoint would be that they are so insignificant that they need not necessarily be dignified by a lot of work to eliminate them.

I believe that would be the company's position, would it not, as far as this particular company's operations are concerned?

Mr. Wheat: Certainly it would, it is so infinitesimal in [fol. 9181] comparison to the volume of business done by the company.

The Witness: If the Commission, however, wishes the information, it can be developed. If it would be our job, however, we would like to be relieved of it.

I might say in connection with Exhibit No. 203 that its introduction is not necessarily an assumption on the part of the company, if I understand correctly, that had these subsidiaries been owned by Panhandle Eastern Pipe Line Company for the full year 1941 that the expenses shown by this exhibit would necessarily have been precisely what, the exhibits [shown] them to be.

By Mr. Wheat:

Q. Will you explain what you mean by that?

A. Well, Mr. Wheat, a unified operation might have produced economies or it might, by some hook or crook, brought about increases. You just could not take a dissimilar plan of operation under different management and tack them up one alongside of the other and assume that they would occur in exactly the same manner or fashion under unified operation. So far as we have seen up to this time in trying to merge the operations of Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation into the plan and procedures of our own operations, there is not going to be too much economy result from that. I am only referring to actual expenses without giving any consideration whatever to the increases that are being experienced by not only the two new sub- [fol. 9182] sidiaries but Panhandle Eastern itself, some statement with respect to which has already been made in this record.

Q. Mr. Watkins, in that connection, you have testified in connection with that matter before. It is true, is it not, that any wage increases or other expenses which have increased in volume during the year 1941 are not reflected on this or any other of these exhibits from the books which contain the 1941 total figures on an annual basis?

A. That is quite true.

Mr. Culton: Mr. Watkins, I believe you stated yesterday that the principal portion of the expenses of the Indiana Gas Distribution Corporation represented purchased gas which has now been eliminated in your consolidated statement?

The Witness: Yes, it is not present at all in this Exhibit No. 203 and, on the fact of the exhibit if you will look at lines 27, 28 and 29, page 2, you will observe there that the distribution expense aggregates a total of slightly less than $10,000.

By Mr. Wheat:

Q. By the way, Mr. Watkins, these expenses, as shown on Exhibit No. 203 and also as shown on other exhibits of expenses per books, include the expenses suffered by the company during the particular periods mentioned for all

types of business, including both the sales to industrial or direct sales to commercial or domestic and I think you headed one exhibit, "Other Sales", as well as sales to [fol. 9183] gas distribution companies, is that true?

A. That is quite true and I am particularly impressed with your word "suffered" with respect to some of the expenses.

. . . . . .

Mr. Littman: Mr. Watkins, you would normally expect that the acquisition by Panhandle Eastern of Michigan Gas and Indiana Distribution would result in economies by reason of the combined operations, would you not?

The Witness: I do not believe, Mr. Littman, in this particular that that is a proper conclusion.

Mr. Littman: Do you agree with the statement made by the President of Panhandle Eastern, Mr. Creveling, in the Annual Report for the year 1941, to the stockholders of Panhandle Eastern in which he stated:

"The effect of the acquisition of these properties by your company would be to increase earnings, remove operating problems and enable your management to deal directly with the distributing organizations in the States of Indiana, Ohio and Michigan."

Do you agree with that statement?

[fol. 9184] The Witness: Wholly, yes.

. . . . . .

By Mr. Wheat:

Q. Mr. Watkins, have you also prepared a document headed "Panhandle Eastern Pipe Line Company and Subsidiary Companies 1942 Construction and Retirement Budgets—Summary by Companies" and with additional pages showing data with respect to individual companies?

A. Mr. Wheat, such a document has been prepared and was used in connection with the Board meeting at which the annual routine construction and retirement budget was presented to the Board and the proposals there made were authorized by the Board.

. . . . . .

[fol. 9185] (The document referred to was marked Exhibit No. 204 for identification.)

* * * * * * * *

By Mr. Wheat:

Q. Mr. Watkins, will you explain what is shown on Exhibit No. 204 for identification, please state the date of the Michigan Board meeting at which you state this document was offered and approved?

A. I am not at all sure I can give you the exact date of the Board meeting but it was a meeting held in January or February of 1942. It has been our custom and practice at one of the meetings late in the year or in the very beginning of the next year to present to the Board of Directors the annual routine construction and retirement budget.

Q. Will you state what is shown on this document?

A. This exhibit for identification No. 204 is a summary of the 1942 annual routine construction and retire-
[fol. 9186] ment budgets. It shows that the Board has authorized, as new work for the year 1942, construction items aggregating an estimated total cash expenditure of $462,600 with estimated additions to gas plant of $513,500 of which amount $50,900 is to be taken from the material and supply account.

If I might proceed further without referring to the amounts in each instance as being estimated and if we will understand that they are estimates, it may save some time.

* * * * * * * *

This exhibit for identification No. 204 shows that there have been retirement items authorized involving a cash expenditure of $500,000 and which, if carried out, will reduce the gas plant by $256,000 and that the total of the 1942 authorization from a cash standpoint is $463,100 with the net addition to gas plant of $257,500 and a net charge to retirement work in progress of $465,300. This latter figure will eventually find its way to the appropriate reserve account after the retirements have been consummated.

The summary sheet, being page 1 unmarked, shows likewise that of certain estimated construction expenditures

authorized in the year 1941, unfinished at December 31, which are expected to be carried out in 1942, involve a cash expenditure of $8,080,400, and estimated increase to gas plant of $8,070,125. The detail of these latter amounts is shown on the very last page of Exhibit No. 204 for identification.

[fol. 9187] All of this work is underway and will unquestionably be completed if it is possible to obtain the materials necessary. As an indication of the progress in that respect, the witness would like to refer to the next document he proposes to offer.

Mr. Wheat: Yes. I think possibly we might have that marked for identification as Exhibit No. 205, if that is agreeable, Mr. Examiner.

. . . . . .

(The document referred to was marked Exhibit No. 205 for identification.)

By Mr. Wheat:

Q. Will you state what you had in mind in explanation of the document marked Exhibit No. 205 for identification?

A. The 1941 carry overs, as we term them and as shown by exhibit for identification No. 204, amounted to $8,080,400 at the time this annual routine construction and retirement budget was presented to and approved by the Board of Directors.

Q. You mean Exhibit No. 204 for identification?

A. If I used another number, 204 is correct.

Q. You did not use any number and I just suggested that we identify it.

A. Since its preparation, that is, exhibit for identification No. 204, and since the approval of the proposals therein contained were had by the Board of Directors, certain expenditures have been made on these carry overs and we [fol. 9188] believe in [in] exhibit for identification No. 205, it will be observed that we estimate the unfinished amount of projects approved in the year 1941 which were unfinished at December 31, amounted to $7,433,000 and that the unfinished work on those projects at February 28, 1942, involved an estimated amount of $5,396,000 which shows a substantial expenditure since December 31, 1941, and

likewise a substantial expenditure for additional investment in gas plant since the annual routine construction and retirement budget for the year 1941, which included carryovers amounting to $8,080,000, was presented to the Board.

Q. And it is a fact that that construction is continuing to go forward as rapidly as material and delivery can be had?

A. That is a fact, yes, sir.

(Exhibits Nos. 204 and 205 were received in evidence.)

Mr. Littman: Mr. Watkins, I refer you to the last page of Exhibit No. 204. I note that the larger part of the additions to gas plant for the year 1942 comes under the heading of "Expansion" and totals $7,572,800. Isn't it a fact that the amount of $7,572,800 is being expended for the purpose of acquiring new markets and for the purpose of serving new markets to be acquired in the future?

[fol. 9189] The Witness: As far as I know, Mr. Littman, your assumption is partially correct although not wholly correct.

Mr. Littman: To what extent is it not correct?

The Witness: There are certain expansions or strengthening of facilities on the existing lines in the State of Illinois which may not, of necessity be required for the addition of new markets.

Mr. Littman: That would be rather small?

The Witness: I would not say so at all, sir. That, I believe, is already in the record and there are other witnesses who no doubt can explain that to you more properly than the present one.

By Mr. Wheat:

Q. May I ask a question that might bring that out.

Mr. Watkins, are you referring in what you have just said to the items on the last page of Exhibit No. 204 headed as follows:

205—12,466

"Havrn Loop, Louisburg Loop, Houstonia Loop, Centralia Loop, Mississippi River Crossing, Pleasant Hill Loop, Illinois River Crossing, Glenarm Loop and Tuscola Loop"?

A. Mr. Wheat, I am not an engineer. I am not even an operating man. To the extent that these expenditures are absolutely required for new business or to maintain the status quo of the existing facilities, I am very much afraid I cannot be of too much help to you.

[fol. 9190] Q. But you have testified that the Board has approved these various items?

A. Yes. They have not only done that but the work is underway.

Mr. Littman: And is it expected that this work will continue to completion notwithstanding the fact that the War Production Board issued an order to which reference has been made in this proceeding as Order No. L-31?

The Witness: I should say that is the fact. As to what effect so-called Order L-31 would have on this construction or the company's ability to get materials or any other pronouncement made by any of the defense industries, your present witness is not prepared to answer you.

Mr. Littman: You have not shown in any of your exhibits, particularly the pro forma exhibits, the increased revenues to be derived from these new markets, have you?

The Witness: No. I believe however, there were some presentations made in previous sessions which might have some of that information in them. That, however, is the guess on my part.

[fol. 9225] Mr. Littman: May I take up one matter, however, before Mr. Chamberlain proceeds? I would like to identify and offer certain exhibits with which I am sure Mr. Watkins is familiar.

[fol. 9226] I would like to have marked for identification a document entitled, "Financial Statement of Panhandle Eastern Pipe Line Company and Subsidiary Companies for Period Ended December 31, 1939."

Trial Examiner: This will be marked for identification as Exhibit No. 206.

(The document referred to was marked Exhibit No. 206 for identification.)

Mr. Littman: I would like to have marked for identification as Exhibit No. 207 a document entitled, "Financial Statement of Panhandle Eastern Pipe Line Company and Subsidiary Companies for Period Ended December 31, 1940."

Trial Examiner: This will be marked for identification as Exhibit No. 207.

(The document referred to was marked Exhibit No. 207 for identification.)

Mr. Littman: I ask that a document entitled, "Financial Statement of Panhandle Eastern Pipe Line Company and Subsidiary Companies for Period Ended December 31, 1941", be marked for identification as Exhibit No. 208.

Trial Examiner: It will be so identified.

(The document referred to was marked Exhibit No. 208 for identification.)

Cross Examination—Resumed

By Mr. Littman:

[fol. 8227] Q. Mr. Watkins, I hand you Exhibits Nos. 206, 207, and 208 for identification, and ask you whether those were furnished by you to Mr. Dunn of the staff of the Federal Power Commission at Mr. Dunn's request.

A. They were.

Q. And do those financial statements correctly reflect the books and records of Panhandle Eastern Pipe Line Company and subsidiary companies and do they correctly show what they purport to show?

A. It is my belief they do except for the exhibit marked for identification No. 207 which I observe has the following notation on page 1 thereof:

"This statement complete except for Central Distributing Company."

Q. Will you explain the circumstances surrounding the statement which you just read?

A. Panhandle Eastern Pipe Line Company disposed of its former subsidiary, Central Distributing Company, in the early part of 1941 and, without having made a previous verification, it is my belief that the notation just referred to on Exhibit for identification No. 207 came about through the fact that the financial statements of Central Distributing Company were delivered to the present owners of those companies along with all of the other corporate records for that company and, therefore, is not in this particular copy of the financial statement.

. . . . . .

[fol. 9228] Q. Central Distributing Company is a company which engages wholly in distribution system activities, is it not?

A. That is correct, sir.

Q. And with that single exception, these financial reports are complete and do reflect the books and records of Panhandle Eastern Pipe Line Company and subsidiary companies for those years?

A. With that exception, your statement is correct.

. . . . . .

[fol. 9247]

William G. Mackay, a witness called by and on behalf of the Commission, having been first duly sworn, was examined and testified as follows:

Mr. Littman: Mr. Examiner, before I interrogate this witness, I should like to make a very brief statement with respect to the subject matter concerning which I propose to inquire of the witness.

Panhandle Eastern has presented an exhibit which has [fol. 9248] been identified as Exhibit No. 38 from which the claim is made that Panhandle Eastern Pipe Line Company and subsidiary companies are entitled to have included in the rate base, for purposes of this proceeding, the sum of five and one-half million dollars for what is called interest, ad valorem taxes, and operating expenses attributable to unused capacity, which is alleged to have been present in the pipe line system between April 1, 1932 and September 30, 1936.

On one or two occasions counsel for Panhandle Eastern have referred to this exhibit as the basis for a claim for going concern value.

[fol. 9249] Direct Examination

By Mr. Littman:

Q. Will you please state your full name?

A. William G. Maguire.

Q. What is your address?

A. Legal residence or where I spend most of my time?

Q. Both.

A. Well, Fredericksburg, Virginia; and 120 Broadway, New York.

Q. What is your present business or occupation?

A. I am president of Missouri Kansas Pipe Line Company.

Q. You are under subpoena issued by the Federal Power Commission to testify in this proceeding?

A. I am.

Q. And your appearance here is in response solely to that subpoena, is it not?

[fol. 9250] A. It is.

Q. Are you a director of Panhandle Eastern Pipe Line Company?

A. I am.

Q. How long have you been a director in that company?

A. I was a director from some time in October, 1930, until some time in March, 1932, and from some time in October, 1937, until the present date.

Q. I believe you stated a moment ago that you were the president of Missouri Kansas Pipe Line Company which has been sometimes referred to in this proceeding as Mokan?

A. That is right.

Q. How long have you been president of that company?

A. Since some time in September, 1937.

Q. Had you, previous to that time, occupied an office in that company?

A. No office.

Q. Mokan is the owner of 339,450 shares.

A. (Interposing) It is four hundred seventy-five.

Q. 339,475 shares?

A. That is right.

Q. (Continuing)—of the common stock of Panhandle Eastern Pipe Line Company?

A. That is correct.

Q. And that represents 42 percent of the outstanding [fol 9251] common stock; is that right?

A. I think it does.

Q. And is it a fact that Columbia Oil and Gasoline Corporation owns beneficially 440,326 shares of the common stock of Panhandle Eastern?

A. That is a subject we are disputing in the Federal Court in Philadelphia, whether they own that many shares or not.

Q. I am reading at this moment from page 69 of Exhibit 145, which is the company's registration statement No. 2-4919, filed before the Securities and Exchange Commission, which also shows that Columbia Oil and Gasoline Corporation holds 50.1 percent shares of the common stock. You are familiar with that registration statement, are you not?

A. I am familiar with the registration statement; yes.

Q. But there is some dispute about the matter?

A. Very decidedly.

Q. Now, the balance of the common stock is distributed in the hands of the public, isn't it?

A. That is right.

Q. So that Mokan is at present and for some time, I take it, it has been a minority stockholder in Panhandle Eastern?

A. That is what—yes, a minority—they are not the [fol. 9252] controlling stockholder at the moment.

Q. Who is the controlling stockholder?

A. Well, the S. E. C. says Columbia Gas and Electric Corporation.

Q. Did Mokan at one time own all of the common stock of Panhandle Eastern?

A. That is a subject for dispute, too, but I say yes, they did at one time.

Q. Isn't it a fact that Mokan organized Panhandle Eastern Pipe Line Company?

A. Yes, sir.

Q. That was in what year?

A. As Panhandle Eastern, I think some time in April of 1930.

Q. Prior to that time the name of the company was what?

A. I think Texas Interstate, or Interstate Natural Gas Company. I am not sure. I wasn't connected with it at the time.

Mr. Wheat: Texas Interstate Pipe Line Company.

The Witness: Texas Interstate Pipe Line Company.

By Mr. Littman:

Q. Well, it was that company which was organized originally in 1929 by Mokan; isn't that correct?

Mr. Wheat: Pardon me, Mr. Littman. I am told that I am not quite correct in the statement I made. At first [fol. 9253] there was no word "Texas" there, but that is all shown in Exhibit 145.

Mr. Littman: Yes.

Mr. Wheat: I just didn't want my statement to go on the record being somewhat incorrect.

Mr. Littman: Well, those were merely name changes, weren't they? May we not agree on that?

Mr. Wheat: I suppose they were. I don't know. Mr. Maguire can probably say.

The Witness: I would say not.

By Mr. Littman:

Q. At any rate, you are aware, are you not, of the fact that Mokan caused Panhandle Eastern Pipe Line Company to be formed and organized?

A. I don't think there is any doubt about that.

Q. No doubt about that?

A. Not in my mind, there isn't.

Q. Until what date in 1930 did Mokan control Panhandle Eastern?

A. That is kind of a tough one, too, but I would say October 23, I think that was the closing date with Columbia Gas and Electric Corporation.

Q. Up to that time there is no question but that Mokan was in the driver's seat, so to speak, in so far as Panhandle Eastern is concerned?

A. I don't think there is any—well, let it go at that. Yes, I would say so.

[fol. 9254] Q. And after that time, who controlled Panhandle Eastern?

A. Well, we thought that it was going to be a 50-50 control. That is, I did.

Q. Who do you mean by "we"?

A. Well, Mokan, but I will specify now what I thought at the time. I was not connected with Missouri-Kansas except in an advisory capacity. I was paid just like a lawyer would be paid. When I made the original agreement with Mr. Gossler, and I am the one that did it, in 1930, there was a distinct understanding that they would have four directors, we would have four directors, and there would be an odd man.

Q. By "they" you mean Columbia Gas and Electric Corporation—

A. (Interposing) I mean Columbia Gas, yes.

Q. (Continuing) —interests?

A. Well, the option they had ran to Columbia Oil and Gasoline, but all our dealings were with Columbia Gas and Electric Corporation, officially. And I understood that the bonds that were issued, 20,000,000, were to be sold publicly. I found out some time in November of 1930 that Columbia Oil and Gasoline Corporation had purchased the bonds directly from the National City Company.

Q. Now, do you recall an agreement dated September 17, 1930, which has been referred to as a tri-party agree-
[fol. 9255] ment between and among Mokan, Columbia Oil and Gasoline Corporation, and the National City Company?

A. I do.

Q. Well, then, it was after October 23, 1930, or thereabouts, that Missouri-Kansas ceased to control Panhandle Eastern, or will you state the fact?

A. They most certainly did cease to control. Within about two weeks after the closing date of the agreement we learned of Mr. George Howard, who had been selected as the odd man, he had been elected not only a member of

the Board of Columbia Gas and Electric Corporation, but a member of the Executive Committee, as well.

Q. You referred to Mr. Howard as the odd man.

A. That is right.

Q. What do you mean by that?

A. Well, if there had not been an odd director, if there was—if both parties disagreed all the time, there would have to be an arbiter of some kind, wouldn't there?

Q. I see. And on and after October 23, 1930, who did control Panhandle Eastern, in fact?

A. Columbia Gas and Electric Corporation.

Q. When did you first become interested in the pipe line project now owned by Panhandle Eastern?

A. March of 1930.

Mr. Wheat: When you were speaking, Mr. Littman—[fol. 9256] just so that we may be clear—when you said "you" in that question, do your mean the witness or the company which he was then representing?

Mr. Littman: I meant the witness.

Mr. Wheat: The witness.

By Mr. Littman:

Q. Did you so understand my question?

A. Yes.

Q. As to when you first became interested.

A. That is correct.

Q. Did you testify before the Federal Trade Commission in November of 1935, in that Commission's investigation of certain electric power and gas utility companies, particularly with respect to Panhandle Eastern Pipe Line Company and associated companies?

A. I did.

Q. Mr. Magnire, I shall read from portions of the transcript of those proceedings contained in Document 92, Part 82, of the Senate, of the 70th Congress, First Session, which document was filed with the Secretary of the Senate on November 15, 1935, and which is entitled "Utility Corporations—letter from the Chairman of the Federal Trade Commission meeting in response to Senate Resolution No. 83, 70th Congress, a monthly report on the electric power and gas utility inquiry—No. 82, history of natural [fol. 9257] gas and natural gas pipe lines in United States,

and reports on Columbia Engineering and Management Corporation, Colorado Interstate Gas Company, Canadian River Gas Company, Mississippi River Fuel Corporation," and I shall hand you a—I herewith hand you a copy of that report so that you may follow portions of your testimony which I propose to read. (Handing)

A. All right, sir.

Q. I trust you will correct me at any time, if I should misread or misspeak myself, as I occasionally do.

A. All right, sir.

Q. I refer you to page 301, et seq., of this document which is a transcript of your testimony before the Federal Trade Commission for the afternoon session of November 12, 1935.

I shall start with the seventh paragraph.

A. On 301?

Q. On page 301.

A. Yes.

Q. You understand I shall endeavor to read only those portions of that transcript which I feel are relevant to this present inquiry.

A. All right.

Q. "Question: Did you, after concluding these firm commitments with the North American interests, North American Light and Power, then arrange to see Mr. [fol. 9258] Gossler, in New York;

"Answer: I did."

Before proceeding with the next question, I am going to ask you to identify for the purposes of this record Mr. Gossler.

A. Mr. Gossler at the time of which Mr. Littman speaks was president of the Columbia Gas and Electric Corporation.

Q. I shall continue reading.

Next question: "Can you say about when it was that you saw him first?

"Answer: I saw Gossler early in May, but I talked to him on the telephone, oh, I should say three or four days after my first visit with Chamberlain and Studebaker. I

can place the exact date for you. It was the day that United Corporation trade was made, and I talked to him on the phone. He told me why he could not see me that day, but would I be good enough to see Munroe, and if I could stay over until the next day, he would like to see me."

I shall ask you to state the year in which you saw Mr. Gossler?

A. May, 1930.

Q. Will you please identify for us Mr. Monroe, to whom you referred in your testimony?

A. Mr. Charles A. Munroe at that time, I believe—I am quite sure—was a director and a member of the com- [fol. 9259] mittee of Columbia Gas and Electric Corporation.

Q. Now, at this time, to wit, May of 1930, Mokan was in control of Panhandle Eastern?

A. It was.

Q. I shall continue reading your testimony:

"Question: Did you then see Munroe?

"Answer: I did.

"Question: Will you tell us the substance of your conversation with Mr. Munroe?

"Answer: Well, I knew Mr. Munroe rather well, and he told me that I had undertaken—"

A. Wait a minute. "And I told him."

Q. I am sorry, "—and I told him that I had undertaken a commission from Missouri-Kansas Pipe Line Company; told him what I knew about Missouri-Kansas Pipe Line Company; told him that we were going to build a line to Indianapolis."

A. "At least to Indianapolis."

Q. "At least to Indianapolis."

A. That is very important, that "at least."

Q. "He told me, in his own way, that I was crazy.

"Question: That you were what?

"Answer: Crazy; and that Parish was perhaps crazier, because, if he had as much money as I said he had, that he ought to keep it, and stay out of the natural gas busi-

[fol. 9260] ness, and that, anyway, Indiana was their territory. I asked him how he figured that; as far as I knew, the only place, the only towns that Columbia served in Indiana was a little gas up at Muncie. Well, he said that that didn't make any difference, Indiana was their territory."

Now, will you explain what you mean by the term "their territory"? Do you mean Columbia territory?

A. That is what Mr. Munroe meant.

Q. I shall continue.

"Question: You mean, to be exploited when they got around to it?

"Answer: That is it.

"Question: Although they were not then serving it?

"Answer: That is right; and we talked about Indianapolis. He, of course, knew that"

A. "That I knew about."

Q. "—that I knew about the Citizens gas situation. We discussed that, at length, and he was distinctly hostile.

"Question: Did you go back to Chicago without seeing Mr. Gossler on that occasion?

"Answer: I don't recall, but I saw Mr. Gossler within two or three days, now. Whether I went back to Chicago in the meantime, I do not know, but I do not think that I did, but anyway, Mr. Gossler called me at my hotel, and asked me, would I come down to see him and discuss the [fol. 9261] subject that I had discussed, the previous day or so, with Mr. Munroe."

Did you give that testimony which I have read, before the Federal Trade Commission?

A. I did.

Q. I now refer you to the middle of page 303.

"Question: When you arrived in New York, after that trip, did you get in touch with Mr. Gossler?

"Answer: I did."

Now, will you please fix the date, approximately?

A. Lord, that is 12 years ago.
Q. Well, in what year?
A. No., 1930.
Q. Very well.
A. Early in 1930.
Q. Early in 1930.
A. In May of 1930.
Q. That is close enough.
A. Yes.

Q. "Question: Did you discuss with Mr. Gossler the subject matter of your conversation previously, with Mr. Munroe?

"Answer: Yes. He brought it up, and said it was very interesting, but it was ill-advised; that he had spent some twenty-odd years building up the Standard and Natural Gas Securities, and that a venture of this kind would just [fol. 9262] tend to destroy his work of 20 years. I could not see why and I told him why I could not see why.

"Question: What did you tell him?"

A. May I make a suggestion right here? There must be a misprint.
Q. Very well. Make any correction that—
A. The Standard—I don't know what that means—the "Standard and Natural Gas Securities." What I must have said was "Standard Natural Gas Securities."
Q. Without the "and"?
A. Yes, without the "and." Without the separation.
Q. Thank you. And feel free to interrupt at any time to correct the transcript.
A. All right.

Q. "Question: What did you tell him?

"Answer: That we could sell the output of the line, that we had very cheap gas, that we could sell him the gas at Indianapolis, or east thereof, a little cheaper, probably, than he was buying it in the field, if we had to.

"Question: Was anything said on that occasion about territory?

"Answer: Yes. He reiterated that Indiana was their territory."

"Question: The whole of the State, or some part of it?

"Answer: That he had made arrangements with Mr. [fol. 9263] Insull; the time was not ripe, yet, but that the Midland United business was his business, and that we should stay out of it.

"Question: Midland United was Insull, was it?

"Answer: At that time; yes."

A. Now, it [illegible] interrupt.

Q. Very well.

A. This is not as clear as it should have been. That is about the time that he made the famous deal with the—I think it was Reserve Gas Company or the Hope Natural.

Q. By "he" you mean whom?

A. Gossler. And he had paid 26½ cents at the river for gas. That is what I meant. At the time we could sell it to him cheaper than he could buy it in the field. He was buying it at 26½ cents.

Q. Where was he buying it at that price?

A. It was the division, the imaginary line, the Ohio River between Ohio and West Virginia, the Reserve Ga—

Q. By "he" you mean Gossler?

A. That is right. Columbia Gas is what I mean when I am talking about the field.

Q. I see. Now, will you please turn to page 305 about one third of the way down the page.

"Question: Do you recall going to New York about that time for the purpose of an appointment with Mr. Barthold?

"Answer: Yes."

[fol. 9264] Will you please identify him for the record?

A. Mr. Barthold was vice president of the Consumers Power. He was vice president of the Commonwealth and Southern Corporation, and was president of the Central Illinois Light, and I don't recall what the Springfield property was called. The name has since been changed, and they are all in one. That is, the properties in Illinois, Springfield and Peoria is now Central Illinois Light.

Q. I shall continue reading your testimony.

"Question: What did the appointment relate to?

"Answer: The contracts for Peoria and Springfield; and we had, in the meantime, gone into the Peoria and Springfield markets, and had tied up most of the industrial consumers, particularly the Keystone Steel & Wire.

"Question: Do I understand that Mr. Barthold's company, there at Peoria, made an agreement to take gas from Missouri-Kansas?

"Answer: Yes, sir, they had a verbal agreement.

"Question: Did you report to Mr. Gossler the successful conclusion of your negotiations with the North American Light & Power people?

"Answer: I did.

"Question: What did he have to say about it?

"Answer: He thought the North American Light & [fol. 9265] Power people made a great mistake.

"Question: Is that what he said, or is that what he thought?

"Answer: No, that is what he said.

"Question: Did he enlarge on that, as to why they had made a mistake?

"Answer: Yes; that they would put the 'hall mark,' I think was his exact expression, 'put the hall mark on Missouri-Kansas' enterprise,' and it was a 'raid', he considered it a 'raid', and if such things happened, he did not know where it would stop."

Now, have I read correctly this far that portion of your testimony?

A. You certainly did.

Q. Now, will you please fix the approximate time that this latter portion of your testimony related to?

A. That should be around the early part of June, 1935.

Q. 1935?

A. Yes; 1930, I mean. I am sorry.

Q. You were testifying before the Federal Trade Commission in 1935.

A. That is right.

Q. Now, I ask you to turn to page 306 about the middle of the page.

"Question: During the time that you were carrying on [fol. 9266] those negotiations with Mr. Burrows, were you also in touch with Mr. Gossler, in New York?

"Answer: I was.

"Question: And about when was that, now?

"Answer: This would be the latter part of May. We are about there, now. By that time, Mr. Gossler, I believe, was convinced the line was going to be built. He then wanted to buy gas, or suggested that if a proper price could be made, that they would take gas. Also about that time is when I introduced Parish to him, the first time."

Now, will you please fix the year in which this occurred?

A. 1930.

Q. And will you please identify for us Mr. Parish?

A. Mr. Parish at that time was president of Missouri-Kansas Pipe Line Company.

Q. And he was one of the men who conceived of this project, was he not?

A. You mean of Panhandle Eastern?

Q. Yes.

A. No, he did not.

Q. Well, what was his connection with Panhandle Eastern, just briefly, so that the record may identify him.

A. He was the president of Missouri-Kansas Pipe Line Company and he was the president of Panhandle Eastern Pipe Line Company at that time, but that is not your [fol. 9267] question. You asked: did he conceive of it.

Q. Yes.

A. He didn't.

Q. He did not?

A. He did not, no.

Q. Well, he certainly attempted to promote it, did he not, at that time?

A. Oh, yes. He was—maybe I misconstrued your question.

Q. I think you were following my question pretty carefully.

A. All right.

Q. He did not conceive the enterprise, but he did promote it?

A. He did not conceive the particular enterprise that you were talking about.

Q. What enterprise did he—

A. (Interposing) He intended to go north. He raised money, I since had learned, by selling stock on the open market. He purchased the small gas reserves down in Texas back, I think, in '29. Perhaps some early in '30, and his idea at that time was to build a line that would closely duplicate what is now the Northern Natural Gas Company.

Q. Natural Gas Pipe Line Company of America?

A. No, the Northern Natural.

[fol. 9268] Q. Northern Natural?

A. That is the line up to Des Moines, Omaha, and so forth, up to the Twin Cities.

Q. In other words, it was originally planned that the pipe line company would go up in that direction?

A. That is correct.

Q. Will you state for the record briefly why the line did not go up in that direction?

A. Well, he encountered a great deal of difficulty, but I thought a better place to build the line was to built it east where they used gas.

Q. In other words, build it as it is now built?

A. That is correct.

Q. And that, of course, came about?

A. It did.

Q. Very largely through your efforts, did it not?

A. I think the record will show that.

Q. The record will show that that is a fact?

A. I think it will.

Q. And as a matter of fact, you negotiated certain gas sales contracts that were entered into between Panhandle Eastern and Missouri Power and Light Company and Illinois Power and Light Company?

A. The company that I was president of at that time handled those transactions.

[fol. 9269] Q. I shall continue reading your testimony where we left off. A. All right, sir.

Q. "Question: And would you say that was along early in June, 1930, or thereabouts?

"Answer: It was either the latter part of May, or early in June."

A. What page are you on?

Q. 306, near the bottom.

A. All right. I have it now. And then the next is: "At this meeting—"

Q. That is right. A. All right.

Q. "Question: At this meeting with Mr. Gossler, when you introduced Mr. Parish, what was the subject or scope of the conversation?

"Answer: Mr. Gossler told Mr. Parish that Indiana was their territory, told him again. He said that they had been considering building a line east from the Mid-Continent field, and he opened the drawer of his desk and said, 'Here is the line'; and he said they had a lot of gas in Arkansas, northern Arkansas, and that he was going to build that line over to Cincinnati, and there was no use of our building a line across Missouri and Illinois, which he was going to do, approximately the same thing. I [fol. 9270] pointed out that Josh. Cosden was about the only one I knew who said that there was any gas in northern Kansas in large quantities—"

A. Northern Arkansas.

Q. "Northern Arkansas in large quantities, and that tied up with Mr. Cosden. He said that did not make any difference, they had plenty of gas, and they were going to build the line; there was no need of duplication of effort. I pointed out that our line certainly went through a better industrial territory, and that his line would go through the Ozarks and Egypt, and southern Illinois, and I did not quite know who he was going to sell the gas to. He laughed about that and said maybe he could join us, on some fair sort of proposition.

"Question: Was there a time, about then, when Mr. Gossler discussed with you the effect of this projected

line of the Missouri-Kansas upon the industry as a whole in the Middle West? Answer: Yes, sir.

"Question: Will you state what he said, in that connection?

"Answer: He said it would demoralize it; that it constituted a 'raid.' I asked him how. He told me we went within a few miles of Kansas City, the projected line will go within a few miles of Kansas City; that was Doherty's territory; that we would go within a few miles of St. [fol. 9271] Louis, and that was Christy Payne's territory; we were projecting a line to Peoria, and that was the Chicago line's territory; we were going over into Indiana, and that was his; that it should be stopped; that it would influence the price of gas securities and be generally demoralizing."

Now, who is the Mr. Doherty to whom you referred?

A. He is dead. He was Henry L. Doherty, Cities Service Company.

Q. And who is Christy Payne?

A. Mr. Christy Payne is retired. He was vice president and treasurer of the Standard Oil Company of New Jersey.

Q. And to what line did you refer by the "Chicago Line"?

A. That is called now the Natural Gas Pipe Line Company of America.

Q. Thank you.

I shall read on.

"Question: I am showing you a page of the memorandum that you previously identified, and I will ask you whether you can give us any more details of that conversation?

"Answer: Yes. I recall very well, now, but I have already given you part of that.

"Question: All right.

"Answer: He used his favorite expression, that 'We [fol. 9272] all live in glass houses,' and told me that the Standard Oil folks and Cities Service were very much

disturbed by this Panhandle-Eastern line; also, Mr. Insull. They were disturbed about their rate structure; that he thought he could work out that disturbed situation better than we could, if he went along with us; and he cautioned me to preserve the utmost secrecy about any talks or dealings that I had had with him on the subject; that he would try to work it out.

"Question: Did he say why he wanted it kept secret?

"Answer: He was disturbed. He wanted us to stay out of Indiana; he had a deal with Mr. Insull, for the Midland United. There was some question of whether the Chicago line would be built down in Indiana, or sell gas to Midland United at the State line; that he wanted that; that Mr. Insull and Mr. Doherty had always maintained that he should stay east of the Ohio-Indiana line.

"Question: Did he make any statement with reference to the strategic qualities of this line, based on the map?

"Answer: Yes. He told me, if I would take a map of the Central United States and a pencil and a ruler, I could not draw a line to raise more hell than that one.

"Question: Was there any discussion on that occasion with reference to the Detroit market?

"Answer: He knew that I had a tentative agreement [fol. 9273] with the Great Lakes Steel Co., at Detroit. I had made them a price on gas for their open hearths and soaking pits, at Detroit, and had gotten a commitment from them.

"Question: Did you discuss it, on that occasion?

"Answer: Yes, we did, and that was also his territory.

"Question: Was there any statement with reference to whether or not other interests also claimed that territory, the Detroit market?

"Answer: Yes. Mr. Doherty at that time was considering building a Chicago line over to Detroit, through southern Michigan.

"Question: Did Mr. Gossler on that occasion caution you against any particular individual, as not being safe to

give the information to, that you were discussing between you?"

The latter portion is not germane here. But have I correctly read from your testimony, and was that a part of your testimony before the Federal Trade Commission?

A. There is not much doubt about it. I will say this: This is the first time I read it, though, in seven years. Yes, I gave that testimony.

Q. I will ask you to turn to page 331 of the Federal Trade Commission report No. 82, at the top of the page, by Mr. Wooden. A. I have it.

Q. "Question: At this conference that you have just [fol. 9274] described, Mr. Maguire, attended by a considerable number of people, were any statements made with reference to the matter of division of territory?"

I am going to ask you to fix the approximate time of that conference.

A. Just a minute. I have got to read back.

. . . . . .

By Mr. Littman:

Q. Mr. Maguire, have you checked the transcript to refresh your recollection of the date of the conference to which I referred?

A. In September of 1930. I think it was at the Savoy Plaza, a hotel.

Q. I shall continue reading from page 331 of the transcript of testimony before the Federal Trade Commission:

"Answer: Mr. Munroe wanted Missouri-Kansas to stay out of the—

"Question: Do not say what he wanted. You may say [fol. 9275] what he said.

"Answer: Oh. Mr. Munroe demanded that Missouri-Kansas stay out of the State of Indiana. I said we were building a line in Indiana, then, to Terre Haute, from Evansville, north; we were already operating in the State, or about to, and that we would not stay out of Indiana.

"Question: Was that the extent of the statements that were made regarding the subject?

"Answer: The extent of the statement I made.

"Question: I am asking you what anybody at that meeting said on the subject.

"Answer: Russell spoke up and said we were entitled to an operating situation.

"Question: Meaning by 'we,' whom?

"Answer: Well, Russell was speaking, that Missouri Kansas was entitled to an operating situation; that he thought that my statement was right."

I would like to have you identify Mr. Russell for us.

A. Mr. Russell at that time was vice president of the National City Company of New York, the people that bought the Panhandle bonds.

Q. And that company was one of the parties to the September 17, 1930, contract? A. That is right.

Q. I shall continue reading:

[fol. 9276] "Question: Does that cover the full extent of the statements made on the subject of that meeting, as you now recall them?

"Answer: Well, a little later on, when the question of price of gas to be bought by Missouri Kansas and by Columbia, came up, and there was a question of where we were going to sell our 20,000,000 feet arose.

"Question: That was the 20,000,000 feet provided for in the contract?

"Answer: September 17—in the proposed contract.

"Question: Had it also been provided for, in the option contracts, during the summer?

"Answer: No. Columbia, at that time, were insisting on 30,000,000 feet a day, at the terminus of the line, and covered it by a letter of Mr. Pew to Missouri-Kansas, all through the negotiations. Mr. Munroe asked Mr. Parish within my hearing, not to do anything to disturb Mr. Insull's situation in Indiana. Parish told him that he would

consult with them, or some words to that effect—an evasive answer.

"Question: Do I understand that, following the September 17 contract, you became a member of the board of directors of the Panhandle-Eastern? Answer: I did.

"Question: Who were the other members of that board, [fol. 9277] at the time you were?

"Answer: At the start?

"Question: Yes.

"Answer: On the Columbia side, Mr. Crawford, Mr. Gossler, Mr. Fred Crawford, and Mr. Munroe. On the Missouri-Kansas side, Mr. Parish, Mr. duPont, Mr. Russell, and myself; and Mr. George H. Howard, as the so-called 'neutral director'.

"Question: Was that Mr. Russell, of the National City Company? Answer: Yes, sir.

"Question: You attended meetings of the Board of Directors during the period from late 1930 and through 1931? Answer: I did.

"Question: In a general way, was there considerable difference of opinion between the various factions on the Board, as to the proper policy to be followed?

"Answer: From the very first meeting.

"Question: What were the differences? What did the differences relate to?

"Answer: Started originally on territorial differences, and Missouri-Kansas had taken several industrial contracts in Indianapolis for gas. That was the first difference. The second meeting, as I recall it, was a question of the extension from the then terminus of the line to Detroit, the proposed extension.

[fol. 9278] "Question: Tell us about that. Answer: '—"

A. "About that last."

Q. "'—about that last.

"Answer: Gossler stated that it would be desirable to extend the line to Detroit, so that the Columbia—"

"A. "As that."

Q. "—as that the Columbia, Cities Service, Consumers Power, and possibly Seagraves should have an interest in it, and I recall asking him, 'Where do we get off?' He said we were not entitled to any interest.

"Question: Did this occur at the meeting of the Board of Directors? Answer: Yes, sir.

"Question: And when would you say that came up, first?

"Answer: I would say in a November meeting—November or December, 1930.

"Question: 1930? Was that also about the time that Seagraves was projecting a line toward Detroit from Kentucky?

"Answer: No. It was after he had sold out.

"Question: Very shortly after, wasn't it?

"Answer: A month or so.

"Question: Did Mr. Gossler undertake, on behalf of the Panhandle, to negotiate for service or supply to Detroit?

"Answer: Well, of course, he had his 30,000,000 fee [fol. 9279] that he had contracted for.

"Question: Did you negotiate for Detroit service in any personal way? I mean, did you personally negotiate for a supply at Detroit? Answer: Back in 1930; yes.

"Question: Did you continue your negotiations to the point that you wished to carry them, or did you discontinue them?

"Answer: Discontinued them, in September, at Mr. Gossler's request.

"Question: Did you do it merely at his request, or what was the consideration that led you to accede to his request?

"Answer: Well, his talk, at that meeting at the Savoy Plaza, we were going to go along as partners, real part

ners, and that Detroit would take care of itself very shortly, and to just leave it alone for the time being; gave me—certainly gave me the impression that we were partners.

"Question: Had you made any substantial progress in your negotiations in Detroit, when you discontinued?

"Answer: Yes. We had that key industry, there. They had stayed with us all through the summer—National Steel Company.

"Question: What do you mean, stayed with you all through the summer?

"Answer: Well, Mr. Seagraves was busy in Detroit in [fol. 9280] July and August, contracting or making tentative contracts with the various industries in Detroit. The National Steel would use more than any other two."

I will ask you to identify Mr. Seagraves.

A. That would be quite a job. At that time Seagraves was a partner in a firm down in Texas by the name of Moody Seagraves. That is about all I can tell you about him.

Q. Very well. I shall continue.

Trial Examiner: Banking investment firm of Ed Porters in Galveston?

The Witness: That is right.

By Mr. Littman:

Q. I shall continue.

"Question: Did you negotiate a contract with the National Steel?

"Answer: Never got a contract form. It was a commitment from the officers of the National Steel to me that if, as, and when we built a line to Detroit, they would give us their business, at a certain price.

"Question: Was that reduced to writing?

"Answer: It was confirmed by letter; yes, sir.

"Question: Now, come back to this matter that you stated a moment ago, to the effect that the first division

of opinion manifesting itself in the Board of Directors of the Panhandle was over territory. How soon did that [fol. 9281] question arise after you went on the board?

"Answer: Either the first or second meeting.

"Question: What was the position of the Missouri-Kansas directors on that question?

"Answer: That there were no territorial arrangements of any kind whatever.

"Question: Is that the consistent position taken by the Missouri-Kansas representatives on the Board all the way through?

"Answer: The only one they could take. There never was any agreement."

Have I correctly read from your testimony before the Federal Trade Commission?

A. You have.

Q. I call your attention now to the middle of page 340 of the Federal Trade Commission report No. 82:

"I say in my memorandum to Mr. Hillman, of the same date, in reply to this: 'What he did not tell you was that the gas he refers to, i. e.—' "

A. Wait a minute. You say page 340?

Q. Yes. Just below the center of the page.

A. I have got a question in my mind here: "What statement did you make in your memorandum of April 29 to Hillman—"

Q. Very well. We can go back there if you wish.

A. No, I don't want to go back. We will go ahead.

[fol. 9282] Q. We will start with the question, then.

"Question: What statement did you make in your memorandum of April 29, to Mr. Hillman, with regard to paragraphs numbered 12 and 13, in his memorandum?

"Answer: Mr. Hillman states, in his memorandum:

"'I outlined to them—'

"that would be Mr. Gossler and Mr. Munroe—

—that the additional supply of cheap gas in Kentucky ought to be taken care of, that they could divert their other gas east, and the towns in Indiana and in southern Michigan ought to be developed in time to be big enough to take all of the Texas gas, as well as the Kentucky gas. He reiterated the enormous amount—

"that would be Mr. Gossler reiterated the enormous amount—

"'of reserve gas lines they had, and indicated that there was no room for the Kentucky gas, and that, with the amount of gas developed, anybody could go down and gather up a million acres of gas lands and leases.

"I say, in my memorandum to Mr. Hillman, of the same date, in reply to this:

"'What he did not tell you was that the gas he refers to, i. e. eastern Kentucky, West Virginia, and so forth, costs from 12 to 15 cents per thousand cubic feet at the well, and that Texas gas and western Kentucky gas can be delivered to Indiana consuming points at far less cost [fol. 9283] than eastern gas.'

"Question: Does that cover both those paragraphs?

"Answer: No, sir. In paragraph 13, in Mr. Hillman's memorandum, Mr. Gossler reiterates to Mr. Hillman that he wants him, Mr. Hillman, to know all about the difficulties of the Panhandle project, but that he wants to help bring about the success of the Panhandle line. He went over the history of their development and connection with contracts, in the purchase of Panhandle-Eastern line, and how it was put in, not only merely as to its supply of additional gas, but largely to eliminate competition.

"Question: What did you say to Mr. Hillman?

"Answer: Here, that the very fellow that they had bought half a line from, was starting in when they needed all the customers they had, and was starting to take the trade away from them.

"Question: That is from the Hillman memorandum?

"Answer: Yes, sir. Now, my memorandum:

"The reason that they invested in the Panhandle Eastern system was to protect their rear. Messrs. Gossler, Gregory, Pew, and F. W. Crawford have all admitted to me that Panhandle gas, at actual cost, could be delivered at the Indiana Ohio State line for a less cost, if the line is working at capacity, per 1,000 cubic feet, than West Virginia, eastern Kentucky can be put into the line at the wells."

[fol. 9284] Will you please identify for the purposes of this record the Mr. Hillman referred to?

A. Mr. Hillman at that time was Chairman of the Board of the Peoples Pittsburgh Trust Company, also president of the Hillman Coal and Coke and various other enterprises in Pittsburgh.

Q. When you made this statement: "The reason that they invested in the Panhandle Eastern system was to protect their rear," to whom do you refer by "they"?

The Witness: Will you read that?

(The pending question, as above recorded, was read by the reporter.)

A. Columbia Gas and Electric Corporation.

By Mr. Littman:

Q. Now I have one last—I want you to bear with me on this because it is the last one, but it is the longest of the items I am going to quote. A. All right.

Q. Commencing at page 342 about one fourth of the way down.

"By Mr. Wooden:

"Question: In this exhibit, you describe your conversation that you had with Mr. C. A. Munroe and Mr. Stanley Russell. Will you give us, briefly, the substance of that conversation?

[fol. 9285] "Answer: First Mr. Munroe opened the conversation by saying that he was deeply concerned over the had been deeply concerned over the affairs of the Panhandle Eastern for some time; had now completed his investigation, and, while he could not verify the attached memorandum—he showed it to us at that time but it, in his opinion, would represent what could be ex

pected from the operations of the Panhandle Company for the year 1932. Russell laughed at Mr. Munroe's memorandum. I spoke up, and pointed my finger to an item that I am marking X, on the attached exhibit."

"Question: Is that attached?

"Answer: I don't see any. No 'X' on this one. But it evidently refers to the amounts of gas Columbia would take during the year 1932. Mr. Munroe made the remark, 'Unless the Columbia Company takes gas in large quantities during the coming winter, the line is sunk.' Said the Columbia Company was opposed to taking gas from Panhandle Company in large quantities, because they had so much of their own.

"Question: Let me interrupt you there, and divert your attention momentarily from the memorandum. As a participant in the negotiations, under which the bonds were floated with the National City Company and the September 17 contract was consummated, calling for 30,000,000 feet to Columbia—

"Answer: Firm contract for 30,000,000 feet.

[fol. 9286] "Question: Do you know why that amount of gas was included in the contract, that 30,000,000 feet?

"Answer: Yes, sir. Originally—well, two reasons: first, all through the negotiations with Columbia they had demanded 30,000,000 feet at the terminus of the line at Indianapolis. Then, the original bond issue was to be $30,000,000. Six percent on that is $1,800,000 a year.

"Question: $30,000,000? Answer: Yes, sir.

"Question: Turned out to be $20,000,000?

"Answer: Yes, sir. That is another story, by itself. The 30,000,000 feet, on the 70 percent load factor would service those bonds and the sinking fund.

"Question: In other words, that is how the 30,000,000 feet was arrived at? Answer: Yes, sir.

"Question: For the purpose of servicing the bonds?

"Answer: Yes, sir; and they wanted the gas, besides.

"Question: Now, what is that Mr. Munroe was saying here, in November, 1931?

"Answer: That they had more gas than they could handle of their own.

"Question: And as I recall it, unless they took their gas—

"Answer: Unless they took the gas, the line would be [fol. 9287] sunk.

"Question: Tell us a little more about this proposition that the bond issue originally was to be $30,000,000 instead of $20,000,000, as it turned out to be?

"Answer: That was at the September 15 meeting."

Mr. Maguire, you now are referring to September 15, 1930? A. That is right.

Q. I read on.

"Mr. Gossler had given his little talk about why things had been as they had been; we could now go ahead and finance; mentioned that Mr. Russell had agreed to underwrite thirty to thirty-five million; that he could see where the thing could be a success. He mentioned that they would have the eastern line, this Philadelphia line, about finished by the time the Panhandle Eastern was—"

A. Now, if I may interrupt, "their eastern line" it should be, not "the eastern line."

Q. "Their eastern line," I am sorry. I will read the sentence again.

"He mentioned that they would have their eastern line, this Philadelphia line, about finished by the time the Panhandle Eastern was; that through their connections with the United Corporation they would have the Philadelphia load by the time it was completed; that very large [fol. 9288] quantities of Panhandle gas could be taken and he was not very fearful about the charges. That would be about, oh, 9 o'clock. Along about 11 o'clock that evening, Mr. Gregory and Mr. Munroe said that they were receiving very favorable reports from Mr. Leonard, who was their man in the field from their engineers, and that the line was not going to cost anything like we thought

it was going to cost; that they could probably finish it for $30,000,000, instead of the estimate that we had always gone on, of 40 to 45. I saw what was coming. I said I thought that was ridiculous, that was too big a difference; what did they have in mind? Mr. Gregory said that he thought $15,000,000 was enough of the senior issue on this line. Mr. Munroe agreed, and I turned to Russell I asked him what he thought of it. He said, 'Well, you know what it means.' I said, 'Sure, I do.' Well, what was the Missouri-Kansas to get? Is this off the record?

"Question: I wanted you to develop that. You talked in rather cryptic language then, about you and Mr. Russell, was it? Answer: Yes, sir.

"Question: Saying, 'You knew what it means.' I want the record to show what it meant.

"Answer: Well, it would require, if the line cost $40,000,000, and there was only a $15,000,000 bond issue out, that Missouri-Kansas to furnish their half of that differ-
[fol. 9289] ence, would have to dig about $10,000,000.

"Question: That did not seem at all probable?

"Answer: No, sir; not with the troubles we had just had.

"Question: All right.

"Answer: Russell said—of course, he spoke up. I hoped that the line would be built as cheaply as Mr. Gregory and Mr. Munroe thought it would be, but he was a banker; he was there to serve. If $15,000,000 was all, that was all right with him, or if $30,000,000 was what they wanted, that was all right. Mr. Parish thought that maybe they might be right. I said, 'Maybe they may be wrong,' so we fussed around for 30 or 45 minutes more, and finally Parish agreed—I got down to $25,000,000, as the absolute minimum, but I was just retained as a lawyer would be; I was not running the outfit, but Parish had agreed to $20,000,000, and I said, 'Where are you going to get the rest?' 'Well,' he said, 'Russell will put it up.' Well, Russell was present, and Russell did not say 'Yes,' and he did not say, 'No.' They arrived at the rather ingenious way of $10 stock, in stock, and $90 in notes, for the notes. The

additional money, if needed, was to be furnished in the form of debentures. Along about 1:30, I kind of missed Parish. We had a string of rooms, four or five rooms, and I went looking for him, and I found him in the bath- [fol. 9290] room, around the corner, with Mr. Gossler. Gossler was trying to buy these bonds direct from Parish.

"Question: When you say 'he was trying,' what did you hear? What was said?

"Answer: Why, Mr. Parish said to me, 'Mr. Gossler has offered me 92½ for these $20,000,000 of bonds.' I turned to Gossler, and I said, 'Is that right?' He said it was, and it would save Missouri-Kansas 2½ points, because they were selling it to the City Company, or save the Panhandle Eastern 2½ points, because they were selling it to the City Company for 90. I said in Gossler's presence, to Parish, 'It would be the most expensive 2½ points he ever saved,' and to come with me, and go down to the Vanderbilt Hotel. I took him down to the Vanderbilt Hotel with me, did not give him time to get his hat or his overcoat, and kept him there.

"Question: And, although the Columbia did not buy the bonds direct, they bought them, several days later, from the National City Company?

"Answer: I learned that, however, as far as my own knowledge is concerned, about the first of December.

"Question: Did you understand, during the negotiations, that the bonds were to be publicly offered and sold?

"Answer: Yes, sir. I even helped prepare a circular."

I shall read on, and I believe the testimony from here [fol. 9291] on is particularly apropos to the situation at hand.

"Question: As a director of the Panhandle Eastern Pipe Line Company, did you have any opinion, at the time you were a director, to the effect that the affairs of the company were being handled in a way that was not for the best interests of the company?

"Answer: I did have.

"Question: Will you specify wherein you thought that was the situation?

"Answer: I thought they should sell gas, which they did not do. I thought that the Columbia management of Panhandle-Eastern should live up to their contract.

"Question: And take gas?

"Answer: And take gas. You see, we had an opportunity to sell a big gob of gas to the St. Louis County Gas Company. They even offered to build from St. Louis County up to the line, near Louisiana, build their own line, 62 miles.

"Question: Louisiana, Missouri?

"Answer: Yes, sir; and pay us 33 cents for it. The Columbia management said no, because that would be interfering with the Mississippi River Fuel Company, of St. Louis.

"Question: Where did that come up? Did that come up before the Panhandle board?

"Answer: No. It came up in a meeting that I had with Mr. Gossler, late in October, or early in November, [fol. 5292] 1930. I had told him that the St. Louis County Gas people were in town, that I would like to bring them over. Said he would not stand for it.

"Question: Said what?

"Answer: Said he would not stand for it.

"Question: In other words, they did not care to sell in St. Louis? Answer: That is right.

"Question: Were there any other cities and towns [were] Panhandle Eastern might have sold gas, but where they did not?

"Answer: Well, there is an industrial load in Kansas City, of some 6,000,000 cubic feet a year; cheap gas, that is true; but they could have had that any time in the past five years, around 12½ cents; and their line, right south of Kansas City, is a 24-inch line. They cannot take it

beyond, under normal practice. They might as well sell it and the interesting thing about that is, that they go—that was too cheap a price, was the excuse, one of the excuses, but they go 200 miles farther, and sell the Atlas Cement at 11 cents.

"Question: What about the Cities of Hutchinson, Wichita, Emporia, and Ottawa, Kansas?

"Answer: That was discussed in the board meeting.

"Question: In your presence?

[fol. 9293] "Answer: Yes, sir.

"Question: What was the substance of that discussion? Answer: That was Cities Service territory.

"Question: And? Answer: Should not be considered.

"Question: Was there any record made on the minutes of that discussion?

"Answer: There was not, that I know of, or can recollect.

"Question: Or of that action? Answer: No, sir.

"Question: Can you say at what meeting of the board or the approximate time, when that did occur?

"Answer: Either the January or February meeting of 1931.

"Question: Were you familiar with any negotiations on the part of the cities of Fulton and Fayette, Missouri, to take gas from the Panhandle? Answer: I was.

"Question: What do you know about that?

"Answer: Mr. Munroe was greatly opposed to supplying municipal plants?

"Answer: That is my recollection, yes.

"Question: When you say he was opposed, what do you base the statement on? That is in the form of a conclusion.

[fol. 9294] "Answer: Why, he definitely stated that he was opposed, that if that sort of thing was encouraged, it would spread.

"Question: Do you recall correspondence that the Panhandle Eastern received from its vice president and general manager, Mr. Bay, relating to supplying municipal plants? Answer: I do.

"Question: Did you see such correspondence, in your capacity as a director of the Panhandle Eastern?

"Answer: No.

"Question: How did you see it, or become familiar with it?

"Answer: Mr. Gregory showed it to me, one day.

"Question: After the September, 1930, financing, and the acquisition of the 50 percent stock interest by Columbia in Missouri-Kansas—is that the correct date?

"Answer: October. The actual closing was in October.

"Question: Was there any change in the method of framing the rate base, in Illinois?

"Answer: Yes, it was put on the commodity and demand and service charge basis.

"Question: Instead of what? What had it been?

"Answer: Just straight, flat sale price.

"Question: What effect would you say that change would have upon the consumption of the gas?

[fol. 9295] "Answer: Held it down, and Mr. Barthold, the largest customer of Panhandle Eastern in Illinois, so stated to me, that it was crippling his sales of gas in Peoria.

"Question: Do you know anything of an opportunity that the Panhandle Eastern Company had to supply gas to the Midland United System?

"Answer: What time are you speaking of?

"Question: 1931.

"Answer: Well, in '31, that was still under Insull management, and there was an agreement between Columbia and the Midland United Crowd, on that.

"Question: 'On that,' you mean with reference to taking gas from the Panhandle Eastern line?

"Answer: Taking gas from Columbia.

"Question: Were there any negotiations with regard to Midland United taking gas direct from the Panhandle Eastern? Answer: Not that I know of.

"Question: Did you negotiate a sales contract at Indianapolis? Answer: Folks in my organization did, yes.

"Question: You were in close touch?

"Answer: Oh, yes. I directed it, yes.

"Question: You directed it? Answer: Yes.

"Question: Will you state, just in a general way, what [fol. 9296] was done at Indianapolis, with a view to providing a market?

"Answer: We secured, roughly, some 30-odd contracts, all the larger industrial users, for a period of years, at an average price, I think, on all the contracts, of about 32 or 33 cents. Most of them were executed prior to February. Most of the contracts were executed prior to February, 1931, and we cooperated with the Indianapolis Manufacturers' Gas Association, a group of manufacturers that had been trying to get natural gas for some time and had been unable to. They needed it, and were actively out trying to get it.

"Question: Have they got it yet?

"Answer: They have not.

"Question: And how close are they to it?

"Answer: About eight miles.

"Question: Did you hear Mr. Parish's testimony with reference to your 'stirring up Indianapolis,' and having it 'put back to sleep, again'? Answer: I did.

"Question: What did you do toward stirring it up?

"Answer: Oh, I got an option from the receivers on the 20,000,000 feet that they are entitled to; tried to get a permit to put it into Indianapolis, in 1933. I was unsuccess-

ful, but the Indianapolis manufacturers were just as desirous, then, as they were two years previously."

Now, will you please identify the receivers to whom you [fol. 9297] referred?

A. The receivers were the Missouri-Kansas Pipe Line Company.

Q. I shall continue.

"Question: Do you know of any efforts that were made to 'put Indianapolis back to sleep'?

"Answer: No; not directly, no.

"Question: Do you know whether it is a fact, or not, Mr. Magnire, that Panhandle-Eastern today has any other outlets of importance, in addition to the contracts that it took over from Missouri-Kansas, in 1930?

"Answer: They have increased their load very little. I am not directly familiar, but very little.

"Question: Did you ever make any calculations showing what would have been the result if certain markets had been supplied, which could have been supplied? I refer in this connection to your memorandum, and you make some calculations, there, I believe, regarding available markets in certain towns in Kansas, Missouri, and Indiana. Answer: Yes, I made those calculations.

"Question: What was the purport of those calculations that you made? What do you now say about them?

"Answer: Well, I say they are correct. If anything, they are a little low. Yes, sir; those figures are all right. They are on the conservative side. There is a differ- [fol. 9298] ence of $4,036,500.

"Question: What do you mean by a difference of that much?

"Answer: Well, it is revenue that Panhandle-Eastern could have, right now, that they are not enjoying—if they sold gas.

"Question: And is that based upon estimates of the available business in certain towns? Answer: Yes, sir.

"Question: Will you say what they were?

"Answer: In Kansas, Hutchinson, Wichita, Emporia, and Ottawa. When was this memorandum made?

"Question: I think it is in 1934, if I am not mistaken.

"Answer: At that time, as I recollect it, Hutchinson and Wichita were—there was a municipal campaign on, or something. Anyway, they wanted to buy gas. At Kansas City, the industrial load is far greater than what I show, but the price is much less; and I will see how it works out, if I may take the time. It would work out, the gross revenue would be about the same. St. Louis County Gas Company is gone. That is tied up, now, with Mississippi River Fuel.

"Question: Wasn't it then? Answer: No, sir.

"Question: Wasn't that then considered Mississippi [fol. 9290] River Fuel territory?

"Answer: Well, the St. Louis County Gas people did not consider it that way. They are part of the North American Company, and they did not consider it that way at that time.

"Question: But now it is tied up?

"Answer: Now it is tied up. Indiana: Midland United will take more gas than I show here, and they will pay about that price.

"Question: What price?

"Answer: I show 30 cents here. They will pay about 35 right now. Manufacturers Gas Company, that is all right.

"Question: Is that Indianapolis?

"Answer: Yes, sir; and I call your attention that I figure the Columbia contract on the dump-load base, and not at the firm contract basis, and if it was taken on that basis, the difference would be an additional $557,000 per annum.

"Question: Was that more than enough to carry all the investment in the company? Answer: Yes, sir.

"Question: With a profit? Answer: Yes, sir."

I will interrupt there to ask you what company are you referring to at that point: Panhandle Eastern Pipe Line [fol. 9300] Company?

A. Must have been.

Q. I shall continue.

"Question: You mentioned some prices, there, 30 cents in Indianapolis? Answer: Yes.

"Question: Was that for industrial?

"Answer: No, not industrial. The industrial load at Indianapolis is figured at 26½. The actual contracts we had averaged about 33. The reason we used 26½, there, was that was Missouri-Kansas' firm contract price at that time.

"Question: What was the domestic rate in Indianapolis at that time?

"Answer: Well, that is artificial gas, and I think their lowest rate was somewhere around 70 cents a thousand, 540 gas.

"Question: As against what B.t.u. content for the Panhandle? Answer: One thousand B.t.u.

"Question: What do you know about the extension of the Panhandle Eastern line to Macon, Missouri, the proposed extension? Was it made?

"Answer: Yes, and I opposed it as the useless expenditure of money. There was not enough—well, I just opposed it. It was not good business.

"Question: Were you the only opponent?

[fol. 9301] "Answer: I think I was. Mr. Bay—I think Mr. Parish backed me up, and said he would like to wait and talk to Mr. Bay. He did. Mr. Bay came over to the office, talked to Mr. Parish, and then Mr. Parish wrote, approving it. I learned about that afterward.

"Question: Was that in connection with the budget which Mr. Parish said was old?

"Answer: Well, it took—I have forgotten the amount, but somewhere around $200,000, depleted the available cash that much. I recall I went over and complained about it to Mr. Munroe, as a director, very seriously, and very strenuously. It was too late.

"Question: Had you taken any steps to get business in Detroit before this September, 1930, contract with Columbia? Answer: Yes.

"Question: What had you done?

"Answer: Just gotten in touch with the National Steel people, got a verbal agreement from them that they would, if a, and when we extended to Detroit, if we did it promptly, that they would buy gas from us at a scale of prices. As I recall, they ran, for various operations, the open hearth were to be on a certain basis, soaking pits on another, slab mills on another; the average price to be somewhere around 29 cents.

[fol. 9302] "Question: And that was before September, 1930? Answer: Yes, sir."

Have I read correctly from your testimony before the Federal Trade Commission?

A. I think you have.

[fol. 9303] Q. You have followed my reading of your testimony, have you not? A. I have.

Q. Certain litigation has arisen by reason of claims of Mokan against the Columbia interests, have there not?

A. Yes.

Q. One of those suits was a suit by Mokan for treble damages? A. That is right.

Q. Now, who was the plaintiff in that suit: Mokan?

A. The receivers of Mokan.

Q. And who were the defendants?

A. Columbia Gas and Electric Corporation, Columbia Oil and Gasoline Corporation, P. G. Gossler, George Crawford, Fred Crawford—well, practically all the Columbia Board of directors at that time.

Q. What did the receivers of Mokan sue for: what amount?

Mr. Hand: I can't hear you.

Mr. Wheat: May I suggest, Mr. Examiner, that Mr. Richard B. Hand, an attorney who has represented Mr. Maguire and Missouri-Kansas in many matters, is sitting with me, and I should like to associate him with me in this matter. He may be able to assist in answering some questions of this type in connection with Mr. Maguire's testimony.

[fol. 9304] Trial Examiner: That will be entirely agreeable.

Mr. Hand: I couldn't hear what you said [is] all.

Mr. Littman: What relief was prayed for in that suit, just generally, in order to put it on the record.

Mr. Hand: A suit for money damage.

Mr. Littman: What was the amount claimed?

Mr. Hand: My recollection was that we claimed 30 million, was it?

It is all in that prospectus; I have forgotten the amount.

Mr. Wheat: Exhibit 145, I think you will find, has the complete history of that.

By Mr. Littman:

Q. Well, that suit briefly sought damages arising out of the claims made by the receivers of Mokan with respect to the alleged mismanagement of Panhandle Eastern; is that right generally? A. That is correct.

Q. When was that suit filed, approximately?

A. In '35.

Mr. Hand: 1935, yes.

By Mr. Littman:

Q. That suit was settled, was it not? A. It was.

Q. Do you remember about when?

[fol. 9305] A. June 1936.

Q. One of the allegations made in that petition was that the management of Panhandle Eastern had failed or neglected to develop its markets during the periods which we have discussed: is that right?

Mr. Wheat: I think that would be the document. Mr. Hand who sits next to me, and who was associated in that case, has stated that he—

Mr. Hand (interposing): I wouldn't like to be too sure of that.

Mr. Littman: I thought we might be relieved of the necessity of putting in a lengthy petition.

Mr. Hand: I will be glad to give you a copy of the bill.

Mr. Littman: I would greatly appreciate it.

Mr. Hand: I will be glad to give it to you.

By Mr. Littman:

Q. At any rate the suit was settled? A. Yes.

Q. Can you briefly state the basis of the settlement and the amounts paid by Columbia?

A. That was brought about by the consent decree, and we are still suing about that.

What was supposed to be an initial one-half interest in Panhandle Eastern was to be returned to us.

[fol. 9306] We maintain that that was not done. They agreed to pay, among other things, $300,000 in cash for receivership expenses. We have never seen the "among other things" and we are still at it.

Mr. Wheat: When you spoke of a consent decree, did you refer to some litigation against Columbia Gas and Electric Company in the federal courts?

The Witness: That is right. I think it is No. 1060.

Mr. Wheat: May I ask him a question in that connection, Mr. Littman?

Mr. Littman: Go right ahead.

Mr. Wheat: Who was it that you said—in the testimony that Mr. Littman has read—some company of Detroit with which you had had a verbal agreement?

The Witness: National Steel Company.

Mr. Wheat: National Steel Company?

The Witness: Yes.

Mr. Wheat: That is an industry located in Detroit, is that right?

The Witness: No. It is out of Detroit.

Mr. Wheat: It is close to Detroit?

The Witness: It is in the Detroit area, yes.

Mr. Wheat: Can you state, at that time, whether any contract, verbal or otherwise, was entered into with the Detroit City Gas Company?

[fol. 9307] The Witness: Yes. I talked to Mr. Eaton. Mr. Chamberlain can refresh my mind on that. I don't know whether Mr. Eaton was still Chairman in 1929 or not, but he was still acting.

Mr. William Chamberlain was president of the United Light and Power, United Light and Railways at that time. I think Mr. Brown—Yes. R. C. Brown was over at Detroit. I talked to Mr. William Chamberlain in April of 1930 about Detroit.

Trial Examiner: The Trial Examiner is commencing to be a bit disturbed about the possibility that we are unnecessarily enlarging the scope of our inquiries.

Just how much of this matter is actually relevant to the alleged unused capacity, and the claim variously denominated resulting from that alleged unused capacity? Just how far should we go afield, particularly in view of the expressions recently of the Supreme Court of the United States.

Mr. Littman: I have completed my reading from the Federal Trade Commission reports, and I merely have a few more brief questions to ask of this witness, and I will then have completed my examination.

Mr. Wheat: In connection with the Examiner's remark, I want to say that we also had some worry with respect to the scope of this inquiry.

[fol. 9308] The fact of the unused capacity has nowhere been questioned in this direct, and the fact

Mr. Littman: I certainly can't agree with that.

Mr. Wheat: I repeat that. The fact that there was unused capacity, there was a pipe line which was not used, has nowhere been questioned by anyone at any stage of this proceeding.

Mr. Lee: Yes, but the reasons for that—

Mr. Wheat (interposing): I don't care what the reasons are. I just made a statement of fact. Somebody said he questioned it, and I repeated it.

Now, there is also one other thing: the fact of the history of this company differing from that dealt with in the decision of the Supreme Court, mentioned by your Honor, is also unquestioned in this record, and I thought I ought to say, in connection with my preliminary statement, that I very thoroughly agreed with the Examiner in his thought that possibly we were getting fairly far afield.

Trial Examiner: The Supreme Court called attention to the fact that the facilities in question had been included in the rate base.

Mr. Wheat: Yes.

Mr. Littman: I take it your Honor is accusing me, perhaps, of being a bit too thorough in this matter?

Trial Examiner: Not in the least, Mr. Littman, but [fol. 9309] reminding us all that we must sometime get through.

Mr. Littman: Very well. As I say, I have completed reading from the transcript of the testimony in the Federal Trade report.

I merely have one further question to ask, in that connection.

Trial Examiner: Proceed.

Mr. Wheat: When the question arose, Mr. Maguire was answering a question [which] I admit I had placed in this record out of place, but with the agreement of counsel, and he hadn't quite finished his answer.

Possibly I can shorten the time by asking Mr. Maguire this brief question:

Was any contract made with the Detroit City Gas Company at that time?

The Witness: There was not.

Mr. Wheat: Thank you. That is all.

By Mr. Littman:

Q. Mr. Maguire, when you testified before the Federal Trade Commission, giving the testimony which I have just read this afternoon, who was present at those sessions? I have in mind any representatives of Columbia interests.

A. Well, on one of the days, I am very—I can recollect very clearly that Mr. Moffat was there, and Mr. Harold [fol. 9310] Ritz.

There is another Columbia attorney whose name I can't recall, and then some Cities Service people were there, Judge Burns.

The Standard, Mr. Doherty—an attorney for the Standard—and Mr. Christy Payne, vice president of the Standard.

Q. Were there counsel present?

A. Mr. Doherty and Mr. Hall.

Q. Were you cross-examined by any of those gentlemen? A. I was not.

Q. Do you recall whether the Trial Examiner at that hearing afforded them the opportunity to cross-examine you? A. He did.

Q. But they did not cross-examine you?

A. They did not.

Q. Mr. Maguire, I merely want to very briefly interrogate you about another matter:

There have been offered in evidence in this proceeding, as a part of Exhibit No. 87, copy of a contract between the Panhandle Eastern and Missouri Power and Light Company, dated May 19, 1930, and a contract between Panhandle Eastern Pipe Line Company—

A. (Interposing) May 1930?

Q. Yes. Dated May 1930. (continuing)—and a contract—

[fol. 9311] Trial Examiner (interposing): You are now showing Mr. Maguire part of Exhibit No.—what is it?

Mr. Littman: 187.

Trial Examiner (continuing)—187?

Mr. Littman: Yes, sir.

By Mr. Littman:

Q. Suppose you look at the contract to which I have just referred, and see if you recall that contract.

A. Yes. I made it.

Q. You say you made the contract?

A. Well, my organization did, yes.

Q. Did you negotiate that contract?

A. If it is the one I think it is I did, yes. I can answer this: I know that this contract was negotiated by me but so far as ever seeing the contract as such before: no. The thing that comes to my mind is the 40-cent base, and the reduction in price; and 16 cents plus a half—all that.

Q. In other words it is your best recollection at present? A. Yes.

Q. That you did, in fact, negotiate that contract between Panhandle Eastern Pipe Line Company and Missouri Power and Light?

A. Yes. That is, North American Light and Power, yes.

Q. That is, that company was a subsidiary of North [fol. 9312] American Light and Power? A. Yes.

Q. Did you also negotiate a contract between Panhandle Eastern Pipe Line Company and Illinois Power and Light Corporation? A. Yes.

Q. Which is the second contract which is a part of Exhibit 187? A. And it is the same company.

Q. That is the same holding company?

A. The same holding company.

Q. Now, who if anyone else assisted in the negotiation of those contracts?

A. Maguire and—an outfit called Maguire and Company did this job.

Now, what contracts are you referring to?

Q. I am talking about the two contracts.

A. Just the two: the Missouri Power and Light and the Illinois Power and Light?

Q. That is right. A. Well, that is all.

Q. No one else took part in the securing of the business: that is the part I am talking about.

A. I know no one else did.

Q. Now, what arrangement did you have with Pan-
[fol. 9313] handle Eastern for compensation for your services rendered in connection with the securing of the business comprehended by those two contracts?

A. I got paid for it, got 7,000 shares of stock — Maguire and Company got 7,000 shares of Missouri-Kansas Pipe Line Company stock.

Q. 7,000 shares?

A. That is right, and we got some of them here, but we got them at 33 or 34 or 35 dollars a share.

Q. Now, you have referred to Maguire and Company. Was that your company?

A. I was the largest stockholder, but it wasn't mine entirely, no.

Q. I see. You were the president of that company?

A. I was.

Q. Now, you received 7,000 shares of Missouri-Kansas stock? A. That is right.

Q. And who gave you those 7,000 shares for the services which you performed in connection with those two contracts? A. Frank P. Parish.

Q. In his capacity as president of the Panhandle Eastern Pipe Line Company? A. Yes, sir.

[fol. 9314] Q. And when did that occur?

A. I just don't recall. I should say offhand sometime early in June. I can look it up for you.

Q. Early in June 1930? A. 1930, yes.

Q. Did Mr. Parish render any services in connection with the securing of those two contracts?

A. Well, now, you are asking me for a conclusion. I can only say: not that I am aware of.

Q. Not that you are aware of? A. That is right.

Q. Do you know whether a Mr. Innis rendered any services in connection with the procuring of these contracts, Mr. Maguire? A. None whatever.

Q. Is the same true of Mr. Parish? A. Well—

Q. Or don't you know?

A. I would like to explain my answer.

As far as any real service, no, but Parish was preside of Panhandle Eastern.

What he would contribute as president of Panhand Eastern and as president of Mokan I don't know, but far as I am not aware of his performing any servi other than signing these contracts, even if he did that.

[fol. 9315] Mr. Wheat: You are speaking, Mr. Littma are you, of these two contracts?

Mr. Littman: Yes, sir.

The Witness: Yes.

By Mr. Littman:

Q. In other words you feel that it was your service and your services alone that were responsible for the s curing of the business comprehended by these two con tracts and the two contracts?

Mr. Wheat: Mr. Examiner, before the witness answers I think I am going to have to object to a question as t what the witness feels.

I am sure it is immaterial to this Commission whether he feels this or feels that.

What he knows, if it is perfinent, is a proper inquiry.

Mr. Littman: All right, I will change the word "feels" to "know" and ask that the question be restated in that way.

Trial Examiner: Read the question.

(Whereupon the pending question was read by the reporter as follows:

("In other words you know that it was your services and your services alone that were responsible for the securing of the business comprehended by these two contracts and the two contracts?")

A. Well, it is a self-serving statement, but I certainly do.

[fol. 9316] May I make this suggestion: if you will read Mr. L. E. Fisher's testimony in this same hearing—identical. See what he says about it.

By Mr. Littman:

Q. Very well.

A. I might say this: when these contracts were being negotiated Mr. Innis was up in Omaha, Nebraska. That is quite a ways from Chicago.

Q. Do you know that Panhandle Eastern Pipe Line Company purchased 19,000 shares of Mokan stock, common stock, purportedly for the purpose of making payment through the medium of Mr. Parish as president of Panhandle Eastern for services rendered in connection with the procuring of these two contracts; do you know that?

A. I know it now, but I didn't know it at the time.

Q. You later discovered that 19,000 shares of stock were distributed in payment for those services?

A. I found out about that in 1935.

Q. That was about five years after—

A. (Interposing) That is right.

Q. (continuing)—after the contracts—

A. (interposing) I knew sometime in '32 that that had been taken out, but I never knew that I was supposed to have gotten it, or Maguire and Company was supposed to [fol. 9317] have gotten it until April of 1935.

Q. And what if anything did you do about the situation when you first learned that you were supposed to have received these 19,000 shares of Mokan stock?

A. Well, by that time, relationship wasn't friendly and—Are you referring to the correspondence that I sent Panhandle Eastern on the subject in 1937?

Q. Yes.

A. Well, it speaks for itself.

Q. Do you have a copy of that correspondence here?

A. No.

Q. We have the reference to the correspondence that was made in the minutes, but we don't have the copy of your letter, because it was not in Kansas at the time we first requested it.

I wondered whether you happened to recall the substance of it.

Suppose you state the substance of it: that ought to be sufficient.

A. I thought that the difference between the 7,000 and the 19,000 should be returned.

Q. To you?

A. No, to Panhandle Eastern Pipe Line Company.

Q. To Panhandle Eastern Pipe Line Company?

A. Yes.

[fol. 9318] Q. Why?

A. Well, all Maguire and Company got was 7,000 shares.

Q. It was supposed to have gotten the whole 19,000 shares?

A. That is correct.

Q. What happened to the other 9,000?

A. You are asking me for a conclusion. I have never yet been able to find out.

Cross Examination

By Mr. Chamberlain:

Q. I have about three questions here.

Mr. Maguire, would you refer to Page 402 and 403 of Volume 82?

A. All right.

Q. I ask you to do that merely to refresh your recol-[fol. 9319]-lection if you need to—and I doubt if you do—with respect to your negotiations for a contract for certain industrial gas in Kansas City in 1932. Can you tell us something about that?

A. I think that was '33, Mr. Chamberlain.

Why, we got together—let's see—we had Swift and Company, Armour and Company, Wilson—can you give me some other names?

We had nearly every packer in that district—Swift, Armour—Cudahy is another—Wilson—a tentative arrangement with the municipally-owned electric generating station in Kansas City, Kansas, and a tentative arrange-

ment with the Kansas City Power and Light—Mr. Porter—to sell him boiler gas.

As I recollect it the industrial load was somewhere around between 13½ to 15 cents, something like that, and with Mr. Porter—the Kansas City Power and Light—I think it was on a fuel basis; that is, on a B.t.u. basis—and my recollection does not serve me exactly—I think it worked out about 13½ of 14 cents.

Q. This says 13 or 13½.

A. Yes.

Q. Now, what is the fact with respect to whether you were able to get that contract accepted by Panhandle Eastern—or those contracts?

[fol. 9320] A. They said No.

Q. You negotiated what is known, and has been described here, as a contract of September 17, 1930, between Missouri-Kansas Pipe Line Company, the National City Company, and Columbia Oil and Gasoline Corporation, did you not?

A. Yes, sir.

Q. I ask you to look at Page 4251 of Volume—No, I am sorry; it is Volume 66—Volume 66 of the Federal Trade Commission reports, and to state whether that contains a copy of that contract.

. . . . . .

Now, personally I was interested in two parts of that. It is possible that counsel will want the whole document in evidence and if so I will be glad to offer the entire contract.

Mr. Littman: I think the entire contract, to which numerous references have been made, should be made a part of the record.

Frankly, I had looked for it in those Federal Trade Commission reports, and I was unable to find it. I am glad you found it, and I would like very much to have it made a part of this record.

. . . . . .

[fol. 9321] Mr. Littman: There was also an amendment, was there not, Mr. Chamberlain, to that contract, in the

month of October 1930, that should properly be made a part of the record also?

The Witness: I would like to say I learned about that amendment, however, as far as any question to me, I learned about that amendment in 1937, when we got the Missouri-Kansas books back.

Mr. Culton: Mr. Examiner, may I suggest that this contract, with supplements, apparently 10 or 12 pages long, very fine print—and while we have a very high re-
[fol. 9322] gard for the Electreporter people, we doubt the wisdom of requiring us to pay for that many sheets of paper in the transcript.

If Mr. Chamberlain considers that of importance, I see no reason why he could not produce it as an exhibit and let it go in as an exhibit.

Mr. Chamberlain: I was going to suggest that it be offered as evidence here, with the permission to substitute a written copy of it, under some given number, and I will be glad to do that. It is a long statement.

Trial Examiner: Will you do that, Mr. Chamberlain?

Mr. Wheat: It would be about thirty pages in the transcript, or more.

Trial Examiner: When you have presented that it will be received, I assume, without objection by counsel.

Mr. Chamberlain: All right. Intervenor offers in evidence a copy of the contract of September 17, 1930, between Missouri-Kansas Pipe Line Company, party of the first part, the National City Company, party of the second part, and Columbia Oil and Gasoline Corporation, party of the third part, which is contained in and forms a part of Exhibit No. 6005 of the Federal Trade Commission reports, and is contained in Volume 66 on Page 1251 and the pages following.

. . . . . .

[fol. 9324] Q. Mr. Maguire, were you present at a meeting of the board of directors of Panhandle Eastern Pipe Line Company held at 61 Broadway, New York, at three o'clock p. m. on Tuesday May 26, 1931?

A. I was.

Q. And were there present the following directors: F. W. Crawford, F. I. Dupont, T. B. Gregory, G. H. Howard, W. G. Maguire, O. A. Munroe, F. P. Parish, and S. A. Russell?

A. Yes.

Q. At that meeting did you hear F. W. Crawford, who was then president of the Panhandle Eastern Pipe Line Company, and an officer and director of Columbia Gas and Electric Corporation, make the following statement:

"The Panhandle Eastern Pipe Line Company has made, [fol. 9325] or has under consideration, various contracts for the sale of gas to other companies, each for their requirements in certain specified communities and territories.

"Among such proposed gas sales contracts are those under which Columbia Gas and Electric Corporation and Missouri Kansas Pipe Line Company would be entitled to call on the Panhandle Eastern Pipe Line Company to supply them with gas. It was definitely agreed that any gas to be taken under such contract by Columbia Gas and Electric Corporation would be for supplying Indianapolis and northern Indiana territory, extending to Detroit and other points in Michigan and connecting with existing pipe lines in Ohio.

"It was likewise definitely agreed that any gas to be taken under such contract by the Missouri Kansas Pipe Line Company would be only for the purpose of supplying gas to the southwestern part of Indiana through Terre Haute and south to Nashville, Tennessee.

"The Panhandle Eastern Pipe Line Company hereby notifies both Columbia Gas and Electric Corporation and Missouri Kansas Pipe Line Company that it does not consider that either of them would be entitled to gas under such contract if the gas so supplied is to be used in violation of the above agreements, or for the purpose of interfering with distribution of gas by the other party."

Mr. Wheat: Now, Mr. Chamberlain, may I ask: did you [fol. 9326] ask the witness to state whether he recalled that some person made this statement?

Mr. Chamberlain: That is right.

Mr. Wheat: In those words?

Mr. Chamberlain: That is right: whether Fred W. Crawford, president of Panhandle Eastern made that statement at that meeting, in the presence of Mr. Maguire.

A. He most certainly did. That is the basis—what Mr. Chamberlain is talking about is why we are here today.

Q. Now, at that time, and in your presence, did Mr. Charles A. Munroe state that he did not see any particular objections to the adoption of the resolutions or the making of the contracts with Missouri-Kansas and Columbia Gas and Electric, contemplated by them, but he wanted it distinctly understood that those contracts should definitely provide that none of the gas taken by Missouri-Kansas should be supplied in the Indianapolis market, because that would be a violation of the agreement to take such gas for the purpose of supplying southern and southwestern Indiana and southward, including Nashville, Tennessee?

A. Do I recollect that?

Q. Yes.

A. Very vividly.

Q. And following that, did Mr. Gregory, also a director [fol. 9327] of Panhandle Eastern, suggest that that statement of Mr. Munroe's be amended or supplemented by the statement that the Panhandle would sell gas to Columbia Oil and Gasoline Corporation for distribution in the Indianapolis market, because that was in accordance with the agreements on which such contracts would be based?

A. He did.

May I suggest that there is a lot more in that, that is interesting, there?

The Missouri-Kansas people—that is one of the really choice meetings that we had, and we all stated that there was no such agreement, and no such agreement had ever been made.

That is a little farther along there.

Mr. Wheat: You took part in that meeting yourself, in that connection, didn't you, Mr. Maguire?

The Witness: Yes, I think you can get testimony on that subject, that I took part in that.

Mr. Chamberlain: And at the meeting you expressly denied that there had been any such agreement to allocate territory?

A. That is correct.

So did Mr. Dupont. So did Mr. Parish. So did Mr. Russell.

. . . . . .

[fol. 9328] Mr. Littman: I don't know whether other counsel desire to interrogate Mr. Maguire. I have no further questions.

. . . . . .

Mr. Wheat: We have no questions.

. . . . . .

[fol. 9329]

LEITH V. WATKINS, was recalled as a witness, having been previously sworn, was further examined, and testified as follows:

Cross Examination

By Mr. Chamberlain:

Q. Mr. Watkins, do you recall a provision of the gas contract between Panhandle Eastern Pipe Line Company and Detroit City Gas Company, dated October 31, 1935, with respect to the time of payment and the place of payment?

A. I recall that there is such a provision, yes.

[fol. 9330] Q. And in that contract did the Detroit City Gas Company, as buyer, agree to pay Panhandle Eastern, at its designated office, on or before the 20th day of each calendar month, for natural gas delivered during the preceding months, according to the measurements, computations, and prices herein provided, and billed by seller in a statement for said month?

A. Yes. There is such a provision in Subdivision 1 of Article 9 of that contract.

Mr. Chamberlain: I would like to have that identified as an exhibit.

(The document referred to was marked for identification as Exhibit No. 209.)

[fol. 9331] The letter, of which you have now handed me a carbon copy, will be marked for identification as Exhibit 209.

Q. Did you, Mr. Watkins, as secretary of Panhandle Eastern, direct a letter to the Detroit City Gas Company on March 30, 1936, in which you designated the office to which they should make payment for gas under the contract which I have just described?

A. That is correct, but the letter provides that this plan would be agreeable to the Detroit City Gas Company, and the copy which counsel has just handed the witness carries such an endorsement signed by the president of that company.

May I have a copy of that?

Q. Yes (handing). A. Thank you, sir.

Q. That was not at the request of the Detroit City Gas Company, was it? A. The letter itself?

Q. Yes. A. Oh, no.

Q. It was directed by you to them? A. That is correct.

Q. And is that you designated where they should make the payments? A. Subject to their acceptance.

[fol. 9332] Q. Yes. A. And they did accept it.

Q. They accepted it? A. Yes.

Mr. Chamberlain: The intervenor offers in evidence the Exhibit No. 209.

(The document referred to was received in evidence as Exhibit No. 209.)

[fol. 9349] DAVID FRIDAY a witness, having been previously sworn, resumed the stand and testified further as follows:

[fol. 9350] Direct Examination (Resumed)

By Mr. Culton:

Q. Dr. Friday, you testified in these proceedings six months ago, did you not?

A. Yes, on October 3, I believe it was.

Q. And since that time we have had a war situation exist in this country. I will ask you to state whether or not you have continued the studies which you presented six months ago so as to reflect the present conditions existing?

A. I have.

Q. Have you pursued your studies largely along the same lines as the studies reflected in your former testimony?

A. Yes. What I have done is to bring especially the statistical series there on down to date.

[fol. 9351] Q. Dr. Friday, on Page 4 of Exhibit 61 presented in connection with your former testimony, you incorporated index numbers of wholesale prices of commodities, by groups, using 1926 as 100. What have you done toward bringing that table to date?

A. I have added to that table the index numbers, by groups, for March 21, 1942, which is the last date for which they are available.

Q. Will you explain what is shown by that table with respect to changes since your former testimony was given?

A. This table shows the prices, by groups, at the time my former testimony was given, September 30, 1941, were the last prices we had at that time and the present prices which, by the way, are shown on a second sheet which we have here as issued by the Bureau of Labor Statistics, those prices have now risen to 97.2. The prices stood at 91.5 for all the 900 commodities in September and, on March 21, they stood at 97.2. They had, therefore, risen 5.7 per cent which is a little over 6 per cent. Every group has risen excepting only the group of fuel and lighting. That has fallen a little bit.

Q. Is that reflected in the document which has been passed to counsel giving index numbers of wholesale prices?

A. It is.

[fol. 93521] (The document referred to was marked Exhibit No. 210 for identification.)

Mr. Culton: Mr. Examiner, during the short delay, I have passed around a number of documents and I suggest that the record might now show that they have been given certain exhibit numbers.

I therefore ask that document styled, "Index Numbers of Wholesale Prices of Commodities by Groups" be marked Exhibit No. 210;

A letter or circular from the Bureau of Labor Statistics captioned, "Wholesale Prices for Week Ended March 21, 1942" be marked Exhibit No. 211;

A table showing, "Index Numbers of Wholesale Prices [fol. 93531] of All Commodities by Months" be marked Exhibit 212;

A table showing, "Average Hourly Earnings and Average Actual Hours Per Week Per Wage Earner in 25 Manufacturing Industries" be marked Exhibit No. 213;

A graph captioned, "Average Hourly Earnings and Average Actual Hours Per Week Per Worker in 25 Manufacturing Industries" be marked Exhibit No. 214;

A copy of a table captioned, "Employment, Payrolls and Average Weekly Earnings in Representative New York State Factories" be marked Exhibit No. 215;

A table showing, "Indexes of Wholesale Prices and Cost of Living for Certain Months, 1913 to 1942" be marked Exhibit No. 216; and,

A graph from the Bureau of Labor Statistics, source Bureau of Labor Statistics, and reflecting "Cost of Living, 1935 to 1939 as 100," and I ask that be marked Exhibit No. 217.

(The documents referred to were marked Exhibits Nos. 211 to 217, both inclusive, for identification.)

By Mr. Cultons:

Q. Dr. Friday, you have explained Exhibit 210 and I believe had started to discuss Exhibit 211, had you not?

A. I was explaining Exhibit 210, I believe. What I said about it was that the general index of prices had ad-
[fol. 9354] vanced from 91.5 to 97.2 which is a little over 6 per cent advance and that in every group, the prices set forth below, except the fuel and lighting group, had advanced from September 20 to March 21. That group has declined 1.8 but it is still higher than it was in August, 1939, but it is not higher than it was on September 20.

Q. Why did you use the date March 21, 1942?

A. I used that date because that was the last date available. Those are the figures given out one week ago today, that is, this evening. They give them out at five o'clock at night and it happens to fall exactly six months from September 20, 1941.

Q. Will you please explain Exhibit No. 211?

A. Exhibit 211 I simply introduce because it was the source of the data on Exhibit 210 for the additional date of March 21.

Q. I believe a similar letter was offered as a part of your former testimony?

As A-2?

A. It was, yes sir.

Q. Will you explain Exhibit 212?

A. Exhibit 212 is introduced here primarily because a similar release of the Bureau of Labor Statistics was offered in my previous testimony and this brings it down
[fol. 9355] to date as far as it does exist now. I might say in passing that the prices there, these are for whole months, have risen from an average of 91.8 in September to an average of 96.7 in February. Those figures are not yet available for March.

Q. And that would be what percentage of increase, Dr. Friday, roughly?

A. That would be a percentage increase of a little less than 6 per cent.

Q. You had a similar exhibit to that, I believe, in connection with your former testimony brought down through July, 1941?

A. That is correct.

Q. Will you now explain Exhibit No. 213?

A. Exhibit No. 213 sets forth the average hourly earnings of 25 manufacturing industries as compiled by the National Industrial Council Board. My previous exhibit had a graph showing those figures. It is my recollection we did not actually put them in. Here they are for the convenience of the Court and everyone else.

I put them in completely from July, 1914, to January, 1942, which is the last date for which they are available and that shows that, since last September when the latest figures were available, the average hourly earnings in these manufacturing establishments had risen from 82.2 cents to 88.2 cents, a little over 7 per cent.

[fol. 3356] Q. I believe you had a chart presented with your former testimony, Document C, attached to that testimony?

A. Yes, sir.

Q. This table down to July, 1941, supports that chart, is that correct?

A. That is correct, sir.

Q. Have you also prepared a chart giving that information down to date?

A. I have and that is Exhibit 214. I may say to those who have the previous charts before them, the graphs are in a somewhat different position on the chart. They are lowered and somewhat smaller. The prices had risen so fast they practically ran off Chart C so I lowered this chart and smalled it somewhat so as to get the chart on now.

Q. Dr. Friday, the trend of average hourly earnings and average actual hours per week per worker in these industries has risen steadily since your former testimony, is that correct? A. That is correct.

Q. How about the steepness of the curve?

A. That has continued without abatement. It has not abated at all. The last page of the exhibit, No. 213, shows exactly what has happened during the last year. One year

ago the average hourly earnings were 75.9 cents and at January of this year they were 88.2 cents which is an ad-
[fol. 9357] vance of 12.3 cents in the year.

Q. Has there also been an increase in the hours of work per worker during that same period?

A. Yes, the hours of work have increased slightly. They have increased somewhat.

Q. Now, will you explain Chart 215—the chart, Exhibit 214, shows only the two matters which you have just referred to, does it not?

A. That is all, yes, sir.

Exhibit 215 is a photostat from this publication of the New York State Labor Department, the Statistical Division thereof, and it simply brings the earnings which were shown in a chart in my previous exhibit, that is, the weekly earnings of factory labor in New York State, down to December, 1941. The last figures that we brought in before were July, I believe. They were $33.48 and, in December, they were $35.78. They have continued their trend.

Q. Dr. Friday, this table supports your Graph B that was presented in connection with your former testimony, does it not?

A. That is correct, sir.

Q. You did not at that time present the table but presented only the chart, is that correct?

A. I presented only the chart, yes, sir.

Q. Now, will you explain Exhibit No. 216?

[fol. 9358] A. Exhibit No. 216 is a table prepared from the Bureau of Labor Statistics' September 15 pamphlet on cost of living and, from the subsequent releases that the Bureau of Labor Statistics has made on the cost of living, it shows in the first column the index of cost of living based on the years 1935 to 1939 as 100. Those are the years used by the Bureau of Labor Statistics. The index of wholesale prices appearing here is the Bureau of Labor Statistics' wholesale prices as they appeared on Exhibit No. 212. Those are the annual figures. Using these figures and taking the years 1935 to 1939 as 100, I have converted the Bureau of Labor Statistics' wholesale prices to an index which appears here. When I testified last, in December, the last figures available were in July and the

Bureau of Labor Statistics' cost of living figures stood at 105.3 and, in January, they were 111.9.

Q. You said you testified in December?

A. It was September.

Q. September or October.

A. They came out yesterday for February also and they are still a little higher than this.

Q. Dr. Friday, you did not present this table in connection with your former testimony but presented a chart reflecting the same information, did you not?

A. That is correct. It seems to me this would be more convenient for everybody to use.

[fol. 9359] Q. Your former chart was "D"?

A. That is correct, sir.

Q. Dr. Friday, have you reflected this information which is shown on Exhibit No. 216 on a graph brought down to date?

A. I have. That is Exhibit D in the former testimony brought down to date.

Q. And it is what exhibit number?

A. That is Exhibit No. 217.

Q. Will you explain what the two lines on that graph represent?

A. The dotted line represents the course of wholesale prices and they are taken from this Exhibit 216 and from the price index as these compiled and the solid line is the same index, Bureau of Labor Statistics index, from 1913 to date as shown on Exhibit No. 216 and they have simply been placed upon this graph which has been marked 217 and show that during the last year, especially since the spring of the year, since March, the rise in the cost of living has been a marked rise. It has gone up 11.6 per cent.

Q. Dr. Friday, from the middle of 1938 to about March, 1941, how did the cost of living curve run?

A. At the middle of 1938, the cost of living was just a shade below 100. In fact, it was at 99.7. It sagged a little in 1939, frankly, then it remains stable without any rise, any material rise at all until February, 1941, and after [fol. 9360] that it began to rise and from March on, it has had a rapid rise.

Q. What has been the increase from March to now?

A. There has been a 10 per cent increase.

Q. How much?

A. Ten per cent increase from March, 1941, to January, 1942.

Q. Dr. Friday, so far as you have learned, has there been anything which would have a tendency to retard the increases shown on the various trends about which you have testified from this time forward? A. No, sir.

Q. Has there been anything happen which, in your judgment, would cause increases in those trends?

A. I doubt it. I doubt whether there is anything that will cause increases now. We have finally gotten some action on the question of price fixing and price determination. Nothing seems to have been done about labor, however, and the cost of living has finally come to rise markedly. While there may be other forces that might work a little in the opposite direction, I do not see that the rise in wages or in the cost of living either will fall. Of course, they do not run the same month by month but the factors which were at work and have been at work in the last year, year and a half, which are generally at work during wars, are at work here.

In my own opinion, they will continue to rise steadily as [fol. 9261] long as the war continues, however long that may be, and with the policy we are pursuing now with respect to the restriction of production, especially of the production that people need for the maintenance of their ordinary standard of living, we are certain to have, at the close of the war, a pronounced rise just as we did after the last war.

* * * * * * *

Cross-Examination

By Mr. Lattman:

Q. Dr. Friday, I am not sure that I understand your last few statements. Is it your testimony that you expect prices to continue to rise? A. Yes, sir.

Q. You do not know of anything that is going to check the continuance of the rise?

A. Nothing that is going to check it any more than it has been checked here in these last months.

Q. Is it your opinion that the Government's efforts to check the rise in prices will be unavailing?

A. Not unavailing, no: I think the Government ha checked or retarded the rise in prices in many commod ities already but I think such a rise at the rate which yo have had here will certainly continue because, while it i doing some things to check the rise in prices and has suc ceeded in checking them in some considerable degree, [fol. 9362] there are other things that do not operate in that direction, particularly our policy with respect to ag ricultural prices which are well known and have been stated in the last year and the cost of labor. With respect to those things, we are bound to have continued rises.

Now, as I see the way in which it works, we have gone now—

Q. (Interposing) You mean they will continue to rise as fast in the future as they have within the past year?

A. Wages?

Q. Yes. A. Yes, I think so,

Q. How long do you expect that to continue in the fu ture?

A. I expect that to continue as long as the war con tinues.

Q. Then you expect it to continue to rise even after the war?

A. Then I expect it to continue to rise after the war as it did at the last war.

Q. How high do you expect them to go?

A. You mean wages?

Q. Yes.

A. It depends partly upon how long the war contin ues, how severe the restriction of these consumer goods is. It is a question of how large the deficits of goods, the vacuum, so to speak, of supplies of goods, how large they become.

Trial Examiner: In making that statement, are you en- [fol. 9363] tirely disregarding the effect of any restrictive legislation which might result in the curbing of wage ad vances or do you contemplate that also?

The Witness: I contemplate that too. I think there may be some restrictions but they won't be sufficient to freeze wages at this level, in my opinion.

By Mr. Littman:

Q. Have you related any of the data which you just submitted to the operations of Panhandle Eastern Pipe Line Company and subsidiary companies?

A. I have not, no, sir.

Q. You have not made such a study?

A. No specific study of that, no.

. . . . . .

[fol. 9364] O. W. Morton, a witness, having been previously duly sworn, resumed the stand and testified further as follows:

Direct Examination (Continued)

By Mr. Culton:

Q. Mr. Morton, several weeks ago you testified concerning your belief as to the volumes of gas that Panhandle Eastern Pipe Line Company will be able to market over the next five years, I believe covering the period 1941 to 1946. Then later, at the request of counsel for the Commission, you furnished Exhibit No. 161 showing your estimated sales and the estimated revenues for those periods divided between various markets. At that time, you indicated considerable confidence in the accuracy of the figures which you presented.

. . . . . .

[fol. 9365] Mr. Morton, do you now have the confidence in [fol. 9366] the accuracy of the figures which you presented in connection with Exhibit No. 161 that you had at the time that exhibit was presented?

A. I do not have.

Q. What has happened since that time to cause you to doubt the accuracy of those figures?

A. The war and events connected with the war.

Q. Have you attempted to make estimates concerning the volumes of gas Panhandle Eastern Pipe Line Company will be able to market and the revenue which it might expect to get from that gas during the period covered by the war?

A. I have no studies on that matter. I have made many conjectures. I have tried to get together some figures that would represent my best judgment as to what the sales and revenues would be for the future but I am forced to confess that I do not know what they will be.

Q. What causes the difficulty in reaching a satisfactory conclusion? Can you give us the reasons?

A. Well, as I stated, in general it is facts and matters connected with our entering the war. More specifically, I have in mind the effect of the various priority and limitation orders which have grown out of our entry into a state of war. Even more specifically, I refer to WPB Limitation Order L-31.

Q. That is an order promulgated by the War Production Board?

[fol. 9367] A. It is.

* * * * * * * *

Q. Has a change in the policy of any of your customers had anything to do with creating difficulties in reaching a conclusion?

A. There is one circumstance that adds, I might say, to my confusion in attempting to predict future sales and revenue related to the change in policy of one of our customers. I am referring specifically to the changed operations of our largest customer, Michigan Consolidated Gas Company.

Q. What has been that change in policy?

A. I probably could describe it better if I reviewed the premise of my former estimate of the amount of gas that we expected to sell to this company over the next five years and the revenues we expected to receive from that sale. The five year estimate I refer to—

Q. (Interposing) That is Exhibit No. 161?

A. The five year estimate I refer to, Exhibit No. 161, was, in so far as the Detroit sales and revenues are concerned, based upon the premise stated in the footnote of that Exhibit 161 which reads as follows:

"Estimated unit sales used in calculating revenues to be [fol. 9368] received from sale of gas to Michigan Consolidated Gas Company for Detroit are based upon the following assumptions:

"(1) Michigan Consolidated Gas Company will continue to purchase all of Detroit's requirements under the present two-part rate;

"(2) Panhandle Eastern will carry the peak loads and Detroit will, therefore, earn a unit rate corresponding to a poor load factor. If Detroit should shave its peaks or avail itself of the new so-called 28-40 rate, the average rate would be less than that used above."

Now, that is the premise upon which I built up the sales and revenues to the Detroit company. Since the preparation of that estimate, Exhibit No. 161, Detroit has changed its system of operation and has shaved its peaks. During the cold weather of January, they did not call upon us for 150 million cubic feet of gas on their maximum day as they had advised us they would in a letter which we received sometime last summer or spring. Instead, they only took 110 million cubic feet on that maximum day.

I might add that personally I have no complaint about the fact they did take 110 million because what it did was of considerable assistance to us in carrying our peaks on the rest of our system.

Q. That was a contract right that they had?

A. And it was a contract right that they had so I do not intend to convey the idea that this is in the nature of a [fol. 9369] complaint. It is merely in the nature of an explanation of why the revenues and the sales at Detroit may not be those which I had previously estimated in this Exhibit No. 161.

Mr. Littman: Mr. Morton, may I interrupt, to ask whether I correctly understand your testimony to be that the lines of Panhandle Eastern Pipe Line Company were used to maximum capacity on the peak day in the present winter?

The Witness: That is correct. I do not know that I testified to that fact but, if that is a question, my answer is in the affirmative, that our capacity was used fully on the peak day.

Mr. Littman: That is what I wanted to elicit because I gathered as much from your statement that you are, in a

measure, happy that the Detroit Distribution company did not call upon you for the full amount.

The Witness: Yes, that is true. I tried to make that clear.

By Mr. Culton:

Q. What effect on your estimates would their failure to rely upon Panhandle Eastern Pipe Line Company for their entire supply have with respect to Exhibit No. 161?

A. That would tend to earn for them a lower rate.

Q. A lower over all rate? A. Yes.

Q. To them?

[fol. 9370] A. Yes.

Mr. Chamberlain: Wait a minute, lower than what?

The Witness: Than if they had relied upon us for their entire demand.

By Mr. Culton:

Q. Have you been able to determine what that difference would be?

A. There are several other complicating factors that enter into that calculation and due to the multiplicity of those factors, I have not made a definite calculation of it, but I do know that it would tend to be lower than the prices which were estimated and shown in Exhibit No. 161.

Mr. Littman: Can you tell us how much lower in dollars?

The Witness: I cannot.

Mr. Littman: How are we going to know, then, whether it is $10 or $10,000 or $1,000,000 without your giving us some idea?

By Mr. Culton:

Q. You say that your estimates are affected by the operation of Order L-31 of the War Production Board?

[fol. 9371] A. Yes.

Q. In what respect?

A. Well, Order L-31, as I read it, and I have read it over and over many times, in the hope that I could understand

fully its meaning, as I read it, prohibits any of the gas distributing or transmission companies from annexing to their lines or taking on any new house heating customers. The inability of the Detroit company to take on any new house heating customers and the prohibition against our delivering gas for new house heating customers has thrown into the picture an added complication which, of course, was not considered at the time Exhibit No. 161 was prepared.

[fol. 9372] By Mr. Culton:

Q. Had you allowed for some increases in customers of that type? A. I had.

Q. How many had you allowed for Detroit, do you recall? A. About 10,000 a year.

Q. Had you also allowed for additional customers of that type in other markets? A. Yes.

Q. All right. What other provision of Order L-31 would make it difficult for you to reach a conclusion?

A. As I read Order L-31, it sets up some very strict rules as to our operations during periods of emergency or during periods when it becomes necessary to use our line capacity to its fullest extent. That brings us down to a consideration of its effect on presently connected industrial customers.

Under L-31, during these periods of emergency, we are—or, rather, the distributing companies are ordered to handle present industrial customers in a manner which is related to the standby equipment of those industrial customers. That is to say that if an industrial customer has standby equipment and can use some other fuel, why, he is going to be required to use that other fuel.

Now, getting a little closer to your question, that com-[fol. 9373] plicates our situation considerably in trying to predict future sales and future revenues. We don't know. I say we: I mean Panhandle Eastern—doesn't know how many customers these distributors have who have standby equipment. We don't know how much they were cut off during emergencies, how much they can cut off during emergencies, how many of their customers will go over to some other type of fuel and stay there. We do know that, under the order—and I am still talking about presently connected industrial customers—the War Production Board

may order you to continue service to certain classes of industries, and order you to discontinue service to other classes of industries. So much for the presently connected industrial customers.

Now, the order—and again I must say "as I read it" because I don't want to pose as interpreting the order, but just merely as an operating man, tell how it seems to me, how it reads to me. As I read it, applied to prospective industrial sales, we are not permitted to connect any new industrial customers, serve them directly or indirectly if they can use any other kind of fuel.

Now, of the increases which we estimated for the coming years in this Exhibit 161, I don't know how much we can take on under that limitation, because I don't know how many of the prospective customers that I estimated would be served in the coming years, can use other fuel in the [fol. 9374] opinion of the W. P. B.

In cases where a prospective industrial customer cannot use any other fuel than gas, and where a proper showing has been made that he must have gas in his business, then, as I read the order, this prospective industrial customer must provide standby equipment and standby fuel to take the place of natural gas during periods of emergency.

There is one other provision under this section of the order to the effect that by special permission of the W. P. B., any of the two former conditions surrounding service may be waived. That is to say, we may take on a new industrial customer with special permission of the W. P. B.

Now, at this point I must hasten to add again we have no criticism to offer and it is not in the spirit of criticism that we discuss this order in this way. We intend to operate with it fully. We think it is O. K. We think it is workable as soon as the order has been thoroughly interpreted for us. We don't believe that we understand it at the present time, and certainly your estimator feels that he would be going far astray if he would attempt to build up an estimate with the uncertainties that I have related facing him. Another provision of the order calls for interconnections between pipe line companies. It is apparently the plan of the W. P. B., and a nice plan, at that, I believe.

[fol. 9375] Mr. Goodman: Could I ask a question at this time?

Mr. Culton: Yes.

Mr. Goodman: Mr. Morton, you stated that you have a mental condition of uncertainty in respect to this order; is that right?

Mr. Culton: I didn't understand this was for cross-examination purposes. I thought it was for clarification.

Mr. Goodman: No, no.

Mr. Culton: All right.

The Witness: Yes.

By Mr. Goodman:

Q. Now, other than to read the order and attempt to interpret it, what have you done to relieve that uncertainty?

A. We have written the W. P. B. in a serious attempt to get some explanation on some points, and we have tried to get clearance on service to some industrial customers. In other words, we have been cooperative and have worked at the job of trying to understand it.

• • • • • • •

The Witness: Speaking of another provision of Order No. L-31 that we think is a good provision but nevertheless is one that projects uncertainty into this business of building up estimates: I speak of that provision which we might entitle, "Interconnections." The order provides that we exchange gas under certain conditions with other pipe line companies. That means that we receive gas from [fol. 9376] them and they receive gas from us during periods of emergency. We don't know just what constitutes a period of emergency yet, but we believe that it is a likelihood that all of next winter will be considered a period of emergency, and all during next winter and succeeding winters, as far as that goes. We will exchange gas with other pipe line companies at prices which no one knows. Continuing, I find the manufactured gas provision of the Order L-31 confusing as far as being able to estimate the quantity of gas we will sell and the unit rate we will receive for it.

By Mr. Culton:

Q. In other words, it is the resulting effect of the order that you are referring to now?

A. Yes, that is true.

Q. Rather than interpretation?

A. Exactly.

Q. All right.

A. I have touched briefly upon the manufactured gas situation with respect to our largest customer, but we also have a problem in connection with other smaller customers. Central Illinois Light Company at Peoria has a gas manufacturing plant. Illinois Texas Power Company at Decatur has a gas manufacturing plant, and there are others. Some are in operating condition and some are not. Order [fol. 9377] L-31 requires, as I read it, manufacturing gas companies who have equipment on hand and in operating condition, to operate that before they interrupt industrial customers during periods of emergency.

I don't know

Mr. Littman: You mean before they interrupt industrial customers that are engaged in national defense work.

The Witness: Possibly that is it. I stand corrected on that.

A. (Continuing) I am uncertain as to whether or not Decatur is going to be able to start up their plant this next winter. I am uncertain whether Peoria can operate and manufacture a gas suitable for combining with natural gas. There are other minor points which I don't recall at the moment in connection with L-31. I have merely attempted to point out some of the principal causes of my inability to estimate with any degree of accuracy for the future.

By Mr. Culton:

Q. None of these reasons assigned by you are intended as criticism of the order in any way; is that correct?

A. That is absolutely correct.

Q. You are in wholehearted accord with the order. It is just attempting to interpret the results of the order in volume of sales and dollars of sales that gives you difficulty; is that right?

[fol. 9378] A. Yes; particularly at this early date. It is possible and I think quite probable I am optimistic

enough to believe that inside of a few months we will be able to weigh the conditions that now are confusing, and possibly make some estimates that would be valuable to all of us.

Q. You will have some past by which to estimate the future, in other words, is that the idea?

A. That is correct.

Q. Has there been any slow-down in the company's expansion program that reflects your estimates in Exhibit 161?

A. Well, I assumed at the time we prepared that estimate, since we hadn't gotten all the pipe we needed nor other transmission equipment, that surely by this next winter we would have sufficient capacity to take care of our anticipated load. It looks like now we are not going to get any more pipe, and it appears that we won't have enough compressor capacity for the coming winter, so that, answering your question, in my opinion, there has been a decided slow-down in the expansion program of the company.

Q. Do you know anything about any contemplated war industries near the company's line that might require substantial volumes of gas over the next few months?

A. I am sure we are all agreed that we wouldn't want [fol. 9379] to call names or places, but I can assure you that I have overheard conversations in our own company concerning the location of extremely large plants along our lines, war plants, war production plants. The quantity of gas which they will use has gone to astronomical figures, but, of course, these are only in the rumor stage, as far as I am concerned, at present.

Q. What can you say as to the price of gas that would probably be sold to such plants as compared with the prices you had anticipated the company would receive for its gas?

. . . . . .

By Mr. Culton:

Q. Well, now, would you expect such sales to be at higher or lower prices than you have assumed in Exhibit 161?

A. I would assume that gas sold in the quantities I have in mind and for the purposes which I have in mind would

be sold at prices lower than the rates which I assumed on Exhibit 161.

Mr. Littman: How much lower do you think?

[fol. 9380] The Witness: I can't say.

By Mr. Culton:

Q. Are your distributing companies in some way bothered by the operation of Order 31 just like yourselves?

A. Yes, we get letters from them all the time indicating that they don't understand L-31 or how it applies to their business.

Q. In other words, the distributor company has its problems and their problems and other problems are carried on to the pipe line company; is that correct?

A. That is correct.

Q. Is it your judgment that under the conditions which now face the company the unit prices received for gas under existing contracts would be less or greater than the unit prices you had assumed in preparing Exhibit 161?

A. Unquestionably less.

Q. Are you able to determine how much less?

A. I am not.

[fol. 9381] Cross-Examination

By Mr. Littman:

Q. Mr. Morton, I want to ask you a few questions at this time.

I gather from your testimony that you no longer have confidence in the estimates which you have submitted in [fol. 9382] Exhibits Nos. 40 and 162?

A. That certainly does, Mr. Littman—that is a correct statement for 40 and 161. I don't recall what 162 is.

By Mr. Littman:

Q. Exhibit 162 consisted of your working papers for Exhibit 40 and Exhibit 161.

A. Your statement is correct.

Q. These estimates cannot now be relied upon for any purpose; is that correct?

A. That is correct.

Mr. Littman: If your Honor please, I move that Exhibit No. 47, entitled "Panhandle Eastern Pipe Line Company and Subsidiary Companies Future Capital Requirements, Gas Transmission Facilities, Liberal Station and Eastward," be stricken. This exhibit—to-wit, No. 47—showing the estimated future capital requirements, which was presented by Witness Burnham, was predicated upon the accuracy and reliability of Mr. Morton's estimates of future sales. If Mr. Morton's estimates of future sales, as he has just stated, cannot now be relied upon, it follows that the estimates in Exhibit 47 showing the capital expenditures estimated, in order to take care of those future sales, equally is unreliable and must be disregarded for any pur- [fol. 9383] pose in this proceeding. I will have something further to say with respect to other exhibits which are bottomed on the reliability of Mr. Morton's exhibits, but I shan't discuss them at this moment.

I would like to have a ruling on Exhibit No. 46 at this time.

Mr. Culton: Mr. Examiner: Those estimates were presented under normal conditions. It is only abnormal conditions which have resulted in their not being accurate, so long as the present war continues. Frankly, I think none of us know where we are on our private business or any other business so long as this war continues. The estimates are what would normally be required if we could get the equipment necessary to supply those markets, and without assuming that we would have force majeure come in here and stop us. Therefore, the estimates are properly admissible for such information as they may give the Commission and the weight that the Commission will take into consideration.

Mr. Littman: If your Honor please, counsel can't blow hot and cold. Mr. Burnham testified that his estimate of future capital additions is predicated upon the estimated peak load sales and estimated annual sales as submitted through Witness Morton. Now, Witness Morton has just testified that his estimates are no longer valid and cannot any longer be relied upon. It follows as an axiomatic [fol. 9384] matter, that this claim which has been submitted through Exhibit 47 for the huge amount of $36,942,600, for

future capital additions, through the year 1936, is equally unreliable and invalid.

I don't believe counsel for Panhandle Eastern have in any manner shown where this Exhibit No. 47 has any proper place today in this proceeding.

. . . . . .

[fol. 9385] Mr. Goodman: I did mention to Mr. Littman what I am going to say, and I think it is a matter worthy of the consideration of the Examiner.

After all, there has been presented in this matter the attitude of a Governmental agency of great importance. The Federal Power Commission is engaged in price fixing activity in this case which, to my mind, is as important in the conduct of the war as is its function in peacetime.

[fol. 9386] The price of gas in wartime is, I think, perhaps more important than in peacetime.

Now, Mr. Morton spreads the infection of uncertainty from his own attitude, which he derives from an order of the War Production Board. It is unfortunate that he should interpret a thing in that way which, to my mind, is clear, but if his interpretation—that is, of utter confusion—is deemed to have any weight, I think that the Federal Power Commission and its properly constituted authority should bring over into this case the agency of the War Production Board and see if they will not for the benefit of regulation clarify those uncertainties.

Mr. Culton: It was not uncertainties that this witness was talking about. It was the effect of the order in its actual operation. There were some uncertainties that other people had in mind, but it was the effect of the order that he was talking about.

Mr. Goodman: I don't want to inject confusion. I asked him a plain straightforward question to develop his mental condition, and I got an answer which I thought confirmed the implication which I made: he was uncertain.

Mr. Culton: As to the effect.

Mr. Goodman: Well, all right.

Now, in my mind, there is no uncertainty about the terms of the order, its purpose and its purport. The order is [fol. 9387] predicated upon the desire to prevent a diversion of a necessary gas use to an unnecessary gas use. It is for the purpose of utilizing to the maximum the capacities of Panhandle Eastern or other gas pipe line companies so as to do the least damage and so as to have gas available for military purposes or other necessary purposes. Gas is always a very necessary commodity. The effect of that order could scarcely be to diminish in any substantial way the quantities of gas which will be transmitted. The effect of that order can hardly be to keep in the ground that which, in the present emergency, should be used. The purpose of the order is to promote utilization and to prevent waste. Now, if there is any doubt about that, I think that the War Production Board should be asked by this Commission, who has the power of regulating prices, for an explanation—

Mr. Culton: There is no doubt about that. It is erecting a straw man.

Mr. Goodman: Now, wait a minute. And should that situation exist or, for a moment, be indulged in, we, who take this task of regulation seriously, have a serious complaint, for, in that instance, the order, by its terms, would be a misconceived effort and a detrimental effort, so far as the conduct of the war is concerned.

Mr. Culton: There is no question as to the desire of the War Labor Board, Mr. Examiner, raised here at all, or [fol. 9388] the purpose of the order.

Mr. Goodman: Well, there is an incidental question as to their competence to draft a significant order.

Mr. Culton: No, there isn't. It is the economic effect is what the witness has referred to.

Mr. Goodman: I am afraid, Mr. Culton, that you are confusing the entire subject in a mass of verbiage.

Mr. Culton: I am not going to let you get me placed in an erroneous position before the War Labor Board. That is why I want that clear. We are not complaining about the order in any way.

Mr. Goodman: You don't need to complain, but your interpretation is a reflection upon the purposes of the order.

By Mr. Lee:

Q. Mr. Witness, despite all you have said this morning, isn't it true that the Panhandle Eastern Pipe Line Company is selling more gas today than it ever sold in its history? A. That is correct.

Q. And despite all you have said this morning, isn't it true that you expect a continuation of that maximum sale and an increase therein due to the war situation? [fol. 9389] A. I expect the facilities of this pipe line company to be pretty well used for transportation of natural gas, yes. I don't expect it to ruin our business.

Mr. Littman: It is pretty close to a one hundred per cent load factor, as a matter of fact, is it not?

Mr. Lee: That is just what I was going to ask the witness.

The Witness: Well, I couldn't say that.

Mr. Littman: Approximately?

The Witness: I wouldn't say even approximately.

By Mr. Lee:

Q. Now, Mr. Morton, your attitude on the stand today and your testimony that you are somewhat baffled and confused and therefore can't anticipate the future, all of that fades into insignificance compared with the fact that you do know, and you are certain in your own mind, I take it, that you are going to be pushed to your utmost because of the war effort, to produce all the gas that you are going to be called upon to produce. Now, isn't that true?

[fol. 9390] It is a superlative situation, isn't it? It is an unusual situation?

A. I can't say that it is a superlative situation, but I can agree with you this far, and I think you have helped

clarify the issues here as I have heard them. I think business is going to be good for Panhandle Eastern. I think we are going to sell a lot of gas. I don't mean, for a minute, to imply that we won't need all the facilities we have said we need to get this gas to the place where we want to sell it.

My principal confusion, if I made that plain, lies in the price we are going to get for it rather than in the quantity to be carried.

By Mr. Littman:

Q. You can't tell us how much the price will be affected in the future?

[fol. 9391] A. No, I can't.

Q. How are we going to know? How are we going to tell, if you can't tell? Can't you assist us in that regard? You haven't made any computations or calculations, have you?

A. I have no formal computations or calculations. I have sat down with a scratch pad in here, made lots of figures on it, tried to visualize the future.

Q. But you are not at all certain about it?

A. No, I am not. That is the crux of the whole matter.

Q. Mr. Morton, is there anything in the War Production Board Order L-31 which you interpret to mean that your company will sell less gas in the future than it sold before the order was issued?

A. The order says that we can take on no more house heating. I take that to mean that we will sell less house heating gas than we had anticipated. The order says that during times of emergency—and that is not very well defined, what emergency is, but I take it during peak times, —industries, certain industries will be cut off from the lines. That would indicate a diminution, in my mind, of the sale of certain classes—

. . . . . .

[fol. 9392] By Mr. Littman:

Q. You completed your answer, didn't you?

A. The order says that with respect to anticipated sales which we might wish to make or be counting on making, or prospective sales, that there will be considerable limitation thereon about those.

On the other hand, as offsetting factors, the order says that we are to make interconnections with other pipe line companies and sell them gas and they, in turn, are to sell us gas where, in the judgment of the War Production Board, or words to that effect, such sales are necessary.

By Mr. Littman:

Q. If you wish to go along, Mr. Morton, with respect to those industrial sales that you say you may be required to curtail, the reason for that will be because you are going to have to sell that industrial gas after curtailment to another industry which is engaged more closely [fol. 9393] or more vitally in connection with the war effort; isn't that correct?

A. That sounds like the meaning of the order to me.

Q. Yes; and you are not—

A. (Interposing). The best utilization of our resources to promote the war effort. I think that is what we are all after, too.

Q. In other words, this particular item you are speaking of, industrial gas, will not result in any diminution of your industrial sales, will it, but merely in a reallocation, so to speak, of the sales?

A. Now, it might work out that way. It sounds to me like that is what they intend to do.

[fol. 9395] By Mr. Littman:

Q. Mr. Morton, you don't expect the firm gas sales to diminish by reason of the War Production Board order No. L-31, do you?

A. To this extent: I can see some diminution. Many of the industrial plants in Detroit are served under firm contracts, firm agreements. As a matter of fact, all of the industries, as far as our deliveries to Detroit are concerned, are firm deliveries.

Now, to the extent that some of those plants might be curtailed, their operations curtailed, discontinued by this order, then I see a diminution in the firm sales of the [fol. 9396] company.

Now, if you speak of them as a whole, why, I expect that we will sell as much or more firm gas than we have been selling in the past.

Q. You have made no investigation of the Detroit industrial situation which you just spoke about, have you?

A. Yes, I am fairly well informed on that. You say have I made any investigation. I haven't, of course, gone up there and gone around personally to these places and asked those questions, but I do talk to the men of the Detroit company, representatives of the company, occasionally, and we have letters from them, so we stay fairly well informed on the matters to which I have testified here.

Q. Now, let's take an industrial customer in Detroit. If a particular industrial customer in Detroit is curtailed by reason of W. P. B. Order L-31, that gas will be sold to another industry more closely associated or connected with the war effort; isn't that correct?

A. The order doesn't say that that is what will be done.

Q. Don't you interpret the order to mean just that?

A. Well, I believe I said before, and I certainly, in general, agree that they intend for the pipe line company to use its facilities to the best advantage, and it is my opinion that where they cut off one industry, they will [fol. 9397] try to sell it to another industry or try to allow the company to sell it to another industry.

Q. So there would not be any curtailment over all in the sale of that gas, would there? That naturally follows, does it not?

A. That follows. I expect the sales of this company to go right forward. I don't expect us to go broke.

Q. Mr. Morton, your company bought Michigan Gas Transmission Corporation and paid more than $10,000,000 for it after Order L-31 was issued, did it not?

A. I believe that is correct.

Q. Panhandle Eastern was not worried about any adverse effects of Order L-31 upon the sales of Michigan

Gas Transmission Corporation, was it, when it purchased that corporation?

A. I don't imagine they were.

[fol. 9405] Trial Examiner: You are referring now to the order of the War Production Board, L-31?

Mr. Culton: That is right. We do not say that we are not going to continue to produce and transport all the gas which we physically can produce and transport under such facilities as we now have or may be able hereafter to get. The management of the company will later present some facts dealing with that particular feature. Frankly, we hope to increase our capacity above what it now is. The services of our gas are needed by certain industries and, if at all possible, we expect to furnish that gas.

We had also hoped to have some other markets available at this time. Because of our shortage of material, those markets are not yet available. We, of course, so long as this order is in effect, cannot say what the ordinary economic effect of conditions will be because there is a matter which now intervenes between us and those ordinary economic conditions on which the former plans had been based.

For example, Mr. Norton referred to a projected plant [fol. 9406] near Kansas City. I do not know whether he stated the volume but the possible volume of that plant, I think I can say, if it materializes, will be probably 25 million cubic feet per day. There may be many other plants of the same kind or for different war purposes constructed at various points along this long line of pipe line.

Obviously, most of the sales which we make, even though we are able to sell more gas than we have sold in the past, even though we get an increase in our capacity and are able to operate to the fullest safe capacity and by that I do not mean 100 per cent capacity factor because it is practically impossible without spare units which we cannot obtain at this time, irrespective of how much gas we sell, we know it will have to be sold, if it is sold, for purposes like that at prices cheaper than we have assumed

we would be able to sell the gas which we now know is going to be cut off. Therefore, it is not the question of volume of sales that we are presenting here. It is the question of diversity of sales. We know some portion, we do not know how much, but we do know some portion of our higher priced gas is going to be cut off and that portion must, of necessity, be sold at the lower prices and we are not attempting to hold the higher price markets but we are gladly cooperating in any way we can with the WPB and will continue to do that.

The point is that estimates heretofore made, based on [fol. 9407] normal conditions, cannot apply to the abnormal conditions under which we are now operating. Mr. Morton, I believe, stated that he had hopes that, after a few months, there might be some kind of a trend which would enable him to make some kind of an estimate with respect to these various sales at the respective markets and the prices for which the gas was sold but, obviously, until there is some history on which we can base his estimates, the estimator cannot make estimates because he can only gage the future by conditions of similar type existing in the past.

That is the position of Panhandle Eastern on this matter, Mr. Examiner, and that is why we had hoped we would be permitted to have 120 days in which to observe the effect of this order, not the interpretation of the order so much. There may be some questions that may need interpretation and if so, of course, the WPB will render the interpretation we requested but our point is that it is the effect of the operation of the order which we cannot determine at this time.

Trial Examiner: May I ask, Mr. Culton, whether you are in agreement with the statement made by Mr. Littman before luncheon that the industrial sales, based on evidence in the case to date, constitute less than 10 per cent of the total sales?

Mr. Culton: You mean direct industrial sales?

Trial Examiner: Yes.

[fol. 9408] Mr. Culton: That is true, Mr. Examiner, but the record—I am not certain that the record in this case

shows—but I know the record in Docket G-240 was to the effect that our principal customer, the Detroit company, had some 1500 to [200], industrial consumers to which it markets gas and a similar situation exists with respect to our other distributors.

Trial Examiner: May I ask whether, conceding, of course, that the War Production Board might divert any gas to any necessary use under its general powers, may I ask whether you made any apprehension of the curtailment of domestic service which you are now rendering?

Mr. Culton: We do, Mr. Examiner.

Trial Examiner: On what is that based?

Mr. Culton: On the right of the War Production Board, if they think it is necessary in the public interest, to require curtailment. The present order, of course, only prohibits certain increases but there is no reason why the War Production Board might not, at some time in the future, extend that to ordinary domestic use.

Mr. Littman: Mr. Culton, in connection with the Trial Examiner's inquiry, I would like to have you point out any part of the War Production Board Order No. L-31, which could conceivably result in any lessening of your present domestic load?

Trial Examiner: Just a moment at that point, Mr. [fol. 9409] Littman. The inquiry I addressed to Mr. Culton had no relationship to the specific provisions of the present outstanding order. I asked him if he had reason to expect, any reason to expect that there would be a curtailment of domestic service. It is, of course, clear that the War Production Board Order L-31 speaks for itself and that does not in any way intimate a curtailment of domestic service, as I read it.

Mr. Littman: That is the way I read it.

Mr. Culton: We do not so contend. I thought the Examiner was inquiring as to the future, if we were wondering something about the future of that and we are.

Trial Examiner: I was wondering if you have any information as to a future order—

Mr. Culton: (Interposing) We have no such information. Mr. Wheat has some knowledge on other phases.

Mr. Wheat: May I say in that connection, Mr. Examiner, I have spent most of the last three weeks in consultation with the War Production Board in connection with telephone communication and there the first order, L-50 which came out about sixty days ago contained no particular intimation of a possible rationing of telephone services.

I may say now that the War Production Board has in contemplation, for publication probably during the current week, three additional orders, the result of which will unquestionably be the start of rationing telephone service in this country. I think that that is an excellent [fol. 9410] illustration of what we may be confronted with in the natural gas business.

Trial Examiner: Thus far, however, it is merely on your part, the recognition of a possibility?

Mr. Culton: That is right.

Mr. Littman: That is kind of speculative, I would think, so far as the gas business is concerned.

Trial Examiner: May I ask further, Mr. Culton, whether you have any reason to expect that you will be able to derive less per unit of industrial gas in your future sales pursuant to Order L-31 than you are now deriving?

Mr. Culton: Unquestionably, Mr. Examiner.

Trial Examiner: For what reason do you say that?

Mr. Culton: There will be a greater volume of what used to be referred to as direct sales. Some of it was formerly referred to as "dump sales."

Trial Examiner: Those are sales by negotiation?

Mr. Culton: That is right, but most of those sales are sales to the United States Government where the price is practically dictated. I say "dictated". We have traded with them and we have made agreements in some respects but, obviously, we are not going to hold up some plant with an unreasonable demand for prices.

Most of those sales are on prices below the prices at which our industrial gas is sold under the firm contracts. [fol. 9411] By that I mean the average price that we receive and the management is unable to say what that price is going to be but we will present, at the hearing which we expect to have a few days from now, a management witness who will explain his views.

Trial Examiner: You, of course, recognize the factor of the service company's rights when it is delivering under order of the Government?

Mr. Culton: That is right.

Trial Examiner: And if you cannot agree with the customer, you will have your recourse.

Mr. Culton: If we cannot agree with the Government, they will take the gas and condemn it.

Trial Examiner: They will take the gas but they will pay you on the basis of its worth and your rights, as established.

Mr. Culton: That is right. We do not want to do that. We are not forcing the Government to any such step as that.

Trial Examiner: I am merely reaching for the effect of these things we are discussing on future revenues.

Mr. Culton: Our difficulty is we know there is going to be some effect and we cannot determine what the impact of that will be. That is our point. We expect the unit price to be less.

Mr. Littman: Less than what?

Mr. Culton: Less than the present unit price of sales.

[fol. 9418] Mr. Littman: May I interrupt to state you estimated the maximum day's sales for Detroit to be 164,500 M.c.f. as shown in Column E of Exhibit 40 which contains your estimate.

The Witness: Yes, Mr. Littman, and I might point out that was before Pearl Harbor.

[fol. 9419] Mr. Littman: You just learned that Michigan Consolidated advised you that they were going to have a requirement of something very close to that amount.

Mr. Culton: How much did they estimate they would require last winter on the maximum day?

The Witness: We have a letter that very much resembles the one we are talking about here and that letter states their requirements were going to be 150 million.

Mr. Culton: What was the maximum they took this last winter?

The Witness: They took 110 million.

Mr. Chamberlain: Are you sure about that amount, Mr. Morton?

The Witness: Yes, I am sure about the 150 million and I am sure about the 110 million.

. . . . . .

[fol. 9420] Q. Mr. Morton, you expressed concern about a change of policy of the Michigan Consolidated Gas Company, your largest customer. Your concern was, I take it, [fol. 9421] with respect to the estimates that you had made in your Exhibit 40?

A. I believe the term "concern" is a misnomer there because I had no particular concern over the matter, Mr. Chamberlain.

Q. I understood that you were very much concerned about the estimates that you had made a few months ago and that that concern arose largely over the fact that Detroit had changed its policies in respect to the use of its standby equipment.

A. I made the statement that they had changed their policy and, of course, I was making comparisons between my estimate and what they took.

. . . . . .

Q. Why were you concerned then? Did you expect the results which would follow would be different [then] your estimate?

. . . . . .

A. Possibly this will answer your question. I think their change in policy, abandoning the old manner of taking their full peak demand from us and going to the original contract, as we call it, or going to the basis of supplying a large part of their own peak, did make some difference in the result.

[fol. 9422] Q. Well then, you calculated that the estimates which you had made would not be accurate because of that change of policy, is that right?

A. You say I calculated. Can you put that in the present? Do you mean to say that in comparison with my estimate that I did make last summer?

Q. I assumed you were here to inform the Commission that the estimates which you made with respect to the prospective sales to the Michigan Consolidated Gas Company, as reflected in your Exhibit 40, could not be relied upon and that the reason was largely due to the fact that they had changed their policy with respect to the use of their standby equipment, am I correct about that?

A. That is correct.

Mr. Littman: By "they", you mean Michigan Consolidated?

Mr. Chamberlain: Yes.

Q. Now, let us take Exhibit 40. You estimated in 1942 that you would sell that company 27 million M.c.f., did you not? A. Yes, sir.

Q. And that their maximum day would be 142,000?

A. Yes, sir.

Q. And you further estimated that the cost to them or, that is, the amount that you would receive would be 27 cents? A. Yes, sir.

[fol. 9423] Q. In other words, that your revenues for 1942 would be $7,290,000. That was right, was it not?

A. Yes, sir.

Q. Now, let us go back to your estimate for 1941. How far did you miss that, if at all?

A. If I recall it, the error was small.

Q. You estimated 26.2 cents, did you not, for the gas?

A. Yes, sir.

Q. And you actually got 26.34 for it, did you not?

A. I do not have that figure in front of me but it is my recollection that that is a fair statement of it.

Q. And the company took very close to the 24 million M.c.f.?

A. As I recall it, yes. I do not have the actual figures in front of me.

Q. Now, we approach 1942 and your estimate there was that the sale would increase by three million M.c.f., was it not? A. Yes, sir.

Q. And you spoke about a demand of 145 million feet. Was there ever any agreement that you know of on the part of your company to furnish more than 125 million feet to Michigan Consolidated Gas Company?

A. No, there was no agreement to furnish any more. That is the contractual obligation of the Panhandle East- [fol. 9424] ern Pipe Line [Line] Company.

Q. And at no time have they agreed to exceed that amount, have they?

A. To my knowledge, that is correct.

Q. I would like to have the record show just what Michigan Consolidated Gas Company did, in the way of its practice, to change the result of your estimate? Will you illustrate that by what happened during your peak load period in January?

A. I presume you are speaking of the calendar year 1942?

Q. I am.

A. I think we can shorten your question and my answer by saying that, for the calendar year 1942, there will probably be very little difference in the unit rate of gas to Detroit, under the method I used in the summer when I prepared Exhibit No. 40 and under estimates which might be prepared now but the principal difference would come in the fiscal period, March 1, 1942, March 1, 1943, rather than the calendar year 1942.

Q. I apparently did not make my question plain, Mr. Morton. What I would like to have you get into the record is just what Michigan Consolidated Gas Company did and how it affected its bills to Panhandle Eastern?

A. All right. Michigan Consolidated Gas Company [fol. 9425] made approximately or produced and put into the mains approximately the difference between their maximum requirement of approximately 140 million and their take of 110 million on January 7, the day of the establish-

ment of the maximum demand. By doing that, they changed the basis.

Q. (Interposing) Will it bother you if I stop you right there. Are you speaking now of the maximum demand to Panhandle or the maximum demand to Detroit?

A. Since we are discussing the bill of the Detroit company, I am referring now to the date of the establishment of maximum demand as between Detroit and Panhandle Eastern Pipe Line Company.

A. Now, you asked me as to what happened as a result of that procedure?

Q. Yes.

A. The result is that for the 12 months period beginning March, 1942, and ending April, 1943, Detroit will purchase its gas on a basis somewhat different from that which it has been purchasing in the past, namely, on the original two-part contract and, by doing that, will reduce its pay [fol. 9426] ments to Panhandle Eastern by several hundred thousand dollars, as I calculate it roughly, over that which it would have paid had it stayed on the old rate.

Q. Now, you say you figured that roughly. Would you give us the method of your computation?

A. The general method of computation is to take the 110 million which is the demand and multiply it by the demand charge of .38 cents per therm times 12 months and that gives you your demand charge for the period, March to March, and charge out your commodity which is the amount of gas purchased at 15 cents per thousand or 1.5 cents per therm, add those two together, which gives you the charge under the original contract. That is the method, I think we all concede, that will govern during the 12 months period, March to March.

Now, if we want to compare that with the old method of billing or the one that we used prior to this March, if we want to compare it with the supplemental billing, we have to go through quite an elaborate process with which I am sure you are quite familiar also and when we compare the prices under those two systems of billing, why, in my judgment, you get a smaller payment than you would with the old supplemental contract. In other words, I think you have saved some money by trimming your peaks.

Q. Well, save money in what money? By getting it for less than we would if we had bought the entire amount?

[fol. 9427] A. That is my judgment.

Q. What do you figure that Michigan Consolidated Gas Company will save by reason of having cut its peak on the 6th of January last, in the next annual period or fiscal year, as you call it?

A. Do you refer to before the cost of manufactured gas? Which cost do you refer to, Mr. Chamberlain, when you say how much would they save, do you mean the gross saving or the net saving?

Q. I mean the saving off the Panhandle bill.

A. I judge it is between $300,000 and $600,000.

Mr. Littman: Is that per year?

The Witness: For the 12 months period.

By Mr. Chamberlain:

Q. Between three and six hundred thousand dollars?

A. Yes.

Q. That their gas bill will be less that year?

A. Yes.

Q. For the equivalent amount of gas? A. Yes.

. . . . . .

[fol. 9428] By Mr. Chamberlain:

Q. Then I take it that it is your judgment that, to the extent of 24 million M.c.f. in the next fiscal year, that it will cost the Michigan Consolidated Gas Company for that amount of gas some $300,000 to $600,000 less than the cost in the past year, is that right?

. . . . . .

(Interposing) 24 million M. c. f.

A. They will probably purchase more than that because 24 million was the quantity purchased for 1941.

Q. Yes, but I am trying to get a comparison of what their gain is going to be in their payments to Panhandle for this gas. It is easier to apply that to an equivalent amount, is it not? In other words, in making a comparison for 1942 under the demand that was established January 6, if we took the equivalent amount of gas in 1942, we would

have, in your judgment, a saving of from three to six hundred thousand dollars, is that right?

A. Over what it would have been had you purchased it on the supplemental contract, yes.

Q. Now, wait a minute. I am asking you what, in your judgment, the saving is going to be. I mean in dollars, not with respect to anything.

A. Your gross saving, I believe I stated, I thought, was between three hundred thousand and six hundred thou-
[fol. 9429] sand dollars.

Q. Then you think that your estimate in Exhibit No. 161 of $7,200,000 is going to be excessive by from three hundred to six hundred thousand dollars?

A. That figure that you are referring to there is for the calendar year and I have been quoting you figures in terms of a fiscal year, March to March.

Q. Yes; how much difference does that make?

A. There is considerable difference between the calendar and fiscal year on this matter that we are discussing. Most of the difference occurs because of the difference between the fiscal and the calendar year.

I believe I might clear it up a little bit by saying that I do not believe that your unit rate that you pay for gas for the calendar year 1942 is going to vary a great deal from what it would have been under the system I used in calculating your 1942 bill in Exhibit No. 40.

Q. What do you mean by that; that we are going to pay 27 cents for the Panhandle Eastern portion of the gas for the 1942 calendar year?

A. Now, I have testified that I have difficulty in calculating sales for the future and, with that reservation, I can-
[fol. 9430] answer your question by saying that, for the calendar year 1942, your unit rate will approximate the figure you mention of 27 cents to Panhandle Eastern, which, of course, would be in the neighborhood of 34 cents at the city gate.

Q. That would make a full 7 cents to Michigan Gas Transmission Corporation?

A. Yes, it would.

Q. And that then increases their allowance of 6.63 cents?

A. I did not understand whether you made a statement or asked a question.

Q. You say that it would be 7 cents. I am asking you whether they would get a larger amount than they got last year which seemed to have been 6.63 cents per M. c. f.

A. Basing my answer on calculations which I show in my Exhibit No. 40 and in 161, the answer is yes.

Q. Have you any reason to change your belief that the sales for 1942 will be 27 million M. c. f.?

A. Yes, that figure of 27 million no longer can be called my estimate for 1942 for Panhandle Eastern's sales to Detroit and the reason becomes immediately clear and immediately apparent when you realize that you have stopped adding house heating customers. We are not going to get the benefit of the sales to house heating customers this fall which I had estimated you would get and which we would [fol. 9431] get when I made my Exhibit No. 40.

Mr. Littman: Didn't you testify, Mr. Morton, when you were here last, that the house heating business was not a very desirable kind of business from the point of view of your pipe line company?

The Witness: I do not hesitate at all to tell you, Mr. Littman, that, in my personal opinion, house heating is the least desirable business from an economic standpoint that we have on our lines.

Mr. Littman: And to the extent that it is undesirable you will be relieved by War Production Board Order L-31 from attaching any new business of that character?

The Witness: Yes, that is true.

* * * * * * * *

Q. And it then becomes your feeling that the sales in the Detroit area will be less than the 27 million that you estimated last fall?

A. Well, certainly in so far as house heating goes, the sales are going to be less than those that I estimated that went into that 27 million. However, I believe that your industrial sales or your base load sales, there is a possibility that they will be larger than those I estimated in Exhibit No. 40.

[fol. 9432] Q. You have no doubt that they will be much larger, have you?

A. Yes, I have some doubt because, as I said before, I still do not know just how far Order L-31 is going to operate against sales and other orders that may come along later. I too am expecting more orders of a limitation nature. I have given it considerable thought.

Mr. Littman: May I interrupt to ask the witness a question or two, Mr. Chamberlain, that seems to me to be apropos to this particular line of inquiry.

Mr. Morton: I am going to read to you some excerpts from the testimony of your president, Mr. Creveling, given before the Securities and Exchange Commission on November 25, 1941, in Docket No. 59-38, etc., in the matter of Columbia Gas & Electric Corporation. I read from Mr. Creveling's direct testimony at page 279 from the official report of those proceedings.

"Question: Mr. Creveling, has the defense program caused any additional load on Panhandle Eastern and its affiliates?

"Answer: It has a very decided one. As a matter of fact, while we do not have the figures here, it is my judgment that probably yesterday, although it is still warm weather, was a peak day for all time for gas deliveries from the Panhandle system.

[fol. 9433] "Question: And you think that is due, in part at least, to the unusual demands by customers engaged in defense operations?

"Answer: We have checked with certain of our customers and through them with the industries served by them and we find that to be decidedly the case and that was one of the items that undoubtedly had a great bearing on our ability finally to get the priority rating that we did for the material being used in our present construction program.

"Question: What was that priority rating?

"Answer: A-2."

Do you agree with the testimony of your employer, Mr. Creveling, which I have just read to you?

The Witness: Well; the fact that he happens to be my employer should not have any bearing on whether I agree or not.

Mr. Littman: Do you or do you not agree?

The Witness: I certainly do agree. I have testified here before today that I think we are going to make lots of industrial sales—"business is going to be good" are the words I used. I did not admit there would be a boom, however, as I was urged to admit but I think it is going to be good.

By Mr. Chamberlain:

Q. Mr. Morton, just a few moments ago you told me you thought the unit cost of gas which you had estimated for 1942 of 27 cents would be substantially the unit cost of [fol. 9434] gas for the year 1942 for the Michigan Consolidated Gas Company. Will you tell me how you can arrive at that estimate without knowing and having, as a base, the amount of gas you are going to sell and the amount and character of the use of that gas?

A. Well, I think I used the expression "approximately" and I believe that is about as good as anybody could do under the circumstances. That was my estimate before for Detroit and I believe I also testified before that it was now my opinion that, for 1942, it would not vary a great deal from the estimate that I used previously in my Exhibit No. 40. The principal differences that I see in the future in unit rates do not come within the next nine months of this calendar year but within the next twelve months, the next fifteen, the next eighteen or two years.

Q. Your twelve months is entirely within the fiscal year of 1942, is it not?

A. Sir?

Q. There will be a twelve months period in your fiscal year of 1942?

A. I refer to it as the calendar year 1942.

Q. You do not think the amount of gas that you have estimated would be sold there was very substantial nor do you think the unit price will vary substantially?

A. I think I said that that total amount would be less because of house heating since you are prohibited from [fol. 9435] taking on additional house heating. I said also

that the base load might be up slightly over that which I estimated but it is very difficult for me to tell how much because I do not know the effect of Order L-31 but the estimate I show there of 27 million for Detroit for 1942 and the money I show there in the exhibit—I am referring to Exhibits 40 and 161—should not vary greatly for the calendar year 1942. The principal variations I see are those which occur within the next twelve, fifteen, eighteen of 24 months.

Q. You mean that the variance is going to come in 1943?

A. Yes, I expect things to be considerably changed so that Exhibits 40 and 161, as they show my estimates for 1943, are going to be considerably changed.

Q. And you made an estimate of a less increase in the sales of gas for 1943 than you did for 1942, did you not?

A. Referring to Exhibits 40 and 161, that is true.

Q. And you know that Detroit is getting into tremendous war production?

A. Yes, I have heard so. I know that to be a fact.

Q. You have read that, haven't you?

A. Yes. We have a letter from your company stating the number of defense workers that you were going to have to take care of there in Detroit, naming your maximum demands for the coming winter that you expected to have [fol. 9436] to take care of. Yes, I am familiar with your estimates.

Q. And you have found those estimates very accurate in the past, have you not? I am speaking of the estimates made as to the maximum days by the staff of the Michigan Consolidated Gas Company?

A. Yes, they are usually pretty accurate.

Q. By the way, I wish you would make a note to get the letter that gave the estimate of 150 million.

A. All right.

Q. And bring it when you come again.

A. Almost the exact words of that letter said, "We will expect you to furnish 150 million." That is from Mr. Battens.

Q. Yes, and he was told they would not agree to furnish more than 125 million, was he not?

A. Yes, he was; that is the contract.

Q. That is right. Now, if the revenue that you are going to receive this year is to be approximately the same,

the unit price is the same and yet the gas a little less, tell me how shaving the peak load benefited the Michigan Consolidated Gas Company?

A. I believe that I have testified that I did not see much benefit to the Michigan Consolidated Gas Company, one way or another, as a result of shaving peaks for the calendar year 1942.

. . . . . .

[fol. 9437] Q. I am going to ask you to give your computation as to how it is going to save them anything for the fiscal year beginning April 1, 1942. Let's get this concrete now and find out just in what way that affects your computations.

A. I should think your own figures would show you that, Mr. Chamberlain. Mr. Batten told Mr. Nenner he had saved a lot of money by shaving his peaks.

. . . . . .

[fol. 9438] By Mr. Chamberlain:

Q. Mr. Morton, to get back to this money making, I want to ask you under which of these contracts settlement was made last year, the supplemental or the original?

Mr. Wheat: You mean 1941?

. . . . . .

The Witness: On the basis of the supplemental contract.

. . . . . .

[fol. 9438a] By Mr. Chamberlain:

Q. Now, Mr. Morton, did you intend to infer that by reason of cutting the peak, the demand charge made by Michigan Consolidated Gas Company to Panhandle Eastern would be decreased over the previous year?

A. I don't know that I made any comparison between the demand charge that would result after trimming your peaks and the demand charge for the previous year.

Q. Well, now, the commodity charge is the same under both contracts, is it not?

A. That is correct.

Q. So that the only difference in the amount of the bills that you render during the year would be in the demand charge, would it not? A. That is correct.

Q. Now, last year a settlement was made under the supplemental contract, was it not?

A. Yes, sir, because that was the cheaper of the two.

Q. And do you have with you the amount of the demand charge for the year—that is, the fiscal year—beginning April 1, 1941? A. I do not.

Q. Is it where you can get it here in the building?

A. I suppose that it is in the files of the Federal Power Commission.

[fol. 9438b] Q. Well, now, what will be the demand charge for the year beginning April 1, 1942, under the original contract as compared with the demand charge under the supplemental contract for the year beginning April 1, 1941?

A. Well, I have neither one of those computations, so that I can't tell what that comparison is.

Q. Well, it would be easy for you to figure this last one, would it not? You have before you the maximum take in therms?

A. Yes. I believe I testified at one time that it was approximately 110,000,000 times 12 times 380 per M.c.f., or stated in therms, would be .38 dollars times 12 times the maximum established on the maximum take amounting to 1,110,161 therms.

Q. The latter figure was the maximum take, was it not, in therms? A. Yes.

Q. The demand charge, then, would be that number of therms multiplied by $4.56, would it not?

A. Yes, it would.

Q. And will you verify this to see whether it would be $5,062,343.14?

A. I agree within two cents. I get 16 cents, where you get 14.

Q. Yes. Now, in your estimate reflected in Exhibit 40, [fol. 9438c] you increased the unit cost of gas to the Detroit company from 26.2 cents to 27 cents, did you not?

A. You are now comparing, I take it, the estimate shown in Exhibit 40 and—

Q. (Interposing) 161.

A. (Continuing)—161?

Q. Right.

A. Year 1941 with year 1942?

Q. Yes.

A. The comparison you mentioned is the correct comparison—that is, the correct figures for the revenues which I estimated at that time that Panhandle Eastern would receive.

Q. All right. Now, I think perhaps I can give you the figures that will enable you to give us the demand charge under the supplemental contract, for the previous year.

Mr. Wheat: Which is that?

Mr. Chamberlain: That is for the year previous to the one that began April 1, 1941.

Mr. Wheat: April 1, 1941, to March 31, 1942?

Mr. Chamberlain: That is right.

Mr. Wheat: Thank you. That is what the witness called the fiscal year under the contract.

Mr. Chamberlain: That is right.

A. The maximum base load demand established March [fol. 9439] 18, 1941, was 742,300 therms. Multiplying that quantity by $4.56, which represents the 12 months charge per therm, yields a total of $3,384,929.04. This figure of $3,384,929.04 is the base load demand charge under supplemental contract for the fiscal year April 1, 1941 to March 31, 1942, inclusive.

By Mr. Chamberlain:

Q. Now, to that must be added the demand for the house heating customers, must it not?

A. If we are making a comparison between the demand charges for that fiscal period and the demand charge which would hold for the 12 months fiscal period '42-'43, yes.

Q. And can you do that?

A. No, I don't believe I have enough information here to calculate the demand charge.

Q. Did you get the figures above (indicating)?

A. (No answer.)

Q. Mr. Morton, if that is substantially correct, I don't want to bind you in anyway to it, but I want you to have ample time to check it, but if that is close enough to adopt for the moment, we will go ahead and let you figure it.

A. I am not having so much difficulty accepting the figures you have handed me, Mr. Chamberlain, for the purpose of this comparison, as I am in reconciling the [fol. 9440] theoretical basis, upon which they are prepared, with the facts.

Q. Now, it would have been an easy matter to arrive at that, would it not, by—you have the demand charge upon the base load. All you lack is the house heating demand.

Now, you can take the rates by your company and by deducting the commodity charge, you would have the total demand charge that was paid last year, would you not? Then by deducting the demand charge on the base load, you would have the amount that was paid for the house heating. It seems to me that would be easy to get from the records here in the Commission, and if you wish, I will frame my question so to assume that that is the correct amount.

A. In order that we may preserve evidence of cooperation here and to get along to the answer, Mr. Chamberlain, I will, for the moment, assume that this calculation is correct enough for all practical purposes.

Q. Yes. We want it right. We don't want anything out of the way, but I understand that that is correct, and if that is not, we want to correct it, but now if that be true, Mr. Morton, the demand charge that was paid by Michigan Consolidated Gas Company to Panhandle Eastern, under the supplemental contract, for the fiscal year beginning April 1, 1941, was $4,497,920.16, was it not?

A. Yes.

[fol. 9441] Q. Now, notwithstanding the peak-load shaving in January, the base load demand went up, did it not?

A. Yes.

Q. And how much did it go up?

A. I can't tell from this exhibit which day established the maximum base load, but I presume from this examination that it is—

Q. (Interposing) January 6?

A. (Continuing)—January 6: that is correct.

Mr. Wheat: 1942?

The Witness: 1942.

A. (Continuing). And the amount that it went up, of course, would be the difference between the maximum load—or, rather, would be the base load maximum demand of 954,043 less the previously established base load maximum demand established March 18, 1941, of 742,309 therms, so that the increase from one year to the next, on that basis appears to be 211,734 therms.

By Mr. Chamberlain:

Q. And what would be the increased cost of that were the settlement to be made under the supplemental contract for the fiscal year beginning April 1 last?

Mr. Wheat: You mean yesterday?

Mr. Chamberlain: Yes.

A. It would appear that the increase in demand charge [fol. 9442] for a 12-month period as between the base load maximum figures above mentioned would be $965,507.04.

Mr. Chamberlain: That is right.

By Mr. Chamberlain:

Q. Now, the cost of gas, then, to Michigan Consolidated, if it be required to settle under the supplemental contract, would be greater by that additional demand charge of $965,507, would it not, notwithstanding the peak shaving we were talking about?

A. That would have been correct had the conditions obtained that we are assuming here.

Q. That is, there are no conditions, are there, other than if they are compelled to settle under the supplemental contract for the fiscal year beginning April 1, 1942?

A. That is correct.

Q. Yes.

Now, let us go back to the original contract and now tell us what the demand charge will be if computed on the original contract for the year beginning April 1, 1942.

A. $5,062,334.16.

Q. Now, will you deduct from that the demand charge that was paid last year under the supplemental contract?

A. When you say "last year," you mean last fiscal year?

Q. Yes, I do.

A. Ending April 1?

[fol. 9443] Q. Yes, I do.

A. I am deducting from the demand charge on the original contract basis for the year '42-'43 in the amount of $5,062,334.16, $4,497,902.16, which latter figure is the one we adopted a few moments ago as representing the demand charges under the supplemental contract for the period April 1, '41-April 1, '42, and the difference is $564,414.

Q. What do you have there?

A. I have a difference of $564,414 even.

Q. Now, you said awhile ago that by the peak shaving there would be a gain if settlement was made under the original contract, did you not? A. Yes.

Q. Then, Michigan Consolidated Gas Company would be required to pay an increased demand charge by $564,414 if the settlement were made for the fiscal year begin[fol. 9444]ning April 1, 1942, under the original contract as compared with the demand charge of the previous year?

A. That is correct.

Q. Then whatever Mr. Batten may have said by peak shaving would be that portion that he could save out of the difference between 564,414 and $965,507, would it not be?

A. As I understand your question, you have asked me to subtract from $965,507.04 another figure of $564,414. The first figure mentioned representing the difference in the base load maximum demands for the two fiscal years which we have been comparing, times $4.56, the second figure being the difference between the demand charge for 12 months beginning April 1, 1942, to April 1, 1943, and the demand charge on the supplemental contract April 1, 1941, to April 1, 1942, and I can't see the connection.

Q. Well, let me put the question in another way.

You concede, of coarse, that the commodity charge remains the same?

A. Yes.

Q. And the only difference in the cost of gas to Michigan Consolidated will be in the demand charge for the fiscal year beginning April 1, as compared with the past year?

A. Yes.

Q. All right. Now, it has one of two options of set- [fol. 9445] tlement: that is, under the original contract or under the supplemental contract, does it not?

A. Yes.

Q. Now, if it settles under the supplemental contract its demand charge increases $965,507, does it not?

A. Yes.

Q. If it settles under the original contract, the demand charge increases over that paid last year by $564,414, does it not? A. Yes.

Q. Now, you have mentioned the difference between the calendar year, and that your figures in Exhibits 40 and 161 were made on a calendar year basis. Under these contracts, the gas company is required to settle, to start with, under the supplemental contract, are they not?

A. Yes.

Q. Then, the demand charge beginning with the first of April will be increased by about $80,000 a month, will it not, beginning with April 1, 1942?

A. Let us concede for the purpose of getting along that that is a true statement.

Q. 8 times 12 is 96, isn't it?

A. Yes.

Q. If you have got 12 months in the year, you have got $960,000, that would be just a shade over $80,000 a month, [fol. 9446] would it not, increase?

A. Let me point out to you that you are discussing a figure which is the difference in the demand charge applicable to the base load maximum demands for the two years in question. That is not the only demand charge under the supplemental contract. There are other items that enter into that charge.

Q. Well, that is perhaps true, but there is at least that much difference, is there not?

A. There is at least that much difference between the base load maximum demand charges for the two years, yes.

Q. I would think there was more. The house heating demand was greater there in 1941. Then, beginning with April, the Michigan Consolidated Gas Company must pay an increased demand charge each month of something over $80,000, must they not, under this contract, or under their contracts with Panhandle Eastern Pipe Line Company?

A. I wonder if I could shortcut this; Mr. Chamberlain, by saying that undoubtedly your demand charges are going to be higher for the ensuing fiscal year than they were for the previous—

Q. (Interposing) Well, you have already stated that under one method they would be at least $965,000 and another would be $506,000, and there are only two, so I [fol. 9447] think we can concede that.

But now what I want to get at is to compare with your figures in Exhibit 40, I want you to make a rough calculation, and you can use, if you like, the paper I have put on your desk, but to make a rough calculation and let us know about what the increased payments on this demand charge would be during the calendar year 1942, so that we can compare it with your estimates.

In this, Mr. Morton, let me say that an approximation is all we care for, and that you may have all the opportunity in the world to recheck.

A. You want to know what is the difference in total demand charge for the calendar year 1942 on the supplemental basis, as estimated in Exhibits 40 and 161, as compared with three months on the supplemental basis and nine months on the original contract; is that it?

Q. What I want to know, Mr. Morton, is what in dollars the Michigan Consolidated Gas Company is going to have to pay you by way of an increase in the demand charges for the calendar year 1942 over the previous year 1941.

Now, let me say this, and I think your will agree with me that settlements in the first instance are made under the supplemental contract, that any rectification is made at the close of the year and that if it should then appear that the original contract was cheaper, there would be a [fol. 9448] refund made, and I think you will also agree

with me in the first instance, that during the summer months the rate would be cheaper under the supplemental contract, and that in the spring months or the winter months of next year, it rises very rapidly under that contract?

A. Yes, that is true.

Q. What I want to know is about how much money Michigan Consolidated Gas Company is going to have to pay in excess of the demand charges last year during the calendar year 1942.

Mr. Wheat: You are speaking solely of demand charge?

Mr. Chamberlain: Yes, sir. The commodity charge remains the same.

Mr. Wheat: Yes, it depends entirely on the amount.

Mr. Chamberlain: Yes. What I am trying to get at is this: what are the finances of these two companies? How much are we going to pay extra and how much will Panhandle receive extra during the calendar year?

Mr. Wheat: Don't you really mean, Mr. Chamberlain—I don't know, the witness may correct me if I am wrong—how much your company would be paying under whatever basis it pays, based on a take of 110,000,000 as against what it would have paid had the take been one hundred twenty-five or some higher figure?

Mr. Chamberlain: No.

[fol. 9449] Mr. Wheat: Isn't that what you are getting at?

Mr. Chamberlain: No.

Mr. Wheat: I thought that was the saving the witness mentioned.

Mr. Chamberlain: The inference has been cast here several times that we had a lower demand by reason of this peak shaving. The fact is that we had an increase.

Mr. Wheat: Not a lower demand in actual cubic feet than you had the year before. I am trying to get myself straight as to your point.

Mr. Chamberlain: It is a miserably complicated thing, but we have an increased base load demand notwithstanding the peak shaving.

Mr. Wheat: That I thought was understood, but that there was a saving because of peak shaving below what had been anticipated that you would take. Might we not ask the witness whether that was what he was trying to get at?

Mr. Chamberlain: Yes.

Mr. Wheat: I hope you will let him explain that because if you will, that will help me.

Mr. Chamberlain: Anything you want.

. . . . . .

[fol. 9450] The Witness: Using approximate methods on the slide rule, it appears to me that on the basis of the calendar years the demand charge for 1942 will exceed those charges paid for gas in '41 by about 360 or 370 thousand dollars.

Q. Well, how do you figure? It would be over a million, wouldn't it? You say that here is nine months of the period which you say the minimum would be 565,000 on that basis.

Mr. Chamberlain: Gentlemen, may we do this: rather than let Mr. Morton take the time now, may we let Mr. Morton make up the calculation and send it in?

Mr. Wheat: Yes, I think that would help.

Mr. Fulton: I think he should know exactly what you want, though.

Mr. Chamberlain: Yes, I will give until tomorrow.

Trial Examiner: Do you agree also, gentlemen, that Mr. Morton, before he takes up this computation, will review his answers to the question which were given on Mr. Chamberlain's interrogatories, and if there are corrections, let us have them?

Mr. Wheat: Yes, I think so.

Trial Examiner: This is a very important ground that has been covered, and the witness has been making his com- [fol. 9451] putations as each question was asked, at the desk.

Mr. Wheat: Yes, we would like to have the witness have that opportunity, and I think it would save a great deal of time.

Mr. Chamberlain: I would be happy to have him have it because these are merely mathematical computations.

. . . . . .

Q. What I want is the difference in the demand charge that will have to be paid by Michigan Consolidated Gas Company in 1942 calendar year over that paid in 1941 calendar year. Now, I realize, Mr. Morton, that you haven't the exact figures for March to determine the house heating demand. You will have that in your office probably in a day or two, but in doing that, I have used the March be- [fol. 9452] fore.

It is based upon 25,000 customers. The only change is in the temperature condition in that month so that it couldn't vary largely. But use either March you want to—this or the last one—because they are very slightly different, but my purpose there is merely to show the cash outlay, by which the demand charge this year exceeds the demand charge next year.

We have got to make provision in our financing here for a million dollars more this year than for last year in the demand charges and it has got to be a matter of cash that is paid if my figures are correct, and I think they will be confirmed.

And, by the way, I might say, Mr. Morton, that my figures indicate that the demand charge of the last year was $4,218,229, and that the demand charge this year under our contract with Panhandle Eastern will be $5,223,654.

Now, the latter is approximate but very close, as I understand it, the only difference being just on the slight variation of temperature in the two Marches.

A. I detect there what I believe to be an error. You multiplied the total demand on the original contract by

12 months, and there is only nine months that it will be effective in this calendar year, so that to get the true demand charges that you would pay this year, you will, as I [fol. 9453] see it, take three months on the supplemental contract and nine months on the original.

We are speaking now of calendar—

Q. (Interposing) Just a moment. You are assuming now that we will get onto the original contract which might make a difference one way or—well, it makes no difference in the calendar year, because we have to pay the supplemental contract, do we not? In other words, we will pay under the supplemental contract for the balance of 1942, for nine months.

A. You are making a distinction between the payments that you will make to us for your gas and the ultimate cost of the gas?

Q. Right. Right. I am getting at the cash outlay for the calendar year and that—

A. (Interposing) I am glad we are clearing that point up, because I think we help the record if we both understand each other.

Q. I am doing that for two reasons. One is to show the cash outlay that must be made by the Michigan Gas Company, and during this period as well as to get a comparison with your figures in your Exhibits 40 and 164.

. . . . . .

[fol. 9454] Mr. Wheat: Now, repeating once more to get it straight: We are interested in what is developing the total demand charges actually paid by Detroit to Panhandle for [fol. 9455] the calendar year '41 as against the prospective payments that will be paid by the former company to the latter for the calendar year '42.

By Mr. Chamberlain:

Q. In other words, the cash paid within that year. Now, I will say this: I asked Mr. Tuttle to make that and he did it hurriedly here and I haven't checked it, but you will check it to see which is correct there.

Now, Mr. Wheat suggested awhile ago, if I am right, a question that I propose to ask you, and that is this: The peak shaving that you referred to as having been done

by Mr. Batten, under which he made money, was done in order to cut down a take which would have been in excess of a base load demand which was figured on January 6 last, was it not?

A. Would this be another way of stating it satisfactorily to you: That it was done to avoid incurring a larger base load billing demand than that previously experienced?

Q. And but for that the base load demand would have been larger by the amount of gas that was sent out by the company? A. Yes.

Q. That is right. Now, will you look at your own bill rendered for January, and state for the record what that [fol. 9456] increased base load demand would have been, had Mr. Batten taken all of the gas from you that day?

A. As I see it, the base load maximum demand would have become 954,043.

Q. Pardon me. You say it would have become that? It did become that, did it not?

A. Had he taken the entire requirements from us on that day, the base load demand would have been the same as I just read: 954,043, since the takes from Panhandle Eastern do not affect the base load maximum. In other words, whether you took it all or didn't take it all from us, under the supplemental contract, the base load—and that is what we are speaking of when we use the base load term.

Q. Yes, you are right about that. You are quite right.

Now, what would be the effect on the original contract?

A. Under the original contract, you would have created a maximum take from us of some 40,000,000 cubic feet or 400,000 therms.

Q. Not that much, would it?

A. Change that to 30,000,000, or 300,000 therms.

Q. Would it be the difference between the send out and the delivery that Panhandle Eastern made?

A. Yes.

Q. Which on that day would be about 207,040 therms, [fol. 9457] would it not?

A. On the sixth it would have been 237,000 therms increase, yes. Just as you have stated.

Q. Now, what would that have increased the demand charge to Michigan Consolidated Gas Company under the original contract?

A. Well, if that had been the situation and if that situation had obtained instead of the one that, as a practical matter, is obtaining, it would have increased the monthly demand charge by a considerable amount, being 90,000 a month approximately, as I calculated on the slide rule.

Q. That is right, or a million eighty thousand dollars a year, would it not?

A. Yes, that is correct.

Q. Then, by the use of the standby service, he reduced what would have been the demand charge under the original contract by $1,080,000 for the fiscal year beginning April 1, 1941?

A. By use of the standby, he reduced the annual demand charges approximately by the amount you stated on the original contracts, but it happens that the original contract would not have been the one that determined the charges between the two companies for that period, since the supplemental would have obtained rather than the demand of 140,000,000—

[fol. 9458] Q. You are just telling us that we have an advantage because we are going to settle under the original contract.

Now, if this had not happened, we wouldn't have settled under the original contract, would we?

A. I believe it is a true statement that you got an advantage by settling under the original contract or you wouldn't be changing over to the original contract.

Q. I don't know how you can tell until the end of the year what it will be.

There is no question, I think, Mr. Morton, in the world, that there wasn't a distinct advantage gained by the use of the standby, an advantage probably of $340,000 over what the bill would have been, but I think you will concede that the bill for demand charge will be, under the lowest method of settlement, $564,414 more than last year, and on the former $565,000 more; that is correct, isn't it?

A. We would expect the demand charge to be more each year because you are adding more business, certainly.

Q. But you complained that you could not arrive at that estimate and that your estimate was now all wet because of that peak shaving. Now, the effect of it is that your estimate is almost a perfect estimate for the year 1942, both as to unit costs and—

A. I testified several times that for the year '42 there wouldn't be much difference between the two.

. . . . . .

[fol. 9459] Now, let me ask you two or three more questions here with respect to the take, and I don't mean this in any sense controversial, because I want merely facts.

A. All right, Mr. Chamberlain.

Q. You have here the sendout which I believe you or some of your men furnished from your measuring station at Dana northward for the period from January 3 to January 11? A. Yes.

Q. There was a period in there of some six days that you averaged better than 175,000 M. c. f., was there not?

A. Yes, I recall those figures, so I can testify to them right off.

[fol. 9460] Q. Yes.

. . . . . .

The 175,000 M. c. f. is what you deem to be the capacity of your line north from Dana, isn't it?

A. That is pretty close to the maximum capacity of that line.

Q. And you had a continued sendout there for that period of time which I think was a remarkably fine bit of operating, and I think you agree with that, but what I am getting at now is: what did the Detroit company do with respect to limiting that load by its standby service during that period?

A. Well, they assisted materially in limiting that load.

[fol. 9461] Q. All right. Now, let us take the sixth day of January, in which you sent through 175,859 M.c.f. beyond Dana. What amount did Detroit add to that for the purpose of consumer use?

A. What portion of that figure is constituted by Detroit's load? is that the—

Q. (Interposing) No. What amount did Detroit send out which supplemented your load?

In other words, what I am getting at is: What was delivered to consumers on that day, and how much did Detroit contribute to it?

A. On the sixth of January?

Q. Yes.

A. According to the record your send out was 1,347,201 therms, and on that day you took from Panhandle Eastern 1,110,161 therms, so that there was a difference there, which was made up from your own facilities at Detroit, amounting to 237,040 therms, or approximately 24 million cubic feet supplied by your own facilities at that critical time.

Q. Well, then, the service in that area was supplemented by that amount of gas in addition to what Panhandle Eastern was able to deliver through their lines, was it not?

A. Yes.

Q. Now, what was your peak day during that period?

[fol. 9462] A. The coincidental maximum day on the Panhandle system occurred on January 7, and it amounted to very close to 254 million cubic feet.

Q. And how much passed the Dana Measuring Station?

A. I will correct that. The figure is 178,868 M.c.f. or 179 million cubic feet approximately.

Q. And how much did the Detroit Company add to that for customer distribution?

A. The Detroit Company added approximately 28 million cubic feet.

Q. And how much on January 8, when your deliveries remained at approximately the same amount, or to be exact 178,324 M.c.f.?

A. Approximately 26 million cubic feet.

[fol. 9468] Mr. Littman: I have a matter that we might dispose of at this time.

Trial Examiner: Very well.

Mr. Littman: It will not take very long, but we might utilize the remaining few minutes.

I have caused to be copied the cross examination of Mr. Joe D. Creveling, president of the Panhandle Eastern Pipe Line [Company,] which testimony was given before the Securities and Exchange Commission on November 29, 1941, in the matter of Columbia Gas and Electric Corporation, et al, File No. 59-33, etc.

[fol. 9469] I would like to have this copy of Mr. Creveling's testimony marked for identification with the next exhibit number.

(The document referred to was marked for identification as Exhibit No. 218.)

(The document referred to was received in evidence as Exhibit No. 218.)

Mr. Littman: As I have stated, Exhibit No. 218 is the copy of Mr. Creveling's cross examination in the proceedings which I just named.

There are, however, some statements that Mr. Creveling made on direct examination, that I think ought to be made a part of this record.

They are not lengthy; and I thought perhaps the most [fol. 9470] propitious way of handling the matter would be to merely read into the record at this point the portions of his direct testimony from the same proceeding, which I deem relevant to the issues at hand in the instance proceeding.

I shall read from Page 277 of the official report of the proceedings before the Securities and Exchange Commission, in the matter of Columbia Gas and Electric Corporation, Docket No. 59-33.

Trial Examiner: That is not contained in your Exhibit 218?

Mr. Littman: That is correct. Page 277:

"Question: Mr. Creveling, I take it that Panhandle Eastern considers that it is most desirable for Panhandle Eastern to acquire Michigan Gas Transmission Corporation?

"Answer: I think that is quite apparent.

"Question: Can you give a brief statement of some of the reasons for that and some of the advantages that would flow from the acquisition of this property by Panhandle Eastern?

"Answer: I think I can give some of them.

"In the first place, from the standpoint of operations and especially as the operations of the various corporations approach 100 percent of the capacity, it is quite apparent that unified management would be more efficient than a divided management.

[fol. 9471] "As an example of that, the item of pressure control is quite important. We, Panhandle Eastern Pipe Line Company, deliver gas to Michigan Gas at a point near the Indiana-Illinois State Line known as Dana. Michigan Gas Transmission Corporation takes that gas and delivers it primarily to our customers in Indiana, Ohio, and Michigan.

"We feel that we have a direct responsibility to these customers to render them as nearly as is humanly possible and economically possible, uninterrupted service in accordance with their varying demands.

"To fully be able to fulfill that obligation, we think it is a handicap to have a third party intervening between ourselves and our customers. We also find out that the customer prefers, in most instances, to deal directly with the owner of the commodity he is purchasing, rather than to deal through an intermediary.

"Question: In other words, the acquisition of Michigan Gas by Panhandle Eastern would afford direct contact between Panhandle Eastern and its customers, present and future, in one of its largest sales territories?

"Answer: That is correct.

"Question: Would there be any financial economies in operation, unified operation?

"Answer: There would be some economies that undoubtedly would result in the consolidation of the two corporations.

[fol. 9472] "There would be only one management and a reduction of general expense. There would be some reduction undoubtedly in the operating expense.

"As an example of that, our contract calls for delivery pressure when demanded at Dana of 225 pounds per square inch. A more economical operation of the two lines as a single project would indicate a pressure at Dana of probably nearer 300 pounds in order to most economically utilize the compressor station installation of the two corporations.

"Also, we find every time we approach either investment or commercial bankers, the proposition of this not being a single unit from the source of supply to our principal markets is brought up and is a hurdle that we have to overcome and, undoubtedly, the tendency of this hurdle is to weaken our credit rather than to strengthen it."

* * * * * * * * *

Mr. Littman: It is stipulated by and between counsel that the word "uncommon" appearing in the second line on page 516 of Exhibit No. 218 should be corrected to read "a common."

* * * * * * * * *

[fol. 9476] Charles W. Smith a witness called by and on behalf of the Commission, having been first duly sworn, was examined and testified as follows:

Direct Examination.

By Mr. Littman:

Q. Will you state your name and address?

A. Charles W. Smith, 1810 Park Avenue, Halethorpe, Maryland.

Q. What is your present position, and how long have you held it, Mr. Smith?

A. I am chief of Bureau of Accounts, Finance, and Rates of the Federal Power Commission, which position, subject to a few changes in duties, I have held since July 1, 1936.

Q. Will you please describe briefly your education and experience?

A. I have a B. S. Degree in Finance and Business Administration, and also an L. L. B. Degree.

I am a Certified Public Accountant of North Carolina and Maryland, the first having been obtained about twenty years ago.

[fol. 9477] I am a past president of the Maryland Association of Certified Public Accountants and a member of the American Institute of Accountants, the American Accounting Association, American Economic Association, the American Bar Association, and an honorary member of Delta Sigma Pi, an international accounting fraternity, the Beta Alpha Psi, a national accounting fraternity.

I am also a member of the Committee on Statistics and Accounts and the Committee on Depreciation of the National Association of Railroad and Utilities Commissioners, and a member of the Special Committee to report on the effect of national defense laws and regulations on public utilities of the public utility section of the American Bar Association.

I have been admitted to the Bars of the Court of Appeals of Maryland and the Supreme Court of the United States.

Q. How long, by the way, have you been a member of the two committees of the National Association of Railroad and Utilities Commissioners?

A. I was a member of the Committee on Statistics and Accounting back in 1933 or 1934.

In 1936 I resigned my membership because I then became associated with the Federal Power Commission and one of my assistants, the chief accountant of the Commission, was also a member of the committee, and I didn't [fol. 9478] think the two of us should represent the same agency.

I again became a member of the committee in 1937 or '38. I have been a member of the Depreciation Committee for about three years.

For nine years I was an auditor in the Income Tax Unit of the United States Treasury Department, and in this capacity I audited the income tax returns and books and records of practically every type of business corporation, including public utilities.

On June 1, 1929, as the result of obtaining the highest mark in a competitive examination, I became the chief auditor of the Public Service Commission of Maryland, remaining in that position for seven years. I joined the staff of the Power Commission, as I have indicated on July 1, 1936.

For ten years I taught accounting in evening schools in Baltimore, including eight years at Johns Hopkins, where I gave the course in accounting systems, and for two years the course in cost accounting. These courses were for both day and evening students.

While with the Maryland Commission, I did a good deal of work as consultant in accounting, taxation, and finance in my spare time.

On one occasion, I obtained leave of absence to do some work of a consulting nature for the Tennessee Valley Authority, and on two other occasions I was granted leave [fol. 9470] to act as consulting accountant to the Federal Power Commission.

On the latter two occasions I was retained by the Power Commission to supervise the drafting of the uniform system of accounts which the Commission later prescribed for public utilities and licensees.

I have written several articles on accounting and economic subjects, including a text on accounting systems for my classes at Johns Hopkins.

I understand that the latter text is still being used. I have delivered a great many lectures, more than 50, on accounting, financial, and economic subjects, including two radio addresses.

I have testified in more than 35 public utility proceedings of one kind or another. While in the employ of the Public Service Commission of Maryland, I had charge of all accounting, auditing, financial and certain rate matters which were under the jurisdiction of that body. This included the making of the usual accounting investigation for all regulatory purposes, all studies relating to the issuance of securities, financial structure, rate of return, and so forth.

I also testified in proceedings before the Maryland Commission as to depreciation matters.

In my present position, I have charge of four divisions [fol. 9480] of the Federal Power Commission, namely, the Division of Accounts, the Division of Finance and Statistics, the Division of Rates and Research, and the Division of Original Cost.

Q. Mr. Smith, when I hereafter use the term "depreciation" in my questions, I include therein also depletion and amortization.

Mr. Smith, have you had any special experience in the field of depreciation? A. Yes, I have.

Q. Will you describe that experience briefly?

A. I have been actively dealing with depreciation matters since 1920.

When I was in the Income Tax Unit of the Internal Revenue Bureau, I necessarily passed upon depreciation claims in numerous, probably hundreds, of cases. In fact, as I look back upon it, it seems that almost every large case involved depreciation in one manner or another.

When I was in the employ of the Maryland Commission, as I just mentioned, one of my duties was to pass upon matters of depreciation expense and accrued depreciation.

Since joining the staff of the Federal Power Commission, I have taken an active part in the functions of the Commission as relating to depreciation.

All staff matters pertaining to depreciation in rate cases [fol. 9481] are handled by the Bureau of which I am the chief. Here again depreciation is involved in almost every rate case.

I have testified in three or four cases before the Commission on the subject of depreciation. Thus, since 1920, I had been constantly applying depreciation principles, I have been determining, service lives, depreciation rates, depreciation expense, and accrued depreciation.

In addition, I have been a close student of public utility depreciation matters and have taken a very active part in the work of the Committee on Depreciation of the National Association of Railroad and Utilities Commissioners.

Q. Mr. Smith, what do you mean by the word "depreciation"?

A. Depreciation signifies the expiration or consumption, in whole or in part, of the service life, that is, the economic life or the economic utility of depreciable property, resulting from the action of one or more of the various forces which operate to bring about the retirement of such property from service.

Among the forces which so operate are wear and tear, decay, action of the elements, inadequacy, obsolescence, public requirements, and the exhaustion of natural resources. Thus depreciation is not wear and tear, inadequacy, or obsolescence. These are causes of retirement.

[fol. 9482] Depreciation is the using up of the economic life of an asset, of a plant item.

Plant items are considered merely as stored up services; the automobile as transportation miles; the gas well as so much stored up gas; the pipe line as so much stored up transportation units of natural gas. As these stored up services are utilized, depreciation occurs.

Q. Mr. Smith, are there two phases to the depreciation problem?

A. Yes. One phase relates to depreciation expense, and the other to accrued depreciation, meaning depreciation in the properties as of the date of the inqury.

Q. Will you explain the difference between these two phases?

A. I have indicated that depreciation expense occurs as the economic life or the economic utility of plant assets used up.

The cost of plant assets is incurred in advance of use. As the economic life of the assets is consumed, a part of the cost of the plant must be charged as an expense.

Thus the cost of leases and wells is incurred in advance of production. Such costs are recorded as a part of the cost of plant.

As gas is produced, depreciation occurs and a part of the capitalized cost should be charged as depreciation ex- [fol. 9483] pense—the word "depreciation" being used in the broad sense, as defined by you, Mr. Littman.

In the early days of accounting, it was the practice to reduce the plant cost by the amount charged as depreciation expense. Thus, if a pipe line had a life of, say, 20 years and each year one-twentieth of the cost of the line was charged as an expense of doing business, the plant item, namely, the cost of the pipe line would be correspondingly reduced.

For the purpose of the mechanics of accounting and for other purposes, such as the giving of more information, the amounts which formerly were credited to the plant accounts, that is, the amounts which reduced the plant accounts, were set up in a separate account known as the depreciation reserve.

The depreciation reserve, therefore, is complementary to the plant accounts. It relates solely thereto. It shows the amount of depreciation which has been recorded in the books relating to the assets still in use.

The reserve, therefore, should measure the accrued depreciation in the properties.

In industrial accounting, it is the practice to deduct the depreciation reserve from the plant cost in order to arrive at the net cost of the plant.

In other words, it is just as accurate today to reduce [fol. 9484] plant costs by the amount of the depreciation which is recorded as an expense as to set the amounts up in the reserve. The latter device does not change the substance in any way at all, but merely is a better arrangement.

A properly computed depreciation reserve, in my opinion, is the best measure of the accrued depreciation in the properties.

Q. Mr. Smith, what is annual depreciation?

A. Annual depreciation is the amount of depreciation occurring in any given year. As I have indicated, it is measured by the estimated cost of the economic life of the plant which is consumed in the particular year.

Q. Is annual depreciation a precise determination or is it an estimate?

A. It is necessarily an estimate because it expresses the proportion of the total economic life deemed to have been used up in a given year.

To determine the proportion used up, it is necessary to know the total life. Naturally, the life of property, as the life of human beings, is necessarily an estimate.

Q. Mr. Smith, have you given consideration to the making of a recommendation to the Commission as to what should be allowed as the depreciation expense of the companies involved in the instant proceeding for the purpose of determining whether their rates are just and reasonable, [fol. 9485] and, if not, the degree of unreasonableness?

A. I have.

Q. What is that recommendation?

A. It is my recommendation that the depreciation expense which the companies have recorded in their books for the last several years, including the year 1941, be accepted by the Commission as a reasonable estimate of the depreciation expense for each of the respective years.

Q. Now, why do you make this recommendation?

A. I have reviewed the minutes of the Board of Directors of the Panhandle Eastern Pipe Line Company for several years which deal with this subject, and those minutes indicate that the company's officers have made a conscientious attempt to determine the proper depreciation expense.

I have likewise read the testimony of Mr. Watkins and have reviewed certain of the exhibits. These also lead me to believe that a serious and conscientious effort has been made by the company to determine the annual depreciation expense.

Discussions with my staff and a knowledge of the natural gas busines lead me to the conclusion that the amounts which the companies have set up in their books for depreciation expense are within the realm of reasonable amounts. They are slightly on the high side, but I believe they are reasonable, on the whole.

[fol. 9486]. Inasmuch as the Company has made a conscientious effort to determine the particular item of expense and inasmuch as I believe it has obtained an answer within the realm of reasonableness, an answer which it has reported to the stockholders, to financial publications, to the Federal Power Commission, and other interested parties, it is my recommendation that the amounts shown by the company's books and records be accepted as reasonable for the purposes of this proceeding.

Q. Mr. Smith, have you given any consideration to a recommendation as to accrued depreciation to be deducted in arriving at the rate base?

. . . . . .

A. I recommend that the amounts appearing in the depreciation reserves of the companies be considered by the Commission as reasonable estimates of accrued depreciation in the properties.

Q. Why do you make that recommendation, Mr. Smith?

A. I have already indicated that the depreciation reserves are merely complements to the plant accounts, deductions therefrom. They reflect the amounts which have been charged off by the companies as expenses for depreciation for the properties still in use.

The companies have considered such amounts as proper [fol. 9487] expenses and have, therefore, considered the amounts in the reserves as accrued depreciation.

Inasmuch as the reserves reflect the efforts of the companies to arrive at a reasonable figure for the cost of the economic life used up and inasmuch as that figure appears to me to be within the realm of reasonableness, I recommend that it be employed for the purpose of determining accrued depreciation.

Q. What do you mean by accrued depreciation?

A. By accrued depreciation I mean that part of the economic life of plant assets which has been used up to the date of inquiry. The amount which is stated in dollars representing the capital outlay which has expired.

Q. Then you suggest that both for expense purposes and for the purpose of determining the depreciation in the rate base, the company's recorded figures be accepted?

A. I do.

Q. Does this harmonize and make consistent the allowance for depreciation and deduction for accrued depreciation in the rate base? A. Yes, obviously.

Q. Mr. Smith, do you believe that it is sound regulatory practice to require depreciation expense and accrued depreciation, the two phases of the depreciation problem concerning which you spoke, to be treated consistently?

[fol. 9488] A. Yes.

Q. Why?

A. I have already indicated that these are but two phases of the same phenomenon. It is illogical to say that the consumption of economic life of plant is going on at a certain rate for the purpose of determining annual expense and then to deny that consumption is going on at that specified rate in determining the amount of property which has been consumed at the end of a given period, such as a year.

I believe it must be obvious that, if amounts charged to annual expense represents a reasonably accurate determination on a cost basis of the amount of economic life or utility of assets consumed in a given period, the accumulated amounts in the reserve must represent the accumulated consumption of such economic life or utility.

In other words, only actual expense should be charged to the operations of a given year. There is no valid reason to inflate those expenses.

Depreciation is a normal item of expense. If the expense is valid as measuring the cost of the economic life which has been consumed in any given period, the accumulations of these expense charges in an account complementary to the plant accounts, called the depreciation reserve account, must just as validly represent the cost of

[fol. 9489] the economic life or the utility which has been consumed to date.

I believe it fundamental to the sound regulation of public utilities that depreciation expense and accrued depreciation in the rate base be harmonized in the manner in which I have indicated.

Q. Mr. Smith, for the purpose of the record, will you indicate whether you believe, as a general principle, that depreciation expense and depreciation reserves, as shown by the books of the company, should be used in rate making?

A. Where the expense is clearly not within the realm of unreasonableness, where it is inadequate or excessive, and where the depreciation reserve is greatly inadequate or excessive, corrections, I believe, will probably have to be made. Under such circumstances, certainly it is perfectly proper to restate depreciation expense at the proper rate and to restate the reserve so that it would show an amount which would have been recorded therein, had the proper rates been used. In other words, there are cases where the amounts recorded for depreciation are unreasonable. In such circumstances, I believe it is appropriate to recompute depreciation expense at a reasonable amount and show accrued depreciation at the "reserve requirement," namely, the proper reserve as established [fol. 9490] by the revised rates.

Q. Mr. Smith, do you believe it sound economics of regulation for the Commission to allow depreciation expense on the consumption of economic life principle and in computing the rate base to deduct not accrued depreciation but a smaller amount such as that determined by what is known as the "observed depreciation" method?

A. No. Such inconsistency is a violation of sound economics of regulation and violates sound logic as well. It constitutes both an affirmance and denial of the service life basis of determining depreciation, and, therefore, is illogical and inconsistent.

Q. Does observed depreciation as usually made constitute proper accrued depreciation, in your opinion?

A. No. Observed depreciation is not based upon the consumption of economic life of plant, and is not, there-

fore, a proper [meteod] of determining accrued depreciation.

As I have indicated, plant assets are purchased for the services they will render. As this service is rendered, revenues are obtained. A cost of such revenues is represented by the cost of the original service capacity which is used up in the period the revenues are derived.

The observed depreciation process is not based upon the using up of the service or economic life but, rather, upon the physical condition of the properties and, there [fol. 9491] fore, cannot, except by accident, be a proper reflection of accrued depreciation.

. . . . . .

Trial Examiner: I show you, Mr. Smith, the balance sheet of the Panhandle Eastern Pipe Line Company marked for identification in this proceeding as Exhibit 172, and will ask you to state what you would include, from that balance sheet, designating the lines or items by name, in what you have termed depreciation or depreciation reserve.

Mr. Culton: Mr. Examiner, may I suggest that you just use the Panhandle Eastern for the purpose of the record? That includes all the subsidiary companies, I believe, 172.

Trial Examiner: Do I understand, then, Mr. Culton, that in this proposed Exhibit 172, you have included the figures which were at one time proposed in Exhibit 88?

Mr. Culton: 48 or 88; I don't remember which.

Trial Examiner: The Michigan Gas Transmission Company balance sheet.

Mr. Culton: That is right.

I just wanted to make that clear, Mr. Examiner, that for the purpose of the record we are talking about the entire group of companies in this exhibit.

Trial Examiner: I was about to ask that question myself.

[fol. 9492] Mr. Littman: It is my understanding, if your Honor please, that Exhibit 172 covers for the full year 1941 Panhandle Eastern Pipe Line Company and Illinois Natural Gas Company.

Mr. Wheat: That is correct.

. . . . . .

Mr. Wheat: Well, there is another exhibit, Mr. Examiner, that has the pro forma including the Michigan Gas Transmission Company. [A]

Mr. Culton: That is right.

Trial Examiner: Very well. We will deal now with Exhibit 172.

. . . . . .

The Witness: Mr. Examiner, I have not studied these exhibits in detail. Could I confer with a member of my staff for a moment before answering the question?

Trial Examiner: Yes. And before that may we have this colloquy read back commencing with my original question? In other words, if there is some revision required to make this question of value, let us have it now. The thought behind the inquiry was, of course, apparent that the balance sheet breaks down the depreciation re- [fol. 9493] serve on the books into some classifications of depletion and amortization and includes several items instead of a single item termed depreciation reserve.

Mr. Culton: 194 was the exhibit number I had reference to, Mr. Examiner.

. . . . . .

The Witness: Referring to page 2 of Exhibit 172, under the heading "Reserves," opposite line 27, I would include as the accrued depreciation: reserve for depreciation of gas plant—that is lines 28 and 29—reserve for amortization and depletion of natural gas land and land rights, lines 30 to 32, and reserve for abandoned leases, line 33.

Trial Examiner: I show you now an exhibit marked for identification as 194 which, I understand from Mr.

Culton, contains the consolidated [statement] since the acquisition by the Panhandle Eastern Pipe Line Company of the securities of the Michigan Gas Transmission Corporation.

I will ask you to make a corresponding comment with reference to this proposed exhibit.

[fol. 9494] The Witness: The items which I would include are shown under the title of "Reserves," on page 2 of Exhibit 194, and they are: reserve for depreciation of gas plant, reserve for amortization and depletion of producing natural gas lands and land rights and reserve for abandoned leases.

Now, there may be some adjustment necessary to these reserves by reason of the fact that I understand this exhibit includes a small amount of distribution property, property, I believe, of the Indiana Gas Distribution Corporation.

The amount applicable to distribution property, of course, would have to be taken out of the reserve figures.

Mr. Wheat: You understand, Mr. Smith, don't you, that those are quite negligible in the total?

The Witness: Yes, I understand they are quite negligible. I am speaking now from principle rather than practical application.

By Mr. Littman:

Q. Mr. Smith, my understanding is correct, is it not, that the reserves to which you have just referred on page 2 of Exhibit 194, cover the reserves of Panhandle Eastern Pipe Line Company, Illinois Natural Gas Company, Michigan Gas Transmission Corporation, and Indiana Gas Distribution Corporation?

Mr. Wheat: That is our understanding, Mr. Littman.

A. That is my understanding.

[fol. 9495] Trial Examiner: Then the items which you have designated by lines and titles are what you would designate as deductible items in arriving at a rate base?

Q. For accrued depreciation? A. Yes, sir.

. . . . . .

Cross Examination

By Mr. Goodman:

Q. Mr. Smith, what is the depreciation basis embodied by the company in: first, the accrued depreciation, and in the annual charges for depreciation?

A. I think the company has made a serious attempt to find the cost of its expired capital outlay.

In other words, I think the company has made a serious attempt to apply the consumption of economic life principle, which I have mentioned in my testimony.

. . . . . .

[fol. 9496] Q. Now, without knowing the individual lives, which, composited, amount to the composite basis, how are you able to state that the composite basis is reasonable?

A. In the natural gas industry, as in the case of all extractive industries, your controlling factor is the life of the natural resource. It is better to be a little conservative in your estimates of the natural resource, in order to arrive at your over-all rates.

For instance, we know that a natural gas pipe line may last 75 or a hundred years. We found in one case 50 years was clearly indicated, and there are some cases, depending upon soil conditions, where the pipe will last many, many years, probably more than a hundred years.

Mr. Littman: You are now speaking of physical life?

The Witness: I am speaking of physical life.

A. (Continuing) But because of the exhaustion of [fol. 9497] the natural resource to which their economic life is tied, you can't possibly use that life without courting disaster. You have got to use the life of the field.

We have made a great many studies of depreciation; a great many studies of over-all rates. We made studies recently of the Canadian River Gas Company, Colorado Interstate Gas Company, and the Colorado-Wyoming Gas Company. We made studies of the Hope Natural Gas Company. We completed studies of the Interstate Natural

Gas Company. We are engaged in making studies of the United Gas Pipe Line Company, the Cities Service Company, and the Lone Star Gas Company.

Such studies are generally under my direction. I can state, from my knowledge in all these studies that the rates which the company has used appear, on the whole, within the realm of reasonableness.

Mr. Wheat: Pardon me just a second, Mr. Goodman. You mean by the last portion of your answer that the things which have been done by the companies which are respondents here in this proceeding appear within the realm of reasonableness?

The Witness: That is correct, yes.

By Mr. Goodman:

Q. Well, I interpret your answer as responding to my question in this wise: That in judging of the composite life [fol. 9498] for the property, you took into consideration life of pipe as long as 75 years. Now, do you mean to answer that? A. I didn't answer that at all.

Q. That is the way your answer seems to read.

A. Well, you misunderstood the answer, Mr. Goodman.

Q. Well, now, let's see if you understood the question. Is it right that you use a composite life?

A. I didn't use any life. I said the company's life is within the realm of reasonableness on a composite basis.

Q. All right.

Now, what life is the company's life?

A. The company, generally speaking, is using a life somewhat more than 33 years on an over-all basis.

Q. And is this an actual life or what you term a life composited out of different accounts?

A. It is a life—they started off originally by a composite method, and then they changed that method because of the predominance of one factor which appeared to be controlling as to most of their properties, namely, the reverable gas.

It is a fundamental principle of depreciation, of course, that where one factor controls, that has to be given sole

weight. So where you have, as we always have, in extractive industries, one factor which predominates, namely [fol. 9499] recoverable gas, that is given major weight.

Instead of figuring individual lives, I went to the group or composite basis, I tried to illustrate to you that we find the physical lives of pipe line to be very, very long, but we are not able to use those lives in a calculation of depreciation, because the economic life is much shorter. That has been true in practically every case we have had so far.

Q. Now, that feature, a discrepancy between a hypothetical physical life and an actual life has nothing whatever to do with compositing, has it?

The Witness: Read the question, please.

(The pending question, as above recorded, was read by the reporter.)

A. Well, you have got to determine the service life in order to make a theoretically correct composite estimate.

By Mr. Goodman:

Q. Well, is the composite, then, an inclusion of a hypothetical physical life along with consideration of an actual life? A. No. No.

Q. All right.

A. But in arriving at your depreciation rates, you are doing this according to the very fine calculations which we make, you must give consideration to the physical life in [fol. 9500] arriving at your over-all life.

If your physical life is shorter than the life of the natural resources, as it is in certain cases of plant, you have got to recognize that shorter life, of course.

* * * * * * * *

[fol. 9507] Q. So that the consideration of life that you gave was something consistent with or comporting with 35 years; is that right?

A. I didn't give any real consideration to life estimates myself. I say again I took the company's result and I put it down as a percent to plant, and I find that that percent, in my opinion, is within the realm of reasonableness, based upon the experience and tests which I have indicated I have made. When you try to transpose that

into a life of a field, I say that transposition would indicate somewhere around 35 or 36 years.

Q. All right.

. . . . . .

Now, will you tell me how your answer that it would [fol. 9508] not be necessary to transpose that into a life harmonizes with your conception that depreciation is the proportion of service life or is based upon the proportion of service life which has expired?

A. *I stated I thought the company had made such* studies as would indicate the proper amount.

It had made a conscientious attempt to determine the reasonable depreciation. I think the estimate is slightly on the high side. The company has made a conscientious attempt, and from tests I have made, it appears reasonable.

Mr. Goodman, if we are going into a comprehensive depreciation study taking about a year, we are going to make a detailed study of each class of property, we are going to arrive at a composite amount, or we might apply rates to individual pieces of property. Instead of around 3 percent; it might come out to 2.85, 2.90, 2.75. Those changes will always be made, and we reserve the right, when we make a detailed study, but I am trying to tell you that I have tested the company's over all results.

I have indicated the tests I have made and I am convinced that they are within the realm of reasonableness.

. . . . . .

[fol. 9510] Q. So that you think it would be fair in this particular case to use an over all life of 35 years?

A. No, I would say it is fair in this case to use the company's estimates. After all, depreciation is an estimate. As to whether an item will last 35, 36, or 37 years involves, to a certain extent, speculation, and you can't indicate the [fol. 9511] life of a piece of property or the life of a natural resource with precision any more than you can guess the life of human beings with precision.

I repeat my statement that the tests we made, which were comprehensive tests, indicate that the over-all rate

is reasonable, and I think the company has done a more conscientious job than most companies in computing their depreciation expense.

Trial Examiner: By the way, Mr. Smith, this is, in practice, essentially a straight line method of depreciation, is it not?

The Witness: Yes, I would say that.

By Mr. Goodman:

Q. All right.

Now, will you tell me, Mr. Smith—we have covered the element of service life. Now, will you tell me what other factor the company has used in ascertaining depreciation so as to reach what you say is a conscientious conclusion?

A. Well, I tested it by the over-all amount, and that was my basis.

Q. Well, will you proceed to state the method that you applied in estimating?

A. Yes. I compared the over-all rates with the over-all rates which we worked out in other cases, and which many other companies are taking.

[fol. 9512] Q. Now, what was the basis of your comparison? A. Over-all amount.

Q. In terms of percentage? A. Yes.

Q. What percentage? A. Percentage to plant.

Q. I beg pardon? A. Percentage to plant.

Q. Well, what percentage did you use?

A. The company is using about 3 percent.

I didn't use any percentage, I tested the company's amount.

Q. Well, you tested the company's amount of 3 percent; is that right? A. Yes, sir.

Q. And you concluded that 3 percent was reasonable; is that right? A. Yes, sir, that is right.

Q. Now, what do you find about 3 percent which endows it with the attribute of conscientiousness?

A. Well, you are talking about two different matters now.

I find nothing in the three percent itself which endows it with anything. I have studied the minutes of the com-

pany, and I have talked to my staff, too, who investigated the company's books and documents. I have studied [fol. 9513] the testimony that certain men of the company's have given before the S. E. C., and I will say to you the company has made a conscientious attempt to solve this problem.

Q. What are the basic elements of this conscientious attempt?

A. The Board of Directors discussed the matter and the Board of Directors had an independent engineer give his opinion, and they also had other men—geologists—give estimates of reserves.

They have taken these things into consideration in trying to arrive at the proper amount.

Now, that is far better than that of a good many companies which have some one individual just call an amount which they put down often—too often, as a matter of fact,—an amount which is related to the profits and not to the properties.

I said this company got off to a good start and did a good job.

. . . . . .

[fol. 9514] Q. How do you know that it is conscientious?

A. I know it is conscientious because I interpret the record as showing that it was a conscientious attempt and because the results the company arrived at looked very reasonable to me.

And I say to you: compared to many other companies, the company is far ahead of its time.

Q. Well, can you show me any principles which indicate conscientiousness?

A. Well, I think I have already mentioned them.

Q. Well, you mentioned the appointment of an engineer.

A. The company started off in the first instance with a determination of service lives. Then it employed an engineer and employed geologists and had a good deal of information as to what was the probable amount of depreciation, depreciation being an estimate, and the amount it arrived at is a very reasonable figure.

Probably the company has been a little conservative in taking too much, slightly on the high side, not much, but a [fol. 9515] little conservative.

It is not a bad thing in the extractive industry, but I say to you that the record I have studied indicates that the company has done a conscientious job. I have enumerated, I believe, Mr. Goodman, the elements that—

Q. (Interposing) Now, let's see. In the first place, you have not given me any service life as a basis for this conscientious job, though you started your testimony by saying that depreciation and its calculation was always referable to a service life.

[fol. 9516] I am not so sure I started my testimony out in the manner you indicated.

I said that depreciation was the consumption of economic life, and certainly the company has made an attempt to determine that and has so recorded amounts in its books and has published the amounts in its statements.

Q. All right.

Mr. Smith, what economic life, then, did the company use?

A. The company considered that the investment in its properties would come to an end and that it would have to amortize that investment, if amortized at all, during the life of the property.

It started out, first, by making fine calculations as to each class of property. They later changed to an over-all basis, which I said approximates 33 years.

A. Generally speaking the company determined at the present time that somewhat more than a 33-year life is a [fol. 9517] reasonable life of the property.

Mr. Littman: Over-all life?

The Witness: Over-all from the beginning.

By Mr. Goodman:

Q. Is that the reason why you consider it a conscientious job?

A. No. I consider it a conscientious job because of the evidence that the company tried to find the right figure. I don't think for a moment in arriving at that evidence the company has to make the fine calculations as to each item of property every year. Theoretically, that has to be done, but you have got to—practically, it can't be done.

Q. I didn't ask you that.

A. Your question clearly implies that, Mr. Goodman.

Q. I ask you this: Do you consider that the over-all life of somewhat in excess of 33 years, which you say was used and applied by the company, stamps this, the determination of depreciation, as a conscientious job?

A. Well, the result, I think, indicates that it is reasonable. A company could get a result by being conscientious or not being conscientious, but I think in this case it has been conscientious in arriving at that result.

. . . . . .

[fol. 9533] The important thing to do in this depreciation matter is to try and fix depreciation expense as accurately as you can.

If you fix too low a rate you are simply bringing disaster upon the company, and if you bring disaster upon the company you bring disaster upon yourself. You can't fix too low a rate.

The next important thing is that the amount you allow as depreciation expense be deducted in computing the rate base. Those are the first two fundamental principles of public utility depreciation or regulatory depreciation.

Q. Well, you wouldn't think that there would be much harm, then, in fixing too high a rate of depreciation?

A. I would say this: rather than be too low I would rather be too high in the annual allowance, because I agree with the Supreme Court's statement that the detriment to the public, in causing a company to go under, will far outweigh any temporary lowering of rates.

In other words, protection of the company is a protection of the public interest, and that protection requires that depreciation expense be adequate.

. . . . . .

[fol. 9538] By Mr. Goodman:

Q. Now, Mr. Smith, will you come down and tell me when, in reference to the hypothetical question that I asked you, you would recommend that the price of service be changed?

A. I think—of course, we are now getting into the realm of theory in the change of rates—I think that if at all possible, we should fix rates for a period of at least two years, a period of five years being desirable, if you can [fol. 9539] possibly do it. In some cases, you cannot do it very well but a period of two years, I would say, should be the minimum unless you are able to put in a sliding scale arrangement such as we have in the District of Columbia where rates are subject to change annually but, ignoring for the moment the sliding scale arrangement, I think you ought to try to fix the rates for a couple of years and that means you have got to take into consideration the plant additions in the couple of years, the increase in depreciation reserve, changes in the economic conditions and matters of that kind.

. . . . . .

[fol. 9567] Trial Examiner: Mr. Smith, if you have some summary to add to this long examination, will you please do so?

[fol. 9568] The Witness: Mr. Examiner, I believe I have indicated this morning that the subject of depreciation is a very broad subject. We have not reached the development in the science of depreciation where we can say one method and only one method is right. We have reached the point where we recognize merit in several methods.

I would like my testimony to stand that I have examined the Company's method and the Company's amounts and, based upon my experience and the tests which I have made, I think they are reasonable and I think the depreciation expense they have recorded on their books and the depreciation reserves they have set up should be used as the

proper expense in this proceeding and as the accrued depreciation, respectively.

* * * * * * * *

[fol. 9579] EDWARD L. DUNN a witness called by and on behalf of the Commission, having been first duly sworn, was examined and testified as follows:

Direct Examination.

By Mr. Littman:

Q. Will you state your name and address?

A. Edward L. Dunn, 504 Bashford Lane, Alexandria, Virginia.

Q. What is your present position and how long have you held it?

A. I am an accountant with the Federal Power Commission, entitled chief examiner of accounts. I have been with the Power Commission since 1934, except for a short period of time.

Q. Will you describe briefly your education and experience?

A. Upon graduation from high school in 1924, I entered Missouri University, where I took the first year in Engi-
[fol. 9580] neering School. I attended Penn State for the second and third years, taking mainly engineering subjects.

In 1929 I was employed by Laciede Christy Clay Products Company, St. Louis, Missouri, as an assistant to the industrial engineer. I was transferred to the general offices to learn cost accounting, became interested in accounting, and completed the course in Higher Accountancy of LaSalle Extension University. I also later took a graduate course in Accounting and Finance at Columbia University, New York City.

When it became apparent that the Federal Power Commission would have considerable accounting work relating to natural gas companies, I took a course in natural gas prepared by the University of Kansas, of which I have completed about two-thirds.

My experience has been practically entirely in bookkeeping, auditing, and accounting.

The three years I have spent in the accounting department of Laclede-Christy involved assignments to every bookkeeping and accounting job in the office below the grade of head bookkeeper.

In 1934 I entered the employ of the Federal Power Commission assigned to the Accounting Division. My duties related to accounting work incident to the determination of actual legitimate cost of licensed hydroelectric plants. [fol. 9572] most of the time being engaged in field examinations of the accounts of public utility corporations and assisting in preparing accounting reports thereon.

In 1936 I accepted a position in the comptroller's office, National Lead Company, New York City. My assignments included the accounting work in revising and restating the depreciation expense and depreciation reserves of all the branches and affiliated companies. I also made internal audits, several cost studies used as the basis of large contracts, and certain proceedings before Government bureaus.

I returned to the Federal Power Commission in 1937. Since then I have made many accounting investigations, several of them being rate cases, both electric and natural gas.

In each case I devoted particular attention to the depreciation and depletion phase of the examination. The depreciation report, on one electric case, where I worked under the direct supervision of Mr. C. W. Smith, Chief of the Bureau of Accounts, Finance and Rates, included a comparison and study of depreciation methods and our report has been widely circulated among those interested in the subject.

My natural gas rate case assignments have been an examination and report on original cost of plant accounts, depreciation and depletion of New York State Natural Gas Corporation and Examiner in Charge of the accounting examination of Canadian River Gas Company, Colorado Interstate Gas Company and Colorado Wyoming Gas Com- [fol. 9573] pany and Hope Natural Gas Company.

Some of the electric utilities where I made rate investigations were Philadelphia Electric Company, Safe-

Harbor Water Power Corporation, and Interstate Power Company.

Q. Have you visited the office of Panhandle Eastern Pipe Line Company in connection with the present rate case?

A. I have on two occasions, the first visit covering a period of ten days spent in Kansas City, Missouri, during the last part of September, 1941, and the second trip covering a period of ten days in Kansas City and Chicago during March, 1942. I also spent several days in the offices of Michigan Gas Transmission Corporation in Detroit, Michigan, during February, 1942.

Q. Did you make an examination of the books and records of Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Company?

A. I investigated several matters, quite a few matters, but I did not make an audit of the books, even in a limited manner. What I was particularly interested in was verifying the accounting policies of the companies, the manner in which the records were kept, the adequacy of the books and records, the principles followed, the system of accounts followed.

In other words, I wanted to know if the records accurate-
[fol. 9574] ly reflect the cost of plant and the cost of operations and if the detailed information was readily ascertainable from the books and records.

Q. What, in general, are your conclusions with respect to the accounting principles followed and the adequacy of the books and records of these companies?

A. The code of accounts followed by both companies prior to January 1, 1940, is substantially the same—

Q. (Interposing) May I interrupt there? You just referred to both companies. Which companies are you now speaking of?

A. Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation.

Q. And when you used the term Panhandle Eastern Pipe Line Company, you [include] its wholly-owned subsidiary, Illinois Natural Gas Company, do you not?

A. That is correct.

Q. Proceed, please.

A. I just said the code of accounts followed by these companies—

. . . . . .

A. (Continuing) —was substantially the same in so far as accounting principles are concerned as the present F. P. C. uniform system of accounts. The books and records of the company are complete and the cost of plant and [fol. 9573] cost of operations may be readily ascertained from the accounts.

With the exception of the item of gas sales and purchase contracts, possibly the depletion and amortization of gas producing properties west of Liberal, and the original cost of certain properties known as local area operations, I do not believe that there are any substantial adjustments necessary in the accounts of the company.

Q. Do you propose an adjustment relating to "Gas Sales and Purchase Contracts" shown on page 2 of Exhibit 52 and at page 2 of Exhibit 176, line 40, and "Reserve for Amortization of Gas Sales and Purchase Contracts" shown in Exhibit 52 line 42?

A. Yes, and it follows from the adjustment that I propose that the annual amortization of the item appearing in the income statement, Exhibits 49 and 173, on line 15 "Amortization of Other Limited Term Gas Investments" will be adjusted also.

Q. What is your proposed adjustment of the item "Gas Sales and Purchase Contracts" and will you please state, as you describe your proposed adjustment, the necessary references to the exhibits which show this item?

A. Well, I am now referring to Exhibit 176, lines 40 and 42. The necessary adjustment—

Q. (Interposing) That is on page 2, isn't it?

[fol. 9576] A. Page 2.

. . . . . .

A. The necessary adjustment is to eliminate the net amount of $1,172,114.80 from the gas plant accounts as at December 31, 1941. This net amount is the difference between $2,930,286.40 shown in line 40 column M, and the $1,758,171.60 shown on line 42, column M. Also it is necessary to eliminate the annual amortization appearing in

line 15, column M of Exhibit 173 in the amount of $293,028.60.

Q. Now, the reference to Line 15, column M of Exhibit 173, was to the second page? A. No.

Q. Was to the first page of that exhibit, was it not?

A. That is correct.

. . . . . .

By Mr. Littman:

Q. Why, in your opinion, is it necessary to eliminate [fol. 9577] these amounts?

A. The remaining unamortized amount of $1,172,114.80 contains no element of actual cost. It represents a write-up. The contracts are recorded on the books merely as a valuation and do not purport to represent anything more than a valuation. The basis for the valuation is clearly disclosed in the entry recording on the books of Panhandle Eastern the original amount of 2,398,402.49—

Q. (Interposing) Dollars?

A. Dollars. (Continuing) —for purchase and sales contracts.

This entry is designated voucher J2, dated September, 1930.

I have before me a photostat of the voucher furnished by the company. It shows that the entry was made to record certain items acquired from Missouri-Kansas Pipe Line Company as per a contract dated September 17, 1930, and a supplemental agreement dated October 23, 1930; an amount of $4,816,350.17 was charged to Fixed Capital and the entry was approved by the Board of Directors of Panhandle Eastern at a meeting held February 3, 1931, as follows—

Q. (Interposing) Before you read from the minutes of that meeting, I would like to have you state the names of the parties to the agreement of September 17, 1930, to which you made reference a moment ago.

[fol. 9578] A. The parties to that agreement were the National City Company, Missouri-Kansas Pipe Line Company, and Columbia Gas and Oil Corporation.

Q. Oil and Gasoline.

A. Columbia Oil and Gasoline Corporation.

Q. Do you have before you a copy of pertinent excerpts from the minutes of the meeting of the Board of Directors of Panhandle Eastern held February 3, 1941 relating to these gas sales and purchase contracts?

A. Yes, I have an excerpt from the minutes furnished by the company and also the copy of the minutes which was attached to and made a part of the voucher recording this item.

. . . . . .

Mr. Littman: That should be February 3, 1931. I am sorry, Mr. Wheat.

By Mr. Littman:

Q. Had you completed your answer to my question?

A. I intended to read the minutes of the Directors relating to this item.

Q. Very well. A. "The Chairman stated"

[fol. 9579] Q. These are in quotes, aren't they?

A. These are quotes.

"The Chairman stated that on October 23, 1930, the Company had acquired from Missouri-Kansas Pipe Line Company, without cost to the Company, certain physical property, gas purchase and sale contracts, stocks of subsidiary companies, supplies, accounts receivable from subsidiary companies, and prepaid accounts, subject to the assumption of accrued taxes and deferred liabilities on the Jacksonville property. He stated that it was desirable for the Board to place a valuation on the property so acquired to guide the Treasurer in setting up the acquisition on the books. He submitted a proposed valuation prepared by the Treasury Department and explained in detail how the valuation was arrived at. Said proposed valuation was as follows:

Property, Plant, and Equipment, $2,197,475.40.

Purchase and Sale Contracts, $2,398,402.19.

Total Property, plant and equipment, $4,595,877.59.

Construction Work in progress, $220,473.12.

Total Fixed Capital, $4,816,350.71."

Q. End quote.

A. End quote. The balance of the tabulation contained in the minutes refers to investments in affiliated companies

and intercompany accounts which I don't feel it is necessary to read at this time.

[fol. 9580] Q. Very well.

Does Exhibit No. 176 show an amount of $13,398,402.19 for the year 1930 in line 40, Column B?

A. That is correct.

Q. Of course, for this item of gas sales and purchase contracts?

A. That is correct; it does. In that year, the totals of gas sales and purchase contracts were recorded in the amount of $13,398,402.49, which is exactly $11,000,000 more than the amount of $2,398,402.19 recorded by voucher J2.

Q. How did that come about and what does the $11,000,000 represent?

A. The amount of $11,000,000 is largely a write-up based on a valuation prepared by Messrs. Brokaw, Dixon Garner & McKee, geologists and petroleum engineers, and approved by the Board of Directors of Panhandle Eastern Pipe Line Company at a meeting held September 3, 1930. The valuation is in substance as follows: I am reading from the minutes of that meeting:

"Based on our examination of the leaseholds for natural gas acreage, survey of the natural gas transmission line now under construction from the Panhandle Area of Texas, Oklahoma, and Kansas to Indiana, survey of the markets of the present non-competitive territory to be served by this line, analysis of the contracts signed and under ne-

[fol. 9581] gotiation for gas and of contracts available, we are of the opinion that such present and available sales contracts are of a present fair market value in excess of $11,000,000."

Q. I note that in 1932 the amount shown in Exhibit 176, page 2, line 40, column D, shrunk from $13,409,544.31 in the previous year to $3,053,391.53. Will you tell us what happened to the $11,000,000?

A. It was removed from the records of the company by resolution of the Board of Directors of Panhandle Eastern adopted at a meeting held March 29, 1932. Of the $11,000,000, the amount of $642,286.30 purports to represent cost and therefore the difference in the amount of $10,357,713.70

was removed by reversing the previous entry which recorded the valuation. The minutes read as follows:

"Reduction in Valuation of Gas Sale and Purchase Contracts.

"The Chairman stated that on September 3, 1930, the Board of Directors of this Company, pursuant to an appraisal by Brokaw, Dixon, Garner & McKee, had determined the value of the gas sales and purchase contracts owned by this Company to be $11,000,000 and that an entry had accordingly been made on the books of account of the Company charging 'Gas Sales and Purchase Contracts' and crediting 'Surplus—Valuation of Gas Contracts' with the sum of $10,357,713.70, being the difference between the [fol. 9582] value so determined and the amount already carried on the books. He recommended that this entry be now reversed, and explained to the Board the reasons for this recommendation, stating that it was approved by the Company's counsel and auditors. After discussion, on motion duly made and seconded, the following preambles and resolutions were unanimously adopted:

"Whereas the Board of Directors of Panhandle Eastern Pipe Line Company, at its meeting held September 3, 1930, pursuant to an appraisal by Brokaw, Dixon, Garner & McKee, adopted a resolution determining the value of the gas sales and purchase contracts owned by this Company to be $11,000,000 and ordered the value of said contracts to be so entered on the books of the Company;

"Whereas pursuant to said resolution an entry was made on the books of the company charging gas sales—"

Q. You mean on the books of accounts of the company.

A. "—— books of accounts of the company charging 'Gas Sales and Purchase Contracts' and crediting 'Surplus—Valuation of Gas Contracts' with the sum of $10,357,713.70; and

"Whereas in the opinion of this Board, it is desirable to reverse said entry in order that the books of account of this company shall be as fully as possible in accord with sound and conservative accounting practice:

[fol. 9583] "Now, Therefore, Be It Resolved that the Treasurer of Panhandle Eastern Pipe Line Company be

and hereby is directed to enter on the books of account of the Company a credit of $10,357,713.70 to the account entitled 'Gas Sales and Purchase Contracts' and a debit in the same amount to the account entitled 'Surplus—Valuation of Gas Contracts'; and

"Resolved that the Treasurer of the said Company be and hereby is directed to investigate and report to this Board his recommendations with respect to the balance remaining in said account 'Gas Sales and Purchase Contracts' after the entry of the credit hereinabove ordered."

Q. Do I correctly understand that the amount of $3,058,391.53, which appears on page 2 of Exhibit 176, Column D, is composed of two distinct items?

A. Yes. The amount of $642,286.30 plus expenses of $12,703.04 incarred in 1931 and 1932, or a total of $654,989.34 and the amount of $2,398,402.19 recorded by voucher J2. In 1936 the balance in the reserve at December 31, 1935, shown in Line 42, Column G, in the amount of $123,105.13 was applied to the asset account resulting in the net amount of $2,930,286.40 shown in Line 40 for the year 1936 and subsequent years. The remaining amount of $2,930,286.40 is being amortized at the rate of 10 percent per year. This 10 percent rate of amortization began in [fol. 9584] 1936 and the gross amount would be fully amortized at the end of 1945.

Q. In other words, as I understand your testimony, the Panhandle Eastern Pipe Line Company and Illinois Natural Gas Company are charging annually to expenses at the present time the sum of $293,028 per year for the purpose of amortizing this item of gas sales and purchase contracts to which you just made reference?

A. That is correct, they are.

Q. Now, referring to the amount of $2,398,402.19, which you stated was a "write up," please state what investigation you have made concerning the item.

A. Since the account was transferred from Mokan—

Q. (Interposing) By "Mokan" you refer to Missouri Kansas Pipe Line Company, do you not?

A. That is correct.

A. (Continuing) —the parent company of Panhandle Eastern, obviously the first step was to determine what Mokan had recorded in its accounts and the cost, if any, to Mokan. Panhandle Eastern did not have the Mokan records, which are, at present, in the offices of a law firm in Chicago. I examined these records and noted that Mokan had recorded an amount of $1,106,250 in the account Gas Sales and Purchase Contracts. The origin of this amount was the opening entry on the books of Mokan and the opening entry was again based on a valuation by Messrs. [fol. 9585] Brokaw, Dixon, Garner, and McKee.

Q. Before going into that valuation, am I correct in understanding that by reason of the transaction involving the transfer of properties from Mokan to Panhandle Eastern, the account denominated "Gas Sales and Purchase Contracts" was increased from $1,106,250; the last balance of the account shown on Mokan's books, to $2,398,402.19, the opening balance shown on Panhandle Eastern's books?

A. That is correct.

Mr. Culton: May I ask a clarifying question there?

Mr. Linman: Yes, sir.

Mr. Culton: Did you find any identification on the records of Mokan from which you could identify the contracts there valued as being the contracts entered on the Panhandle Eastern books?

The Witness: They did not list in their general ledger the details of just what contracts. It just said Gas Purchase contracts required.

Mr. Culton: Then, the answer is that there was no identification of what the contracts were which you found on the Mokan books?

The Witness: Well, for that identification, I relied on the description by Panhandle Eastern in which they said they had valued these contracts acquired from Mokan and Mokan was turning over all gas purchase contracts [fol. 9586] it had to Panhandle Eastern which, with the exception of the Kentucky properties—anything relating to their Kentucky properties.

Mr. Culton: I understand that you did not have any discussion with any of the Panhandle Eastern accountants

indicating that they had any familiarity with what is shown on Mokan's books?

The Witness: I, of course, asked them, but they did not know exactly what was on Mokan's books. They had a fair idea what was on there.

Mr. Culton: That was to see whether or not there was anything in the books theinselves to describe the contracts and show that they were the same contracts. My understanding is that there is nothing in the Mokan books identifying what gas purchase contracts were included in the million dollars; that is correct, isn't it?

The Witness: Well, nothing except that Brokaw, Dixon, Garner, & McKee made a valuation of Mokan's contracts which would necessarily include all contracts.

Mr. Culton: What I meant to ask you: Do you have that valuation?

The Witness: No, I do not.

Mr. Culton: Did you see it?

The Witness: I saw many references made to it in the [fol. 9587] reports by the auditors of Mokan who were required to make several audits for various reasons, some of which were denoted stipulated audits and they always referred to these contracts as a valuation basis made by this—

Mr. Culton: (Interposing) Mr. Dunn, I just have one question and probably I am not making myself clear: I want to know if you found on the Mokan books or on any Brokaw, Dixon, Garner & McKee report which you found, an identification of the gas sales and purchase contracts that were either valued by Dixon—Brokaw, Dixon—or put on the books of Mokan, so that we can say between whom the contracts were or anything of that character.

The Witness: Oh, no individual contracts, just all contracts, but no breakdown as to what—

Mr. Culton: (Interposing) No identification of any character except just all contracts?

The Witness: That is right.

Mr. Culton: That is all. Thank you.

By Mr. Littman:

Q. Well, Panhandle Eastern acquired all of the contracts that Mokan had at the time of the transaction, which you just described, did it not?

A. That is my understanding of it, except possibly some contracts that might relate to what they call their Kentucky properties.

[fol. 9588] By Mr. Littman:

Q. You have just testified that the transaction involving the transfer of properties from Mokan to Panhandle Eastern—that is, by reason of that transaction, the account denominated "Gas Sales and Purchase Contracts" was increased from $1,106,250 to $2,398,402.19?

A. Yes.

Q. Is that right?

A. Those contracts transferred from Mokan to Panhandle Eastern were increased that much.

Q. Now, there alone is a write up of at least $1,292,152.19; is that correct?

A. Yes, plus an amount of $180,000 appearing in Capital Surplus account of Mokan as a credit offset to the recorded value of gas contracts. When Mokan closed the accounts transferred to Panhandle Eastern, it also closed this surplus account, then called "revaluation surplus", thereby reducing the recorded value of gas contracts, and the write up becomes $1,472,152.19.

Q. Did any portion of the $1,106,250, shown on Mokan's books for these gas sales and purchase contracts, represent cost?

[fol. 9589] A. Not more than $1,250 represents valid cost. The balance of $1,105,000 was recorded by the opening entry on Mokan records, Voucher #1, June 1, 1930. This entry purported to record the value of properties acquired from Shippey, Maddin, and Parish Gas Company, a partnership. The partners formed Mokan and transferred the partnership properties and contracts to the corporation. The total of the assets acquired by Mokan were carried on the partnership records at the amount of $413,047.28 and were recorded by Mokan in the amount of $630,000. Thus Mokan entered the amount of $1,735,

000 as fixed capital. The valuation of Gas Sales and Purchase Contracts was 100 percent write-up on Mokan books, and was never claimed to represent other than a write-up by any of the Mokan, Panhandle Eastern, or Columbia interests.

Q. Did you request Panhandle Eastern to furnish all support that they had for the cost or other basis of valuation for this item of "Gas Sales and Purchase Contracts"?

A. Yes, it furnished the vouchers and minutes referred to. There was considerable information concerning the item in their files relating to Federal Income Tax Returns. The company furnished me with copies of the Internal Revenue Agent's investigation and reports on the item and correspondence pertaining thereto. They present a rather complete picture of the gas sales and purchase contracts.

Mr. Littman: Mr. Examiner, I would like to have marked [fol. 9590] for identification with the next exhibit number a document entitled "Panhandle Eastern Pipe Line Company Gas Sales and Purchase Contracts, copy of report by Bureau of Internal Revenue and related correspondence."

Trial Examiner: It will be marked for identification as Exhibit 219.

[fol. 9592] By Mr. Littman:

Q. Referring to the investigation made by the Bureau of Internal Revenue, with respect to this item of gas sales and purchase contracts, what conclusion is reached therein? and please make reference to Exhibit No. 219 in answering.

A. The item was disallowed—the amortization of the item was disallowed—because it was—

Q. (Interposing) By "disallowed," you mean it was claimed for federal income tax purposes—

A. (Interposing) That is right: claimed as an operating expense of the company, as a deduction for tax purposes.

Q. (Continuing) —and the Bureau of Internal Revenue [fol. 9593] disallowed it? A. That is correct.

Mr. Wheat: In order that the record may be perfectly clear, I wonder, Mr. Dunn, whether it wouldn't be advisable for you to state what the claim for deduction was, and what

was the ruling, or tell us where it appears in this voluminous document.

The Witness: I will.

Mr. Wheat: Do you mind, Mr. Littman?

Mr. Littman: Not at all, Mr. Wheat, and I believe, if you will just be patient with us for a moment, we will reach all those points shortly.

Mr. Wheat: All right.

By Mr. Littman:

Q. Now, you were saying that the item was disallowed. Now, do you want to particularize with respect to that?

A. Yes. The amortization of the item was disallowed because it was without recoverable basis.

The report recognizes the principle that, if the transferor had a recoverable basis, then the taxpayer has a taxable basis to be recovered.

The exhibits attached to the report disclose that there was no cost or other taxable basis for the gas sales and purchase contracts.

The explanation appearing in the report is on Page 4 of [fol. 9594] this exhibit.

Q. Perhaps it would be well to read the explanation of items shown on that page.

Mr. Littman: Those explanations are not lengthy, and they might serve here to clarify the transcript.

A. Well, the agent first makes a preliminary statement, which appears on Page 3, wherein he says:

"The principal causes of the change in tax liability are the disallowance of amortization of gas sales and purchase contracts acquired from predecessor company without recoverable basis—"

From there on—

Mr. Wheat (interposing): I wonder if you would mind telling us what that means. You have used that phrase: "without recoverable basis." Just so the record will be clear.

The Witness: Yes. He is referring to the Federal Revenue Act of 1928, which covers depreciation and depletion matters.

In general "recoverable" means a cost basis.

Mr. Wheat: I see.

The Witness: Prior to 1913 the recoverable basis was fair value or cost, whichever was higher, but clearly this falls within the cost section of the law.

[fol. 9595] Mr. Wheat: Thank you.

By Mr. Littman:

Q. You have read the pertinent part of the preliminary statement on Page 3, have you not?

A. That is correct.

Q. All right. Will you go to page 4?

A. There is one other point that I might mention that might be of interest here.

Q. Very well.

A. The agent further states:

"The changes were discussed with Leith V. Watkins, secretary; N. F. Paxton, assistant secretary; and Arthur Anderson & Company, accountants. Form 874 has been executed."

This form 874 referred to is a form of waiver executed by the company, agreeing to these changes, and it is attached as a part of this exhibit.

Q. Will you give us the page on which the said form 874 appears in Exhibit 219?

A. That appears on Page 11. Immediately preceding this form is a letter from Mr. Watkins, explaining why the Board of Directors had agreed to the findings of the Bureau of Internal Revenue.

Q. Now, that letter is dated November 7, 1941, and was addressed to Mr. N. F. Paxton, assistant secretary of Pan-

[fol. 9596] handle Eastern Pipe Line Company; is that correct? A. That is correct.

[fol. 5-30]. By Mr. Littman:

Q. Yes. You were going to go back to the agent's report.

Where do you propose now to read?

A. On Page 4. Explanation of items.

Q. On Exhibit 219? A. That is right.

"In original Revenue Agent's reports for 1936, 1937, 1938 and 1939, an amortization of the book value of gas purchase and sales contracts computed on a composite life of 20 years was allowed in computing the taxable income subject to approval and verification by the Valuation Section of the Internal Revenue Bureau in Washington.

"It has since been disclosed that this book value exceeded the taxable basis recoverable by $2,398,402.19, which is the value at which a portion of the contracts were received from the Missouri Kansas Pipe Line Company in October, 1930.

"The latter company at that time owned all the stock of Panhandle Eastern Pipe Line Company, and as provided in Section 118-(a) (8) of the Revenue Act of 1928 the taxpayer has a taxable basis to be recovered the same as in the hands of the transferor.

"Further investigation discloses that these contracts were acquired for stock from a partnership, Shippey, Madden and Parish Gas Company, which at that time in 1928 [fol. 9660] owned all of the Missouri-Kansas Pipe Line."

Mr. Wheat: All of the what?

Mr. Littman: All the stock.

A. "All of the stock of the Missouri-Kansas Pipe Line. It has been also disclosed that the partnership had no cost in acquiring the contracts and reported no taxable profit on the transfer of the contracts to the corporation for stock. See Exhibits B and B(1).

By Mr. Littman:

Q. Now, have you attached Exhibits B and B(1) to which reference is made in the agent's report? A. Yes.

Q. Where do those appear?

A. Reference should be made to Exhibit A, B, and B-1 in this connection.

I want to continue some more from the agent's statement.

Q. Very well.

A. "Under the circumstance described, the amortization allowed—"

Q. (Interposing) Pardon me. Where are you reading now? A. Page 5.

Q. Very well.

A. (Continuing) "—the amortization allowed on the [fol. 9601] book value set up on the contracts received from the Missouri-Kansas Pipe Line Company in the original report is being eliminated.

"Book value of contracts received from Missouri-Kansas Pipe Line Company on October 23, 1930—$2,398,402.19.

"Amortization allowed at five per cent on above amount in original report eliminated—$119,920.11."

Q. Mr. Dunn, is my understanding correct that, for income tax purposes, the Panhandle Eastern claim for amortization of gas sales and purchase contracts was at the rate of five per cent each year? A. That is correct.

Q. Commencing in 1936?

A. Well, he commenced in 1936, because that was the first taxable year that the agents made an investigation.

Q. Yes; now, for the purposes of this proceeding, and for purposes of Panhandle Eastern's own bookkeeping, they amortize at the rate of ten per cent per year, do they not?

A. They are, beginning in 1936. Prior to that they used a slightly different rate.

Q. And as you have heretofore explained, they are currently amortizing the amount and if amortization were to continue at the rate of ten per cent per year the account would be fully amortized at the end of 1945?

A. That is correct.

[fol. 9602] Q. However, as I understand this, the entire claim by the company, of amortization of this item for income tax purpose was disallowed by the Bureau of Internal Revenue, was it not?

A. Yes; after they made a reexamination they came to the conclusion that there was no recoverable basis, and by that they mean no actual cost pertaining to these gas sales and purchase contracts.

[fol. 9602] By Mr. Littman:

Q. Mr. Dunn, you were about to explain Exhibit "A" of the Internal Revenue Bureau's report which appears at page 6 of Exhibit No. 219. Will you proceed with your explanation?

A. Yes. As shown by this tabulation, the Bureau of Internal Revenue had knowledge of the costs from the income tax returns reported by Missouri-Kansas Pipe Line Company and, near the bottom of the page, the last item, "Value of Gas Purchase and Sales Contracts", the cost, as reported by Missouri-Kansas Pipe Line Company, is shown as $926,250. Opposite that is a column headed, "Taken Up By Panhandle Eastern" shows an amount of $2,398,402.19 or an increase in this item of $1,472,152.19 and that amount checks with the amount that I found by an inspection of Mokan records.

Q. By an inspection of Mokan records and also by the record of Panhandle Eastern? A. That is right.

Q. Will you now turn to page 7 of Exhibit No. 219 and explain that schedule?

A. The Bureau of Internal Revenue had a record of cost to a partnership known as Shippey, Maddin and Parish Gas Company and, under Footnote (a), there is shown as cost to Shippey, Maddin and Parish, the amount of $413,047.28 which is the amount of the property that Shippey, Maddin and Parish had at the time these partnership assets were transferred to Mokan.

[fol. 9604] Q. You mean property as distinguished from gas sales and purchase contracts?

A. All the cost of property. That is all they had in total dollars, $413,047.28. Now, Missouri-Kansas Pipe Line Company recorded that on their books in the amount of $630,000 and, in addition, recorded the amount of $1,[illegible]00,000 as a value for gas purchase and sales contracts. Therefore, clearly, all of the gas purchase and sales contracts represented no cost to the partnership.

Q. Do you have any further references to make to the report of the Bureau of Internal Revenue for the purpose of explanation?

A. Exhibit "B-1", which has been referred to, explains the circumstances under which these properties were sold by Shippey, Maddin and Parish and acquired by Mokan.

Q. That appears on page 8 of Exhibit No. 219, does it not?

A. That is correct. That is all I have to say in explanation of the report by the agent of the Bureau of Internal Revenue.

Q. Now, will you proceed to explain the remaining subject matter in Exhibit No 219, confining your description to such matters that relate to the matter of gas sales and purchase contracts.

[fol. 9605] A. On page 13 is shown a letter dated April 11, 1940, from the Chief Counsel of the Bureau of Internal Revenue and there is a reply thereto dated August 21, 1940, with a list of attachments. This letter is signed by Mr. Leith V. Watkins, Secretary-Controller.

Q. In response to the letter addressed to Panhandle Eastern Pipe Line Company by Mr. J. P. Wenchel, Chief Counsel of the Bureau of Internal Revenue, is that right?

A. That is correct.

In these letters, the Bureau requested detailed information in regard to each gas purchase and gas sale contract. The information was furnished as shown by the details attached to the letter of transmittal dated August 21, 1940. The summary sheet of gas purchase contracts showed that they were acquired from Mokan without cash consideration. The summary sheet is shown on page 17.

I omitted the list of contracts because it involved 18 pages.

Q. Those are the gas purchase contracts?

A. I omitted the entire list of gas purchase contracts. There were numerous contracts.

Page 18 is a summary sheet for gas sale contracts. They are also shown to have been acquired from Mokan without cash consideration. Following this sheet, there are shown the original contracts. I note under the column headed, "Duration of contract", that these original con-
[fol. 9606] tracts have now expired.

I might add that the list of contracts contains all other contracts besides the ones acquired from Mokan.

Q. How are the contracts which were acquired from Mokan designated in the schedule which appears on pages 19 to 22 of Exhibit No. 219?

A. Referring to the summary sheet, page 18, Note (1) refers to the gas sales contracts which were acquired from Mokan and each contract, so acquired, is designated by the numeral (1) on the analysis sheets.

Q. Now, this summary shows the names of the contracting parties, the duration of contract, the territory covered, a brief statement of the terms of contract, the date acquired and from whom and the consideration, does it not?

A. It does.

Q. Do you have any further explanation to make with respect to Exhibit No. 219?

A. There is another letter dated October 3, 1940, from the Chief Counsel of the Bureau of Internal Revenue and the reply thereto dated February 24, 1941. This correspondence shows the history of the acquisition of the properties from Mokan very clearly in the first attachment. This is on pages 26, 27, 28 and 29.

Q. As I understand it, pages 26, 27, 28 and 29 contain Panhandle Eastern's own statement given to the Bureau of [fol. 9607] Internal Revenue respecting its understanding of the gas sales and purchase contracts?

A. That is correct.

Q. I note there is a final attachment on page 30, the last page of Exhibit No. 219. Do you have any comment to make with respect to that?

A. The second attachment, of course, relates to other gas sales and purchase contracts concerning which the company had stated the cost of acquisition of these contracts was not capitalized. The wording caused the Bureau of Internal Revenue to inquire into the matter and this is the answer which shows that Panhandle Eastern, of course, acquired many contracts through the services of its own employees without cost other than such incidental overhead costs and traveling expenses of its own employees. That probably explains why there is no capitalized cost for all other gas purchase contracts with the exception of such contracts that involve a payment for change-over costs and house heating costs. Change-over distribution system and house heating change-over costs, to a certain extent, have been capitalized by Panhandle Eastern.

Q. I take it you merely inserted page 30 for the purpose of making the excerpted portions complete because some

reference had been made in the correspondence which passed between the Bureau of Internal Revenue and Panhandle Eastern?

A. That is the reason it was included.

[fol. 9608] (Exhibit No. 219 was received in evidence.)

Q. Mr. Dunn, during the course of your examination into the records of Panhandle Eastern Pipe Line Company, did you examine and read Minutes books of that company?

A. I did.

Q. Did you cause to be excerpted from those Minutes books portions of the Minutes of that company relating to depreciation? A. I did.

[fol. 9609] Mr. Littman: I ask, Mr. Examiner, that a document entitled "Excerpts from Minutes of Meetings of Board of Directors, Relating to Provisions for Depreciation, Depletion and Amortization", be marked for identification as Exhibit No. 220.

Trial Examiner: It will be so marked.

(The document referred to was marked Exhibit No. 220 for identification.)

Mr. Wheat: Mr. Littman, may I ask a question of the witness? Is the material contained in Exhibit No. 220 for identification, Mr. Dunn, material furnished to you by the Panhandle Eastern Pipe Line Company at your request?

The Witness: It is.

(Exhibit No. 220 was received in evidence.)

Q. Mr. Dunn, have you made an investigation of the records of Panhandle Eastern Pipe Line Company and Illinois Natural Gas Company in order to estimate the working capital requirements of those companies?

[fol. 9610] A. Yes, including the working papers used by those companies in preparing the estimate of working capital appearing on transcript pages 455 to 473.

[fol. 9612] Q. Coming back to the subject of working capital, I believe you stated that you had examined also the working papers used by company Witness Sperry in connection with his testimony which appears on pages 455 to 475. That is his direct examination which appears at those pages of the transcript. A. I have.

Q. Have you read Mr. Sperry's definition of working capital which appears on page 455 of the transcript, a copy of which transcript I now hand you?

A. Yes, I have read his explanation of the term "working capital".

Q. Will you please read his definition of working capital and read the question that precedes it?

A. (Reading)

"Q. What do you understand the term 'working capital' to include?

[fol. 9613] "A. I understand that term to include the materials and supplies necessary and requisite for the carrying on of current operations and current repairs and also cash balances sufficient in amount to enable the corporation to pay promptly its current operating expenses as they accrue; to provide for such prepayments as are necessary; to afford provision for reasonably to be expected contingencies and to make possible the continuous efficient operation of the corporation. This necessarily includes the meeting of such emergencies as they occur and the proper maintenance of current credit."

Q. Is that what you understand the term "working capital" to include?

A. It is, with the understanding that the working capital estimates to be used for rate making purposes, that is, the amount to be added to the plant and property accounts, should not be duplicated in the allowable plant accounts or operating expenses.

Q. Will you give us an example of how certain items of working capital might be included in plant account and thereby duplicated?

A. We have an excellent illustration in the case of Panhandle Eastern. The company has followed the accounting practice of including an amount in the cost of construction for gas used in blowing, testing and packing lines. In fact, the company has capitalized operating costs on the main line prior to April 1, 1932, by charging such costs to plant.

accounts and crediting the plant accounts with revenues [fol. 9614] from gas sales. In view of the fact that the original line pack is now included in plant accounts, any additional allowance for such line pack represents a duplication of the item.

Q. How much has the company actually included in its plant accounts for blowing, testing and packing lines?

A. Panhandle Eastern has furnished me a statement of the amount showing that $122,824.36, representing 1,319,414 has been capitalized for gas used in construction. Some of this gas was undoubtedly blown to the air, but there is certainly an adequate amount capitalized to cover any required allowance for line pack.

Mr. Littman: I ask that the document entitled, "Panhandle Eastern Pipe Line Company and Subsidiary Company" consisting of five sheets, each of which contains a tabulation relating to the table on the first page which is called, "Computation of Working Capital Requirement" be marked for identification as Exhibit No. 221.

Trial Examiner: It will be so identified.

(The document referred to was marked Exhibit No. 221 for identification.)

By Mr. Littman:

Q. Will you please explain how certain items of working capital might be provided in the allowance of operating expenses? You have already given one example of how working capital may be provided for in an allowance of [fol. 9615] capital.

A. Yes. I might add that this exhibit which we have just distributed—

Q. (Interposing) You mean Exhibit No. 221?

A. Yes. Exhibit 221 shows the source of the amounts in M.c.f. of gas used in testing lines at the last page and at the footnote of the last preceding page.

Taxes—

Q. (Interposing) Before you go to taxes, is my understanding correct that the figures shown on the last page of Exhibit No. 221, "Gas used in construction of pipe line March 31, 1932, to December 31 1941", were furnished to you by Panhandle Eastern?

A. That is correct, they were, and if you will refer to the preceding page, the gas used in testing lines for the year 1931 is shows and that information—

Q. (Interposing) You mean for the year—

A. (Continuing) 1931. That is on the preceding page.

Q. That is at the bottom of the page, yes.

A. That information was also furnished by the company.

Q. Very well. Now, the next subject which we wish to discuss has to do with your explanation of how certain items of working capital might be provided in the allowance of operating expenses.

A. Taxes offer the best illustration. For instance, [fol. 9616] Federal income taxes are paid in quarterly installments beginning March 15 following the taxable year. Thus, the company has the use of the money collected for tax purposes which are collected from the customers more than a year in advance. A study of the balance sheet account, accrued taxes, for the year 1941, shows that Panhandle Eastern had on hand at all times about $3,000,000 for tax accruals. This summary of the account appears on the fourth page of Exhibit No. 221.

. . . . . .

By Mr. Littman:

Q. Now, you were explaining the item of accrued taxes for the year 1941. Will you explain that tabulation which appears at the top of page 4?

A. There is shown, by months, for 1941—

Q. (Interposing) You mean you show the balance in the tax accrual account as at the beginning of the month and as at the end of the month?

A. Yes. The debits, in general, refer to the amounts when they are paid. The credits refer to the amounts which are concurrently charged to current operating costs and credited to this account. The balance at the end of the month shows that the company has accrued and included in current operating costs about $3,000,000 or more [fol. 9617] at all times for taxes.

Q. Let's examine the extreme right-hand column headed, "Balance End of Month" for each of the months in the year 1941. What was the lowest balance at the end of any month in that year?

A. January, 1941, showed a balance of $2,654,680.71.

Q. And what was the largest amount?

A. The largest amount is in September which showed a balance of $3,807,825.20.

Q. Are those balances sufficient for the purpose of providing sufficient cash working capital for the company, in your opinion?

A. This item of taxes which is currently provided for in operating expenses but not actually paid until many months later is contributed in the monthly collections from the gas consumers and they actually provide cash working capital many times the amount computed by Mr. Sperry.

Q. In other words, assuming that the Commission would and, of course, it shall make a proper and adequate allowance for income taxes, that allowance would be sufficient to take care of necessary cash working capital?

A. The allowance for income taxes and all other taxes, of course, property taxes particularly.

Q. However, you are making a certain allowance, are you, for cash working capital requirements notwithstanding that fact, in your estimate?

[fol. 9618] A. I have computed a separate amount without regard to this fact.

Q. Yes. We will come to that presently.

Let's pass on then to the next item. Have you computed the working capital requirement based on the actual operations of Panhandle Eastern and Illinois Natural Gas Company for the year 1941?

A. I have, as shown on page 1 of Exhibit No. 221.

Q. That page contains the summary of your estimate?

A. That is correct.

Q. Will you please explain the first item shown thereon which is headed, "Total Operation and Maintenance—1941" and there is an overriding heading called, "Cash Working Capital". Please explain that item in its entirety.

A. Operation and maintenance expenses for the year 1941 amount to $3,392,827.05. I have deducted gas purchase cost in the amount of $1,180,918.

[fol. 9619] A. (Continuing) leaving the amount of $21,902. I have allowed 45 days as representing an adequate and liberal period for the company to produce and transport the gas for which revenues are collected.

Q. In other words, you have assumed that at all times 45 days of operating expenses are tied up in the business?

A. That is correct, I have.

Q. Now, why do you exclude purchased gas? That is, why do you exclude purchase gas cost?

A. For the reason that the company pays for gas purchases about the same time of each month when it receives revenue from gas sales and there is no requirement for cash working capital for this item of expense.

Q. Have you a tabulation which shows that?

A. Yes, the company furnished me with the statement appearing on page 2 which shows the due and payment dates on major gas sales contracts listing all the important contracts, date due and the date when they received the money for them. At the bottom of the page is shown a statement, "Due and Payment Dates on Major Gas Purchase Contracts. Due Date, 25th of Month. Payments Usually Made from 19th to 21st."

Q. That latter refers, of course, to gas purchased in the preceding month? A. That is correct.

Q. Who is the largest customer of Panhandle Eastern?

[fol. 9620] A. Michigan Consolidated Gas Corporation is the largest ultimate customer; in volume. I suppose Michigan Gas Transmission Corporation, which transports that gas and receives the payment for Panhandle Eastern.

Q. Now, in that connection, when does Michigan Gas Transmission Corporation receive its payments or, I should say, receive the payments from Michigan Consolidated Gas Company?

A. I understand about the 23d to the 25th of the month.

. . . . . .

Q. Let me ask you this, Mr. Dunn. What is the source of the information shown on page 2 of Exhibit No. 22?

A. That was furnished by the company and it answered all the questions in my mind concerning any possible lag between the receipt of revenues and the payments of gas purchase contract amounts.

[fol. 9621] Q. In other words, there was no lag?

A. No. There is a lot of revenue received as early as the 10th of the month, the 15th of the month and that to me was all I needed to know about when the money was received.

[fol. 9622] By Mr. Littman:

Q. Mr. Dunn, looking at page 1 of Exhibit No. 221, I see that you deducted the cost of gas purchased during the year 1941 in the amount of $1,180,917 from the total operation and maintenance for that year in the amount of $3,392,827 to secure the balance of $2,211,909. What did you then do with that amount to put it on a 45 day basis?

A. Divided by 365 for one day's basis, multiplied by 45 to extend that one day to 45 days.

Q. And that gave you what amount?

A. $272,701.

Q. Which is the average cash required for operation and maintenance on a 45 day basis?

A. That is right.

Q. The next item is the sum of $94,732 for "Prepaid Items at December 31, 1941". Where did you secure that figure?

A. That figure is a balance sheet item. The reference is to Exhibit No. 172, line 14, column M. The company pays certain expenses in advance of the period to which they [fol. 9623] relate. I have included the total of prepaid expenses in the working capital allowance.

Q. Now, the next item which you show is the sum of $374,839 for "Materials and Supplies Inventory—12/31/41". Where did you secure that figure?

A. That is also a balance sheet item.

Q. As of December 31, 1941?

A. That is correct, appearing in Exhibit No. 172, line 13, column M. It is the actual inventory at December 31, 1941.

Q. Now, why did you select the day, December 31, 1941, as the basis for amount of materials and supplies?

A. The details of the materials and supplies account for the year 1941 are shown on page 3 of Exhibit No. 221. The inventory is considerable higher at that date than at any other period and higher than the average inventory

for the year 1941. The reason I selected the highest amount is because of Mr. Sperry's testimony that the company really felt it necessary to maintain a larger inventory than in the past.

Q. Now, looking at page 3 of Exhibit No. 221, I note that the balance at the end of January, 1941, for materials and supplies was $211,075. Is that correct?

A. That is correct.

Q. And the balance at the end of each succeeding month was progressively—well, almost progressively greater, I think with but one exception.

[fol. 9624] A. It declined somewhat during the summer months. Other material was issued, I suppose for the repair and maintenance program during the summer time which brought the balance down a little bit in the summer months. That was increased along about September and increased each month up to December.

Q. At which time, that is, on December 31, 1941, the materials and supplies account stood at $333,941?

A. That is correct. I might say that this is slightly different from the amount shown on page 1 due to the fact that there is about $10,000 of materials and supplies in the gasoline plant which I did not bother with in this table.

Q. In other words, you included approximately $10,000 more in your summary and ultimate estimate than the actual balance at December 31, 1941?

A. I did not mean it quite that way. They have really two inventory accounts, one for the gas business and one for the gasoline business and this analysis on page 3 is only for the gas business but, nevertheless, the gasoline business is a part of the company and I naturally included that material and supplies inventory. It was very small.

Q. The total of the items which you have mentioned is $742,279 for Panhandle Eastern and Illinois Natural. In your opinion, does this amount represent the maximum allowable working capital to be added to plant accounts [fol. 9625] and to be added to operating expenses for purposes of this proceeding?

A. It does represent the maximum amount. As I have indicated, the tax accruals are more than sufficient to provide all necessary cash working capital. In view of the fact that gas customers actually provide an ample amount of working capital through the medium of accrued taxes,

it is my opinion that no additional allowance for cash working capital need be separately provided for.

Q. However, you have included an allowance for cash working capital as shown on page 1 of Exhibit 221, have you not?

A. That is correct, I have.

Q. Have you made a study of the working capital requirements of Michigan Gas Transmission Corporation?

A. I have.

Q. I am going to ask you to refer to Mr. Spitznagle's exhibit on the subject of working capital which is Exhibit No. 94.

For purposes of the record, Mr. Spitznagle, a witness on behalf of Michigan Gas Transmission Corporation, testified on direct examination with respect to working capital at pages 1852-1856 of the transcript.

Do you have before you now Exhibit No. 94?

A. I do.

Q. Will you please go through the several items that are shown on the first page of that exhibit which summarizes Mr. Spitznagle's allowance and state briefly which of these allowances you would recommend and which, in your opinion, represent necessary amounts of working capital for this company?

[fol. 9626]

A. The first item, "Cash fund operating expenses" based on monthly average pro forma operating expenses, excluding purchased gas, taxes, prepayments, depreciation and amortization and using 45 days (average period in day's expense is paid before it is repaid by customer)" is shown in the amount of $47,175.05. I have no reason to believe or see no objection to this amount. In fact, it is computed in almost the same manner that I recommended in the case of Panhandle Eastern. However, if we used the full year 1941, the amount would be slightly higher, I think about $50,000.

Q. Instead of $47,175?

A. Yes.

Q. In other words, his estimate speaks as of June 30, 1941, does it not?

A. That is correct.

Q. Mr. Dunn, it is a fact, is it not, that Mr. Spitznagle made no allowance for the cost of gas purchased, did he?

A. He did not. He said he had made an investigation of the item and could find no reason for including it in his working capital allowances.

Q. In other words, his estimate is very similar to yours [fol. 9627] in that regard?

A. It is.

Q. Very well. Now, will you go to the next item which is headed, "Materials and Supplies, Based on Actual Material and Supplies on Hand at June 30, 1941, Per Books, Plus Estimated Amount of Increase There Resulting from Change in Price to June 30, 1941," in the amount of $100,92378.

A. Referring to the materials and supplies account shown in Exhibit No. 163, page 1, the company actually had on hand $115,053.90 representing the actual inventory of supplies and materials.

Mr. Wheat: What date is that?

The Witness: December 31, 1941.

Mr. Culton: Will you give the amount again, please?

The Witness: $115,053.90. I would suggest this amount as being the proper allowance for working capital purposes.

By Mr. Littman:

Q. That is the amount as of December 31, 1941?

A. That is right.

Q. What do you say with respect to the third item, "Purchased Gas Cost for Line Pack after Deducting any Portion of Such Cost Capitalized, Based upon Average for 12 Months Ended June 30, 1941", in the amount of $31,406.70 which Mr. Spitznagle included in his working capital allowances?

A. Well, Mr. Spitznagle was very careful in this ad- [fol. 9628] justment but I think he made a very complicated computation to no purpose here.

Q. What did he do, briefly?

A. Briefly, he added $31,406 to his proposed rate base but he deducted $5,595 from his proposed operating expenses.

Q. From his annual operating expenses?

A. That is right. Such an adjustment results in a decrease in allowable revenue to the company and I believe

it is entirely unnecessary to make such an adjustment. The reason he had to make such an adjustment in operating expenses is because line pack, in the Michigan Gas system, was not the same each year and, having increased in the period June 30, 1941, over the prior year, he had to remove that increase from the operating expense, gas purchased, and, in effect, capitalize it by including it in working capital.

Q. How did the line pack increase? Was that by reason of additional pipe line or by reason of higher pressures?

A. Probably some of both. I am not certain but I did see that it had increased by that amount in his working papers.

I think a much more simple and probably even more accurate method of handling it is to allow the cost of gas purchased as an expense in the year it is purchased and omit this troublesome item of line pack from the working capital.

Q. What effect does that have? Is your recommendation [fol. 9629] in this regard much more liberal to the company than Mr. Spitznagle's treatment?

A. Yes. As far as this item is concerned, it would be just twice as good to the company.

Q. As far as Michigan Gas Transmission Corporation is concerned?

A. Yes.

Q. In other words, if I may summarize, what you propose to do is recommend the disallowance in working capital of the $31,406 for gas purchase cost for line pack and to allow, in operating expenses, the $5,000 odd incurred each year for the cost of gas in that conection, is that right?

A. That is correct.

Q. Now, will you please pass on to the next item of prepayments which Mr. Spitznagle allows in the amount of $4,538.55. What is your recommendation in that regard?

A. Since these items are actually prepaid, I think they should be allowed in working capital.

Q. What is the prepayment amount at December 31, 1941? You are, I presume, looking at the financial state-

ment of Michigan Gas Transmission Corporation for the necessary detail?

A. That is correct. The prepaid accounts are shown under the title "Deferred Debits."

Q. In what exhibit?

A. Of course, deferred debits are prepaid but the [fol. 9630] amount is shown on page 1 of Exhibit No. 163.

Q. That is the financial report for 1941 of Michigan Gas Transmission Corporation?

A. That is correct, in the amount of $6,364.61.

Q. You would recommend the allowance of that amount as of December 31, 1941, rather than an amount at the midyear?

A. That is correct, for working capital purposes.

Q. Yes. What do you say with respect to the final item shown on page 1 of Exhibit No. 94 allowed by Mr. Spitznagle for "Minimum Bank Balances Required to Support Check Privileges Based Upon Advice Received from Depositories" in the amount of $116,303?

A. The accrued taxes provide cash at all times far in excess of $116,000 in much the same manner as it is with Panhandle Eastern and, therefore, I do not believe that this amount should be allowed in working capital inasmuch as the company has ample cash on hand from accrued taxes to cover any minimum bank balances.

Q. I believe the cross-examination of Mr. Spitznagle covered that subject and showed the amounts, did it not?

A. Yes, Mr. Spitznagle, as I recall, admitted that the company had plenty of cash from accrued taxes to more than cover minimum bank balances.

Q. The record will show whatever his testimony was in that regard and will speak for itself.

[fol. 9631] Will you please total the items which, in your opinion, should be allowed for the working capital of Michigan Gas Transmission Corporation for purposes of this proceeding?

A. That total is $171,419 obtained by using a round sum of $50,000 for cash fund expenses covering operation and maintenance. I believe that actually works out slightly higher than this. I would recommend at least $172,000.

Q. And does that amount represent, in your opinion, the maximum allowable working capital to be added to the

plant accounts and to operating expenses of Michigan Gas Transmission Corporation for purposes of this proceeding?

A. It does.

(Exhibit No. 221 was received in evidence.)

[fol. 9632] Mr. Littman: I would like to have marked for identification, Mr. Examiner, an exhibit consisting of two [fol. 9633] pages entitled, "Panhandle Eastern Pipe Line Company and Subsidiary Companies—Computation of Average Return Earned on Net Investment for the Period April 1, 1932 to December 31, 1941."

(The document referred to was marked Exhibit No. 222 for identification.)

Q. Mr. Dunn, what is the source of the information and data shown in Exhibit No. 222?

A. The sources are all indicated. Column (b) is taken from Exhibit No. 173, the income statement prepared by Mr. Watkins. That is a cumulative total from the beginning to December 31, 1941.

Q. The sources of the other figures, of course, you may explain as you go along and I think it will be apparent.

Trial Examiner: Before you leave that, what companies are included as subsidiaries in this study?

Mr. Littman: All of the companies shown in Mr. Watkins' Exhibit No. 112 which was furnished at my request, all of the subsidiary companies owned in each year by Panhandle Eastern. In other words, this exhibit is presented on the same basis as Mr. Watkins' accounting exhibits have been presented.

Trial Examiner: And, of course, does not include anything of Michigan Gas Transmission Corporation?

[fol. 9634] Mr. Littman: That is correct because the last period is December 31, 1941.

I might state in that connection that it is my understanding and I will have Mr. Dunn correct me if I am

wrong, that at no time did Panhandle Eastern Pipe Line Company own any considerable amount of distribution system property. In the early years, it owned more distribution system property than in the later years. As a matter of fact, on January 1, 1941, it owned no distribution systems and then as of some date in February, it recently acquired the Indiana Gas Distribution system which is a small company. However, this exhibit was made on a comparable basis so that it may be conformed and compared with Mr. Watkins' own presentation.

By Mr. Littman:

Q. Is my statement generally correct, Mr. Dunn, about the distribution systems?

A. It is. They were at all times a very minor part of this company's operations.

Q. You had no way of eliminating them without going through a considerable amount of detailed work, did you?

A. That is right. In fact, for the purpose of this exhibit, I had no desire to eliminate them because I wanted to show what the total operations of Panhandle Eastern were as a corporation over this period of time.

Q. Very well. Will you please explain Exhibit No. 222?

[fol. 9635] A. Column (c) shows certain adjustments to operating expenses which I have entitled, "Adjustment for Items Admittedly Not Cost".

Q. Just a minute, have you sufficiently explained Column (b)? Let me repeat, Column (b) is the total operating revenue and operating revenue deductions and net operating revenue, per books, and as shown in Mr. Watkins' Exhibit No. 173 for the period April 1, 1932, to December 31, 1941, on a cumulative basis, that is, the total of all the figures in that period, is that right?

A. That is correct, it is.

Q. All right. Now, go to Column (c) and I might state for the purpose of the record that the net operating revenue shown, that is, the cumulative total, is $21,929,484.

Now proceed to Column (c).

A. The adjustments to which I referred are explained on page 2 of this exhibit. The first one is an adjustment relating to amortization of limited term gas investments and pertains to the item of gas sales and purchase con-

tracts which were not stated at cost. The items which I have included in this exhibit, namely, the gas purchase and sales contracts in the amount of $654,989.34 are contracts with Missouri Power & Light and Illinois Power & Light and certain industrial companies, which Panhandle Eastern secured by payment of some Mokan stock.

[fol. 9636] Q. Are you referring to the 19,000 shares of Mokan stock purchased by Panhandle Eastern and distributed by Mr. Parish, the then president of Panhandle Eastern?

A. That is the item to which I referred.

Q. And how much money is involved in the purchase of that stock, approximately?

A. The purchase of the stock was—

Q. (Interposing) The cost to Panhandle Eastern—

A. (Continuing) $556,000. The total of this amount, to reconcile the figures here, shown as $654,989.34 is represented by some additional payments, one of which is an amount of $75,000 paid Missouri Kansas Pipe Line Company to reimburse them for expenses incurred in obtaining gas sales contracts and that amount was paid to the American Coke & Chemical Contracting Company plus an additional $9,500 for securing the industrial contracts with Peoria Malleable Castings Company, Keystone Steel Company, Caterpillar Tractor Company and R. Herschel Manufacturing Company. Then there were some expenses in the amount of $786.30, a premium on a bond amounting to $1,000 and then, later on, in 1931, and 1932; an amount of payroll and expenses of $12,703.04, all of these relating to the gas sales contracts that I have described.

Q. Well, at any rate, the bulk of the item of $654,000 odd was made up of the $500,000 odd which was paid by [fol. 9637] Panhandle Eastern for the acquisition of 19,000 shares of Mokan stock which was given to Mr. Parish as president of the company to distribute for the acquisition of the Missouri Power & Light Company and the Illinois Power & Light contracts, is that a correct summary?

A. That is correct. The exact amount is $556,000.

Q. Did you hear Mr. Maguire testify he rendered all of the services in connection with the securing of those contracts and that he received but 7,000 shares of that stock?

A. Yes, I heard Mr. Maguire's testimony to that effect.

Q. But you are not making any disallowance of any of this $654,000 item, are you? That is, you are not recommending any disallowance for the purpose of this proceeding?

A. No. The fact I do not see how it can be disallowed. It has all been written off. In effect, more than that has been written off and the company has already disposed of the item.

Mr. Culton: In other words, it is not in their accounts at this time?

The Witness: I do not see how it could be considered in their accounts at this time.

By Mr. Littman:

Q. It has been amortized?

A. That is right.

Q. Very well. This, of course, is the amount before [fol. 9638] amortization, is it not, $654,989?

A. That is right.

Q. Will you proceed with your explanation?

A. Then an amount has been amortized for other gas sales and purchase contracts in the amount of $174,689.20 which is the total allowable amortization for this item in the sum of $829,678.54.

Q. Which is the amount which you are permitting to remain intact?

A. Yes. We can see, from Column (c) that the company has really amortized $1,231,870 more than cost in the past.

Q. All right. Will you proceed with your explanation of this exhibit?

A. The next adjustment I made is self-explanatory. It is charges in lieu of Federal income and excess profits taxes and that is not cost because it represents the amount of taxes which would have been paid had the company not engaged in the refinancing operations in 1941 and since it was not paid, I have not included it in this study of actual expenses.

Q. In other words, they were charges that were accrued but not paid, is that right?

A. That is right.

Q. And, of course, to that extent, the net operating revenue of the company was understated?

A. Yes.

[fol. 9639] Q. And accordingly adjusted by you. Will you proceed with the next item of adjustment?

A. The other adjustments relate to taxes and are taken from certain exhibits presented by Mr. Watkins to show the difference between taxes actually paid and the taxes accrued. There is a reference in each instance to the exhibit and it shows that, in the case of miscellaneous Federal taxes, State and local taxes, about $69,550 was over accrued. In the case of Federal income taxes, about $600,530 and Federal excess profits taxes, $219,881. The sums of all these adjustments which have been included as operating expenses amount to $2,945,713.

Q. In your opinion, has the net operating revenue of Panhandle Eastern Pipe Line Company and subsidiary companies, on a consolidated basis during the period from April 1, 1932, to December 31, 1941, been overstated, cumulatively speaking, in the amount of $2,945,713?

A. The operating expenses have been overstated by that much or the operating revenue has been understated by that much.

Q. Now, that gives us what net operating revenue, as adjusted, as shown in Column (d)?

A. $34,875,197.

Q. And what do the figures in Column (e) represent on page 1 of Exhibit No. 222?

A. That is the annual average obtained by dividing the [fol. 9640] totals in Column (d) by the period of time which is $9\frac{3}{4}$ years.

Q. What is the average net operating revenue for that period?

A. $3,576,943.

Q. I note a figure in line No. 27 denominated "Average Net Investment" in the amount of $47,774,469. Do you have a tabulation in this exhibit which shows how you arrive at that amount?

A. Yes, that is shown at the top of page 2.

Q. Will you explain that tabulation?

A. The gas plant totals shown in Exhibit No. 176, line 38, are listed by years, showing the balance at December 31 for each year. I have added to that the net amount of gas sales contracts shown on line 44 of Exhibit No. 176. I have deducted the balance in the reserves for depreciation

and depletion corresponding to the proper years as shown in Exhibit No. 172, lines 28 to 33, inclusive, and the last column shows the net investment. I have totaled that and divided by 10 to get an average because there are 10 years involved.

Q. That gave you the amount of $47,774,469, does it not?

A. It does.

Q. At line 28 at the foot of page 1 of Exhibit No. 222, you have shown 7½ percent as the "Average Returned [fol. 9647] Earned" Shouldn't that be corrected to "Average Return Earned"? That "ed" on "Return" does not belong there.

A. That is a typographical error. That should be "Return."

. . . . . .

Q. Now, will you explain that item?

A. The company's income statements, particularly the Exhibit No. 173, show that they have earned a fluctuating amount of net income, some years rather high and some years very low. I wanted to see what the average would be to know what the results of operation were more intelligently and that showed they earned on the average 7½ per cent.

Q. On their net investment as shown in Exhibit No. 222?

A. That is correct.

Q. And that is the amount that is somtimes called "net operating revenue"?

A. That is correct.

Q. Expressed in percentage of net investment?

A. Yes.

. . . . . .

[fol. 9648] (Exhibit No. 222 was received in evidence.)

. . . . . .

[fol. 9650] Mr. Culton: Mr. Examiner, I have distributed a number of proposed exhibits and I would like to have them marked for identification at this time. I think that will be a time saving matter.

I ask first that the document entitled, "Substitute Estimate (Less Economic) of Additional Capital Expenditures

South and West of Liberal Compressor Station Required to Meet Peak Day Sales of 307,000 MCF" be marked Exhibit No. 223 for identification.

(The document referred to was marked Exhibit No. 223 for identification.)

Mr. Culton: I ask that the document entitled, "Substitute Estimate (Less Economics) of Additional Capital Expenditures South and West of Liberal Compressor Station, Required to Meet Peak Day Sales of 338,000 MCF", be marked Exhibit No. 224 for identification.

(The document referred to was marked Exhibit No. 224 for identification.)

Mr. Culton: May we reserve Exhibit No. 225 for an exhibit which has not yet been completed but which, in regular order, I think should go in at this point?

[fol. 9651] Trial Examiner: We will reserve that number.

Mr. Culton: It will be for a document entitled, "Estimate of Operation and Maintenance Costs South and West of Liberal Compressor Station, Panhandle Field, 307,000 MCF, Continuous Daily Sales Capacity Operation at 70 Per Cent Capacity Factor."

(Exhibit No. 225 was reserved for exhibit to be submitted later.)

Mr. Culton: We ask that the document entitled, "Estimate of Operation and Maintenance Costs South and West of Liberal Compressor Station, Panhandle Field, 307,000 MCF Continuous Daily Sales Capacity Operation at 90 Per Cent Capacity Factor" be marked Exhibit No. 226.

(The document referred to was marked Exhibit No. 226 for identification.)

Mr. Culton: The next exhibit is entitled, "Estimate of Operation and Maintenance Costs South and West of Liberal Compressor Station, Panhandle Field, 338,000

MCF Continuous Daily Sales Capacity Operation at 70 Per cent (Approximately Normal) Capacity Factor" be marked Exhibit No. 227.

(The document referred to was marked Exhibit No. 227 for identification.)

Mr. Culton: We ask that the document entitled, "Estimate of Operation and Maintenance Costs South and West Hol. 9652 of Liberal Compressor Station, Panhandle Field, 378,000 MCF Continuous Daily Sales Capacity Operations at 90 Per Cent Capacity Factor" be marked Exhibit No. 228.

(The document referred to was marked Exhibit No. 228 for identification.)

Mr. Culton: We ask that the document entitled, "Capacity Study April 7, 1942 Continuous Daily Delivery Capacity 307,000 MCF" be marked Exhibit No. 229.

(The document referred to was marked Exhibit No. 229 for identification.)

Mr. Culton: We ask that the document entitled, "Capacity Study April 7, 1942 Completely Looped and Economically Powered Main Line System with Economic Production Transmission Expenditures" be marked Exhibit No. 230.

(The document referred to was marked Exhibit No. 230 for identification.)

Mr. Culton: I ask that the document entitled, "Capacity Study April 7, 1942, Revised Completely Looped and Economically Powered Main Line System with Less Economic Production Transmission Expenditures" be marked Exhibit No. 231.

(The document referred to was marked Exhibit No. 231 for identification.)

[fol. 9653] EDWARD L. DUNN, a witness, having been previously duly sworn, resumed the stand and testified further as follows:

Redirect Examination

By Mr. Littman:

Q. Mr. Dunn, when you were on the stand near the close of the last session, were you requested to furnish certain data and information?

A. I was, yes.

[fol. 9654] Q. And have you prepared that information and data in response to those requests?

A. I have.

Q. I call your attention particularly to a request that was made by Mr. Chamberlain with respect to Exhibit No. 222 entitled, "Panhandle Eastern Pipe Line Company and Subsidiary Companies—Computation of Average Return Earned on Net Investment for the Period April 1, 1932, to December 31, 1941". Have you prepared a table in response to Mr. Chamberlain's request with respect to Exhibit No. 222?

A. I have.

Mr. Littman: I ask, Mr. Examiner, that a table consisting of one page, entitled, "Panhandle Eastern Pipe Line Company and Subsidiary Companies—Comparison of Average Return Earned on Net Investment for the Periods April 1, 1932, to December 31, 1936, and January 1, 1937, to December 31, 1941", be marked for identification as Exhibit No. 232.

Trial Examiner: Would it not be better, Mr. Littman, to mark this exhibit No. 222-A?

(The document referred to was marked Exhibit No. 222-A for identification.)

By Mr. Littman:

Q. I hand you Exhibit No. 222-A for identification, Mr. [fol. 9655] Dunn, and ask whether this is the table you prepared in response to Mr. Chamberlain's request?

A. It is.

Q. Will you briefly explain this exhibit, giving only such detail as is necessary to explain the exhibit briefly?

A. This exhibit is supplementary to Exhibit No. 222 which showed the average return earned over the entire corporate history of Panhandle Eastern Pipe Line Company and its subsidiary companies. The purpose of this exhibit is to break that down into two divisions, namely, the period from 1932 to 1936, inclusive, and—

Q. (Interposing) You mean from April 1, 1932, to December 31, 1936?

A. Yes, and the period beginning in 1937 and ending in 1941.

Q. That is, from January 1, 1937, to December 31, 1941?

A. That is right. Therefore, I started with the total which is shown in Column B of Exhibit No. 222 and divided that into the periods mentioned. The operations are accounted for by years and, of course, I used the years as they are accounted for on the company's books for the purposes of this division.

There is one exception to that statement. In the case of the amortization of gas contracts, that amount is shown as $829,679 for the total. The amount applicable to the first period is one-half of the amount of $654,990 shown in [fol. 9656] the amount of $327,495 under "Amortization of Gas Contracts" in the column under the period 1932 to 1936. The other half is included in the period 1937 to 1941 plus the amortization of the gas contracts new which were entered into during the latter half of this period, namely, the period 1937 to 1941. Therefore, all of the amortization has been applied to that period.

Q. Mr. Dunn, your Exhibit No. 222 showed that Panhandle Eastern Pipe Line Company and its subsidiary companies earned an average return of 7½ per cent per year over the period April 1, 1932, at which date it actually

commenced its operations through December 31, 1941. Is that correct?

A. That is correct.

Q. Now, what you have done in Exhibit No. 222-A is to divide that period into two separate periods so as to show the average return earned during the period from April 1, 1932, through December 31, 1936, on the one hand, and for the period January 1, 1937, through December 31, 1941, on the other hand. Is that right?

A. That is right.

Q. Over the first period, the average return earned by Panhandle Eastern Pipe Line Company and subsidiary companies was what per cent of its net investment?

A. 3.1 per cent.

Q. And what was the average return earned, as shown [fol. 9657] on Exhibit No. 222-A, on the latter period, to-wit, from January 1, 1937, through December 31, 1941, on the net investment?

A. 10.64 per cent.

Q. Now, you made this separation at the request of Mr. Chamberlain, did you not?

A. That is correct.

Q. State whether or not it is the fact that the Detroit business was attached along toward the latter part of 1936?

A. Yes, it was.

Q. So that your latter period reflects the operations and return to Panhandle Eastern after the Detroit, Michigan, load was fully attached, does it not?

A. It reflects the actual sales to the Michigan Consolidated Gas Company, in full.

Q. And, of course, the first period from April 1, 1932, through December 31, 1936, reflects the operations before the Detroit load was attached to the lines, is that correct?

A. Yes. There are some Detroit sales in there undoubtedly for a portion of the year 1936 but not a substantial amount, according to the company's statements of operating revenues.

Q. Now, did you also prepare a table in response to the Trial Examiner's request which was to this effect: That you prepare a table showing the average earned on the net investment of the Michigan Gas Transmission

[fol. 9658] Corporation for the period March 1, 1936, to December 31, 1941?

A. I did.

Mr. Littman: I ask that this table be marked for identification as Exhibit No. 222-B inasmuch as it is a similar computation to those which preceded it.

(The document referred to was marked for identification as Exhibit No. 232.)

By Mr. Littman:

Q. I hand you a copy of Exhibit No. 232 for identification, Mr. Dunn, entitled, "Michigan Gas Transmission Corporation—Computation of Average Return Earned on Net Investment for the Period March 1, 1936, to December 31, 1941", and ask you whether this is the table which you prepared in response to the Trial Examiner's request to which I referred a moment ago?

A. It is.

Q. Will you briefly explain this table?

A. This table is taken from the income account, per books, shown as Exhibit No. 99 up to the end of December 31, 1940, and Exhibit No. 163 for the year ended December [fol. 9659] 31, 1941. Cumulative totals are shown in the first amount column. The second column includes an adjustment for taxes not paid, the amounts being taken from Exhibit No. 99. The third column shows the cumulative totals, as adjusted, and the fourth column shows the average amounts over the life of Michigan Gas Transmission Corporation ending December 31, 1941, which is a period of 5 5/6 years.

Q. What is the source of the figures shown in Exhibit No. 232?

A. The source is Exhibit No. 99 and Exhibit No. 163.

Q. Which, in turn, reflect the company's books, do they not?

A. That is correct.

Q. And the same is true of Exhibit No. 222-A; that is to say, the figures reflect the company's books, do they not?

A. That is right, except for certain adjustments which were explained in connection with Exhibit No. 222.

* * * * * * * *

Q. What does your Exhibit No. 232 show to be the average return earned by Michigan Gas Transmission Corporation on its net investment from March 1, 1936, through December 31, 1941?

A. This exhibit shows that that corporation earned an average of 8⅛ per cent on an average net investment of [fol. 9660] $9,134,568 for that period.

Q. By "net investment" are you referring to book costs of the gas plant less depreciation reserves?

A. That is correct, less an adjustment for an item of intercompany profit which is shown on the bottom of this exhibit.

Q. You mean the figures shown in the column headed, "Net Adjustment for Intercompany Profit"?

A. That is correct. That amount was approximately $139,500. It is depreciating about $3,600 a year or, at the end of 1941, it had depreciated to approximately $103,500. At the end of the preceding year, at the end of 1940, it was $107,100 or $3,600 less, which is carried on back to 1936 in that manner.

Q. Is that the intercompany profit to which numerous references have heretofore been made in this proceeding, namely, the profit that was taken by Columbia Engineering Corporation from Michigan Gas Transmission Corporation's predecessor, Indiana Gas Transmission Corporation?

A. Yes, it was a construction fee, not actual cost, which was paid to an affiliated company by a predecessor company.

Q. That is the intercompany profit referred to by the Securities and Exchange Commission in its opinion which is in evidence as Exhibit No. 147, is it not?

A. That is correct. The real source of the item is disclosed in Mr. Spitznagle's original cost study, however.

[fol. 9661] Q. Which is Exhibit No. 91, as I recall it?

A. I believe it is.

Q. Mr. Dunn, you have just alluded to two adjustments which were made in Exhibit No. 232 shown in the second column for taxes not paid. Is my understanding correct

that, in certain years, Michigan Gas Transmission Corporation accrued on its books an amount greater than the amount of taxes actually paid?

A. That is correct.

Q. And, to that extent, understated its net income per books?

A. That is a result of the over-accrual, yes.

Q. And you have shown the amount of these understatements, to wit, the amount of the accrual for taxes not paid and accordingly you have made the adjustment in Exhibit No. 232?

A. Yes.

. . . . . .

[fol. 9663] Q. You have used the terminology, "average net investment"?

A. Yes.

[fol. 9664] Q. In fact, you have taken the gas plant at the close of each year, have you not?

A. I have.

Q. And you have applied to that the revenues for the year?

A. That is not.

Q. So that it is not the return upon the average investment for each year?

A. Well, that is not what the exhibit shows. It shows the average for six years, and I divided by six to get an average for six years, not an average for individual years.

Q. I see. In the ultimate figure, you take the average for the full period?

A. That is correct.

. . . . . .

[fol. 9668] (Exhibits Nos. 222-A and 232 were received in evidence.)

. . . . . .

[fol. 9669] C. H. Hinton, a witness, having been previously duly sworn, resumed the stand and testified further as follows:

Mr. Culton: Mr. Examiner, in line with the suggestion of the Examiner a few days ago, I will make a statement

with respect to the former testimony to which the next witness' testimony is related.

This witness heretofore testified and presented his written testimony which appears as Exhibit No. 42. In connection with that, he offered certain schedules in Exhibit No. 43. His examination appears at three places in the transcript. He was first offered at page 654. Later, there was direct examination at page 1306 and the cross-examination commenced at page 4775.

This witness' former testimony, among other things, related to the capital expenditures which will be required in the two fields in which Panhandle Eastern's reserves are located in order to meet certain volumes and peaks as estimated by Mr. Morton. He also in his exhibit presented the operation and maintenance costs in the field and, by the field, I mean west of Liberal.

His testimony will relate to a further study which he has recently made based on changed conditions. His estimated future expenditures, as contained in his former [fol. 9670] testimony under what was referred to as the anticipated load, commenced on page 26 of Exhibit 42 and for the expenditures through 1946 carried through page 32.

. . . . . .

By Mr. Culton:

Q. Mr. Hinton, in your former testimony on page 26 of Exhibit 42, you detailed certain future capital expenditures in what was referred to as the anticipated load. I will now ask you to state what has been done with respect to the various items referred to under 1941 as it appears on page 26 of that exhibit?

A. All of the items which were proposed for 1941 have now been completed with the exception of the acidization of the gas well shown under item D. That is a matter of about $1,550. That work has not yet been done.

Q. That is largely due to circumstances related to other matters, is it not?

A. It is a matter of holding off on that acidization until such time as we have gas available to load the acid for gas treating rather than using liquid as a drive.

Q. In other words, it will be more economical and more effecient to be able to acidize it in the way you have described?

A. We find we have better results by using a partial [fol. 9671] water load and partial gas load and we are going to hold up that acid treating until such time as we have the gas load available.

Q. This well is that which was drilled in what was, in effect, a new field so far as Panhandle Eastern is concerned, that is, a new area?

A. That is correct. That is our first well.

Q. And I believe it was practically completed the last time you testified?

A. Yes, sir.

Q. What kind of a well did you get from that area?

A. Well, we have a natural open flow there of approximately 5 million cubic feet per 24 hours tested on a 20 minute blowdown pitot test and we feel that is an indication that we have some pretty good acreage surrounding that well.

Mr. Littman: May I inquire whether that 5 million open flow was before or after acidization?

The Witness: Before. The well has not been acidized.

Mr. Littman: You fully expect the well to be greater after acidization, do you not?

The Witness: Yes, we hope so on a pitot tube test of 5 million, I would estimate that we would go to somewhere around 25 to 30 million.

By Mr. Culton:

Q. In other words, you feel, as a result of the drilling [fol. 9672] of that well, that you have proven that the Panhandle acreage in that area is substantial acreage which it will pay the company to develop?

A. Yes, and other wells drilled in the vicinity further prove it, that is, wells owned by other companies.

. . . . . .

Mr. Littman: Will you please give us the location of that well?

. . . . . .

The Witness: The well is located in the north half of Section 25, Township 3, Range 15 and it shows on that map to be located in the center of the west half but we changed that location after this map was made.

Mr. Littman: In what State and in what county?

The Witness: Texas County, Oklahoma.

Mr. Littman: What was the thickness of the lime?

. . . . . .

[fol. 9673] By Mr. Culton:

. . . . . .

Q. Since you formerly testified, have you had occasion to make any computations with respect to future capital expenditures on any basis other than that on which your anticipated load capital expenditures, as reflected in Exhibit No. 42, was prepared?

A. Yes, I have.

Q. What was the basis on which the anticipated load capital requirements, contained in Exhibit 42, was based?

A. They were based upon estimates of Mr. O. W. Morton.

Q. Reflected in his Exhibit No. 40?

. . . . . .

The Witness: The figures which appear on Exhibit 40 are the same as those that were furnished me by Mr. Morton on August 18.

[fol. 9674] Q. In your former study, you took into consideration the volumes of gas shown on Exhibit 40 as well as the maximum day requirements, is that correct?

A. That is correct.

Q. You state that recently you have made another study of capital requirements. What has been the basis of that study?

A. That study is based upon volumes of gas which have been given me by the management of the company.

Q. By the management. You mean the president, Mr. Creveling?

A. Yes, sir.

Q. And what bases were used, what capacity?

A. The volumes which he gave me were continuous daily capacity of 307,000 M.c.f. operating at a capacity factor of both 70 per cent and 90 per cent and a volume of 338,000 M.c.f. peak day sales and that was to be designed for continuous operation and the estimates were based upon a 70 per cent capacity and a 90 per cent capacity factor on that volume also.

Q. In other words, you have made computations for capital expenditures first to meet sales of 307 million daily and second, to meet sales of 338 million daily, is that correct, peak sales?

A. Yes, and I was also instructed to use the minimum amount of steel in both cases.

[fol. 9675] Mr. Littman: When you speak of 338 million and 307 million, you are speaking of cubic feet, are you not?

The Witness: In M.c.f.—

Mr. Littman: (Interposing) No, you mean 338,000 M. c.f. or 338 million cubic feet.

The Witness: You are correct, Mr. Littman.

By Mr. Culton:

Q. The first exhibit which you offer and which has been identified for use in connection with your testimony relates to substitute estimate, less economic, of capital expenditures. What did you consider the most economic method of doing the necessary construction work?

A. The same construction program as outlined in Exhibit 42, pages 26 to 32.

Q. Approximately what annual volume did you take into consideration in the preparation of Exhibit No. 223?

A. The annual volume required at the intake side of Liberal compressor station to furnish the 307,000 M.c.f. at a 70 per cent capacity factor is 76,953,656 M.c.f. and that is on a 16.4 pound pressure base.

[fol. 9676] Q. In other words, it is approximately 77 billion cubic feet?

A. That is correct.

Mr. Littman: Will you explain or define the term "capacity factor" as you use it?

The Witness: That means that the pipe line would be operating at 70 percent of its capacity of 307,000 M.c.f. per day.

By Mr. Culton:

Q. At about what period in Mr. Morton's Exhibit No. 40 would you have reached that volume of annual sales?

A. We would have reached approximately that volume for the year 1944.

Mr. Littman: You mean 1943, don't you, Mr. Hinton?

The Witness: No, sir.

Mr. Culton: It is between 1943 and 1944, isn't it?

The Witness: Yes, it is between 1943 and 1944.

Mr. Littman: The reason I wondered whether he had misspoken himself was because of Column E of Exhibit 40, Mr. Morton's exhibit, which showed the annual requirement for the year 1943 to be 77,461,000 M.c.f.

The Witness: Yes, but the amounts on Exhibit 40 will not tie into this because this has the fuel added in required beyond Liberal station and including Liberal sta- [fol. 9677] tion and is converted from a 30-inch saturated pressure base which is 14.73 pounds to 16.4 pounds for the purpose of production because all production, in both the Panhandle and Hugoton fields is measured on a 16.4 pound pressure base.

By Mr. Culton:

Q. In other words, Mr. Morton's figures were sales figures whereas you have included everything?

A. Yes, sir.

Q. Sales, line loss and fuel.

A. And gasoline plant shrinkage.

Q. Gasoline plant shrinkage and so forth?

A. Yes, sir.

Q. And you have also changed the measurement basis to the field standard of 16.4?

A. Yes, sir.

Q. Exhibit No. 224 for identification shows the less economic substitute estimate required to meet peak day sales of 338 million cubic feet. What would the total volume be on that basis, approximately?

A. When you speak of the total volume, you mean—

Q. (Interposing). Annually.

A. Annually, at a 70 per cent [capcity] factor?

Q. At 70 per cent and 90 per cent.

A. The one we gave there on the 307,000 M.c.f. was at 70 and we have not yet given the 90.

[fol. 9678] Q. Give the 90—you have given us the 70 on the 307,000 M.c.f., is that right?

A. Yes, sir.

Q. Give us the 90 per cent capacity factor on the 307,000 M.c.f.

A. The annual requirement at 90 per cent capacity factor would be 98,940,368 M.c.f., approximately.

Q. Was that figure reached on Mr. Morton's Exhibit No. 40?

A. I do not know how many years he went on that exhibit.

Q. He used through 1946.

A. No, Mr. Morton gave me estimates beyond those shown in Exhibit 40 and a comparable load condition would not be reached under his estimate until the year 1947. That is, it would occur between 1947 and 1948.

Q. Now, will you tell us the annual volume required to meet sales of 338 million at a 70 per cent capacity factor?

A. The annual requirement for 338,000 M.c.f. capacity operating at 70 per cent capacity factor would require annually 85,954,285 M.c.f.

Q. And when would that point be reached on Mr Morton's Exhibit No. 40?

A. That would be reached approximately the year 1946. It would occur between the year 1945 and 1946, the estimate for that year.

[fol. 9679] Q. What would be the annual requirement to meet sales of 338 million operating at a 90 per cent capacity factor?

A. The requirement under that condition would be 110,512,512 M.c.f.

Q. And that point would be reached sometime beyond the date covered by Mr. Morton's five year estimate, would it not?

A. Yes.

[fol. 9681] Mr. Littman: Do these annual figures that you have read into the record reflect the line loss, company use, and so forth?

The Witness: Yes, they do.

Mr. Littman: That is, they include the line loss?

The Witness: That is correct.

Mr. Littman: Have you estimated how much of these annual amounts is actually going to be sold?

The Witness: Yes, that is the volume that they gave me and I worked backwards from that. You see when Mr. Creveling told me to figure out the least steel possible to supply these volumes, then it was necessary for me to start at the sales end of the line and work backwards to the well.

Mr. Littman: The only figure he gave you was the 338,000 M.c.f. and the 307,000 M.c.f.?

The Witness: That is correct.

Mr. Littman: That was your starting figure and you worked back to these annual figures?

The Witness: Yes, sir.

Mr. Chamberlain: And that was sales?

The Witness: Yes, that is sales.

[fol. 9686] Mr. Littman: Mr. Hinton, is my understanding correct that the annual figures which you have read into the record with respect to Exhibits Nos. 223 and 224, that is, the annual figures, are comparable to the annual figures shown on page 15 of your Exhibit No. 42?

The Witness: Yes, I had forgotten they were there but they are.

Mr. Littman: In other words, the annual delivery figures which you have read into the record are the amounts which are required, either delivered at Liberal compressor station or adjusted to a 16.4 pound base with an addition for the gas required for the power and loss due to line leakage?

The Witness: That is correct.

Mr. Littman: And are comparable to annual figures shown by you on page 15 of Exhibit 42?

The Witness: Yes, sir.

• • • • • • •

The Witness: They include the same thing and are on the same pressure base.

By Mr. Culton:

Q. And your computation is on the assumption that the company would get those volumes at an earlier date than estimated by Mr. Morton?

A. Yes, and the time element enters in our expenditure [fol. 9687] requirement.

Q. And it has been on the assumption that the company would have those volumes just as soon as it could by physically possible for the additional expenditures to be made?

A. That is the way I understood that it was. In all probability, the fuel would be used for plants now engaged in making war materials and that it was a hurry-up job and to get the most possible there with the least steel.

Mr. Littman: You are now reflecting your understanding of what Mr. Creveling wanted you to do?

The Witness: Yes.

Mr. Littman: He gave you the hypothesis and you worked out the result?

• • • • • • • •

[fol. 9688] By Mr. Culton:

Q. Mr. Hinton, you stated that the management gave you instructions to prepare further estimates as to capital expenditures, one to meet sales of 307,000,000 cu. ft. and the

other to meet sales of 380,000,000 cu. ft., using both the 70 per cent capacity factor and the 90 percent capacity factor, is that correct?

A. That is correct.

Q. And you said something about the difference in steel requirements. Just what instructions were those?

A. Well, they were not hardly instructions. That is, Mr. Creveling said, "Just what is the least number of tons of steel that you can get this gas into Liberal with?" and for me to make my computations upon that basis, and that is what I have done.

Q. That is, irrespective of whether or not it was the most economic way to furnish the capacity, is that correct?

A. That is correct.

Q. That resulted in what principal differences between your estimates this last time and the estimates which you made last fall, what fundamental differences?

A. Well, fundamentally it is just a shift of the problem from furnishing pipe line capacity, and converting to horsepower.

[fol. 9689] Q. In other words it results in less pipe and more compressor stations?

A. That is correct.

Q. Or compressor units?

A. That is correct.

Q. Now, does it make any difference in where the principal portion of the additional gas will be taken?

A. Yes, it makes a decided difference, because without steel we are not able to reach the pipe line capacity from Texas that we had anticipated under the study shown on Page 27 of Exhibit 42.

Q. Does it also necessitate, in later years, the construction of the gathering lines in Oklahoma about which you testified to?

A. If I—maybe you had better state that question again.

Q. All right. In this new study have you assumed that you would never construct the gathering lines in Oklahoma?

A. No, sir.

Q. Which you have heretofore testified you would construct around Oklahoma?

A. There will be no gathering lines constructed in the state of Oklahoma other than one small line which has not been considered in this study at all.

[fol. 9690] Q. Will these additional capital expenditures about which you will testify, such as reflected in Exhibits 223 and 224, fit into the eventual economic picture which you had presented in connection with your former testimony?

A. Part do and part of them do not.

Q. Will you be able, at the proper time to explain which ones you hadn't taken into consideration in your general study heretofore?

A. Yes, sir.

Q. I note that Exhibit 42, on Pages 27 and 28, list capital expenditures for the year 1942, aggregating $4,530,370, whereas your Exhibit 223 for a peak day sales of 307 million cubic feet shows an expenditure in 1942 of $1,285,301, and for 338 million cubic feet an expenditure of $1,878,096.

Do you have a copy of your Exhibit 42 before you?

A. I do.

Q. Your first item—that is, item A for 1942—shows the drilling of five wells in the Panhandle field, whereas the exhibit 223 and exhibit 224 show only three wells.

What is the reason for the reduction in those two wells?

A. The chief reason is to cut down on the tons of steel required.

Q. In other words, if you had these additional wells, [fol. 9691] then you would have to have more steel for gathering lines, is that correct?

A. And we would have to use more of your casing to case the well.

Q. That is a steel saving proposition then?

A. That is right.

Q. Now, in your exhibit 42 you show installing liners in two old wells, and tubing in two old wells, and the same is shown in Exhibits 223 and 224. Are those the same wells?

A. Yes, those are the same wells, but under item C of Exhibit 242 the cost was estimated at $4,262 for the tubing.

We have since revamped that and, by cause of further study, have decided to use a larger production string in those wells and that has been increased to $6,900.

Q. In other words you think you would get better results by using larger string in those wells than you had originally planned, is that correct?

A. Yes, sir; that is correct.

Q. Now, in your former exhibit you showed acidizing five wells in the Panhandle field, whereas you now show acidizing ten.

Will the acidization of those additional wells give you greater volumes?

A. Yes. The wells will be able to deliver greater vol-
[fol. 9693] umes of gas at a comparative working pressure.

Q. Now, in your former exhibit you showed well lines for five wells, and measuring stations for five wells, whereas that has now been reduced to three. That is because you have reduced the number of wells which will be drilled in the Panhandle?

A. That is correct.

Q. Then Item G shown in 1942 on Exhibit 42 and Item H shown our Exhibit 42 are not reflected in either Exhibit 223 or 224. What is the reason for that?

A. That is a matter of cutting down on the steel requirement.

Q. Does cutting down the steel requirements for the trunk gathering line and the increase in the capacity of the gathering line make any difference in the volumes of gas which you will be able to take out of the Panhandle field?

A. Yes. They make a decided difference.

Q. And you show Items G and H in Exhibit 223 representing the installing of additional horsepower at Sneed and Hansford.

Those are the same items, are they not, as those similar items in Exhibit 42?

A. Yes, that is correct, and even though we will be able to take less gas from the Panhandle field, the horsepower

requirement will be approximately the same, due to the
[fol. 9693] fact that we will have to have a lower intake
pressure at the Sneed compressor station, because we
will have a limited line capacity.

Q. In Exhibit 223 and Exhibit 224 you show acidization of 20 wells in the Hugoton field, whereas I believe in your old Exhibit 42 you showed acidization of only ten wells. What is the reason for that change?

A. That is because we are going to have to take more gas from each well which is now drilled than we would if we would have gone ahead and drilled the 20 contemplated wells in Oklahoma.

Q. It is the result, then, is suspending the drilling of additional wells in the lower part of the Hugoton field and taking increased volumes of gas from the other portions of that field, is that correct?

A. Well, it is a matter of taking more gas from Hugoton field over the entire field. That is, if I understood you correctly, you said that it meant taking less gas from one portion of Hugoton field, and a greater portion from another, but the takes will still be governed by progation, as nearly as it will be possible to do so.

Q. That is, so far as you have gathering facilities to gather the gas?

Mr. Littman: Pardon me, Mr. Culton. Where do you show in Exhibit 42 that you had proposed to acidize in
[fol. 9694] 1942 more than four old wells in the Hugoton field?

The Witness: That is a typographical error, and I believe that was corrected in the record, because the unit cost of the acid treatment is $1,550.

Mr. Littman: Unit cost?

By Mr. Culton:

Q. In other words the item $15,500 under Item 9 is the cost of acidizing ten wells and not the cost of acidizing four wells; is that correct?

A. That is correct, and I thought that that was brought up one time during cross examination.

Mr. Culton: I have my exhibit marked there changed from four to ten.

Mr. Littman: I have no recollection of that change having been made, but if there is a correction to be made on Page 27 of Exhibit 42 let's do it now.

Should that read "Acidize ten old wells in Hugoton field, cost of $15,500"?

The Witness: Yes, sir.

By Mr. Culton:

Q. In other words your unit cost the aggregate cost represents the unit cost of ten wells?

A. Yes, and my working papers show what ten wells were to be acidized.

[fol. 9695] Mr. Littman: Are these 20 wells proposed to be acidized as shown on Exhibits 223 and 224 all old wells?

The Witness: Yes. By "old wells" you mean wells that have been drilled previous to this date?

Mr. Littman: I mean old wells in the same way that you used the term "old wells" in Exhibit 42. I take it you have defined it.

The Witness: Well, my definition for an old well is one that has been completed and has been producing gas into the pipeline for some time.

Mr. Littman: That is what you meant when you used that term in Exhibit 42?

The Witness: Yes, sir.

By Mr. Culton:

Q. Now, in your Exhibits 223 and 224 you show compressor station near Hugoton, Kansas, and a dehydration plant?

Mr. Littman: How about the office building in the [fol. 9696] Hugoton? You skipped that.

Mr. Culton: That is the same, is it not, in all the exhibits?

The Witness: Yes.

Mr. Culton: That was also in the original 42. I am just going to the change now.

Q. Was this compressor station near Hugoton and dehydration plant used in the old Exhibit 42?

A. No. Not for the year '42, but it does appear for the year 1946 under the anticipated load.

Mr. Littman: Where is that shown? What page and what item?

Trial Examiner: Did Mr. Culton's question contemplate the year 1942—

Mr. Culton (Interposing): Yes, sir.

Trial Examiner (continuing):—or Exhibit 42?

Mr. Culton: It happens to be both in that particular instance, Mr. Examiner, but I meant the Exhibit 42 under the year 1942.

The Witness: That is shown on Page 31 under item I and J.

Mr. Littman: On what page?

The Witness: 31. Item I and J.

However, the horsepower requirement for the stations [fol. 9697] shown in Exhibit 42 Page 31, Item I, is not the same horsepower as that proposed shown in Exhibit 223 and 224.

Mr. Culton: What is the difference?

Mr. Littman: What are the horsepower?

The Witness: As I remember it took 2600 horsepower at that time?

By Mr. Culton:

Q. And you are using 4,000 in the current one?

A. And we are using 4,000 now.

Mr. Littman: You mean you are using 4,000 now for the purposes of Exhibit 223?

The Witness: Yes, that is correct. 2600 horsepower.

Mr. Littman: Thank you.

By Mr. Culton:

Q. Now, your dehydration plant in Exhibits 223 and 224 is shown at $60,000 whereas in the exhibit 42 it is shown at $70,000. Do you recall what that difference was?

A. Yes, sir.

Q. All right.

A. The $70,000 was based on a bid that was received from the Finor Company. Since that time we have done considerable experimenting on dehydration plant work, and we have come to the conclusion that our engineering department is capable of building a more suitable dehydration plant for our requirement, and it is estimated that we can do that work for $60,000 and get the plant [fol. 9698] that we want, rather than pay the $70,000 for the plant which was proposed.

Q. In other words, if at this time you were remaking Exhibit 42 you would use $60,000 instead of the $70,000 which you used there?

A. Yes, sir.

Q. You show in Exhibits 223 and 224 an item for looping existing lines, there being one of 3.5 miles and the other of four miles. Where would that looping be done?

There is an Exhibit No. 45 which you can probably describe that from, and you might hold it where Mr. Shattuck and counsel can see it, or they might come up here, and they and the Examiner could all see it, if you like.

A. The looping which is proposed covers the pipe shown to have been constructed—that would have been constructed in 1944 on the original estimate, and that particular location was chosen to enable wells connected to the present eight-inch line to produce gas at the required working pressures for the increased volume.

We have in our pipe yard at Hugoton at the present time some secondhand eight-inch pipe which I did not show because I just didn't have time to get the value of it, and we propose to come over and connect this original line with that eight inch pipe.

Q. The word "this" doesn't mean anything in the record.

[fol. 9699] Will you please give from section corners to section corners, or something like that?

A. Yes. The pipe extends from the end of the present 16-inch line, which is in the northeast quarter of Section 22, Township 33, Range 38, and extends to a point about 3½ miles west to the approximate north half of Section 19, 33, 38, and the four miles, starts from the end of the 16-inch, northeast quarter of 22, 33, 38, and extends along the present eight inch line in a northwesterly direction a distance of approximately four miles.

Trial Examiner: To say it another way, you are trying to increase your capacity immediately west of Hugoton, Kansas?

The Witness: Yes, sir. That is correct. And the reason that we picked that location is because there are so many wells now connected which are dropping off in pressure more rapidly than other wells in the field.

Trial Examiner: And the [reas] you have indicated on the map is a matter of six or eight square miles immediately west of Hugoton?

The Witness: That is correct.

By Mr. Culton:

Q. You said that, in doing this work, you had some eight-inch pipe that you thought you could use. Has the [fol. 9706] cost of that been included in the estimates in Exhibits 223 and 224?

A. No, sir. No allowance has been made.

Q. In other words, the money which you have been providing for in Exhibits 223 and 224 represents new money that would have to be put into the matter?

A. That is right.

Q. New pipe?

A. I think that the secondhand pipe would already be on the books of the company at some value, and the increase in the cost would just be construction, and it amounted to so little that I didn't put it in.

Q. So you are not taking into consideration, in this, either the value of that pipe or the cost of taking it up or the cost of replacing it?

A. No, sir. Neither have I shown that we are going to

12, and move the 16-inch line over to a portion of the system that the 12 will be removed from, in order to give us better capacity in the Panhandle field.

Q. In other words, this study was made as much for the information of those interested in the amounts of new steel which would be required as anything else?

A. Yes.

[fol. 9701] Q. That was one of the important things that you were considering? A. That is correct.

Q. Now, I notice that you have a less number of buildings required on Exhibit 223 and 224 than were required in your old Exhibit 42.

A. The number was cut down because the material situation had become as tight as it has, and the fact that we are not going to be able to build all of the buildings which were originally proposed will influence our operating cost to some extent, and that will be an increase of the operating cost.

* * * * * * * *

[fol. 9707] By Mr. Culton:

Q. Mr. Hinton, I think this morning we had discussed the differences between the capital expenditures in 1942 as shown in your Exhibit No. 223 and the capital expenditures for the same years effected in your Exhibit No. 42.

Is there any change in the expenditures which you contemplate making in 1943 and those you had covered for 1943 in your Exhibit 42?

A. Yes, there is a change unless the present situation ends and it is possible to obtain the desired materials.

Q. You reduce the expenditures for 1943, do you not, as shown on Exhibits 223 and 224? A. Yes.

Q. Substantially below those you had provided for 1943 in your Exhibit No. 42?

A. That is correct. We reduced that, the major reduc- [fol. 9708] tion being to limit the use of steel.

Q. Is there any additional capital expenditure provided for in Exhibit 224 for the year 1942 over and above those provided for in Exhibit 223? In other words, to

A. No, they are identical.

Q. I notice that for the 307,000, there is a total expenditure of $1,335,000 in Exhibit 223 and, in Exhibit 224, that expenditure is shown as $1,978,000.

A. I thought you were speaking of the year 1943.

Q. 1942.

A. Yes, there is a difference in the two expenditures.

Q. In order to meet the 338 million sales, what will you have to have by way of capital expenditures that will not be required to meet sales of 307 million?

A. There will have to be a 4,000 horsepower compressor station built near Santanta and a dehydration plant at that location and a telephone line from the present Liberal compressor station up to the proposed Santanta station.

Q. In other words, the Santanta station will have to be in contact with the line? A. Yes.

Q. So you can tell how to handle your pressures?

[fol. 9709] A. That is right.

Q. There would be no commercial station, telephone line there, that could be used?

A. That is my understanding. I did not investigate it but I had it investigated and that is the answer I got.

Q. Will you refer to Exhibit 45, the map of the future expenditures and tell us approximately where the Santanta station would be?

A. The proposed Santanta station will be in the northwest quarter of Section 28, Township 30, Range 34, Haskell County, Kansas, and it is shown on Exhibit 45 by a dotted triangle that it would eventually be a station location but, as it did not come within the 5½ year period covered in this study, it is not colored. It is just merely shown on there as a triangle at the present time.

Q. In other words, you had originally assumed it would be necessary to put that station in at a date after 1946? A. That is correct.

Q. But by the use of less steel and more horsepower, you have decided it would be necessary to put it in now if you meet these peaks? A. That is correct.

. . . . . .

[fol. 9710] Recross-Examination.

By Mr. Littman:

Q. Mr. Hinton, have any of the expenditures set forth in Exhibits 223 and 224 been as yet approved by the Board of Directors of Panhandle Eastern Pipe Line Company? A. Yes, sir.

Q. Which ones have been approved?

A. Should I identify those by item letter?

Q. Yes. A. Item (A)—

Q. (Interposing) Just a minute, you are referring to which exhibit? A. Exhibit No. 223.

Q. Exhibit No. 223, all right.

A. Item (A), item (B), item (C), one-half of item (D), item (E), item (F), item (G), now under construction, item (H) now under construction, one-half of item (I), item (J) has not been approved. Neither has item (K), nor (L), (M), and I am not sure about (N). Item (O) has been approved, and when I speak of approved, I mean that that is in the budget at this time and the money has been set aside for the use of this construction.

[fol. 9711] Q. Which items are under construction?

A. Item (G) and Item (H).

Q. The others are not under construction?

A. No. We have the pipe for the liners, for item (B). We have the pipe for item (A). We have the pipe for item (C) and as to the items which have not been approved in this recent study, there just has not been a chance to work up the budget for those for approval.

Q. In other words, roughly a little more than a half or approximately a half of the capital expenditures shown in Exhibit 223 have not been approved by the Board of Directors?

A. Yes, approximately half of the money involved.

Q. Have those items which you indicated were not as yet approved by the Board of Directors been submitted to the Board of Directors by way of an estimate or budget?

A. No, they have not and I think that the fuel requirement situation for war industries will govern whether they are submitted or not. If they are not submitted, why, it will mean that we will be supplying a much smaller market than is anticipated on the quantity shown at the top of Exhibit No. 223.

Q. In other words, items (J), (K), (L) and (M), at least, may never be submitted and may never be approved by the Board of Directors for aught that you know?

[fol. 9712] A. Not item (J). Items (K), (L) and (M) will depend upon the need for fuel for war industries.

Q. And those three items alone make up approximately half of these proposed capital expenditures for the year 1942 under the hypothesis stated in Exhibit 223? Is that right? A. Yes, sir.

Q. What is the fact as to item (J)? That item, office building Hugoton, has not yet been submitted to the Board of Directors, has it? A. I am not sure.

Q. Or did I misunderstand?

A. I just do not know whether that has been approved or not. I feel quite sure that it has not been disapproved by the Board because that portion of the budget, my understanding is, has not yet come up for approval.

Q. All right. How about the proposed expenditures estimated for the year 1943 in Exhibit 223 in the amount of $65,262, have any of those items been submitted or approved by the Board of Directors?

A. No and, in all probability, they will not until the early part of 1943.

Q. In other words, no commitment has been made with respect to those?

A. I do not believe that any of the budget items are approved a year in advance in any case by the company.

[fol. 9713] Q. Now, let's look at Item (G) which is a large item in Exhibit 223, which provides for the installation of additional horsepower at Sneed in the amount of 2600 horsepower at a total cost of $362,800. Have you as yet ordered the equipment?

A. It is not only ordered, the major part of it is on the location and the construction work has been going on for some time on the installation of the 2600 horsepower.

Q. You have the machines on hand?

A. Either on hand or shipped. It is quite definite that they are there. I have not been down there for a couple of weeks and I do not know whether they are in or not.

Q. What about Item (H), additional horsepower at Hansford in the amount of $121,200. What is the fact as to that?

A. That is about the same as the Sneed station or Item (G). It is under construction at the present time and if the engines are not there at this time, they are probably on the way.

Q. What assurance, if any, do you have that you are going to be able to get compressor station equipment designated as Item (K), in line 13, for the compressor station near Hugoton, Kansas, shown here as 4000 horsepower and in the amount of $552,560?

A. If it is decided that there is an urgent need for [fol. 9714] gas to be used as fuel in war industries, I think it is rather certain we can get the 4000 horsepower required there. Those will be 800 horsepower engines and they are more readily available than the larger engines at this time.

Q. Who has to decide that?

A. Well, I would say first it would be the W.P.B. and then, I cannot remember the name of the preference rating board.

Q. At any rate, some Governmental agency will have to give you priority before you can obtain that machine?

A. Absolutely.

Q. And you have not as yet received any such priority rating?

A. No, sir, this is too recent to have even made application for a preference rating.

Q. Now, let's look at Exhibit No. 224. Some of the items which you have already described are duplicated on this exhibit but perhaps you had better go on through each of the items on Exhibit No. 224 and tell us which ones have been approved by the Board of Directors of Panhandle Eastern and which have not.

Mr. Culton: Mr. Littman, I think you will find it will be a time saving proposition as there are only an addition of three or four items there so the same status would exist as to the remaining items.

[fol. 9715] That is true, isn't it, Mr. Hinton?

The Witness: Yes, that is true.

Mr. Culton: It is just the addition of three or four items on Exhibit No. 224 that are not on Exhibit 223.

Mr. Littman: Yes.

By Mr. Littman:

Q. I think you can start with line 14, Item (M). Suppose you take up the new items which appear in Exhibit No. 224.

A. Of which there are four.

Q. You know that better than I at this stage.

A. The first being Item (M), a compressor station to be constructed near Santanta and that is the same as the compressor station near Hugoton. It is a recent development, we might say, in our studies and there has been no approval and I feel quite sure there has been no application made for preference rating on the required horsepower.

Q. And it may never be installed, for all you know?

A. You mean during 1942 for the '42-'43 load?

Q. Yes.

A. I feel quite sure that it will eventually be installed but not for that year—what I mean is, it is going to be installed sometime but whether it is installed during the year 1942 to carry the '42-'43 load depends on what is decided as to the requirements for fuel for war industries. [fol. 9716] Q. You did not have any such item at all in your Exhibit No. 42 when you were last on the stand, did you?

A. No, sir, because we were basing our study on the economic method of development at that time.

Q. And within two years, let us say, it is altogether probably that you may revert to your so-called economic studies shown in Exhibit 42. Isn't that within the realm of possibility?

A. Yes, sir, we certainy hope so.

Q. Then it may never be installed?

A. If we furnish the 338 thousand M.c.f. daily sales, it will be installed because we cannot furnish it without it.

Q. With a capital "If," of course. If it is to be installed, it will be installed, of course, but you do not know whether it will ever be, do you?

A. Of course, the title of this exhibit was put on there to try to explain that the capital expenditures outlined here were based on the volumes that were given at the top of the exhibit.

Q. You started out with the premise that if and again I say a capital "If," if this amount is required in 1942, you will install, or in your opinion, the capital additions which you set forth here will be required.

A. Yes. If times were normal and things not so uncertain, there would be no change in the original exhibit. [fol. 9717] Q. All right. What about the next item, "Telephone line" shown in line 15, item (N)?

A. That will be essential if the compressor station is built at Santanta.

Q. You know copper is pretty hard to get these days, don't you?

A. We have no idea of building a copper line. We are going to substitute steel. I think copper would be an utter impossibility.

Q. Has the telephone line been submitted to the Board of Directors for approval?

A. No further than Mr. Creveling, as far as I am concerned.

Q. How about the next item, "Dehydration plant near Santanta"? A. That is in the same class.

Q. "Loop existing lines Hugoton Field," which is the next item. What is the fact as to that?

A. That would also be placed in the same class.

Q. That is, the item has not been yet submitted to the Board of Directors for approval?

A. As far as I know, it has not. I know that Mr. Creveling has approved that method of obtaining the volume acquired.

Q. If certain things are to happen, he approves it? [fol. 9718] A. Yes, and if the gas field does not suddenly become depleted.

Q. Now, how about the next item, "Purchase pickup trucks"? You were a little uncertain about that on Exhibit No. 223, were you not?

A. If we do not increase our load over the load which is anticipated, we will not have to purchase, but one of those.

Q. Now, adding up these items that have not yet been submitted to the Board of Directors for approval and which are in the category of items concerning which you are uncertain as to when they will be installed, I secure the

amount of $1,270,000 odd out of your estimate of $1,978,000 odd. Is that about right?

A. Yes, that sounds about right to me.

Q. In other words, out of $1,978,000 odd of estimated capital additions on Exhibit No. 224 for the year 1942, approximately only $700,000 have been approved by the Board of Directors. Isn't that right?

A. That is correct. These things take time to go through the channels and I would say that these, in all probability, will not be submitted to the Board. I do not know how that works exactly but until Mr. Creveling would find out what the demand would be for fuel, these are largely dependent upon that. In other words, we can give them so much gas without any further capital expen-
[fol. 9719] ditures or we can try to furnish needed fuel by making these additions.

Q. Now, with respect to the year 1943 the capital expenditures shown in Exhibit No. 224, I take it that no submission to the Board of Directors has as yet been made?

A. No, the only thing that has been done for the 1943 program is to secure some casing for the two wells.

Q. I take it from your testimony, Mr. Hinton, and I want you to correct me if I am wrong, you were merely given a mechanical job of estimating the capital additions that, in your opinion, would be required to make the deliveries shown in the captions of Exhibits 223 and 224 and to do so on the basis of the least amount of steel?

A. Steel and other materials in which a shortage appears at this time.

Q. In other words, you are not taking the responsibility for the philosophy of the exhibit but you have done a mechanical job of estimating the amount of capital requirement under the hypothesis given?

A. I do not know whether I would term that "philosophy" or not. I would say the volumes were given me and the problem was just as you stated it and, to supply the volumes that were given me, these were the expenditures that would be required.

Q. You do not know whether the company is going to actually make these amounts of sales, do you?

[fol. 9720] A. No, sir.

Q. Mr. Hinton, will you please give us, in a single statement, the formula which you used to convert the peak day sales amounts of 307,000 M.c.f. and 338,000 M.c.f. into the four annual amounts which you gave as gross amounts available at Liberal station?

A. You refer to the change of pressure basis?

Q. Yes, and to the line loss, company use.

. . . . . .

The Witness: I believe that the most understandable way to do that would be to go through the same procedure which I did to arrive at those amounts.

[fol. 9721] I first took the 307,000 M.c.f. which is the estimated sales. The next thing is the addition of 16,880 M.c.f. which takes care of the fuel that is used east of Liberal. It is found by experience that the gasoline plant shrinkage will amount to 2,640 M.c.f., approximately, and that there will be an unaccounted amount of gas due to line loss of 1,540 M.c.f. which gives a total requirement of 328,060 M.c.f. and that is the requirement east of the Liberal compressor station.

To that amount we add, for fuel for the Sneed compressor station, 2,100 M.c.f.; fuel for the Hansford station is 1,375 M.c.f. and fuel for the Hugoton station is 1,000 M.c.f. and the fuel for the Liberal station is 2,800 M.c.f. which gives a total of 335,335 M.c.f. daily requirement. That is multiplied times the capacity factor used, whether it be 70 or 90, and the product is multiplied times 365 days to arrive at the annual requirement.

Q. You mean if you are using a 70 per cent capacity factor, you take 70 per cent of 365 days and then multiply it by the 335,000?

A. (Interposing) No, I take the 70 per cent of 335,335 and multiply that times 365 days. If it is 90 per cent, the answer is all the same but I never like to take 70 or 90 per cent of a year because it is hard to trace the figures back that way.

Q. But the results are the same?

[fol. 9722] A. That is right.

Q. Now, what pressure base do you have?

A. Those amounts which have been given are all on a 30 inches saturated pressure base which is equivalent to 14.73 pounds, approximately, that is, very close and to convert that to the 2 pound pressure base which is 16.4 pounds, it is necessary to divide 14.73 by 16.4 and that factor is applied to the amounts which have been given to arrive at the pressure base which is used in the production end.

Q. Will you please take the 338,060 M.c.f. peak day sales and give us the method applicable to that amount?

A. We start with the 338,000 M.c.f. To that we add the fuel requirement east of the Liberal compressor station, which is 22,130 M.c.f. The gasoline plant shrinkage for that amount will run 3,375 M.c.f. and the unaccounted for gas, due to line loss, will be 2,327 M.c.f. That gives us a sub-total of 365,832 M.c.f. which is required east of Liberal to supply a sale of 338,000. Then to the 365,832 M.c.f., we add the Liberal fuel in the amount of 3,080 M.c.f.; the Sneed fuel in the amount of 2,400 M.c.f.; the Hansford fuel in the amount of 1,375 M.c.f.; the Hugoton fuel in the amount of 1,000 M. c. f. and the Santanta fuel in the amount of 1,170 M.c.f. which gives us a total of 374,557 M.c.f., the amount which we are required to produce to supply a 338,000 M.c.f. sale.

[fol. 9723] Then, to find out annual requirement on a 70 per cent capacity factor, we multiply the 374,557 by 70 per cent and, in turn, by 365 days to get the annual estimate on a 14.73 pound pressure base. In other words, to convert to the production pressure base, we divide 14.73 by .16.4 and we obtain a factor of .89817 which is applied to the amounts given in any case and that gives us the requirement from the production end.

Q. That is 85,954,285 M.c.f. for the year?

A. On a 70 per cent capacity factor?

Q. That is the one you just gave us.

A. How many did you say, Mr. Littman?

Q. 85,954,285 M.c.f. per year.

A. That is correct.

Q. Now, in order to secure the amounts under the 90 per cent load factor, you used the same formula except that you applied 90 per cent instead of 70 per cent?

A. To the total daily requirement, that is correct. I think that we have the wrong figure there for the annual requirement, though. It is my understanding that we are talking about a 338,000 sale. That is the one we have just gone through.

Q. That is right.

A. And a 338,000 M. c. f. sale daily on a 70 per cent load factor gives us an amount of 95,699,033 M.c.f. on a 14.73 [fol. 9724] pound pressure base or 85,954,285 M.c.f. on a 2 pound pressure base or production base—

Mr. Culton: (Interposing) When you say 2 pound, you mean 16.4?

The Witness: Yes, that is atmosphere plus 2 pounds.

By Mr. Littman:

Q. And the figure I read of 85,954,285 M.c.f. is on the—

A. (Interposing) On the 2 pound base rather than the 8 ounce.

Q. And the latter base is the one which you use and did use in the Exhibit No. 42?

A. That is correct, yes, sir.

Q. Mr. Hinton, when you referred to your annual estimate as "Load conditions comparable" to Mr. Morton's estimates in Exhibit No. 40, you merely meant that the annual volumes were the same?

A. Yes. I did not state that properly and I appreciate your calling attention to it because it had nothing to do with the load factor at all. It was the annual requirement.

Q. Is it not true that in the load conditions which you have assumed, the annual sales are larger in proportion to the system capacity than in Mr. Morton's Exhibit No. 40?

A. Yes, they are somewhat larger and I believe that you are referring to the 70 per cent capacity factor?

[fol. 9725] Q. That is right

A. Of course, we know the 90 per cent is much larger.

Q. What provision has been made to hold the leases which were supposed to be perpetuated by the 19 wells

which you had proposed to drill per your Item (M), page 27, of Exhibit 42?

A. As far as I actually know, there has been no move made but the leases which were at that time owned by Hagy, Harrington & Marsh have been sold to another company and it is possible that we will be able to make some type of deal with the other company. If not, to insure ourselves against an altogether loss there, we have gone out and taken additional acreage elsewhere to make up for these leases, if they are entirely lost to us.

Q. Well, when did you discover this? A. Discover what?

Q. That you could do without drilling these 19 wells?

A. If we did not put in the horsepower up in the Hugoton Field, we would have to have the 19 wells and the pipeline as we originally had it laid out.

. . . . . .

[fol. 9726] By Mr. Chamberlain:

Q. Why would you have to have the 19 wells, Mr. Hinton?

A. To augment the supply which we now are able to put into the Liberal compressor station.

Mr. Culton: That is, you are able to if you get this additional expenditure, you mean?

The Witness: No, I mean under the original system, we plan to take an amount of gas from Oklahoma which is approximately equivalent to the increase that can be obtained by the use of horsepower in the Hugoton Field.

By Mr. Chamberlain:

Q. The 19 wells were to be in Texas County, Oklahoma?

A. Yes.

Q. Now, I think I understand your plan here to be a determination of a method of getting your supply on the basis of steel conservation, is that correct?

A. That is correct.

Q. Why do you have those three Texas wells included in 1942 if you are trying to conserve steel?

A. Just for insurance. To give you an example, during our peak load which occurred last winter when we were taking some 151 or 152 million out of Texas, we had on the line at that time 161 wells. The reason that we

did not have 110 on was because the other nine would not [fol. 9727] feed and we are experiencing, in some cases, very sharp pressure declines on our Texas wells and I did not feel that it would be safe not to drill any wells at all down there and that is the reason that we held it to three instead of five. We, I believe, are on the conservative side and yet on the safe side.

. . . . . .

Trial Examiner: I do not recall, Mr. Culton, that any statement has been made on the record concerning any war [fol. 9728] time restrictive measures, that affect your drilling program?

. . . . . .

Trial Examiner: There have been developments?

Mr. Culton: Yes, sir, not so much the drilling program as the furnishing of the material for the wells, obtaining the material.

That is correct, isn't it?

The Witness: There has been considerable along the lines of drilling also.

Trial Examiner: I have seen in the press statements concerning restrictions as to drilling for oil and I assumed that similar restrictions would obtain with reference to the development of gas. Is that true?

The Witness: That is correct.

Mr. Culton: Are you familiar with what those restrictions are? If so, will you give them?

The Witness: Pretty well. They come under P 68 and provide that no gas well can be drilled on acreage which is less than 640 acres; that it must be drilled approximately in the center of the lease and cannot be drilled on a lease which is more than twice as long as it is wide and they have had—I believe Mr. Littman was down to the hearing they had there on the local supply, no, it was Mr. Jones who was down there—they have had a meeting down [fol. 9729] there trying to cut down the size of the lease required because 640 acres in the Local Area there, that

would completely cure most of those patches of productive areas and they are trying to get a 40 acre spacing area worked out there now.

Mr. Culton: Would it now effect you substantially in the Hugoton area, is what I think the Examiner had in mind.

The Witness: Yes, it would, because we cannot go ahead and develop as economically as we would like to, that is, to cut down our delay rentals and decrease the overall cost of the gas to the extent we might like to because we cannot make an application for the use of materials and say that it was absolutely required that we do this, to furnish our market, say, do the drilling to furnish the market.

Trial Examiner: And the matter is controlled through the priorities regulations?

The Witness: That is correct. We file a notice of intention to drill in both Oklahoma and Texas. That is, they issue a permit and it is just a matter of getting the information into their offices. In Kansas, it is not even necessary to make out an application to drill.

Trial Examiner: Do the restrictions go so far as to deny the use of material you have on hand and in stock?

The Witness: Yes, sir.

[fol. 9730] Mr. Littman: These restrictions to which you have just referred are State, not Federal?

The Witness: That is correct, as far as the permits for drilling, but we are not permitted to use material which we have in the warehouse to drill wells that we could not so far were actually needed, without violation of the priority order as I understand it.

Trial Examiner: Now, you are referring not to State regulation but Federal regulation through the War Production Board?

The Witness: That is correct.

Trial Examiner: Through the Priorities Division?

[fol. 9736] Redirect Examination.

By Mr. Culton:

Q. Some reference was made, Mr. Hinton, to the leases which you have heretofore testified would be drilled if economically handled in order to protect some leases which have been top leased. A. Yes, sir.

Q. And you stated that there was a possibility that something might be worked out with the new owner of those leases. If it isn't, you think that, if you are not able to get the additional pipe required, the additional steel, there is a possibility that some of those leases might be lost: is that correct?

A. I think it quite probable that they will all be lost.

Q. But you will either lose the leases or you will have to make a trade with the present owners of some kind?

A. That is correct.

Trial Examiner: Your contracts are not such that the regulatory orders will relieve you from your obligations?

Mr. Culton: That is true, Mr. Examiner. As a lawyer I might state that those [least] contracts provide that they absolutely terminate at a certain date unless production is then being had.

Top leases are made after that which would immediately [fol. 9737] become effective if that first lease, the lease held by us, terminates, and it is only production that can keep the lease alive after the—what we call—the primary term, and, of course, a new deal can't be made by the land owner now since he has executed a new lease to the top lessee.

Is that explanation sufficiently clear?

Trial Examiner: Yes.

By Mr. Culton:

Q. Mr. Hinton, certain exhibits—225, 226, 227, and 228—have been marked for identification. I will ask you to explain Exhibit 225, which is captioned "Estimate of operation and maintenance costs, South and west of Liberal Compressor Station, 367,000 M. c. f. continuous daily sales capacity, Operation at 70 per cent capacity factor,"

the first page being for the Panhandle field, and the second page for the Hagoton field.

Will you first explain the two columns under the heading "1942 1943" of Exhibit 225?

. . . . . .

A. The amounts shown under the years 1942 and 1943 are the amounts which Estimate would be the cost to the company to operate and maintain the property south and west of Liberal.

[fol. 9738] It is a comparison of what the operating and maintenance cost would be if we were to develop as we desire, or if we are caused to develop as we have to with the shortage of material which is now being experienced.

Q. And will reach 307,000 M.c.f. at 70 per cent capacity factor? A. That is correct.

Q. Where are the principal differences between the economic expenditures resulting from economic construction and those less economic?

A. The principal difference in cost is in the royalties, in the delay rentals, and in the gas purchase costs, and in the increase of routine operating and maintenance costs which are caused by the installation of new compressor stations.

Q. I note on Exhibit 225 Page 23 the royalties are changed from $232,000 to $150,000.

A. You mean Line 23?

Q. Line 23, yes. A reduction in royalties? A. Yes.

Q. 1942 and 1943? A. Yes.

Q. And also a reduction in 1943-44. Why is that reduction in royalties?

A. That is caused by the drilling of additional wells [fol. 9739] in the Panhandle field.

Q. What do you mean by that?

A. As shown in the capital expenditures. In other words, if we would go ahead and develop, as I believe that the company should, to meet these market requirements, we would have, at the time which we would experience this load, have developed so that the amount of gas that we would be producing, which would be in excess of what we will be able to produce under the less economic expen-

ditures; would a [a] comparison of $232,099 against $160,523.

Q. In other words, by producing less of the gas your royalties are less: is that the point?

A. That is correct.

Q. Now, there is an increase in Line 25 in delay rentals, from $4,932, as used under "Economic Expenditures," to $11,031 on "Less Economic Expenditures." What is the cause of that increase in delay rentals?

A. That is because we would be forced to continue to hold those leases by the payment of delay rentals rather than by curing the lease by drilling.

Q. That represents the leases which you have heretofore assumed you would drill in Texas?

A. That is correct.

Q. And in order to hold those leases alive you were required to pay more delay rentals than you had antici- [fol. 9740] pated? A. Yes, sir.

Q. Now, line 27 show an increase of $113,000 in gas purchase costs.

Explain the reason for that.

A. That is because the percent that the purchase wells would participate in the Panhandle field, after we had made our desired development, would be less than it will be under the alternate or substitute method of development.

Q. There is a decrease shown in columns B and C, page 1, Exhibit 225, of some $62,000 in royalties, but there is an increase in the amount of $110,000 or $113,000 in the expense for gas purchase costs, is that correct?

A. That is correct.

Q. That is due to shifting the balance between your purchased gas and your produced gas in Texas?

A. That is right.

Mr. Littman: Why is that necessary? Why are you going to shift—why are you going to make that shift?

The Witness: By the application of the proration formula under which the property is operated, each developed well has a certain participation in the total amount of gas that is taken from that field, and if we were permitted to

go ahead and drill the wells that we would choose to drill to meet this volume—market volume—why, the division of that gas in Texas would be in the following per cents:

[fol. 9741] We would be producing 68.77 per cent of the gas and would be buying 31.23 per cent of the gas, but inasmuch as we will not be able, in all probability, to get the material to develop, as we would desire, the division of the produced and purchased gas will be in the following per cents:

For the first year, which I assume will cover a portion of 1942 and 1943, we will be producing 56.47 per cent of our gas and will be buying 43.53 per cent, but, by the addition of two more wells, before we go into the next year's market, we will increase the amount that we will produce from 56.47 per cent to 57.27 per cent, and will decrease the amount that we will buy from 43.53 per cent to 42.73 per cent.

[fol. 9742] Q. There is also a difference in the production tax shown on Line 36 of Page 1, Exhibit 225, in that under your economic expenditure column B, the company's gross production tax in Texas would be $65,698, whereas with less economic expenditures the gross production tax would be only $40,590.

A. That is right. We would have a reduction of approximately $25,000 in gross production tax.

Q. That is, had you anticipated that you would be able to drill the wells at the time that volume of gas would be required is that correct? A. That is correct.

Q. What was the difference in the first year, in the Panhandle field, between what the operating and maintenance expenses would be on an economic basis and on a less economic basis? A. It would be $27,131.

Q. It would cost more in the Panhandle field than you have heretofore assumed under the same load?

A. Yes, sir.

Q. Annual load? A. Yes, sir.

Q. Now, will you pass to Page 2. Does that reflect the same situation as to the Hugoton field as it reflected [fol. 9743] on Page 1 as to the Panhandle field?

That is, is it prepared on the same general line?

A. The base used for the preparation is the same.

Q. What are the differences in the less economic expenditures and the economic expenditures, as reflected on Page 2?

What are the principal items of difference?

A. The principal items of difference are the operation of a compressor station near Hugoton, and the cost of purchased gas.

Q. There will be an item of $23,000 for the maintenance of the two compressor stations, operation and maintenance of the two compressor stations; is that correct?

A. That is correct.

Q. And an increase in the cost of purchased gas from $508,000 to $931,000; is that correct?

A. No, sir. There will be an increase in the cost of purchased gas from $293,498 to $701,922.

Q. My eyes went crooked. You are right.

A. There will be a reduction in royalty of approximately a thousand dollars.

Q. And what will be the difference in the cost of the Hugoton field between operating with economic capital expenditures and the less economic capital expenditures?

A. It would be $302,846. Four hundred is right— [fol. 9744] $403,846.

Q. Then what would be the net increase in operation and maintenance cost be in the two fields for the first year in operating with what you consider economic expenditures and those less economic? A. $429,977.

Q. In other words, your operation and maintenance expenses, if you attain a production of 307 million cubic feet daily sales capacity, operating at 70 per cent capacity factor, with the expenditures which you have heretofore described, would cost the company more than $429,977, than would the cost have been had you been permitted to make the expenditures referred to in your Exhibit 42?

A. Yes, that is correct.

Q. Now, Exhibit 226; is that prepared along the same lines as Exhibit 225, only for an operation at 90 per cent capacity factor? A. That is correct.

Mr. Littman: —I would like to have the witness clarify one or two matters for me.

[fol. 9745] Mr. Hinton, where do you secure the figures in Exhibit No. 225, which appear in columns headed, "With Economic Expenditures"?

Are those figures taken from your Exhibit No. 43, schedules 3 and 4?

The Witness: Some of them are and some of them aren't. In other words, I—

Mr. Littman (interposing): That is what seems to have me confused.

The Witness [(continuing)]: —I had to make a new estimate of what the expenses would be under each condition for this load.

Mr. Littman: Well, you had them already estimated—

The Witness: (interposing): No.

Mr. Littman (continuing): —in Exhibit 43, did you not?

The Witness: No, sir.

Mr. Littman: Then it—

The Witness (interposing): I had the same comparative type figure, but under a different load condition, and with the time element entering into the problem of the cost.

Mr. Littman: Different volumes of gas too: is that right?

The Witness: Yes; and I used the actual costs which we have on our books for the cost of these functions, as a [fol. 9746] base, but I used my judgment in what it would cost for each particular operation in each case under these conditions.

Mr. Littman: So that you can't take any of your columns headed "With economic expenditures" and compare them with any of the schedules that appear in Exhibit No. 43 directly can you?

The Witness: Not directly, no sir, but they are the base which—that is, they are the base figures on which I based my judgment of revising the estimated cost of maintenance and operation in Exhibit 225.

Mr. Littman: Well, now, looking at schedule 4, page 1 of Exhibit 43, and comparing column—

The Witness (interposing): Which is that, Mr. Littman, please?

. . . . . .

Mr. Littman: Estimate of operation and maintenance costs of west of Liberal, Panhandle field, estimated future load.

Now, I note in your column F for the year 1944, of that exhibit, your operation, your transmission operation expense is $27,078, which is precisely the same as the similar item which appears in Exhibit 225 in Column B.

The Witness: Yes. And it should be approximately the same, because we would have the same number of miles of pipe line to operate.

[fol. 9747] Mr. Littman: Now, the next item "Maintenance" is $13,530 in each of the exhibits?

The Witness: Yes.

Mr. Littman: Now, looking at the measurement amounts for the year 1944 in schedule 4, page 1, of Exhibit 43, the expense is $21,528, which is the same as the amount which appears in Column B of Exhibit 225; is that right?

The Witness: That is correct, and it should be so.

Mr. Littman: Now, the next one appears to show a considerable variance?

The Witness: Yes, sir.

Mr. Littman: Column F for the year 1944 Exhibit 43 schedule 4 shows—page 1—shows $243,200 for compressor station operation and maintenance, as compared with $95,859 in Column B of Exhibit 225. Now, what accounts for the difference there?

The Witness: I would say that the difference is accounted for in the fact that the original figure included a cost of 15 cents per M. c. f. for fuel which was used in the operation of the compressor station, and if you will remember we had considerable discussion about how that should be handled.

It is a washout, as far as regular accounting is concerned, but to bring out our picture more accurately I left the cost of fuel out altogether this time.

[fol. 9748] Mr. Littman: This time you did as we suggested you do?

The Witness: Yes.

Mr. Littman: In other words, take the cost of fuel out so as to avoid a possibility of a duplication?

The Witness: That is right, and I didn't want to get into another accounting argument, because I knew I would lose, so I just left it out.

Mr. Littman: Well, that saved us a lot of money here, didn't it?

That accounts for the paring down from $243,000 to $95,000 for that?

The Witness: Yes, sir.

Mr. Littman: Let's look at the next item which appears to be identical, to wit: cost of or expense for the production operation and maintenance.

The Witness: Right.

Mr. Littman: Now, you show $36,250 in Column B of Exhibit 225, which is identical with the amount shown in your previous schedule, Exhibit 43?

The Witness: Yes, sir. That would be the same number of wells under approximately the same operating condition.

Mr. Littman: So far so good. Now, the next one is entitled: "Land and Lease, Operation, Royalties, Rents, Delay Rentals, Renewal Bonus."

Now, here is a considerable variation?

[fol. 9749] The Witness: Yes, sir. The original did not have the gas purchase costs, but inasmuch as we finally had it all together before we got through making exhibits, I carried the gas purchase costs in this total here.

Mr. Littman: In other words you did not include in the former exhibit—to wit: Exhibit No. 43—the cost of gas purchased, did you?

The Witness: No, sir.

Mr. Littman: You did include it after we made some computations?

The Witness: That is right.

Mr. Littman: And added them together?

The Witness: And I thought it would be handier for everybody concerned if it was put in here at this place.

Mr. Littman: I see. Well, but notwithstanding that, that is, excluding the $650,209 of gas purchased, I believe there would still be a variance.

Let's look at the items. Your operation is the same under both the old and the new?

The Witness: Yes, sir.

Mr. Littman: Now, under the old schedule you had $182,562 for royalties, whereas you now have $232,099 for royalties?

The Witness: Yes, sir. The volume controls royalties, and the volume which we are talking about is the same as [fol. 9750] that which we would experience in the year 1946, approximately.

Mr. Culton: Rather than the year 1944?

The Witness: Yes.

Mr. Culton: Or '43, whichever one you are using?

The Witness: That is right.

Mr. Littman: Then the difference, at that juncture, is simply because of the increased volumes of gas?

The Witness: Right, and if you will notice, all the way through here our operating expenses have been estimated to be less, in almost every case, than they would have been if we would have encountered this load in 1946.

Mr. Littman: So your $232,099 in Column B of Exhibit 225 for "Royalties" is the same as the amount shown in your former exhibit for the year 1946?

The Witness: That is a coincidence if it checks.

Mr. Littman: It comes out to the dollar.

. . . . . .

The Witness: It would have to be a coincidence if it is correct.

[fol. 9751] It is not correct.

Mr. Littman: What is not correct?

The Witness: The amount shown. The $232,099 is not correct.

Mr. Littman: What is the correct amount?

The Witness: It should be $193,185.

Mr. Gulton: It should be what?

The Witness: $193,185 for the first year.

. . . . . .

Mr. Littman: Instead of $232,099?

The Witness: Yes, sir.

Mr. Littman: In other words you have just a slight increase over the 1944 figure in your previous exhibit: is that right?

The Witness: Yes. That is the way it would come about.

Mr. Littman: Now, the next figure of rents, $325, is the same for 1944 under your old schedule?

The Witness: That is the same every year. That is office rent.

. . . . . .

Mr. Littman: Now, delay rentals are the same, are they not?

[fol. 9752] The Witness: No, sir.

Mr. Littman: Under your old schedule and under your present schedule?

The Witness: To fit the time, yes.

Mr. Littman: Beg pardon?

The Witness: To fit the amount of development; you see, the $4,932 would be the last delay rental we would pay before we completed our drilling.

. . . . . .

Mr. Littman: Very well. So the next item of $800 is the same in Column B of 225 as—

The Witness (interposing): That is right.

Mr. Littman (continuing) —as shown in your former exhibit—

. . . . . .

Mr. Littman (continuing) —for the year 1944, is that right?

The Witness: That is right.

Mr. Littman: Very well. Now, so far it looks like you [fol. 9753] have only got about $10,000 more of expenditures in Column B than you had for comparable items in your previous exhibit.

The Witness: Yes, sir.

Mr. Littman: Let's go to the next item of dehydration.

The Witness: No. Wait a minute. You didn't get to the gas purchased there.

Mr. Littman: Well, I mean excluding the gas purchased.

The Witness: Yes.

Mr. Littman: Because you didn't set forth that item in your other exhibit: to wit, Exhibit 43.

The Witness: That is right.

Mr. Littman: Let's go to the next item, the item of "Dehydration Plant; Sneed, Operation and Maintenance."

Now, the total of $6,623 is approximately the same—well, it is the same as the amount which you show in your Exhibit 43, schedule 4, page 2, for the year 1943?

The Witness: Yes. I believe that that is just about correct too.

Mr. Littman: Why do you jump back to 1943 instead of going to 1944?

The Witness: Because the age of the station, the age of the plant, would be taken into consideration.

Mr. Littman: Not many dollars involved there—

The Witness: No.

[fol. 9754] Mr. Littman (continuing) —one way or the other?

The Witness: No, sir.

Mr. Littman: Let's go to taxes. Taxes are $95,976 under Column B, Exhibit 225, as compared with $81,955 for the year 1944 in schedule 4, Page 2, of Exhibit 43. What accounts for that difference?

The Witness: It means that the difference of approximately $30,000 there—

* * * * * * * * * *

The Witness: That is accounted for chiefly in gross production tax, and the gross production tax in the state of Texas runs into considerable money on any volume of gas, and the fact that we would be producing less gas cuts that down from $65,698 to $40,590, and the ad valorem taxes are also lower under the less economic expenditures, because we don't have as much property in the state.

By Mr. Culton:

Q. Just for clarification, that difference in the gross production tax would be paid by the people from whom you purchased gas, since they would pay the gross production [fol. 9755] tax on it? A. No, sir. That is paid by us.

Q. Well, you charge it to them though? A. No, sir.

Q. Didn't you do that?

A. Oh, we can't charge the gross production tax, on the gas we produce, to somebody else.

Q. No, but then there would be more of it, more of the gross production tax—

A. (Interposing) The state of Texas would get the same amount of money. I see what you mean.

Q. More of it would be paid by your vendors than by you? A. That is right.

Mr. Culton: All right.

Mr. Littman: Let's look at the ad valorem tax. The amount is the same in the old Exhibit for 1944 as under your new exhibit 225, Column B—$30,278?

The Witness: Yes, against $25,610.

Mr. Littman: Where is the $25,610? I don't find that.

The Witness: Under Column C, line 35.

Mr. Littman: I was looking at Column B all the while. Your ad valorem tax is the same under Column B as it was under the old setup?

The Witness: That would be the taxable property that [fol. 9756] we had constructed in the state at that time.

Mr. Littman: The gross production tax goes up about $14,000, doesn't it?

The Witness: About $25,000.

Mr. Culton: I think you are talking about two different things there.

The Witness: Are you on Exhibit 225?

Mr. Littman: Yes, sir. You have $65,608?

The Witness: Yes, sir, under Column B. That is the way we would like to have it.

* * * * * * * *

Mr. Littman: Now, for the year 1944, which seems to be the comparable year over in Schedule 4, Page 2, of Exhibit 43, you have $51,677 for gross production taxes?

* * * * * * * *

The Witness: Gross production tax is governed entirely by volume of gas which is produced by the company.

Mr. Littman: Produced by the company?

The Witness: Yes.

Mr. Littman: But you are going to produce less, aren't [fol. 9757] you, under this new setup?

The Witness: Yes, than we would if we would have made the capital expenditures that we would have desired to make to furnish this volume of gas.

What you are losing track of is the time element and the volume of gas that is to be handled.

Mr. Littman: All I wanted you to explain is why, in column B, you have $65,698 for gross production tax in exhibit 225, as against $51,677 in column F of schedule 4, page 2 of exhibit 43.

. . . . . .

The Witness: The gross production tax in the state of Texas is governed by the value of the gas, and the way that is calculated is to take the total amount produced and value the working interest which we have in that gas.

That is, we have seven-eighths, so I take 87½ per cent of the 41,262,000 which we expect to produce, and I value that gas at 3.126 cents and arrive at a total value and take 5.2 per cent of that value which is the state tax, and that is the way I obtain the amount shown under "Gross Production Tax," line 36, exhibit 225.

. . . . . .

[fol. 9759] By Mr. Culton:

Q. Mr. Hinton, have you checked the computations as to lines 23 and 36, page 1 of exhibit 225, during the re-[fol. 9760] cess? A. Yes, sir.

Q. Are your original figures right or wrong on those?

A. The original figures are correct.

Q. In other words line 23, the royalties under column B, are properly shown at $232,099, and the gross production tax at $65,698? A. Yes, sir.

Q. What caused the confusion in your examination a while ago?

A. Well, I had made several trial calculations and I had not marked the sheet of my working paper which I used, and I referred to the wrong sheet of my working papers.

I have now marked the sheet which I used so there can be no further mistake.

Q. And that represents the royalties and the gross production tax on the volumes of gas which you would have liked to have been able to produce from Texas, with a daily sales capacity of 307 million, and operation of 70 per cent?

A. Yes, sir. That represents the amount which I believe that we would use under such load conditions, if it were possible to obtain needed material.

Q. Then from the two fields you would have an increase in operation and maintenance cost of $429,977 by using the less economic method of capital expenditures, is [fol. 9761] that right?

A. Yes. That would be for the first year that we would experience this condition, which I assume would occur during the latter portion of 1942 and the first portion of 1943.

Q. Would there be any substantial difference the second year?

A. No substantial difference. It would be about $700 further increase.

* * * * * * * * *

Mr. Littman: Now, Mr. Hinton, do I understand you to say that the volume of gas contemplated to be produced by the expenditures shown in column B of exhibit 225 is 60 million M. c. f.?

[fol. 9762] The Witness: Annually.

Mr. Littman: From the Panhandle field?

The Witness: Yes, sir.

Mr. Littman: And that is the precise amount of gas which you had originally expected to be produced in 1946 as per your exhibit 43?

The Witness: Right.

Mr. Littman: Now turn, if you will, to page 2 of schedule 4 of exhibit No. 43, and I call your attention to column H for the year 1946.

You show your grand total of operation and maintenance expenses to be $725,317, is that right?

The Witness: Exclusive of the purchased gas.

Mr. Littman: And I want you to add to that the cost of gas purchased which is $650,209. I am correct, am I not, when I state that that is the cost of gas purchased?

The Witness: That is correct.

Mr. Littman: What total do you get?

The Witness: $1,376,526, and from that amount the power or the fuel at 15 cents per M. c.f. should be deducted from the Sneed and Hansford compressor stations to make it comparable to the amount shown on exhibit 225.

Mr. Littman: Suppose you deduct that, and let's see whether it is comparable.

The Witness: I obtain a figure of $1,207,466 after de- [fol. 9763] ducting the amount of $108,460 for fuel at Sneed, and the amount of $60,600 for the fuel at Hansford compressor station, making a total of $169,060, which is to be deducted from the $1,376,526, leaving a comparative total of $1,207,466, against $1,189,009, which is shown under Column B of Exhibit 225, the difference being principally in the time element of higher operating pressures and lower maintenance and operating cost of the wells.

Mr. Littman: The difference to which you refer now is the difference between the $1,207,466 and the $1,189,009?

The Witness: That is correct.

Mr. Littman: A difference of approximately $18,000?

The Witness: Yes, sir.

By Mr. Culton:

Q. In other words, if these economic expenditures were made earlier, the operating expenses would be less than as reflected in your former exhibit?

A. That is correct.

Q. And you have shown that lesser operating expenses in column B? A. Yes, sir.

Q. Of Exhibit 225?

A. That is right. And if they were to be made at a later date than shown on this exhibit they would be increased instead of decreased.

* * * * * * * * *

[fol. 9764] By Mr. Culton:

Q. Passing to Exhibit 226, I notice you show, for the Panhandle there, operating at 90 per cent capacity factor, 307,000 M. c. f. of continuous daily sales capacity, an expenditure in the "economic" column of $1,200,852, and in the "less economic" column $1,216,140, and that the expenditures in the "less economic" column, column C, are the same as those shown by operating at 70 per cent capacity?

A. Yes.

Q. Why is that?

A. Because we would be taking the same amount of gas from the Panhandle field under either condition.

Q. In other words, whether operating at 70 per cent factor or 90 per cent factor, you would take the same volumes of gas from the Panhandle field, and under the same conditions?

A. From the standpoint of protection of reserves it would be the proper method to take it from there as we have done.

Q. But what is the difference in the cost of taking from the Hugoton field, when taken at 90 per cent factor, over and above that when taken at a 70 per cent factor?

A. I would like to find my copy of that 226.

Q. 226 is not in that for some reason (handing).

[fol. 9765] A. That is for 309,000 M. c. f. at 90 per cent capacity factor?

Q. Yes.

A. We would have an increase in the cost, cash out of pocket, to Panhandle Eastern, of approximately $620,000.

Q. Making a total difference in the cost to Panhandle Eastern, in the two fields, of how much?

A. $637,023.

Q. And Exhibit 227, is that prepared along the same lines which show a continuous sales capacity of 338,000 M. c. f. with an operation at 70 per cent capacity factor?

A. That is correct.

Q. Is there any difference in the Panhandle field between the cost under those circumstances and the cost when operating at 307,000 M. c. f. continuous capacity and 90 per cent factor? A. No, sir.

Q. You take the same volumes of gas?

A. Same volumes of gas being produced under the same conditions.

Q. And what is the situation as to the Hugoton field?

A. The increase that will be encountered in the Hugoton field is slightly over $500,000.

Q. Making a total difference of how much in the two fields?

[fol. 9766] A. $523,955.

Q. Now, passing to Exhibit 228, purporting to show the estimated cost of operation and maintenance for 338,000 M. c. f. of continuous daily capacity, operation at 90 per cent capacity factor.

Is there any difference as to the cost in the Panhandle field on the previous bases? A. No, sir.

Q. You are still producing the same volume of gas from the Panhandle field, irrespective of which of these sales capacities is used: is that correct?

A. That is correct.

Q. And what is the increase in cost of producing 338,000 M. c. f. at 90 per cent capacity factor over what it would have been in the Hugoton field, had you been able to handle the economic expenditures?

A. About $744,000.

Q. And the total in the two fields would be how much more? A. $760,963.

Q. Now, are columns D and E in each of these exhibits 225, 226, 227, and 228, prepared along the same lines as columns B and C, except for a subsequent year?

A. Yes, they are.

Q. Are the differences in cost shown on the end of each [fol. 9767] exhibit?

A. Yes, and I believe itemized in sufficient detail to enable anyone to see where the increase or decrease in costs occur.

Q. In your opinion do the figures reflected on Exhibits 223 to 228 inclusive correctly reflect what they purport to reflect?

A. As nearly as I feel that it would be possible to estimate them.

Q. And were they prepared by you?

A. They were.

Mr. Culfon: That is all.

. . . . . .

Recross Examination:

By Mr. Littman:

Q. These figures that you show at the foot of Page 2 of each of exhibits 225, 226, 227, and 228, as representing the difference between the cost of operating under the so-called "less economic" method, as compared with the cost of operating under the so-called "economic" method, do not reflect the saving that will accrue by reason of the installation of considerably fewer capital additions, both with respect to rate of return and with respect to allowances for depreciation?

A. No, sir. They do not purport to show any such [fol. 9768] figure.

They are purely maintenance and operating figures, including the cost of purchased gas.

There is no allowance made in there for excess profits, income tax, depletion of reserves, amortization, or anything other than pure maintenance and operation costs.

Q. No consideration given to rate of return—

A. (Interposing) Executive salaries.

Q. (Continuing) —executive salaries, or the fact that your fixed overhead costs, such as administrative and general expenses will remain the same notwithstanding the increased volume of gas—nothing for that?

A. No, sir.

Q. And as you have said, no reflection of the effect of the differences in depreciation allowances, as between the so-called economic and less economic methods?

A. That is correct.

It is a cash out-of-pocket expenditure, is what it amounts to.

Q. For maintenance and operation?

A. For maintenance and operation.

Q. And nothing else?

A. And nothing else.

[fol. 9769] Redirect Examination.

By Mr. Carlton:

Q. In other words this merely shows the difference in operating and maintenance cost, if you substitute additional power for additional steel which you would otherwise have installed to get the additional volumes of gas?

A. That is correct. If there would be no difference in the operation and maintenance cost, why, then, we would have gone to horsepower in the first place, rather than to pipe lines, in our original study.

Q. Did you at that time make a study to determine whether or not it was more economic to go to horsepower or to steel pipe?

A. I don't believe that we made what you would call a regular study, but we did make a sufficient number of calculations to readily show that we had chosen the economic method of development.

Q. And this less economic method—under this less economic method of development—you will be limited in the portions of your reserves which you can develop within an early period of time?

A. That is correct, and the fact is we will have to go ahead and make, at a later date, practically all of the ad-[fol. 9770] ditions which we originally contemplated, and this is merely a temporary substitute, but it does not mean that the additions proposed will not have to be constructed at a later date.

Q. In other words, you are just switching some of the later expenditures to early years and the early expenditures to later years; is that correct? A. Yes.

Mr. Littman: Can you give us the year? You talk about years; what years?

The Witness: If I knew just exactly what the fuel requirements were to be for the war industries I think I could give you the year, within a year, but I do not know what that load would be at this time, and it would be pretty difficult to answer your question.

Mr. Littman: Neither does anybody else know.

The Witness: That is what I am getting at. In this uncertain time, why, that would be a difficult question to answer.

Trial Examiner: Mr. Hinton, in the preparation of these studies you have adopted a standard of peak day sales of 338,000 M.c.f. and 307,000 M.c.f. at respective load factors of 70 per cent and 90 per cent?

The Witness: Yes, sir.

Trial Examiner: Perhaps it will make this record more [fol. 9771] intelligible if you say why you have adopted this standard.

. . . . . .

The Witness: No, I did not determine the volumes, but it was explained to me why the volumes were used, and I think that Mr. Burnham's testimony will show why we arrived at the volume of 307,000 Mcf per day and 338,000 M.c.f. per day, rather than some other figure, and the understanding that I have, and the reason that these studies were called for was on the assumption that Panhandle Eastern Pipe Line Company will probably be called on to deliver gas in considerable quantities, which will be used at plants engaged in making materials for the war effort.

. . . . . .

[fol. 9772] By Mr. Culton:

Q. Your jurisdiction is only from Hugoton south and west; is it not? A. From Liberal.

Q. From Liberal, I mean, south and west?

A. Yes, sir.

. . . . . .

[fol. 9773] Recross Examination

By Mr. Chamberlain:

Q. Is it my understanding that in 1941 you purchased and produced about equal quantities of the gas which you sold?

A. Yes. That is approximately correct.

Q. Now, is it fair to say that, in the immediate future, you contemplate an increased production of which you can not get the same proportion out of Texas as you have been in the past? A. That is right.

Q. And that the changes that are shown on Exhibits 225 and 226 are because of being required to change the source of your production from that which it would have been had you been able to make the expenditures that you outlined in your former exhibits?

A. That is correct. It is the shift of the division of load between fields.

Q. Now, can you tell me—and I think perhaps you did and I didn't take it down—what percentage you had figured that you would furnish from Texas at the time of your Exhibit 42?

A. At that time, and basing the load increase upon the estimate furnished by Mr. Morton, we assumed that we [fol. 9774] would continue to divide the load between the two fields in approximately the same proportion as we have the past year, that being somewhere around 70 to 71 per cent of the total from the Panhandle field.

Q. Well, now, going to your exhibit 225, column B, will you tell me what amount of gas it is contemplated that you will produce in 1942-43, page 1? I refer to the Panhandle field; page 1.

A. I don't believe I understand you. You asked what amounts we were going to produce for the year?

Q. Yes. Let me ask it again. What I would like there would be the figures of what you contemplate producing and what you contemplate purchasing in that exhibit.

* * * * * * * *

A. We estimate that we will produce —

* * * * * * * *

A. (Continuing)—41,262,000 M.c.f.

Mr. Littman: 41,262,000?

The Witness: M.c.f.

[fol. 9775] Mr. Littman: That is, produced?

The Witness: Yes.

By Mr. Chamberlain:

Q. And you will purchase how much?

A. 18,738,000 M.c.f.

That is what we would do if we were able to get the material to add to our system.

Mr. Culton: The two together make 60 million, is that right?

The Witness: Yes, sir.

A. (Continuing) But what we are actually going to do with the shortage of material, in place of producing 41,262,000, we estimate that we will produce 28,537,417 M.c.f. and we will purchase 21,998,118 M.c.f. making a total of 50,535,535 M.c.f.

. . . . . .

Mr. Littman: That is a different volume of gas, is it not?

The Witness: Yes. If we had the material to build to get to a market of this volume we would take 60 million feet a year from Texas, while we could, rather than being [fol. 9776] forced to cut back to 50,535,535 M.c.f.

. . . . . .

By Mr. Chamberlain:

Q. Now, will you turn to page 2, exhibit 225, and give me similar figures for the Hugoton field?

A. If we were able to develop in the manner which we would like to—that is 307 at 70 per cent, isn't it?

Q. That is right.

A. (Continuing)—we would produce from the Hugoton field 19,128,114 M.c.f. as would be reflected in column B of Exhibit 225, and would purchase 6,825,542 M.c.f.

. . . . . .

A. But operating in the method which is considered under the less economic method we will produce 10,094,364 M.c.f. and will purchase 16,323,757 M.c.f., making a total from the Hugoton field of 26,418,121 M.c.f. which would be taken from that field under the additions shown in Column C. By "additions" I mean additions to the property in the way of pipe lines and horsepower.

[fol. 9777] By Mr. Littman:

Q. Will you give us the corresponding figures for columns D and E on page 2?

. . . . . .

For the column—they will be the same, the volumes will be the same for D and E, the M.c.f. volume will be the same.

Q. Is the same true of the preceding page, namely page 1 of Exhibit 225? Will the volumes be the same—

A. (Interposing) No, sir.

Q. (Continuing)—for columns D and E as for columns B and C?

A. No, sir, they will not.

Q. Will you please give us the volumes for columns D and E?

A. Under the economic method of developing, they will be the same, but as we feel that we are going to add to the system the amount shown to be produced from the Texas field for column B would be 41,262,000, and the amount purchased 18,738,000.

Q. That is the same for column D as for column B?

A. Yes.

Q. Page 1 of exhibit 225?

A. Same for B as for D, but the amount for E is not the same as that for C.

[fol. 9778] Q. Will you give us that figure?

A. Yes. The amount we would produce, and which would be reflected in column E, would be 28,941,701 M.c.f. produced and 21,593,834 M.c.f. purchased.

Q. That gives you precisely the same total—

A. (Interposing) Yes, it would be the same volume.

Q. (Continuing) —as that for column C?

A. That would be the same volume from the Panhandle field, but the division between the purchased and produced changes.

Q. Very slightly at that?

A. By two wells. By the addition of the two wells, the influence that they would have.

[fol. 9784] C. H. M. BURNHAM was recalled as a witness, having been previously sworn, was further examined and testified as follows:

Direct Examination

By Mr. Culton:

Q. Mr. Burnham, exhibits 229, 230 and 231 have been marked for identification.

I will ask you if those exhibits were prepared by you.

A. They were prepared by me and, to some extent, under my direction.

Q. Do they correctly reflect the matters which they purport to reflect? A. They do.

[fol. 9785] Q. I will ask you to explain these exhibits, first taking Exhibit 230—we can go back to 229 later—and ask you to explain Exhibit 230, the occasion for your making the study, and what that exhibit shows.

A. As I have previously testified during this hearing, we are continually studying the loading on our system, the effect of different distributions of load, and the need for power, as evidenced by these studies, at the various compressor stations.

I was assigned the job of determining as accurately as possible the maximum quantity of gas which might be sold on a continuous basis when the system west of Zionsville, Indiana, is completely looped, and with the various compressor stations powered on an economic basis.

This study resulted in the answer shown on Exhibit No. 230.

In other words, when completely looped west of Zionsville, Indiana, and economically powered, Panhandle Eastern Pipe Line Company System, combined with that of

Michigan Gas Transmission Corporation will have a continuous daily delivery capacity of 338,000 M.c.f.

Q. What compressor units are required for that capacity? Where are they reflected on your exhibit 230?

A. They are reflected near the bottom of page 1 at the right-hand side, the additional compressor units that [fol. 9786] would be required.

Q. And what would be the aggregate cost of those compressor units?

A. The aggregate cost of those compressor units, including additions to the gasoline plant at Liberal compressor station, amounts to $2,959,150.

Q. What additional pipe line construction would be needed in order to attain that capacity, and where is it reflected on your study?

A. The additional pipe line construction that would be required is shown on page 2 and consists of two loops in Indiana, or rather one loop in Indiana and one loop extending over into Ohio, and the completion of our loop construction in Kansas.

The loop in Ohio consists of 9.94 miles of 24-inch O.D. pipe on the discharge of Edgerton compressor station, and the loop in Indiana consists of 46.67 miles of 24-inch pipe on the discharge of Zionsville compressor station.

Q. That would make how much investment in pipe line by Michigan Gas Transmission?

A. $1,494,504.

Q. And how much additional capital expenditures would be required for Michigan Gas Transmission by way of compressor station under that method?

A. We have no additional power required by Michigan [fol. 9787] Gas Transmission.

Q. No additional capacity for Michigan Gas Transmission Corporation, solely by reason of the looping which you have described?

A. That is correct.

Q. What looping would be required for the main line of Panhandle Eastern?

A. The looping required for the main line in Kansas will consist of 26.64 miles of 26-inch pipe on the discharge of Olpe compressor station—that is between Olpe and Louisburg compressor stations.

15.53 miles of 26-inch pipe between Haven and Olpe compressor stations.

20.19 miles of 26-inch pipe between Greensburg and Haven compressor stations, and 23.37 miles of 26-inch pipe between Greensburg and Liberal compressor stations.

Q. Making a total of how much for looping?

A. $2,581,160.

Q. And this would require a total of how much for looping? A. $4,075,664.

Q. Now, in addition to the additional compressor stations and the loop lines, would any other expenditure be required on the main line system or on the system east of Liberal?

[fol. 9788] A. To complete the system and to make it possible to operate it on an economic as well as practical basis we feel that the system telephone line should be extended eastward to not only Dana but to Detroit.

Q. Which would necessitate a further expense of how much money?

A. A further expense of $846,800.

Q. Making a total cost east of Liberal of how much for additional facilities in order to have economic production and transmission expenditures?

A. $7,881,614.

Q. Now, did you also ascertain the expense of certain construction west of Liberal station in order to have the gas economically produced and transmitted?

A. Yes. I consulted with Mr. Hinton and determined what field lines would be necessary, including expanding the trunk system into Texas.

Q. And were the figures that you obtained those that are reflected for such items in his original exhibit 42?

A. They are.

Q. Up to the time that volume of gas would be required?

A. That is correct.

Q. Did you consider the figures which he had there as reasonable? A. I did.

[fol. 9789] Q. And accounting only for the well lines, the trunk lines, the gathering lines, and the measuring stations, what additional investment would be required south and west of Liberal station?

A. $3,660,923 in lines and measuring stations.

Q. Is that reflected on your exhibit 230?

A. On page 3.

Q. And to the extent that those items are listed in your exhibit, are they a duplication of similar items which appear in Mr. Hinton's exhibit No. 42?

A. They are.

Q. This would make a total investment of how much for additional capital expenditures over the entire system in order to have a continuous daily delivery capacity of 338 million cubic feet?

A. The figure which I will read is in addition to certain projects now already under construction, and amounts to $11,542,537.

Q. And that, so far as the field is concerned, includes only lines and measuring stations?

A. That is correct.

Q. It does not include the compressor units or gas wells?

A. That is correct, and particularly does not include the two units we are now installing at Sneed and Hans-
[fol. 9790] ford compressor stations.

Q. Now, have you, from this study, determined the amount of tonnage, by way of pipe requirements, that would be required if the line were completely looped and economically powered with economic production and transmission expenditures, so as to have a continuous daily delivery capacity of 338 million? A. I have.

Q. Is that reflected in your exhibit 230?

A. On page 4 of Exhibit 230 that is reflected.

Q. And will you explain page 4 to us?

A. Page 4 is a computation, or the results of a computation totalling the mileage of pipe involved, and determining from it the total tons of pipe.

As will be noted the Michigan Gas Transmission will be required to install 11,820 tons of pipe in Indiana and Ohio.

The Panhandle Eastern Pipe Line Company will be required to install in Kansas, along the main line, 17,502 tons of pipe.

Vol. VIII

TRANSCRIPT OF RECORD

(Pages 3537 to 4056)

Supreme Court of the United States

OCTOBER TERM, 1944

No. 296

PANHANDLE EASTERN PIPE LINE COMPANY, ILLINOIS NATURAL GAS COMPANY AND MICHIGAN GAS TRANSMISSION CORPORATION, PETITIONERS,

vs.

FEDERAL POWER COMMISSION, CITY OF DETROIT, COUNTY OF WAYNE, MICHIGAN, ET AL.

ON WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE EIGHTH CIRCUIT

PETITION FOR CERTIORARI FILED JULY 28, 1944.

CERTIORARI GRANTED JANUARY 3, 1945.

Commodity Price Indexes of Ten Countries	13247	4318
Statement relating to Tax Collections in the United States, from 1913 to 1942	13258	4328
Index Numbers of Wholesale Prices of all Commodities by Months, from 1890 to 1940	13263	4333
Statement relating to Wholesale Prices for Week Ended September 20, 1941	13264	4335
Graph relating to Average Weekly Earnings in Manufacturing Industries of New York State from 1914 to 1941	13266	4339
Graph relating to Average Hourly Earnings and Average Actual Hours per Week per Worker in twenty-five Manufacturing Industries from 1914 to 1941	13267	4341
Graph relating to Average Cost of Living from 1935 to 1939	13268	4343
62, Deduction from Cost of Reproduction New for Depreciation and Present Value of Plant, Property and Business as of June 30, 1941	13270	4345
Letter from P. McDonald Biddison, Consulting Engineer, to Panhandle Eastern Pipe Line Company, September 30, 1941	13271	4345
General Summary	13272	4347
63, Investors' Appraisal of the Risk of Capital in the Natural Gas Industry as compared with other Divisions of the Utility Industry, Summary of Analyses, prepared by Paul B. Coffman, Vice-President of Standard and Poors Corporation	13321	4349
Table of Contents	13322	4349
Statement of Experience and Qualifications of Paul B. Coffman	13327	4354
Investors' Appraisal of Capital Risks in Various Divisions of the Utility Industry	13348	4371
Statement A, Investors' Appraisal of Risks of Capital for the years 1937, 1938, 1939 and 1940	13351	4373

	Original	Print
Statement A-1, Investors' Appraisal of Risks of Capital for the Interim Period of 1941, January-August, Both Inclusive	13352	4375
Statement B, Investors' Appraisal of Risks of Capital for the years 1937, 1938, 1939 and 1940	13353	4377
Statement B-1, Investors' Appraisal of Risks of Capital for the Interim Period of 1941, January-August, Both Inclusive	13354	4379
Statement C, Investors' Appraisal of Risks of Capital for the years 1937, 1938, 1939 and 1940	13355	4381
Statement C-1, Investors' Appraisal of Risks of Capital for the Interim Period of 1941, January-August, Both Inclusive	13356	4383
Statement D, Investors' Appraisal of Risks of Capital for the years 1937, 1938, 1939 and 1940	13357	4385
Statement D-1, Investors' Appraisal of Risks of Capital for the Interim Period of 1941 January-August, Both Inclusive	13358	4387
Statement E, Investors' Appraisal of Risks of Capital for the years 1937, 1938, 1939 and 1940	13359	4389
Statement E-1, Investors' Appraisal of Risks of Capital for the Interim Period of 1941, January-August, Both Inclusive	13360	4391
Statement F, General Information Covering each Company as to the Nature and Size of the Business and the Territory served	13361	4393
64, Statistics supporting Data, Exhibit 63, Appendixes A, B, and C	13379	4414
Appendix A, Complete List of Companies studied and Reasons for eliminating those not used to determine Investors' Appraisal of Risks of Capital	13380	4414
Appendix B, Securities of forty-three Natural Gas Companies considered Representative of the Industry, etc.	13387	4426

Index, Volume X.

Appendix C, Working Papers showing the Computation of Investors' Appraisal of the Risks of Capital	13398	4446
Water Companies	13399	4447
Electric Operating Utility Companies	13420	4461
Manufactured and Mixed Gas Companies	13465	4501
Natural Gas Companies	13495	4521
65, Study relative to Rate of Return on Panhandle Eastern Pipe Line Company prepared by Paul B. Coffman, Vice President, Standard and Poors Corporation	13533	4547
Table of Contents	13534	4547
Chart No. 1, Main Transmission System of Panhandle Eastern Pipe Line Co. and Subsidiary	13542	4559
Chart No. 2, Growth of Natural Gas Industry in United States of America from 1906 to 1940	13548	4567
Chart No. 3, Consumption of Natural Gas in United States of America from 1919 to 1940	13550	4571
Chart No. 4, Revenue from Natural Gas Consumed in United States of America from 1919 to 1940	13552	4573

	Original	Print
Chart No. 5, Average Revenue per M. C. F. from 1929 to 1940	13554	4575
Chart No. 6, Panhandle Sales by States, vs. Industry Consumption of Natural Gas from 1934 to 1940	13556	4577
Chart No. 7, Trends of Gross Revenue from 1934 to 1940, Panhandle vs. other Pipe Line Companies and Industry	13558	4579
Chart No. 8, Operating Ratio of Panhandle Compared with other Pipe Line Companies from 1934 to 1940	13560	4581
Chart No. 9, Trend of Revenue and Expenses of Panhandle Eastern Pipe Line Company from 1934 to 1940	13562	4583
Chart No. 10, Percent Earned on Invested Capital of Panhandle Based upon Capital Structure	13564	4585
Chart No. 11, Percent Earned on Invested Capital of Panhandle Based upon Net Property, Intangibles and Working Capital	13566	4587
Chart No. 12, Return to Common Stockholders of Panhandle Eastern Pipe Line Company from 1934 to 1940	13568	4589
Chart No. 13, New Tax Bill will reduce Income sharply — Computations based on Operations — Twelve Months ended June 30, 1941	13570	4591
Chart No. 14, Percent Earned on Invested Capital of Panhandle Eastern Pipe Line Company — as of June 30, 1941	13572	4593
Chart No. 15, Percent Earned on Invested Capital of Panhandle Eastern Pipe Line Company — as of June 30, 1941	13574	4595
Chart No. 16, Historical Costs of Debt Capital of Panhandle Eastern Pipe Line Company—from 1930 to 1941	13576	4599
Chart No. 17, Effect of 1941 Refinancing of Panhandle Eastern Pipe Line Company	13578	4603
Chart No. 18, Historical Costs of Preferred Stock Capital of Panhandle Eastern Pipe Line Company from 1937 to 1941	13580	4605
Chart No. 19, Earnings — Price Ratios of Natural Gas Pipe Line Common Stocks from 1937 to 1940	13582	4607
Chart No. 20, Current Earnings — Price Ratios of Natural Gas Pipe Line Common Stocks	13584	4609
Chart No. 21, Cost of Financing Northern Natural Gas Company Common Stock — Offered to Public on September 10, 1941	13586	4613
Chart No. 22, Estimated Current Cost of Financing Common Stock of Panhandle Eastern Pipe Line Company	13588	4615
Chart No. 23, Continuing Growth of Panhandle System Indicates Future Needs for New Capital	13590	4617
Chart No. 24, Panhandle Eastern Pipe Line Company Invested Capital as of June 30, 1941	13592	4621
Chart No. 25, Preferred Stock Unusual in Natural Gas Pipe Line Companies	13594	4623
Chart No. 26, Earnings Necessary to Maintain Credit Position of Panhandle Eastern Pipe Line Company	13596	4625
Chart No. 27, Earnings Necessary to Maintain Credit Position of Panhandle Eastern Pipe Line Company	13598	4627
Chart No. 28, Overall Cost of Capital to Panhandle Eastern Based on Ideal Capital Structure	13600	4629

	Original	Print
Chart No. 29, Dollars needed Annually by Panhandle for Operations and Maintenance	13602	4633
Chart No. 30, Dollars needed Annually by Panhandle for Taxes	13604	4637
Chart No. 31, Dollars needed Annually by Panhandle to return Capital to Investors when Gas Reserves are Exhausted	13606	4639
Chart No. 32, Dollars needed Annually by Panhandle for current Capital Requirements — Bonds	13608	4641
Chart No. 33, Dollars needed Annually by Panhandle for current Capital Requirements — Preferred Stock	13610	4643
Chart No. 34, Dollars needed Annually by Panhandle for current Capital Requirements — Common Stock	13612	4645
Chart No. 35, Dollars needed Annually by Panhandle for total current Capital Requirements — Total Invested Capital	13614	4647
Chart No. 36, Dollars needed Annually by Panhandle to provide Service to Customers, a Fair Return to Investors and restore Invested Capital when Gas Reserves are Exhausted	13616	4649
Chart No. 37, Dollars needed Annually by Panhandle to Provide Service to Customers, a Fair Return to Investors and restore Invested Capital when Gas Reserves are Exhausted	13618	4651
Table for Chart No. 2, Growth of Natural Gas in the United States of America for the years 1906 to 1940, Inclusive	13619	4653
Table for Chart No. 3, Consumption of Natural Gas in the United States of America for the years 1919 to 1940, Inclusive	13620	4655
Table for Chart No. 4, Revenue from Natural Gas Consumed in the United States of America for the years 1919 to 1940, Inclusive	13621	4657
Table for Chart No. 5, Average Revenue per M. C. F. from Natural Gas Consumed in United States of America at Points of Consumption	13622	4659
Table for Chart No. 6, Natural Gas Sales by States for the years 1934 to 1940, Inclusive	13623	4661
Table for Chart No. 7, Trend of Gross Revenue, Panhandle Eastern Pipe Line Company vs. Other Pipe Line Companies and the Natural Gas Industry, 1934 to 1940 Both Inclusive	13624	4663
Table for Chart No. 8, Operating Ratio of Panhandle Eastern Pipe Line Company, compared with other Pipe Line Companies exclusive of Taxes, 1934 to 1940	13625	4665
Table for Chart No. 9, Panhandle Eastern Pipe Line Company, Trend of Revenue and Expenses	13627	4669
Table for Chart No. 10, Percent Earned on Invested Capital, based upon Capital Structure	13628	4671
Table for Chart No. 11, Percent Earned on Invested Capital, based upon Net Property, Intangibles and Working Capital	13629	4673
Table for Chart No. 12, Return to Common Stockholders 1934 to 1940 Both Inclusive	13630	4675

Measuring and Regulating Station Structures	14446	4852
Other Transmission System Structures	14447	4852

Index, Volume XI.

Mains	14448	4853
Compressor Station Equipment	14449	4853
Measuring and Regulating Station Equipment	14450	4854
General Equipment	14451	4855
87, Materials and Supplies Restatement of Cost of Major Items as of June 30, 1941, Michigan Gas Transmission Corporation by Francis S. Haberly	14466	4856
Materials and Supplies	14467	4856
88, Michigan Gas Transmission Corporation — Comparative Balance Sheets, per Books as at December 31, 1936 to 1940, Inclusive, and June 30, 1941	14475	4863
89, Michigan Gas Transmission Corporation Statement showing earned Surplus per Books for the Ten Months ended December 31, 1936, years 1937 to 1940, inclusive, year and six months ended June 30, 1941	14477	4867
90, Michigan Gas Transmission Corporation — Statement showing Capital Surplus, per books, for the Ten Months ended December 31, 1936, years 1937 to 1940, inclusive, year and six months ended June 30, 1941	14478	4869
91, Michigan Gas Transmission Corporation — Preliminary Report on Original Cost Studies by Central Service Corporation	14479	4871
Statement A, Outline of Origin and Development	14489	4878
Statement A-1, Common Stock issued and Outstanding at January 1, 1940 and June 30, 1941	14492	4881
Statement B, Statement showing Acquisition by Reporting Company or Predecessors of Gas Operating Unit or System, etc.	14493	4883
Statement D, Statement relating to Gas Plant as of January 1, 1940, etc.	14494	4885
Statement E, Statement showing Summary of Adjustment relating to Gas Plant, etc.	14495	4886
Statement F, Statement relating to Gas Plant as of January 1, 1940, etc.	14496	4887
Statement G, Statement relating to Balance Sheet as of January 1, 1940, etc.	14498	4891
Statement H, Statement relating to Suggested Plan for Depreciation, etc.	14499	4893
Statement I, Statistical Information Relative to Gas Plant at June 30, 1941	14500	4893
92, Michigan Gas Transmission Corporation Statement showing Original Cost Depreciated to present Conditions as at June 30, 1941 and observed Depreciation as at June 30, 1941	14507	4903

	Original	Print
93, Michigan Gas Transmission Corporation — Statement of Contributions made to Customers for Business Development for the years 1936, 1937 and five months ended May 31, 1938	14508	4905
94, Michigan Gas Transmission Corporation Statement showing working Capital as of June 30, 1941	14510	4908
95, Michigan Gas Transmission Corporation — Estimated Cost of Completing work in Progress at June 30, 1941 and Estimated Gross Income to be derived from the Completed Projects	14517	4919
97, Michigan Gas Transmission Corporation — Variation in Purchase Power of Dollar as Related to Gas Plant	14519	4921
Graph relating to Variation in Purchasing Power of the Dollar spent for Main Compressor Units	14522	4923
Graph relating to Variation in Purchasing Power of the Dollar spent for Steel Pipe	14523	4925
Graph relating to Variation in Purchasing Power of the Dollar spent for Station Structure Materials	14524	4927
Graph relating to Variation in Purchasing Power of the Dollar spent for Station Structure Labor	14525	4929
Graph relating to Variation in Purchasing Power of the Dollar spent for Station Equipment Labor	14526	4931
Graph relating to Variation in Purchasing Power of the Dollar spent for Mains Installations	14527	4933
Statement relating to Variation in Purchasing Power of the Dollar as related to "Gas Plant"	14528	4935
99, Michigan Gas Transmission Corporation — Statement of Income and Expense per books for years ended December 31, 1936 to 1940, inclusive, twelve Months ended June 30, 1941 and six Months ended June 30, 1941 and December 31, 1940	14530	4937
100, Michigan Gas Transmission Corporation — Statement of Income and Expense per books and after Adjustments and redistributions necessary to reflect the 2-6 months Period per books on an annual basis, for six months ended December 31, 1940 and June 30, 1941 and for twelve months ended June 30, 1941	14533	4943
101, Michigan Gas Transmission Corporation — Comparative Statement of Operating Revenues, for years ended December 31, 1936 to 1940, inclusive, twelve months ended June 30, 1941 and six months ended June 30, 1941 and December 31, 1940	14537	4951
102, Michigan Gas Transmission Corporation — Operation and Maintenance Expense per books for the twelve months ended June 30, 1941	14538	4953
103, Michigan Gas Transmission Corporation — Statement showing Gas Sales, Gas Transported, Gas used by Company, Line Losses and Gas Purchased for the years ended December 31, 1936 to 1940, inclusive, twelve months ended June 30, 1941 and December 31, 1940	14540	4957
106, Registration Statement of Panhandle Eastern Pipe Line Company No. 2-4597, filed with the Securities & Exchange Commission November 18, 1940, Excerpts from	14548	4959

The well lines, gathering lines, and trunk lines, in Texas, Oklahoma, and Kansas, will require 29,805 tons, giving a total tonnage of pipe required of 59,127 tons.

Q. Now, even if you had that pipe and the compressor stations which you have listed, would you still feel safe in operating the system with a continuous daily de- [fol. 9791] livery of 338 million, without further equipment?

A. That would depend largely on the load factor.

Q. Assuming a 90 per cent load factor?

A. Assuming a 90 per cent load factor it would be practically impossible to operate the compressor stations without a standby unit in each station.

Q. Why is that true?

A. Because it is necessary to repair these units as well as to operate them.

It takes from two to three weeks to repair one of these large engines, and a repair or maintenance job is required after about 4,000 hours of operation.

There are roughly some 8,000 hours in a year, so it would indicate at 90 per cent load factor that these units —one unit would be under a repair operation almost all the time at a 90 percent load factor rating.

Q. What is your practice as to these repairs under the load factor which has heretofore applied?

A. We are able, on the present basis, to repair all of our units during the summer period.

Since our load factor is in the order of 65 to 70 per cent this would indicate that, during the summer, only part of the units in each station is running, giving us a spare, or sometimes two spares, to work on during the slack period.

Q. Then if there was continuous operation on a load [fol. 9792] factor of 90 per cent, what additional capital expenditures would be required for safe operation and dependable operation?

A. The Michigan Gas Transmission Corporation would be required to install an additional compressor unit in each

of its three compressor stations, the total cost of which would be $520,000.

Panhandle Eastern Pipe Line Company would be required to put a new unit or standby unit in each of its compressor stations.

I have included only compressor stations from Liberal eastward, trusting that the field stations would not require a standby unit for the proper maintenance of these stations.

In other words, the flexibility in the field is sufficient to permit the repair of an occasional unit in the field.

Panhandle Eastern's expenditure on this basis would be $1,407,000, making a total of $1,927,000 to be invested in standby units.

Q. Is that study of standby compressors reflected on your exhibit 230?

A. It is, on page 5.

Q. Then, in order to have a continuous daily delivery capacity of 338,000 M.c.f. at 90 per cent capacity factor, and in order to feel safe in the view that you could furnish [fol. 9793] that much every day, it would be required to make that expenditure, in addition to the expenditures for compressor stations and loop lines, which are shown in your exhibit 230?

A. That is correct.

Q. Now will you explain Exhibit 231?

A. 231 follows very closely Mr. Hinton's exhibit No. 224.

In other words, I have carried the computations, and so forth, eastward from Louisburg, with some duplications in the field, as will be explained later.

A minimum amount of steel is to be used in bringing about the same answer as was obtained on Exhibit No. 230, and in reducing this quantity of steel we have assumed that there will be no looping of the trunk gathering line extending up from the Panhandle field to Liberal station.

This gas, which we formerly contemplated would come from Texas and Oklahoma, will come from Kansas.

Q. That is, the greater portion of it will come from Kansas?

A. That is correct.

Q. All right.

A. Therefore, power or compressor stations are to be installed in the Hugoton field. These two compressor stations are—

[fol. 9794] Mr. Littman (interposing) Just a minute. You say "will be." You mean: based on certain assumptions?

The Witness: Yes, sir.

Mr. Littman: If this, that, or the other thing happens?

The Witness: That is correct.

A. (Continuing) These compressor stations are reflected in Mr. Hinton's exhibit No. 224, as well as in my exhibit No. 231.

The same quantity of gas, it is assumed, will be handled on the maximum day.

By Mr. Celton:

Q. What about the compressor station equipment which will be required on the main line, including the Michigan Gas Transmission?

Is there any difference in that?

A. Inasmuch as the quantity of gas to be handled on the maximum day is the same, there is no change in that connection.

Q. How about the looping?

A. The looping is the same.

Q. In other words there is no change between Exhibit 230 and 231, except in so far as the field is concerned?

A. With another exception, and that concerns the telephone lines east of Louisburg, Kansas. We have eliminated those also, in line with cutting down on materials and ex[fol. 9795] penditures.

Q. With the idea of using what facilities for that?

A. Using the private commercial lines for those facilities.

Q. Such as you are now using?

A. That is correct.

Q. The Hugoton and Satanta plants shown in your exhibit 231 are those about which Mr. Hinton testified?

A. That is correct.

Q. Now, did you make a study as to the volumes of pipe required under the plan set out in Exhibits 231 and [231]?

A. The quantity of pipe required in the event we build these two compressor stations in western Kansas, instead of pipe lines in the field, is very much less than that required on the basis that we would bring a considerable quantity of gas up from Texas.

Q. It is the difference between 59,127 tons and 29,824 tons, is it not? A. That is correct.

Q. So that this study presented in exhibit 231 reflects only approximately half the amount of tonnage required as was required under exhibit 230?

A. That is right.

Q. And what would be the total investment, exclusive of standby compressor units, gas wells, and other field [fol. 9796] costs required under exhibit 230?

A. $11,542,537.

Q. And what would be the total investment exclusive of standby compressor units, gas wells, and other field costs required under exhibit 231?

A. The total investment, exclusive of standby compressor units, gas wells, and other field costs, is estimated to be $8,324,534.

Q. Do the same observations with respect to standby units apply to that study as apply to exhibit 230?

A. They do.

Q. Now, will you explain exhibit 229?

A. Exhibit 229 was developed in response to a request to determine how much gas could be delivered on the maximum day with the same looping as was involved in exhibits 230 and 231 but with no compressor additions whatever except as standby units might be required in each of the compressor stations from Liberal eastward.

The maximum capacity which could be delivered on that basis, on a continuous daily basis, is 307 million cubic feet, as compared with the 338 million cubic feet per day in Exhibits 230 and 231?

Q. You used the same looping in all three of those exhibits, is that correct?

A. That is correct. The same looping east from Lib-
[fol. 9797] eral station.

Q. And you used the same capital investment for compressor additions in all three exhibits for standby capacity?

A. No; I made some change.

Q. All right. What was the change?

A. I have recognized the fact in Exhibit No. 229 that when a standby unit is built or installed by itself and not in conjunction with other power, that the cost will be slightly increased.

Q. And is that difference in cost reflected on page 5?

A. It is.

Q. Of Exhibit 229?

A. That is correct.

Q. I believe you stated that the same tonnage would be required under exhibit 229, same steel tonnage, as would be required under exhibit 231?

A. That is correct.

Q. And that by increasing the units in the compressor stations you could increase the daily delivery capacity from 307 million to 338 million?

A. That is right.

Mr. Culton: You may take the witness.

Cross-Examination.

By Mr. Littman:

Q. By "steel tonnage" you mean pipe tonnage, do you
[fol. 9798] not? A. That is correct.

Q. Mr. Burnham, with respect to Exhibit No. 230, that might be characterized, might it not, as a pipe dream under conditions as they exist today, might it not?

A. Well, you (Mr. Littman) might characterize it as that, but we don't know how important the W. P. B. might feel that it is essential that Panhandle Eastern Pipe Line Company do certain things in a certain way.

Q. You can't get the pipe, can you?

A. We might get the pipe.

Q. In other words you have presented these three studies because you don't, at this writing, know in which manner you may be required to operate your system to meet certain requirements?

A. That is exactly right.

Q. But you submitted a study heretofore—Exhibit 47—which set forth your best judgment of the most economical manner in which to operate the property, or in which to expand the property, did you not?

A. Yes, that is true, and it checks very closely with this figure here.

I think that at that time I arrived at an economic maximum capacity of 331 million. We now have 338 million which is a result of recasting our figures and balancing [fol. 9799] the system somewhat in better form—

Mr. Culton: (interposing) That is, as a result of taking over the Michigan Gas Transmission Corporation—did that help you to balance the system?

The Witness: Yes. We balanced by throwing in a little more power in at Tuscola and less power at Montezuma.

* * * * * * * * * *

[fol. 9810] C. H. M. BURNHAM having been heretofore duly sworn, resumed the stand and was further examined and testified as follows:

Cross-Examination (Resumed)

By Mr. Littman:

Q. Mr. Burnham, referring to Exhibit No. 229 which shows your estimate of the capital additions required to increase the continuous daily delivery capacity of Panhandle Eastern and Michigan Transmission Systems to 307,000 M. c. f.; what annual sales are contemplated by this exhibit?

A. In preparing this exhibit, I did not go into annual sales at all. This exhibit is merely to show the investment and the steel required to build the daily delivery capacity of the system to 307,000,000 cubic feet per day.

Q. Now, the 307,000,000 cubic feet represents the de- [fol. 9811] liveries to the customers?

A. Represents the delivery capacity or the ability to make 307,000,000 cubic feet deliveries on peak days on a continuous basis—that is, day after day.

Q. Well, you have labelled on the first page of Exhibit 229, the 307,000 M. c. f. as "Total Sales." I take it that

means that is the quantity of gas which is contemplated to be delivered at the various delivery points on the peak day? A. That is correct.

Q. What pressure base was used?

A. 14.73 pounds per square inch, absolute.

Q. Now, if we were to undertake to determine the annual deliveries on the basis of, let us say, a 70 percent load factor, will you state whether I am correct in saying that we would take 70 percent of your total capacity sales of 307,000 M. c. f., and then multiply the result by 365 days?

A. Yes, you are right.

Q. Likewise, if we were to use 90 percent capacity factor or load factor, as it has been used by Mr. Hinton in several of his exhibits, we would take 90 percent of the 307,000 M. c. f., and multiply the result by 365 days, would we not? A. Yes.

Q. Now, am I correct in understanding that the pressure base reflected in your Exhibits 229, 230, and 231, of 14.73 [fol. 9812] pounds per square inch is the same pressure base which Mr. Morton used in his Exhibit No. 40?

A. Yes.

Q. Is my understanding correct that none of the estimated capital additions set forth in Exhibits 229, 230, and 231, are now under construction? I gather that from your statement on the first page of each of these exhibits, that "All facilities required are in addition to certain projects now under construction."

A. That statement is correct as carried on the first page of each exhibit.

However, there is pending the immediate starting of some of the items shown. That is, some of the work is in phase of being planned at this moment, although construction is not under way.

Q. Have any of the items shown in these three exhibits been approved formally by the Board of Directors of Panhandle Eastern or Michigan Gas?

A. As I understand it—and this is purely hearsay—the Board of Michigan Gas Transmission Corporation approved the purchase of two Worthington 1300 horsepower gas compressor units. These two units, when approved by the management of Michigan Gas Transmission, were to be installed at Montezuma Compressor Station.

Panhandle Eastern has assumed the responsibility of [fol. 9813] placing those units in the system at more desirable points, and at the moment plans are being drawn to install one of these units at Tuscola Compressor Station, and one of them at Centralia Compressor Station.

Q. Now, with that exception, have any of the items set forth in these three exhibits been, as yet, approved by the Board of Directors of the companies?

A. With that exception, none, to my knowledge, has been approved.

Q. Have any of these estimated capital additions set forth in these three exhibits, to-wit, 229, 230 and 231, been submitted to the Board of Directors in a budget or any other form for the Board's consideration?

A. In so far as I know, they have not been submitted to the Board.

Q. What is the present peak day capacity of the system?

A. Approximately 250,000,000 cubic feet sales.

Q. In other words, comparable to the 338,000 M. c. f. and 307,000 M. c. f. figures in your Exhibits 229 to 231, inclusive? A. That is correct.

Q. Referring now to Exhibit No. 229, you do not employ the term "Economic" in connection with this exhibit, [fol. 9814] whereas Mr. Hinton employed the term in connection with the 307,000 M. c. f. sales.

Will you explain why you don't have two exhibits covering the 307,000 M.c.f.?

A. Exhibit 229 might properly be labelled "Less Economic", because if you will note, the gas—or a greater proportion of the gas—must come from the Hugoton field due to the construction of a station at Hugoton, Kansas.

If the Commission would so desire, we can prepare another exhibit supplementing or parallelling Exhibit 229, which would show the investment on an economic basis.

Mr. Culton: Would there be any difference in the main line?

The Witness: There would be no difference in the main line, it would be strictly in the field end of the study.

By Mr. Littman:

Q. Wouldn't your Exhibit 47 already reflect, to a large extent, the so-called economic basis?

A. Except for the fact that there is no study—or, rather, there is no study; that is correct—upon which Exhibit 47 was built, which corresponds to 307,000,000 cubic feet per day capacity.

We would have to develop a study which would reflect the effect of carrying 307,000,000 cubic feet sales back to the field.

[fol. 9815] Q. I see.

I note that Column D of Exhibit 40, a copy of which I hand you, shows, for the year 1942, maximum day total main line sales of 305,200 M.c.f., as submitted by witness Morton.

Would that refresh your recollection any?

A. In that event, no doubt, there is in Mr. Hinton's exhibit, then, sufficient data to permit one to derive the economic expenditures for a sales corresponding to 307,000,000 cubic feet per day.

. . . . . .

Q. Are you referring to his early Exhibit No. 42, rather than his recent Exhibits 223 and 224?

A. I refer to his early exhibit. I don't know the number.

Q. I hand you Exhibit No. 42 to refresh your recollection.

A. No doubt the information is contained in Exhibit 42.

Q. Then, in reality, we have a number of studies with respect to capital additions, to wit—that is, studies that were submitted by you—first, your study submitted originally in Exhibit 47, then the three studies which you [fol. 9816] submitted yesterday, to wit Exhibits Nos. 229, 230, 231.

Now, obviously all of these can't be put into effect, can they?

A. No. These are, as I understand it, alternates. It is proposed that the W. P. B. pass upon which of these construction programs will be undertaken.

Q. What about the study submitted originally by you in Exhibit No. 47?

Is that now out the window, so to speak, or is it still within the realm of real probability?

A. Well, I should say that in as much as we are now in a war, that the status of the early years in 47 is very much changed.

Now, it may be possible that we can swing back on to the proposed investments as reflected in the Exhibit 47 at some later date, but for the moment it seems appropriate that we contribute as much as we can to this war effort, and, in doing so, construction programs as are outlined on these three exhibits, 230, 231, and 229, might receive consideration—favorable consideration—by the W. P. B. to that end.

Q. And they might not?

A. Naturally, they might not.

Q. In other words, at this stage, your company does not know what program of capital additions will even-
[fol. 9817] tually be adopted and put into effect; is that right?

A. That would seem correct.

Q. Now, you have from time to time employed in your Exhibits 229, 230, and 231, the terms "economic," and "less economic."

What do you mean by that?

A. I borrowed those terms from Mr. Hinton's exhibits, and, as I understand it, the economic basis of conducting our business would be to derive larger quantities of gas from Texas than are reflected on these studies which I have labelled "less economic."

Q. Have you made any economic studies for the purpose of determining the over-all cost of gas on these various bases?

A. No, I have not, but, as I understand it, Mr. Hinton has done so, as you know.

Q. Are you referring to Mr. Hinton's recent exhibits in which he gave the estimates of operations and maintenance cost?

Is that what you are referring to?

A. I refer to that and also to all of his previous work which he has done to determine which is the more economic method of producing our gas supplies.

Q. I didn't have those studies in mind. I had in mind studies that took into account the total cost of gas delivered to the various customers, taking into account depreciation, [fol. 9818] return, and all expenses applicable to those sales on the various bases here presented.

A. I believe that, if you remember, Mr. Hinton testified yesterday that he has made studies to determine which is the better or cheaper way, therefore, the economic way, of bringing gas supplies into Liberal Station.

Q. But he, as I recall it, stated he did not take into account return on investment, depreciation, fixed overhead costs, and so forth, but merely confined his estimate to operations and maintenance.

Now, I am asking you whether you know of any such studies of the character that I have described that have been made by yourself or any other officer of the company?

A. No. I know of no such studies.

Q. Well, obviously such studies would have to be made to determine, in the first instance, whether the various alternatives here suggested are economic or non-economic; isn't that correct?

A. That is probably true.

Q. What additions to facilities would be necessary to continue to meet the present sales?

A. The present sales?

Q. Yes.

A. I don't know exactly what you mean by the present sales.

[fol. 9819] Q. Well, let us take the sales for the year 1941, the full year 1941. Would you need any additional capital requirements to meet the sales that you did meet in 1941?

A. I think that on a previous occasion before this, in this hearing, Mr. Hinton testified on what would be the capital requirements to continue on the present basis, and I think, if you will refer to his testimony again on that occasion, you will find present basis is set up.

• • • • • • • • •

[fol. 9820] Q. Mr. Burnham, confining ourselves to our studies, namely, the studies of additions to the pipe line east of Liberal, what, if any, additional facilites would be required to meet the sales that were made in the year 1941?

A. In the year 1941, the peak day sales experienced during that calendar year was something like 240,000,000 per day. Now, on that basis, and disregarding the fact that in the winter of '41-'42, we made a delivery of something over 250,000,000, I should say that the main line capacity would not have to be increased in future years to [fol. 9821] care for such peaks as were experienced in 1941.

Mr. Culton: And with the same load factor?

The Witness: And assuming the same load factor.

By Mr. Littman:

Q. And as a matter of fact, you wouldn't have to construct any additional capital facilities beyond those that are now constructed in order to meet the 1941-1942 peak of 250,000,000 cubic feet?

A. But remember that during that peak period of the winter of 1942, we had interrupted something like 30,000,000 cubic feet, some of which was for essential industries.

Q. I am speaking of the actual deliveries, Mr. Burnham, of—what was it—250,000,000 cubic feet—on peak day of the 1941-1942 winter?

A. Well, if you will confine yourself to the 250,000,000 cubic feet, yes, we do have capacity to carry that great a peak day sales.

Mr. Culton: Is that continuous capacity?

The Witness: Yes.

• • • • • • • • •

By Mr. Littman:

Q. Am I correct in gathering from your testimony that these additional facilities which are set forth in your various exhibits are, in reality, for the purpose of meeting [fol. 9822] additional demands for additional sales?

A. Yes, you are correct.

Q. Mr. Burnham, is there any duplication of facilities set forth in Exhibits 223 and 224 with those set forth in your three exhibits, 229 to 231, inclusive?

A. Yes, there are.

Q. Will you please name the items that are duplicated?

A. In Exhibit 231 I have duplicated in my study, the following items shown on Exhibit 224; Line 12, item K compressor station near Hugoton.

Q. Are you now referring to Exhibit 224? A. Yes.

. . . . . .

Q. Item K?

A. Item K. Line 13, Item L, Dehydration Plant near Hugoton.

Line 14, Item M, Compressor station near Satanta.

Line 16, Item O, Dehydration Plant near Satanta.

Line 17, Item P, looping existing lines, Hugoton field.

There are two items under P which total approximately $64,000.

Q. Several of those items also appear in Exhibit 223, do they not?

[fol. 9823] A. Yes, sir, and referring to my Exhibit 229, I have duplicated in it the following items which are shown on Exhibit 223.

Line 13, Item K, compressor station near Hugoton, Kansas.

Line 14, Item L, Dehydration Plant near Hugoton, Kansas.

Line 15, Item M, the same loop lines in the Hugoton field I mentioned a moment ago, totalling approximately $64,000.

Q. Those items are duplicated also in certain other of your exhibits, are they not?

You merely stated they duplicated certain items in Exhibit 229.

A. And 231. I mentioned 231.

• • • • • • • •

Q. I am sorry.

Are there any duplications between Exhibits 223 and 224 and your Exhibit 230?

A. No.

• • • • • • • •

By Mr. Littman:

Q. I believe you testified, Mr. Burnham, that the $3,660,923 of field pipe lines and measuring stations appear-
[fol. 9824] ing on page 3 of Exhibit 230 were the same as those which appear in Mr. Hinton's Exhibit No. 42 under the anticipated load.

A. They were furnished me by Mr. Hinton, and I assume they were taken from his Exhibit No. 42.

• • • • • • • •

[fol. 9825] By Mr. Lee:

Q. Mr. Witness, perhaps this is a repetition of some questions already asked by Mr. Littman, but over-all, have you made any study or prepared any figures to show what the income of the company would be if you had this additional capacity?

A. No, I have not.

Q. It is all predicated, as I understand it, upon what capacity you may need if and when you sell the additional gas to additional customers. By additional, I mean over and above what you have today?

A. We have to build the capacity before we can sell the gas.

Q. I understand that, but it is all predicated upon not today's business and today's customers, but additional customers and additional business; is that right?

A. Well, today's customers' demands are greater than we have capacity today to serve.

Yesterday's customers, we have capacity for. I mean last year's customers.

Q. You mean to say that at the present time the demands are greater than the facilities? A. Yes, sir.

Q. To what extent?

A. Last winter we would have sold, had we had the [fol. 9826] capacity, something in the order of 300,000,000 cubic feet per day.

Q. Well, is it true that so far as the Detroit Company was concerned, that because of their use of their standby facilities, that you did not sell them what you had anticipated you would?

A. That is right.

Q. And is it true that the excess that you had from that source you disposed of elsewhere?

A. Well, it was all thrown in the pot, you might say, but even at that, we were short some 30,000,000, as I testified a moment ago.

Q. And that shortage wasn't caused by the Detroit contract, at least that is true, isn't it?

A. That is right.

Q. What was the cause of the shortage?

A. Well, we just simply did not possess sufficient capacity to meet the demands of our customers. The shortage was caused by customer requirements.

Q. I understand that, but perhaps I didn't make myself clear. Who were the customers that made demands that resulted in a shortage because of your inability to supply those demands?

A. That would be very difficult for me to say, because all of our customers had grown, you might say, during the [fol. 9827] period of the last year, there had been house-heating customers put on in practically every town and village that we served in Missouri, in Illinois, in Indiana, Ohio, and possibly in Michigan—Monroe, particularly—and so the growth was over the entire system, you might say.

You can't put your finger on any one customer and say that he caused an unusual demand on our system.

Q. Now, if you will just pardon me a minute, I would like to get this clear in my mind.

Is it true that the failure of your company—or not failure, but the fact that your company did not supply the requirements, we will say, in some cities of Michigan, outside of the Detroit area, for househeating, is that true because of the nature of the contract?

A. We served all the househeating requirements during that period.

Q. I thought you said a minute ago that in Monroe, for example—

A. (Interposing) I say that all the towns and cities served directly or indirectly from our system grew during the last year—that is, their demands grew.

Q. What you mean is that you could have sold them more if you had the capacity? A. No.

Q. Then I didn't understand you, if you will pardon me.

[fol. 9828] A. What it really amounts to is this: they all grew. We took care of all their requirements, all the domestic requirements, but in that process we had to interrupt from industrial customers some 30,000,000 cubic feet of gas.

Q. Now, that is what I want to get at.

You did not reject any of the requirements throughout your entire system, of domestic customers?

A. No, sir.

. . . . . .

Q. What did happen was that in order to do that was, you said you had to forego industrial sales, interrupt industrial sales? A. Yes, sir.

Q. Now, it is also true, isn't it, that your industrial contracts are interruptible contracts?

A. That is right.

Q. And they are interruptible contracts because you, in making them, take cognizance of the fact that the sales must be made, and the obligations must be met, of the domestic customers; isn't that right?

A. That is correct.

Q. So, in that respect, when you make the broad, general statement that you could have sold and had demands [fol. 9829] for—what was it: 300,000,000?

A. Oh, in that order.

Q. Extra cubic feet. That was for the entire year?

A. Not extra; total.

Q. Total cubic feet, as against what you did supply, the difference being what?

A. Some 30,000,000.

Q. 30,000,000. What you mean is—in the last analysis, now, what you mean is that you just didn't serve the industrials and you were entitled not to serve them because, in making the contract in the beginning, you were taking cognizance of the fact that you may have to shut them off in order to take care of the domestic customers?

A. But it so happened that these industrial customers, to whom we had to curtail the sales of gas, were engaged in war production and that was very embarrassing to have to interrupt and curtail the supply of gas in an essential industry.

Q. That is why I asked you to give me the names of those customers.

I don't dispute your word, but I wanted to see if that was really the situation.

A. It is already in the record, Mr. Lee. I testified to that the last time I was here.

Q. All right.

[fol. 9830] Just one more question. Isn't it the custom in the business that you are engaged in, universal custom, that the industrials are interruptible contracts?

A. Certain types of industrials are interruptible.

Q. Now, what types?

A. Interruptible industrials. We have a firm industrial just now about to go on our line, if you would be interested in knowing the difference between a firm and interruptible.

Q. I know what the difference is, but what I am trying to get at, if you will just bear with me a minute, was: these that you failed to supply were not firm industrial customers, but interruptibles.

A. Yes, that is true.

Q. You did supply all of your firm industrials, if you had any at that time, did you not? A. Yes.

Q. So a condition of your sale of gas to industrials who were interruptible is sort of predicated upon a different basis—if I use the proper term—than your firm [indistrial] customers; isn't it? A. Correct.

What is the difference in that distinction?

A. I don't believe that this company, up to date, is serving any firm industrial customers, but we are about to take on a powder plant which will be, as I understand it, [fol. 9831] a firm industrial customer.

Q. Then you will take care of that contract at the expense of foregoing interruptible industrials, won't you?

A. I assume that we will, yes.

Q. Yes, certainly. A man who gets his gas from you on an interruptible basis knows that he is in a category where he is apt to have it shut off at any time and he takes it upon that condition, doesn't he?

A. He signs that kind of an agreement, but he hopes that we will never shut him off.

• • • • • • • •

Q. Isn't it true that all of the industrial gas that you will sell for defense purposes must be on a firm basis?

A. Well, last winter we interrupted some defense gas or curtailed it, notwithstanding.

Q. Was it on a firm basis under the contract?

A. No, the contract specified interruptible.

Q. That is right, but isn't it true that henceforth any industrial gas for defense purposes will absolutely be on a firm basis?

Mr. Culton: We think that is a matter for the defense industries to determine, Mr. Examiner, what kind of a contract they will require.

[fol. 9832] By Mr. Lee;

Q. Well, isn't it obvious that in order to insure the continuity of supply to an industrial that is engaged in defense purposes, isn't it obvious that there will have to be some guarantee of a continuity of the supply of gas, or that they have standby equipment which will enable them to carry on the continuity of their business?

A. That would be the ideal situation.

Q. Yes. So these customers that you complain you were unable to serve, these customers that you say you could have sold 30 million more cubic feet during the last year than you did: did these customers shut down or go out of business because of your failure?

A. Their operations were curtailed.

Q. Did they have standby service of their own?

A. No.

Q. They did not? A. No.

Q. But it would be good judgment on their part to have some standby facilities that would continue to the interruptible customers?

A. That depends on the customer. He might want to gamble with it.

Q. If he gambles with it, and if he doesn't protect himself with a standby facility—such, for example, as butane [fol. 9833] —to serve as a standby when unable to get the regular supply, then that puts a different face on this whole general allegation that you needed 30 million more cubic feet for customers and that you didn't have the facilities to produce it; isn't that so?

A. Well, butane is hardly a practical substitute.

Q. Well, use some other substitute. They are plenty others, aren't there?

In other words, your general allegation, as you gave it on direct examination, impressed me in the beginning as though you had to forego serving, selling, 30 million cubic feet additional because you lacked the facilities, whereas, when you come to break down that general allegation, we find that that applied only to interruptible industrials, and that you did not fail to supply any of your firm demand customers:

A. Except in the case of City of Detroit, we failed to supply our contract.

Q. That wasn't due to your lack of capacity; that was due to the fact that the distribution company in the City of Detroit utilized its standby facilities and cut down their requirements: isn't that true?

A. It is possibly true.

Q. Well, now, isn't it true?

A. That is my understanding of it.

* * * * * * * * * *

[fol. 9834] Q. Well, that puts a different face upon your general testimony then, what you seemed to imply in your direct testimony.

You don't charge your inability to have adequate facilities to the Detroit Company in any way when you know, as a matter of fact, that what the Detroit Company did was to resort to its standby to cut down—we might say "shave" —the peak loads, cut down requirement, but you had that gas to sell elsewhere, didn't you?

A. It went into the general pot, as I said a while ago.

Q. That is right. So when we get right down to the final breakdown of this statement of yours, isn't it true that it comes to this situation: that what you are complaining of—or what you are alleging—I don't say "complaining—what you are alleging is that you could have sold 30 million more cubic feet of gas than you did last year, but you took care of all your domestic customers, you took care of all your industrial firm customers, if you had any, and the failure to produce the 30 million extra had all been taken cognizance of by both you and the customer when the contract was made: isn't that true?

[fol. 9835] A. That seems to be a fair statement.

Q. You made a statement a minute ago that a standby facility for an industrial, such as butane, was not very desirable: is that right?

A. I am referring particularly to some of the industrials that we curtail—a brick plant, for instance. I think it would be almost prohibitive for a brick plant to put in butane standby.

. . . . . .

Mr. Culton: Mr. Lee, it has been commented that it would be rather difficult, under the present setup, to obtain permits for butane standby equipment.

Mr. Wheat: Those are covered, as you probably know, under Order M 68 of O. P. C., of the Office of Petroleum Coordinator, and are strictly prohibited, except on special permission, which I understand is exceedingly difficult to obtain at this moment.

[fol. 9836] I thought you might like to know that situation on butane.

Mr. Lee: I have heard that.

By Mr. Lee:

Q. But that is why your future contracts for industrials engaged in defense purposes are going to be firm guarantee contracts, aren't they?

A. I don't know.

Q. Well, it is a good reason why, isn't it? Isn't that true?

A. I would say that a defense industry would be able to probably get standby equipment, but the instance that I cited a moment ago, natural gas is essential to that operation, and no other fuel or product will take its place. Therefore, that is a firm contract.

Q. But you can't give me the name of any brick company that you had to deny gas to?

A. Oh, yes, I can. I did name those plants in my testimony.

Q. Weren't they generally brick and tile and ceramic and glass? A. Yes.

By Mr. Littman:

Q. Mr. Burnham, when the W. P. B. orders you to sell gas to an industry closely affiliated or connected with the [fol. 9837] war effort in such manner as to not interrupt the flow of gas to that industry, then, to all intents and purposes, notwithstanding any contract, the industrial firm becomes a user of firm gas, does it not?

A. Yes, if the order has the authority to make it stick.

Q. And that is true notwithstanding the fact that that industry may have a contract with your company providing for interruption?

A. That is true.

* * * * * * * * * * *

[fol. 9838] Leith V. Watkins, a witness previously called and duly sworn, resumed the stand and was examined and testified further as follows:

Mr. Culton: Mr. Examiner, during the intermission we passed around to various counsel numerous documents which we would now like to have marked with exhibit numbers for identification, and I shall list them all at this time.

First, we ask that the document entitled "Prospectus—Panhandle Eastern Pipe Line Company" to which there is a rider relating to the price and dated April 2, 1942, be marked Exhibit No. 233 for identification. There is also another rider in the body of the document.

• • • • • • • • • • •

(The Document referred To Was Marked Exhibit No. 233 For Identification.)

Mr. Culton: We next ask that a document entitled "Summary of Construction and Retirement Budget and Work Order Procedure" be marked Exhibit No. 234.

Trial Examiner: It will be so identified.

[fol. 9839] (The Document Referred To Was Marked Exhibit No. 234 For Identification.)

Mr. Culton: We next ask that a statement entitled "Statement Showing the Computation of Depreciation for Federal Income Tax Purposes for the Year 1939 as Claimed in Federal Income Tax Returns" be marked Exhibit No. 235.

• • • • • • • • • • • •

(The Document Referred To Was Marked Exhibit No. 235 For Identification.)

Mr. Culton: We next ask that a document entitled "Statement Showing the Computation of Depreciation for Federal Income Tax Purposes for the Year 1939 on the Basis as Settled with the Bureau of Internal Revenue" be marked Exhibit No. 236.

• • • • • • • • • • •

(The Document Referred To Was Marked Exhibit No. 236 For Identification.)

Mr. Culton: We next ask that document entitled "Statement Showing the Computation of Depreciation for Federal Income Tax Purposes for the Year 1940 as Claimed in Federal Income Tax Return" be marked Exhibit No. 237.

• • • • • • • • • •

(The Document Referred To Was Marked Exhibit No. 237 For Identification.)

Mr. Culton: I next ask that the document entitled "Statement Showing the Computation of Depreciation for [fol. 9840] Federal Income Tax Purposes for the Year 1940 on the Basis as Settled with the Bureau of Internal Revenue" be marked Exhibit No. 238.

• • • • • • • • • • •

(The Document Referred To Was Marked Exhibit No. 238 For Identification.)

Mr. Culton: We next ask that a document entitled "Analysis of Account 795, Special Services—Years 1940 and 1941—Panhandle Eastern Pipe Line Company and Subsidiary Companies" be marked Exhibit No. 239.

• • • • • • • • • • •

(The Document Referred To Was Marked Exhibit No. 239 For Identification.)

Mr. Culton: We ask that a document entitled "Analysis of Account 795, Special Services—Year 1941—Panhandle Eastern Pipe Line Company and Subsidiary Companies (including Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation)" be marked Exhibit No. 240.

• • • • • • • • •

(The Document Referred To Was Marked Exhibit No. 240 For Identification.)

Mr. Culton: We ask that a document entitled "Analysis of Account 796, Special Legal Services—Years 1940 and 1941—Panhandle Eastern Pipe Line Company and Subsidiary Companies" be marked Exhibit No. 241.

• • • • • • • • •

[fol. 9841] (The Document Referred To Was Marked Exhibit No. 241 for Identification.)

Mr. Culton: We next ask that a document entitled "Analysis of Account 796, Special Legal Services—Year 1941—Panhandle Eastern Pipe Line Company and Sub-

sidiary Companies (including Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation)" be marked Exhibit No. 242.

. . . . . .

(The Document Referred To Was Marked Exhibit No. 242 For Identification.)

Mr. Culton: We ask that the document containing several pages, entitled "Statement of Estimated Federal Income and Excess-Profit Taxes for the 12 Months Ended February 28, 1942 (based on Revenue Act of 1941)," so far as page 1 is concerned and based on rates proposed in recommendation by Secretary of the Treasury Morgenthou as shown on page 2 with an explanatory statement on page 3, be marked Exhibit No. 243.

. . . . . .

(The Document Referred To Was Marked Exhibit No. 243 For Identification.)

Mr. Culton: We ask that a document entitled "Statement of Budget Items Included in Exhibit No. 205—Projects Approved in Year 1941 Which Were Unfinished at the Date Shown" be marked Exhibit No. 244, that document being a two-page document.

. . . . . .

[9842] (The Document Referred To Was Marked Exhibit No. 244 For Identification.)

Mr. Culton: We next ask that printed document entitled "Agreement Between Columbia Gas & Electric Corporation and Panhandle Eastern Pipe Line Company dated February 5, 1942," be marked Exhibit No. 245.

. . . . . .

(The Document Referred To Was Marked Exhibit No. 245 For Identification.)

Mr. Culton: We ask that a document showing, "Preliminary Determination of the Second Installment of Purchase Price to Be Paid to Columbia Gas & Electric Corporation," be marked Exhibit No. 246.

. . . . . .

(The Document Referred To Was Marked Exhibit No. 246 For Identification.)

Mr. Culton: We ask that the document entitled "Certain Increased Costs Not Fully Present in Income Account" be marked Exhibit No. 247.

(The Document Referred To Was Marked Exhibit No. [fol. 9844] 251 For Identification.)

Redirect Examination.

By Mr. Culton:

Q. Mr. Watkins, will you please briefly explain Exhibit 232?

A. Exhibit No. 232—I do not believe this witness is involved—

Q. (Interposing) Exhibit No. 233, I beg your pardon, sir. I had the wrong figure there. Will you please explain Exhibit No. 233 which is the prospectus of Panhandle Eastern Pipe Line Company?

A. There has heretofore been introduced in these proceedings as Exhibit No. 146 the prospectus of Panhandle Eastern Pipe Line Company with respect to $10,000,000 first mortgage and first lien 3 percent bonds, Series C, due January 1, 1962, and 150,000 shares "blank" percent cumulative preferred estock (par value $100 per share). On April 2, 1942, in compliance with the regulations of the Securities and Exchange Commission, it became necessary to attach to the prospectuses to be delivered subsequent to that date, a rider with respect to the change in offering price of the 150,000 shares of the 5.60 percent cumulative preferred stock.

The rider simply states that certain of the purchasers named in the prospectus are making available for sale to approved dealers certain shares of the stock at an offering [fol. 9845] price less a concession of $1.50 per share.

There is also a rider attached to page 53 which became necessary as a result of an order issued by the Securities and Exchange Commission on March 31, 1942, under the Public Utility Holding Company Act of 1935, covered by Holding Company Act Release 3415, which the witness believes is self-explanatory.

Q. You mentioned a portion of the provisions on the first rider. What change was made in the first rider as to the purchase price to the public, the offer price?

A. The price was changed to $100 per share flat.

Q. From what?

A. From the previous price of $104 plus accrued dividends.

Q. Will you now explain Exhibit No. 234 and state the reason for the preparation of that exhibit?

A. Exhibit No. 234 is a condensed summary of the construction and retirement budget and work order procedure used by Panhandle Eastern Pipe Line Company and its subsidiary companies. Its preparation came about in response to a request made by the counsel for the Commission to Witness Hinton in a previous session in this matter.

Q. Does this Exhibit No. 234 show in detail the policy of the company with respect to such budgets and work orders and reflects the ordinary course that such matters take?

A. Not so much the policy, sir, but it does reflect the [fol. 9846] ordinary course and gives, in a condensed form, the routine through which their preparation proceeds.

* * * * * * * *

Q. Now, will you explain together Exhibits Nos. 235, 236, 237, and 238? I think you can probably discuss those four at one time.

A. Exhibits Nos. 235, 236, 237, and 238 were prepared in response to a request made by Mr. Goodman at page 8941 of the transcript of the proceedings in this matter for the session of March 30, 1942.

The first of these exhibits shows computation of depreciation for Federal income tax purposes for the year 1939 as claimed in the Federal income tax returns and is, the witness believes, in sufficient detail for its complete understanding.

Q. But it shows what total?

A. A total of $2,381,293.48 in Column H opposite lines 31 and 32.

Exhibit No. 236 comprises a statement giving the computation of depreciation for Federal income tax purposes for the same year, 1939, on the basis of the company's settlement with the Bureau of Internal Revenue and provides a total of $2,186,243.66 in Column F opposite lines 23 and 24, which amount is comparable to the figure of $2,381,293.48 heretofore identified by this witness as ap- [fol. 9847] pearing on Exhibit No. 235.

Exhibit No. 237 for identification consists of a statement showing the computation of depreciation for Federal income tax purposes for the year 1940 as claimed in the income tax return for Panhandle Eastern Pipe Line Company and subsidiary companies. The total of such claim was $2,640,225.34 as shown in Column H opposite lines 33 and 34. The basis of the settlement for the year 1940 is shown on Exhibit No. 238 in Column H opposite lines 21 and 22. Here it should be stated that the amount there shown, $2,301,752.34, is not the actual basis of settlement for the reason that the return for the year 1940 has not been completely examined.

The matter presented in this exhibit has been computed, as nearly as it has been possible for the company to do, on the basis of the anticipated settlement with the Revenue Department and conforms to the settlement basis for the year 1939 as shown by Exhibit No. 236.

Q. I think you might now explain Exhibits Nos. 239 and 240 together and you might state the reason for the preparation of those exhibits also.

A. Exhibits Nos. 239 and 240 for identification were prepared in response to a request made by counsel for the Commission at pages 8981 and 8991 as shown by the transcript of the testimony in this matter for the session of March 30, 1942.

[fol. 9848] The first of the two exhibits, namely No. 239, consists of an analysis of Account 795, the title of which is "Special Services." This analysis covers the years 1940 and 1941 and is for Panhandle Eastern Pipe Line Company and subsidiary companies, excluding Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation, which did not become subsidiary companies of Panhandle Eastern Pipe Line Company until February 6, 1942.

This exhibit presents, in the order named, the name of the person performing the special service, the type of service, the amount of fees, expenses, and the total of such costs for both years 1940 and 1941, the latter information appearing in Columns (C), (D), (E), (F), (G), and (H).

Exhibit No. 240 for identification is a compilation of the analysis of this account, No. 795, Special Services for the

Year 1941, which includes, in addition to the costs of this nature experienced by Panhandle Eastern Pipe Line Company and Illinois Natural Gas Company, similar costs experienced by Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation, and is a presentation for the year 1941 as though the latter of these companies were actually subsidiaries of Panhandle Eastern Pipe Line Company during that year.

Q. Now, will you explain Exhibits Nos. 241 and 242?

Mr. Littman: Just a minute, Mr. Culton. I would like [fol. 9849] to inquire whether Panhandle Eastern proposes to retain the services of Columbia Engineering Corporation in future years, including 1942.

The Witness: The contracts with Columbia Engineering by Michigan Gas Transmission and Indiana Gas Distribution Corporation were canceled on February 6, 1942.

Mr. Littman: I note from Exhibit No. 240, line 11, that Columbia Engineering Corporation received the sum of $23,731 for "Services and Expenses under Engineering Contract" for the year 1941. Is that correct?

The Witness: That is a correct statement of what appears on the exhibit, yes, sir.

Mr. Littman: That, I take it, was paid by Michigan Gas Transmission Corporation, was it not?

The Witness: And Indiana Gas Distribution Corporation.

Mr. Littman: You do not expect to have that item of expense in 1942, do you?

The Witness: Not in its precise nature, no, sir, and there is no expectation, as far as this witness knows, that there will be any such expense arising from any services performed by Columbia Engineering and Management Corporation.

I am not able to say there will not be similar expenses of some nature incurred in some other direction within the organization; my statement meaning simply that because of the elimination of the engineering contract, it would not [fol. 9850] necessarily follow that expenses aggregating

this approximate $24,000 might not be present in the operation for such years.

Is that sufficient, sir?

Mr. Littman: For the present, yes. That is all.

By Mr. Culton:

Q. Will you explain Exhibits Nos. 241 and 242?

A. Exhibits No. 241 and No. 242 for identification have been prepared in the same manner and for the same purpose as were Exhibits Nos. 239 and 240 for identification. The information contained in the two exhibits being so similar to the previous ones, might we pass them without further explanation?

Q. I believe you were heretofore requested to make some kind of a report or investigation with respect to Exhibit No. 192?

A. Yes, sir. At page No. 8998 of the transcript of the proceedings in this matter for the session of March 31, such a request was made, and it is explained that the difference between the amount of $153,000—

. . . . . .

Exhibits Nos. 191 and 192—I believe they have been [fol. 9851] received, have they?

Q. They have been identified, I know, and I think they have been received.

A. Exhibits Nos. 191 and 192 were reconcilements of the net income, per books, with the net income per Federal income tax returns for the years 1939 and 1940, and, in the session of March 31, 1942, in this proceeding, a question arose as to two amounts, these amounts appearing opposite lines 27 and 28 of Exhibit No. 191, and opposite lines 22 and 23 of Exhibit No. 192, being $153,053.56 and $715,162.16, respectively. The difference between the two amounts is the result of the fact that Exhibit No. 191 was prepared to give a reconcilement of net income, per books, with the taxable net income on the basis of the settlement with the Bureau of Internal Revenue for the year 1939, while the data shown on Exhibit No. 192 was predicated on a reconcilement of a return as filed, per the books, without giving effect to the expected settlement basis. However, had a settlement for the year 1940 been made

precisely in the same manner as for the year 1939, the comparison would have been as between $153,053.56 and $256,769.05.

The difference of $458,393.11 between the latter figure and $715,162.16 is explained as follows: In the year 1940, the depreciation claimed was on a wasting asset basis and amounted to $2,706,029.59. The Bureau's settlement basis [fol. 9852] of this same amount, as nearly as the company can anticipate it, if such settlement conforms to the treatment in the prior year, 1939, would have been $2,247,636.48, and the difference between these two amounts is $458,393.11.

. . . . . .

[fol. 9853] Mr. Littman: Have you given any explanation anywhere in the record, Mr. Watkins, as to the method and manner by which you arrive at this $7,350,000 of estimated excess profits net income for the year 1941, which figure is shown in the middle of page 3 of Exhibit No. 243?

. . . . . .

The Witness: I doubt if such explanation has been given. I do not find it from a hasty perusal of the transcript of the proceedings for the session of April 1.

Mr. Littman: Can you tell us how you arrived at that figure of $7,350,000?

The Witness: Mr. Littman, of course, in making our tentative income tax return for the year 1941, we must have some idea of approximately what our tax may be and, as you know, the Internal Revenue requirements are such that we must estimate our net income and our tax as well and make a token payment provided we do not file a complete return.

We did not file a complete return. We had an extension of time in which to file our return, and the $7,350,000 was [fol. 9854] determined through our customary procedure of what our tax liability may be at the end of the year at the time our books were closed as well as our estimate used in connection with the filing of the return itself, that is, a preliminary return.

Mr. Littman: Can you enlighten us as to how this figure of $7,350,000 was determined? I have no desire to impede the progress of your presentation of your exhibits, Mr. Watkins. If you would prefer to give us the data later, very well, unless you feel you can give it now.

The Witness: I can answer your question right now. If you will refer to Exhibits 191 and 192 which are a reconcilement of net income, per books, with net income tax returns for the years 1939 and 1940, the determination for the year 1941 was made in exactly the same manner as shown here. I do not have it with me, however. Corporations make accrual for this purpose monthly, and as its accounting periods progress during the year's work, you must make some sort of an estimate as you go along.

Mr. Culton: That was the reason for the estimate of $7,350,000?

The Witness: That is correct, sir, and the witness does not know anything at this particular time that will change that figure greatly.

Mr. Littman: Mr. Watkins, I believe that we ought to [fol. 9855] have in this record a reconciliation between the $7,350,000 of estimated excess profits net income for the year 1941 and the net income, per books, for the year 1941. I wonder whether you could supply that for us.

The Witness: You are the doctor, sir.

Mr. Littman: I would greatly appreciate it, for I think it would greatly assist our staff and the Commission.

The Witness: You understand, of course, the filing is tentative.

Mr. Littman: Yes, I understand.

The Witness: In the event we have completed our actual return for the year 1941, would you prefer the reconciliation between the net taxable income as shown by the return and the books rather than this estimated amount which we find in Exhibit No. 243?

. . . . . .

Mr. Littman: We would prefer the actual if it is available when you submit it.

. . . . . .

[fol. 9856] Mr. Littman: I would like to have all companies, as your Exhibit No. 243 shows all companies.

The Witness: You want the information for all companies rather than a reconcilement of Panhandle Eastern alone?

Mr. Littman: Individually and collectively. In other words, I would like it in the same manner as Exhibit No. 243 presents the data.

. . . . . .

The Witness: We will get it.

. . . . . .

Mr. Littman: I would like to refer to Exhibit No. 241. I note a rather large item on Exhibit No. 241, line 5, giving payment to Edward N. Goodwin, general counsel, in the amount of $50,366.81 in 1940, and $44,824.97 in the year 1941, for fees and expenses.

Can you enlighten us with respect to the nature of the services rendered by Mr. Goodwin, in connection with what particular transactions or litigation or what not were his [fol. 9857] services rendered?

The Witness: Mr. Littman, I could not profess to have at instant call all of the wide variety of matters that the general counsel for the company had his fingers in in the years 1940 and 1941.

I believe your knowledge of legal lore and so forth, if you were to refer to the company's filings with the Securities and Exchange Commission and the matters that you have personal kowledge of that have been before the Securities and Exchange Commission would cause you very soon to reach the conclusion that Mr. Goodwin and his staff had no doubt been quite busy. I do not have information with me that would be sufficient to give you a categorical answer to your question and if a request

were made for such information, it would involve the analysis of all of the statements rendered by Mr. Goodwin which detailed the services which he had performed and those statements are usually two or three pages long of closely typed matter each month. He has been a very busy gentleman and his staff has been very busy.

. . . . . .

Mr. Culton: His services are not confined to work in the office of the company but he is engaged in the outside prac-
[fol. 9858] tice of law, is he not?

The Witness: That is correct.

Mr. Culton: And he is not merely counsel for the company?

The Witness: No.

Mr. Littman: Mr. Clark is general counsel for the company, is he?

The Witness: Not general counsel. Mr. Goodwin is general counsel. Mr. Clark is company counsel. We distinguish between the services of the two in this fashion: Mr. Clark, in the offices of the company at Kansas City, is cognizant, of course, with all the legal matters with which the company is confronted. Their duties have to do with the every-day affairs concerned with corporate procedure or with respect to special work for various governmental commissions and what not.

Mr. Littman: I take it that Mr. Goodwin's services have been rendered chiefly in connection with proceedings before the S. E. C.?

The Witness: And in an advisory manner with respect to general corporate affairs, annual meetings of stockholder, directors' meetings, any general contracts, and any question we wish to ask him, whatever the nature may be.

Mr. Littman: Are these fees paid on a retainer basis or are they billed as the services are rendered?

The Witness: We pay Mr. Goodwin no retainer.

Mr. Culton: Did you have any public financing in either
[fol. 9859] of those two years?

The Witness: Yes, we did.

Mr. Culton: And Mr. Goodwin represented the company in connection with that refinancing operation?

The Witness: He did, and not only that but all of the matters precedent to that financing and the clean-up work after the development of stock certificates, bonds, indentures, and the very wide variety of attendant matters that go along with substantial financing transactions.

Mr. Littman: In other words, a large part of Mr. Goodwin's services were rendered in connection with refinancing and the issuance of securities by Panhandle Eastern during the past year?

The Witness: During the past two years, I think that would probably be a fair statement, Mr. Littman, but I do not wish to be tied down to try to give you specifically what proportion of Mr. Goodwin's services were performed for anything because, frankly, I do not know.

Mr. Littman: Did he assist in the preparation of the indentures and prospectuses that were issued?

The Witness: I should say he did.

Mr. Littman: Were any part of his fees charged to that discount and expense?

The Witness: They may have been.

Mr. Littman: That is, you mean parts of these amounts [fol. 9860] that appear in line 5 of Exhibit 243 may have been?

The Witness: No, these amounts are for special services as defined in Account No. 796. Now, there may have been other charges for Mr. Goodwin that were charged to work orders in which the company accumulated the costs of some of its financing.

Mr. Littman: Do you expect to have any such expense as $44,000-odd for the year 1942—

The Witness: (Interposing) It would not astonish me if it were not that much or even more.

Mr. Littman: At least that much?

The Witness: Of course, I have no way of knowing and I am not a crystal gazer, but, as I say, I would not be astonished, from my knowledge of the company over the years and the ability of certain ones to cause it to undergo costs of this nature, for that cost to be exceeded without too much trouble.

Mr. Littman: It might be considerably lower too, might it not?

The Witness: That could be, too, yes, but I doubt it.

* * * * * * * * *

[fol. 9861] By Mr. Culton:

Q. Will you explain Exhibit No. 243, Mr. Watkins, and explain it in comparison with Exhibit No. 202 or its lack of similarity?

A. Exhibit No. 243 is referable to Exhibit No. 198. Subsequent to the last presence of this witness in this matter, we found that there had not been supplied a statement showing the estimated Federal income and excess profits tax for the 12 months ended February 28 as shown by Exhibit No. 198, as had been the case with regard to certain other exhibits.

Now, Exhibit No. 198 was introduced at page 9166 of the transcript of testimony at a previous session and it consists of a portrayal of the method the companies—and here we have Panhandle Eastern, Illinois Natural, Michigan Gas Transmission Corporation, and Indiana Gas Distribution—used in estimating the excess profits and net income and surtax taxes for the 12 months ended February, 1942. Page 1 gives this information based on the Revenue Act of 1941 and shows a total estimated tax for this purpose. It shows a total tax for all of the companies for that 12 months period of $4,362,229 in column N opposite line No. 43.

Page 2 furnishes similar information for all of the companies but is based on rates proposed in the recommendation made by Secretary of the Treasury Morgenthau on [fol. 9862] March 3, 1942, and develops a total of $6,199,475 in column N, as shown on line 43, as contrasted with $4,362,229 based on the Act of 1941.

Page 3 of this exhibit explains certain adjustments used in the development of the data in the two preceding pages.

Q. I believe you were heretofore requested to give some information about the routine budget on page 9185 of the record?

A. Yes, sir. At that point of the record, Exhibit No. 204 was offered and I believe later accepted. This exhibit consisted of several pages comprising the 1942 routine construction and retirement budgets of Panhandle Eastern Pipe Line Company and subsidiary companies as they then existed, which included Illinois Natural alone. At the time the exhibit was introduced, there were not sufficient copies to distribute one to everyone represented in the matter and arrangements were made and additional copies sent to those who were short-changed. I believe they were mailed on April 1.

* * * * * * * *

Q. Now, will you explain Exhibit No. 244?

[fol. 9863] A. Exhibit No. 244 for identification is an itemized statement of budget items included in Exhibit No. 205. These show projects approved in the year 1941 which were unfinished on the dates of December 31, 1941, and February 28, 1942.

Exhibit No. 205 gave these totals of unfinished work at December 31, 1941, and February 28, 1942, of $7,433,000 and $5,396,000, respectively. The information in that instance, however, was simply totals, by company.

Exhibit No. 244 for identification identifies the specific budget items that made up the totals.

Q. Do you have available the amount of expenditures to date on Items 552R and 553R as shown on Exhibit No. 244?

A. Yes, I have.

Q. What is the amount of them?

A. The amounts of expenditures to February 28, 1942, on Budget Items Nos. 552R and 553R, being the Michigan-North Line and Michigan-West Line, respectively, were $1,605,000 for Budget Item No. 552 and $180,000 for Budget Item No. 553, a total of $1,785,000 against an original authorization or rather revised authorization of $5,145,000, and work is progressing constantly since that date.

Q. Mr. Burnham this morning testified with respect to certain items for which arrangements have recently been made. Do you have budget items on those?

A. That is, the proposed additions at Centralia and [fol. 9864] Tuscola stations?

Q. That is right.

A. Yes, there have been forwarded to the Secretary budget items Nos. 587 and 589, which were approved by all the operating officials on April 3, 1942, and they call for the construction of certain additions at the Centralia station and Tuscola station and are in the amounts of $166,400 and $164,600, respectively.

Q. That item has not yet been presented to the board?

A. It has not, but the witness' observation of the method in which the board has heretofore acted with respect to such items would not indicate to him anything but its approval.

Mr. Littman: Just a minute. I would like to ask that the latter part of that answer go out. It is just purely a hazard, a guess.

* * * * * * * *

Trial Examiner: That portion of the answer following the statement, "It has not," may be stricken.

* * * * * * * *

[fol. 9865] Mr. Littman: Mr. Watkins, referring to Exhibit No. 244, what do you mean by the term "Regular" and the term "Expansion" as used here on the first page of that exhibit?

The Witness: I believe we went through that before, didn't we, Mr. Littman?

Mr. Littman: Those terms are not used on your Exhibit No. 205 to which it refers.

The Witness: No, but we did cover routine construction and retirement budgets and expansion budgets.

Exhibit No. 205 to which it refers was a statement showing certain estimated construction expenditures for the year 1942 and did not purport to segregate such amounts as between regular and expansion programs. If, however,

counsel for the Commission were to refer to the last page of Exhibit No. 204, he would find there that such a segregation has been made.

Mr. Littman: By "Expansion" do you mean that these projects are for the purpose of enabling Panhandle Eastern to serve new markets?

The Witness: The witness has a rememberance that a question similar to that was put to him at the time Exhibits Nos. 204 and 205 were introduced, and his reply went to the general order that, so far as the actual production of new business for any of the total of $8,080,400, as shown by Exhibit No. 204, or either the $7,433,000 or $5,395,000, as [fol. 9866] shown by Exhibit No. 205, was concerned, that such a question would have to be directed to someone else.

Mr. Littman: I see. I believe Mr. Burnham probably covered that this morning.

Is my understanding correct that all of the expenditures shown in Exhibit No. 244 have been approved by the Board of Directors of Panhandle Eastern and Illinois Natural Gas Company and Michigan Gas Transmission Corporation?

The Witness: Michigan Gas Transmission Corporation, sir; I would hesitate to state too specifically about that. But my knowledge, however, of their budgetary procedure is such that I think it could be very safely assumed that such approval has been had. As to Panhandle Eastern and Illinois Natural, there is no doubt about that fact.

Mr. Littman: Now, do you know whether construction is actually in progress on all of these projects shown in Exhibit No. 244?

The Witness: If you will bear with me a moment—yes, the information I have with me seems to indicate that work is actually under way on all of them.

Mr. Littman: Have you received the pipe for all of these?

The Witness: I could not answer that question, sir.

. . . . . .

[fol. 9867] By Mr. Culton:

Q. Mr. Watkins, I believe Exhibit No. 245 is the next exhibit. Will you please explain that?

A. Exhibit No. 245 for identification is an agreement between Columbia Gas & Electric Corporation and Panhandle Eastern Pipe Line Company dated February 25, 1942, and is presented as an exhibit in this proceeding because of the fact that the purchase price to be paid to Columbia Gas & Electric Corporation for the stock and debt of Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation is subject to further determination.

Paragraph (e) of the agreement provides that a second installment be paid upon the purchase price, and then there is also a provision in the contract with respect to the treatment of the matters pertaining to income taxes for prior years.

The following exhibit, No. 246, if I may proceed with that, sir?

[fol. 9868] Q. If you will, please.

A. Exhibit No. 246 gives a preliminary determination of the second installment of the purchase price and, signified, consists of the net income of Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation for the month of January and 5/28 of the net income of the two companies for the month of February, the total, subject to further determination, being $77,462.02. Final determination of this installment cannot be made until the enactment of the Revenue Act applicable to the year 1942, if there be such an act, and I do not believe there is any question about the fact there will be one and it won't be be "hay".

Q. In other words, this shows the additional purchase price that will have to be paid over and above that which was paid at the time the stock and bonds were delivered?

A. Part of the original purchase price, sir, and as yet undetermined. Just what will happen to the tax side of that determination is something that no one can foretell at this moment.

Trial Examiner: Was this further settlement in contemplation when the Securities and Exchange Commission gave its approval?

* * * * * * * * *

The Witness: I think it was. At least, the contract [fol. 9869] which we are now submitting as Exhibit No. 245, I am quite positive, has the "blessing", perhaps, of the Securities and Exchange Commission.

By Mr. Culton:

Q. Now, will you explain Exhibit No. 247?

A. Exhibit No. 247 consists of a presentation of certain increased costs already authorized but not fully included in the company's expenses for the year 1941. Any explanation of this exhibit should be preceded by a statement that it is not here intended to portray, by any means whatever, all of the increased costs that were suffered by Panhandle Eastern Pipe Line Company and subsidiary companies for the year 1941.

This simply selects some of those increased costs which are not fully present in the operations for that year and shows the amount included in the operations for 1941 together with the remaining portion of the annual authorization which would have been present had such authorizations been made, shall we say, as of January 1, 1941.

Q. Will you please take those items up separately and explain them, please?

A. On May 1 and July 1, 1941, the field employees of Panhandle Eastern Pipe Line Company and Illinois Natural Gas Company were granted pay-roll increases having an annual amount of $22,800 as shown by Column (B), line 4, of Exhibit for identification No. 247. The amount of that [fol. 9870] authorization included in expenses for the year 1941 is shown in Column (C) to (L), inclusive, the remaining portions shown in Columns (M) and (N) opposite lines Nos. 3, 4, and 5, being $4,000, to be charged to Account No. 759-111, and $4,200 to be charged to Account No. 759-21, both accounts being those prescribed by the Commission in its Classification of Accounts.

Q. In other words, had the same scale which was effective at the end of the year been effective from the beginning

of the year, the additional amount which would have been included in the expense account for 1941 would have been $8,200 as to the first item?

A. That is correct, sir.

Q. Now, will you explain what the second item of $22,800 represents?

A. That item represents a change in pay-roll base granted to the employees of Michigan Gas Transmission corporation on July 1, 1941, and likewise amounted to $22,800 as shown by Column (B) on line 7, the amount of such authorization not fully included in expense for the year 1941 being $11,400.

Q. Which would be from January to June, inclusive, is that correct?

A. That is correct, yes, sir, and would have been charged to the accounts shown in Columns (M) and (N) in the amount shown in Column (N) of this exhibit.

[fol. 9871] There is no similarity between the two amounts of $22,800 shown in Column (B). It is just a mere coincidence.

Q. Now, will you explain the third item?

A. As a result of the change of hours in the work week of the field employees of Panhandle Eastern Pipe Line Company and Illinois Natural Gas Company made about the 1st of August, 1941, the company obligated itself to an annual increase of $92,400, as shown in Column (B) opposite line No. 13. Of this amount, $53,900 had not made its appearance in the expense accounts of the company for the year 1941. Charges for these amounts are being currently made to Accounts Nos. 759-111 and 759-21 of the Classification of Accounts prescribed by this Commission.

Q. Will you next explain the fourth item?

A. There has been considerable discussion, I believe, in the record about the necessity for and advisability of emergency protection of the facilities of not only Panhandle Eastern Pipe Line Company and Illinois Natural Gas Company, but Michigan Gas Transmission Corporation as well. We all know and regret exceedingly the occurrence that took place early in December, 1941, that gave rise to this necessity.

Q. It is protection against action by fifth or sixth columnists, or anybody else who is acting against the governmental interests at this time, is that it?

A. Not only that, but to insure continuity of service [fol. 9872] and it is just general, all-round, good business to have protection against the causes you mentioned.

Q. That includes the hiring of a considerable number of guards, does it?

A. It does, sir, and it seems to me it is something on the order of 120. I am not sure of that amount. I know Panhandle Eastern has in the neighborhood of 85 or maybe 90, the remainder being on the property of Michigan Gas Transmission Corporation.

That information is already in the record.

Of the total amount authorized in Column (B) opposite lines 18 and 19, there was $149,500 and $72,000 not present in the accounts at December 31, 1941. These amounts are being currently incurred and will be present in the expense accounts hereafter.

Q. Will you explain the next item, that of "Rate Case Expense"?

A. The combined annual amortization of Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation for costs actually incurred and those estimated to complete this proceeding is anticipated to be amortized on the basis of $70,000 per year. Whether or not the $350,000 shown opposite line 25 in Column A of Exhibit No. 247 for identification is actually incurred, it is the company's present intention to amortize the costs on a basis of $70,000.

[fol. 9873] Michigan Gas Transmission Corporation began its amortization in July, and, in the year 1941, charged to expense $6,000. Panhandle Eastern did not begin its amortization until January 1, 1942, and, beginning with the month of March, the amortization of those two companies, the monthly amortization, will be synchronized with an annual amount of $70,000.

Q. How was Panhandle Eastern's expense carried prior to the 1st of January, 1942?

A. It was carried in a deferred account pending determination as to the proper procedure with respect to its amortization.

Q. You have a subsequent exhibit showing how you arrived at the $350,000, do you? A. That is correct.

Q. Now, will you explain the last item in Exhibit No. 247?

A. If Michigan Gas Transmission Corporation had been a subsidiary of Panhandle Eastern Pipe Line Company at the time Panhandle Eastern adopted its pension plan, Michigan Gas would likewise have participated.

We are engaged at this very moment in working out a plan for the inclusion of Michigan Gas Transmission's employees under Panhandle Eastern's group annuity contract. The cost of the inclusion of the eligible employees of Michigan Gas Transmission Corporation under that [fol. 9874] plan and to provide benefits which have been determined should be provided for them is $30,000. We have obligated ourselves not only to the insurance company but to the employees as well, as to this particular matter. Now, when I say obligated, I am not speaking for the Board of Directors. This amount has yet to be approved by the board but I have no doubt that it will be approved.

Q. The plan is just to put the employees of Michigan Gas Transmission Corporation on a par with the employees of Panhandle Eastern and its subsidiaries, that is correct, is it not?

A. Substantially on a par. We bring them under the same umbrella and we will give them the same protection that employees of Panhandle Eastern may receive in the future.

Mr. Lee: Is that in addition to the Social Security benefits they receive?

The Witness: Yes, sir.

Mr. Lee: What is the limit of earning to entitle an employee to come within it?

The Witness: May I rephrase your question, please? I think perhaps I can answer it better.

The group annuity plan of Panhandle Eastern, which is expected to be extended to Michigan Gas Transmission, is available to all employees.

Mr. Lee: Regardless of their earnings?

[fol. 9875] The Witness: That is right, but it is based on their earning power. It picks up an employee after a certain specified period of service and provides benefits for him on a certain basis up to the age of 40, and, after the age 40, on a different basis. It is the so-called non-contributory plan. The employees have no vested rights whatever prior to 15 years continuous service and do not have any vested rights whatever if they leave company employ prior to that time.

Mr. Lee: As I understand it, everybody working for Panhandle Eastern, regardless of whether they earn $2,000 a year or $40,000 a year, gets a pension in addition to Social Security benefits, to which the employee makes no contribution. The rate payer pays the whole shot, is that right?

The Witness: I would not say that they get a pension, Mr. Lee, but one is being provided, an indefinite amount payable at some indeterminate time in the future.

Mr. Lee: Regardless of the earning power of the employee?

The Witness: There is a limit to the total amount of pension, if that is what you are getting at.

Mr. Lee: What I want to get at is, an employee earning $8,000, $9,000, $10,000, or $40,000 is a beneficiary without making any contribution?

The Witness: That is right.

Mr. Lee: It is all saddled on the rate payer?

The Witness: I do not know whether it is saddled on [fol. 9876] him or not but it is a part of the company's legitimate expenses.

Mr. Lee: Does the employee make any contribution toward it?

The Witness: It is a non-contributory plan.

Mr. Lee: What does it cost the rate payer to carry this system a year?

The Witness: If you will look at Exhibit No. 190, I believe it is, you will find some information with respect to that, opposite lines 12 and 13.

* * * * * * * *

[fol. 9878] By Mr. Culton:

Q. Will you please explain No. 248?

A. Exhibit No. 248 is a pro forma consolidated income account for the year ending December 31, 1941, for Panhandle Eastern Pipe Line Company and subsidiary companies and, as shown by Note A, includes the activities of Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation, and is prepared on the basis that the financing of the cost of the acquisition of the outstanding stock and indebtedness of Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation resulted in annual interest costs of $300,000, and which has consummated on February 6, 1942, had been effected January 1, 1941, that the interest expense applicable to obligations of Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation to Columbia Gas and Electric Corporation, their then parent, would have aggregated the same amount had the Panhandle Eastern Pipe Line Company been the parent company and that dividends had been paid by Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation to the extent of their net income for the year and after giving effect to the estimated increases in Fed-
[fol. 9879] eral income taxes, which would have resulted had such interest and dividends been paid by Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation, to Panhandle Eastern Pipe Line Company to the full extent of their net income and to the inclusion of certain authorized increased costs, not fully included in expense for the year 1941.

On that basis, the exhibit for identification No. 248 shows in Column E opposite Line No. 29, net income amounting to $5,342,361.60.

Q. Now, have you made a similar computation and prepared a similar consolidated account adjusted to give effect to the rates proposed in Secretary Morgenthau's recommendation? A. I have, sir.

Q. Is that Exhibit 249? A. It is.

Q. Will you please explain that exhibit?

A. Exhibit 249 for identification has been prepared in exactly the same manner as Exhibit No. 248 for identification, except that the amount of Federal income and excess profits tax used in Exhibit No. 249 are those based on the rates proposed in the recommendation of the Secretary of the Treasury Morgenthau on March 3, 1942, before the House Ways and Means Committee, and varies from Exhibit No. 248 for identification in that the net income shown in Column E of Exhibit for identification [fol. 9880] No. 249 opposite Line No. 29 is only $3,550,590.72 as contrasted with $5,342,361.60 as shown in Column E, line 29, of Exhibit No. 248.

Q. A difference of how much? Will you make a computation? A. $1,791,770.88.

Q. Was this computation evidenced both by Exhibits 248 and 249? Did you take into consideration the increases in company expenditures reflected in Exhibit 247?

A. I did, yes, sir.

Q. Now, will you explain Exhibit 250?

A. Exhibit 250 for identification is a statement of rate case expenses in connection with Federal Power Commission consolidated dockets Nos. G200 and 207, which includes actual cost to February 28, 1942, and estimated cost to complete. It shows in Column A the nature of the expense, in Column B the actual expense incurred to February 28, 1942, estimated cost to complete in Column C, and the total cost in Column D. The actual cost to February 28, 1942, as shown by a long line 13 of Column B is $214,898.95, estimated cost to complete, as shown on Line 13, in Column C is $135,101.05, with a total cost in Column D opposite line 3, of $350,000.

There were at February 28, 1942, certain costs incurred that had not yet been submitted to the company. Those [fol. 9881] costs are included in the estimate shown in Column C. The amount shown opposite the general heading such as "Engineering" includes both fees and traveling expenses.

Traveling expense has been a rather important item in this proceeding.

Q. That is largely due to the circumstance that the hearings will be held at a considerable distance from where the company's offices are and where the witnesses reside? A. That is true, yes, sir.

* * * * * * * *

Mr. Littman: Mr. Watkins, the figures that appear in Column B of Exhibit 250 represent the amount actually paid to February 28, 1942?

The Witness: Column B?

Mr. Littman: Yes.

The Witness: Mr. Littman, they were either paid or in the process of being paid. Now, our accounting routine is such that if we get a statement prior to the closing of, shall we say, February work, we will actually record that in February work, although our payment might not necessarily be completed until some time during the month of March. Do you understand that, sir?

Mr. Littman: Yes, sir.

The Witness: So that the expenses actually incurred for which statements have been presented, although I [fol. 9882] shouldn't feel it proper for me to say they actually had been paid prior to the 28th of February, because some of them, no doubt, were in the process of payment during the early part of March. There is no duplication between the amount shown in Column B and Column C, however.

Trial Examiner: I assume this statement of rate case expenses includes a proration of salary employees' time.

* * * * * * * *

The Witness: No, sir, it does not.

Trial Examiner: So that it does not include any charge for the time of yourself and others who are on these companies' payrolls?

The Witness: That is correct, sir, except to the extent that any overtime incurred by the rank and file, or where it became necessary to employ additional employees, that amount is shown opposite Line No. 7, under the general

heading "Overtime and Additional Employees," but there is no portion of the general salaries of official force or the department heads or the staff, generally, even when they were employed in overtime work, of which there has been a tremendous amount in connection with this matter.

Trial Examiner: To that extent, then, your statement of rate case cost is inadequate and incomplete?

[fol. 9883] The Witness: That is quite true, sir.

By Mr. Culton:

Q. This item of overtime and additional employees: has any of that been charged as a part of regular operating expense?

A. No, sir, no part of it. I want to be clearly understood with respect to that. The additional employees were employees engaged, not to do the work of the regular force who were working on exhibits, and so forth, for presentation, but they were additional employees brought in for the purpose of preparing material for this particular matter.

We had quite a number of artists, for instance, to work on a great number of the maps and so forth prepared during the early stages.

Now, the overtime portion shown opposite No. 7 is the overtime of certain of the staff, the rank and file, in such instances that they had to perform overtime services to keep up with their regular work, and when I say "keep up," that is correct, because we haven't been able to keep up with our regular work, by a great deal.

Trial Examiner: Have you kept records to enable you now to prorate the salaried expense which was necessarily incurred in the rate case matters?

The Witness: I am sorry, sir, we have not.

Trial Examiner: Have you any intention to make such [fol. 9884] a proration?

The Witness: As far as this witness knows, the company has no such intention, sir.

Trial Examiner: Although it is a large sum?

The Witness: There is no question of that, sir. It is a tremendous sum.

Mr. Littman: Those amounts are included in your regular operating expenses for the year 1941, are they not?

The Witness: Yes, that is quite correct.

Mr. Littman: Do I understand that none of the months shown in Exhibit 250 are duplicated or included in any of the operating expenses of the companies as shown on their books for 1941?

The Witness: I don't know how we could indicate them, Mr. Littman, and have our books in balance.

Mr. Littman: I merely wanted the record to be clear on it. I understood you to say that these were over and above the—

The Witness: There is no duplication.

Mr. Littman: That is, these were all carried in the deferred account for a time, or most of them?

The Witness: Yes, a specific work order in which we have gathered the expenses incident to these proceedings. Charges made to that work order have not been distributed to regular expense accounts.

[fol. 9885] Mr. Littman: And in so far as your employees did work from time to time on various phases of this rate case, the amounts expended in that connection would, of course, be included in the regular expenses?

The Witness: Well, it could be, Mr. Littman, that in a very few instances we may have taken a few employees, a very few, and assigned them specifically to the preparation of material for the rate case, in which event their salaries would have been charged on the work order from which the information shown in Column B of Exhibit for identification 250—but I don't remember any of them, any such employees, any such segregation.

Trial Examiner: What is the fact as to the method of charging the expense accounts of salaried employees who have been engaged in this proceeding?

The Witness: As to whether or not there has been any change, sir?

Trial Examiner: As to whether or not they have been charged to operating costs or segregated to the account of the rate proceeding?

The Witness: Only to the extent that employees have incurred overtime.

Mr. Culton: I think the Examiner has reference to expenses to Washington, for example.

Trial Examiner: I stated traveling expenses.

* * * * * * * * *

[fol. 9886] The Witness: Any traveling expense incurred specifically in connection with this rate proceeding has been charged to the deferred account from which these costs that we now have before us in 251 was accumulated.

Mr. Littman: In other words, they are included in Exhibit 251?

The Witness: If they could clearly be shown as being such expenses. Now, some of us officers have to jump hither and yon on different occasions, and so forth, and it could very well be that some of our expenses have not even gotten in here.

Mr. Littman: Mr. Watkins, I would like to have you furnish for the record an itemized statement of these rate case expenses, showing the amounts and the individuals to whom they were paid. Could you do that for us?

* * * * * * * * *

The Witness: How long do we have for the development of that information, sir?

Mr. Littman: How long would it take?

[fol. 9887] The Witness: Possibly a week, ten days, maybe two weeks.

Mr. Littman: Let me suggest, then, that we reserve as Exhibit No. 250-A, a place for this supplemental exhibit to

be inserted when it is received by the Commission, even though it may be received after the hearings on this phase of the proceeding be closed.

* * * * * * * *

Trial Examiner: I think that is an entirely satisfactory arrangement, and I think it is much preferable to let certain supplemental data, which may be required, come in after the completion of the hearings.

* * * * * * * *

[fol. 9889] Mr. Culton: Mr. Examiner, some time back we were requested to produce a letter written by Mr. P. McDonald Biddison to Mr. J. D. Creveling relative to the purchase of the various properties from Columbia Gas and Electric Corporation and Ohio Fuel Gas Company. This is the letter, isn't it, Mr. Watkins?

[fol. 9890] The Witness: Yes, sir, that is an executed counterpart of the letter.

Mr. Culton: We ask that it be incorporated in the transcript, and we understand that counsel has no objection.

Mr. Littman: No objection.

Trial Examiner: Very well, it may come in at this point.

(The letter last above referred to reads as follows:

"Washington, D. C.,
"November 24, 1941.

"Mr. J. D. Creveling, President,
"Panhandle Eastern Pipe Line Company,
"90 Broad Street,
"New York, N. Y.

"Dear Sir: Since your inquiry to me on November 13, 1941, I have secured and examined data on the property presently proposed to be acquired by Panhandle Eastern Pipe Line Company from Columbia Gas and Electric Corporation and The Ohio Fuel Gas Company, those properties and the approximate purchase prices being:

	Approximate proposed Purchase Price
Stock and Debt of Michigan Gas Transportation Corporation	$10,700,000
Stock and Debt of Indiana Gas Distributing [fol. 9891] Corporation	145,000
Certain Properties of The Ohio Fuel Gas Company including: Line Z50 from its intersection with Line Z58 to King Station (Indiana), approximately 32.825 miles of 16". Line Z58 from its intersection with Line Z50 across Ohio-Indiana State line to its end at a point near Richmond, Inc., approximately 12,808 miles of 10". Line Z72 from its intersection with Line Z50 to its end at Winchester, Indiana, approximately 7.187 miles of 6" and 6⅝". Together with Measuring Station Structures designated as King, Western-Lynn, Western-Hollandsburg, Western-New Paris, and Measuring Station Equipment and their connections to the foregoing lines designated as Western-Lynn, General Glass, Ohio-Indiana, Indiana Central Natural, State Line, Western-Hollandsburg, Western-New Paris	440,000
Total	$11,285,000

It is my opinion that the proposed purchase prices are fair prices for Panhandle Eastern Pipe Line Company to pay for these properties.

(Signed) P. McDONALD BIDDISON,
Consulting Engineer."

* * * * * * * * *

[fol. 9893] Recross Examination

By Mr. Littman:

Q. Mr. Watkins, I want to ask you a few questions about a matter that we have discussed on the record heretofore, relating to certain rate schedules that were forwarded to this Commission for filing, but which have not as yet been approved by the Commission.

You recall, do you not, numerous references to those matters?

A. I certainly do.

Q. Can you state whether it is a fact that if those numerous rate schedules which have been forwarded for filing with this Commission, and which have not yet become effective, had been in effect when forwarded to the Commission for filing in 1941, whether the revenues derived from those sales under those schedules would have been any different or would have been substantially differ-[fol. 9894] ent from those actually derived under the present schedules. Do you follow my question?

A. That is a rather broad question for me to answer, Mr. Littman, without referring to that entire file which is probably, by this time, more than an inch thick, but if I may answer it in a general way, if that proves satisfactory, perhaps we can dispose of the question that seems to be bothering you at the moment.

My present recollection is that had those filings been in effect during 1941—is that the period that your question was directed to?

Q. Yes, that is when they were filed.

A. Had they become effective in the ordinary and customary routine after their filing in 1941, there would not have been a very great difference in the amount of revenue that Panhandle Eastern received.

There was some slight change anticipated, statements of all of which are in the possession of the Commission with that tremendous bulk of stuff that has been filed concerning those matters.

My remembrance is there is an individual statement for each individual portion of those filings, that shows what the anticipated effect for the next calendar year might be, and that that has been filed quite some time, and, [fol. 9895] as my memory goes at the moment, the very last thing we have from the Commission formally concerning these matters is an acknowledgment of the receipt of that material, and stating they would take it under advisement.

Q. In other words, it is our best recollection at this time that had these proposed rate schedules been in effect in the year 1941, as filed, there would have resulted no substantial difference or change in revenue to Panhandle Eastern.

A. That is my present recollection. I take it that Counsel's question—and I am certain the witness' answer—assumes that exactly the same quantity of gas would have been purchased.

Mr. Littman: Yes indeed.

Just one moment.

Mr. Culton: Let me ask this and see if I am correct.

By Mr. Culton:

Q. Those contracts were merely changed in form for receiving the same volume of money, were they not?

A. That is true, Mr. Culton. If we look at the matter from the standpoint of Panhandle Eastern before ownership of Michigan Gas Transmission Corporation, there was probably a very slight differential in favor of Panhandle Eastern, but since the ownership of Michigan Gas Transmission is now vested in Panhandle Eastern, the differential would have washed out in consolidation.

[fol. 9896] Q. On a consolidated income account, there would have been no difference whatever?

A. Assuming the same exact quantities of gas purchased. That is my present recollection.

By Mr. Littman:

Q. Mr. Watkins, you, I presume, had some considerable part to play in the preparation of the supplemental information attached to the prospectus of Panhandle Eastern Pipe Line Company here identified as Exhibit No. 233, did you not?

A. I am afraid I did not.

Q. Did you have anything to do with it at all?

A. About all I had to do with the supplemental information shown on page 53 was to take care of the mechanical work involved in having it inserted in the proper place in the prospectus and seeing that the various distributing bodies who had reason to distribute the prospectus were supplied with their required number of copies for dis-

tribution. I had nothing whatever to do with the preparation of that material nor with the preparation of the material shown on the front cover under date of April 2.

Q. I have not had time as yet to go through this prospectus, Exhibit No. 233, but I will ask you whether there is anything contained in this exhibit or the supplemental in- [fol. 9897] formation contained therein which speaks as of approximately April 2, 1942, whether Exhibit 233 makes any statement regarding the effect upon the business of Panhandle Eastern and subsidiary companies by reason of War Production Board Order No. L-31.

A. If the witness remembers your statement correctly, it was directed to a date of April 2, 1942. I don't believe you quite meant that, did you? Is your question directed to the prospectus as a whole or to the rider attached on the cover sheet and the rider attached to page 53.

Q. The rider attached to the first page is dated April 2, 1942, and the rider attached to page 53 is dated April 4, 1942.

A. And those are the two items to which your question refers?

Q. Yes.

A. There doesn't seem to be anything in either of those referring to L-31.

* * * * * * * *

[fol. 9898] C. H. M. Burnham a witness heretofore duly sworn, resumed the stand, and was examined and testified as follows:

Cross-Examination.

By Mr. Littman:

Q. Mr. Burnham, define the term "capacity" as you have used it in Exhibits Nos. 229 to 231, inclusive.

A. Capacity, as used in those three exhibits refers to the ability of the pipe line system to make those deliveries as specified day in and day out. When I say "deliveries" I mean deliveries at the sales points. Which deliveries total to the quantity shown on the various studies.

Q. That is, the ability to deliver day in and day out, the amount of 338,000 M. c. f., as shown on Exhibits 230 and 231, and 307,000 M. c. f., as shown in Exhibit 229; is that right? A. That is right.

Q. Now, do you mean by that, the ability to make those [fol. 9899] deliveries with or without the standby equipment which is set forth on the fifth page of each of Exhibits 229, 230, and 231?

A. At normal load factors, those deliveries can be made without the standby equipment shown on the last page of each exhibit.

Q. And what do you mean by "normal load factors"?

A. Load factors approximating 70 percent.

Q. What was the load factor of the Panhandle Eastern System during the year 1941?

A. It was, to the best of my information, very nearly 67 percent.

Q. Mr. Burnham, I have just one more question. Will you please define the term, "firm basis" as you have used it in Exhibits 220, 230, and 231?

A. Firm basis used in that connection means after having interrupted readily interruptible sales.

Q. Isn't there some little discrepancy between your definition of that term, as just given, and certain responses to some of Mr. Lee's inquiries this morning. If there are any, and I think the record could be clearer, I wish you would explain.

A. I don't believe there is any discrepancy. What it really amounts to is this: that all our special and industrial sales are made on an interruptible basis. That is, the [fol. 9900] contracts specify that these sales may be interruptible in the event of a shortage of gas for domestic customers.

Q. Just right there, if I may interrupt. All industrial sales are—

A. (Interposing) Special industrial sales.

Q. All special industrial sales are contracted on an interruptible basis.

A. That is correct.

Q. What do you mean by special?

A. Well, the pipe line company make direct contracts with industrial customers. We call those, of course, special industrial contracts. Some of the distributing companies make two kinds of contracts with industrial customers. One of them which involves the interruptible clause and another which might be sold on a firm basis.

Q. Now, are those differentiated as between special and not special, the latter class?

A. Well, those that are brought to us for clearance, and to determine whether we have sufficient quantities of gas to supply the proposed industrial customer, are named special industrial.

Q. Those are ones that are made at a kind of special price, too?

A. Well, I think the rate filings specify the prices, if [fol. 9901] I am not mistaken. At least, the filings that we have with the Commission specify the division of the revenue obtained from that sale.

Q. Well; the firm industrials—that is, the noninterruptible industrial sales, are, of course, at a higher rate than the interruptible customers?

A. That is correct.

Q. Now, as I understand your testimony, all of the direct sales—that is, the sales made directly without the intervention of a distributing company—that is, sales made directly to industrials by Panhandle Eastern, are made at all times on an interruptible basis?

A. That is correct.

Q. Do the sales which you show, for instance, in Exhibit 229, page 1, include any sales to interruptible customers or to customers that you have designated as "special industrials"?

A. The fact of the matter is that total quantity of sales on that page and, in fact, on the first page of the other three exhibits—

Q. (Interposing) Of the other two exhibits.

A. (Continuing) —of the other two exhibits.

Q. Exhibits 230 and 231?

A. Yes. (Continuing) —does not specify the distribution of this gas whatever. As I testified yesterday, I was [fol. 9902] handed a problem to determine how much gas a completely looped system with the present power would be capable of handling or delivering on the peak day, and I was also given the problem to determine the maximum capacity that might be developed if we fully powered a completely looped system. So these quantities of gas shown here, as the delivery capacity don't necessarily allocate this gas to any one customer.

Q. In other words, not necessarily to firm customer?

A. That is right.

Q. In other words, these are the deliveries that you could make on a peak day if you had the capital additions which you have estimated in these exhibits?

A. That is correct.

Q And could make every other day?

A. Yes.

. . . . . .

By Mr. Lee:

Q. Do I understand that your present average load is 67 percent, did you say?

[fol. 9903] A. I made a rough calculation the other day and I think it came out 67 percent load factor.

Q. Now, then, these exhibits that Mr. Littman has just been interrogating you about, they contemplate a 90 percent load factor.

A. Mr. Hinton persented some exhibits which contemplated a capacity factor as high as 90 percent.

Q. Well, now, the idea I wanted to get straightened out in my mind is this: your exhibits presented here today contemplated the same as Mr. Hinton, a 90 percent daily load factor.

A. My exhibits do not contemplate any load factor. They are merely to show the investment required and the tons of pipe required to meet certain peak day deliveries.

Q. But it isn't peak day, it is to maintain every day a certain amount of delivery.

A. Yes, the calculations are so carried out that if it will meet one day, it will meet several days.

Q. Yes, that is right, but what will be the load factor on the then existing system?

A. If you ran at the same capacity every day, it would be a hundred percent load factor.

Q. That is what I am getting at.

So you have presented exhibits here that contemplate [fol. 9904] an increase from an average of 67 percent load factor, as it is today, to a 100 percent load factor?

A. No, not necessarily.

Q. Why not?

A. My exhibits have nothing to do with load factor.

Q. I understand, but you agree, don't you, that under the hypothesis you have set up, a daily delivery of a fixed

amount under the augmented increased system, under the expenditure you proposed, would mean a 100 percent load factor?

A. If you delivered the same quantity of gas every day, then or now or last year, it would have been a 100 percent load factor.

Q. And that is what you contemplate under these exhibits, don't you? A daily delivery of a fixed amount?

A. I don't know what you exactly mean by that, but we do design for a daily delivery of a fixed amount on a continuous basis.

Q. Exactly. And that, in the last analysis, would mean a 100 percent load factor, wouldn't it?

A. If it were experienced, it would result in a 100 percent load factor.

Q. Certainly. It is all assumption, anyhow, but if the supposition were carried out, it would be a hundred percent load factor, and you contemplate a situation, as I understand it, your proposed expenditures and increased [fol. 9905] capacity, to accomplish what is set forth in the exhibit, practically one-third increase over your present plant and facilities; is that right?

A. I contemplate a design which would be capable of handling considerably more gas than we now handle, and considerably more gas than we have handled, on a lesser capacity factor.

Q. Yes; but measuring on a low factor basis, it would be a ⅓ increase, the difference between 67 and 100 percent, wouldn't it?

A. I would call that a 50 percent increase in load factor.

Q. Difference between 67 percent and 100 percent?

A. Yes.

Q. Well, 67 out of a hundred is ⅔.

A. And ⅓ is exactly 50 percent of ⅔. ⅓ increase would be a 50 percent increase.

Q. That is right. So you contemplate an expenditure that will double your facilities; is that right?

A. Your word "contemplate" bothers me.

Q. You use your own wording. That is what it amounts to, doesn't it?

A. We have set forth here estimated expenditures which, if incorporated in our plant account, would be

capable of developing capacities that I have shown on these [fol. 9906] three studies, and if the 338,000,000 were carried on a continuous basis, each and every day of the year, namely, on a 100 percent capacity factor, naturally our capacity factor or load factor would be increased approximately 50 percent.

Q. Now, you don't set it forth just as a theory or a possibility, you set it forth as what you say you should have in order to get the return to enable you to make the expenditures to get that; isn't that your purpose here?

A. I haven't testified a word about return.

Q. I know you haven't. You have carefully avoided that. You haven't told us anything about that, but you do seriously come here as a witness and you seriously make this proposal because you seriously say that is what you should have and that is the amount of money you need to create it.

A. That is correct.

Q. Yes, that is right, that is your purpose here, isn't it?

A. I am serious about this matter, if that is what you want to know.

Q. And yet, while you are serious about it, you don't for one minute think that you are going to be able within in next year or two, in view of the conditions that obtain, in getting material, you don't think, really, now, seriously and honestly and in an ordinary common sense method, [fol. 9907] that you are ever going to achieve it, do you?

A. We are getting materials right today for carrying out a lot of our projects.

* * * * * * * *

Trial Examiner: Mr. Burnham, coming back to your exhibits 226 and 227, to which Mr. Lee has just referred, or you, in your answer. Have you those exhibits before you?

* * * * * * * *

[fol. 9908] The Witness: Those were Mr. Hinton's exhibits, aren't they?

Trial Examiner: Yes, they are.

The last two lines of the captions of those exhibits are unpunctuated, and read, in one instance: 307,000 M.c.f. continuous daily sales capacity operation at 90 percent capacity factor, and 227 is 338,000 M.c.f. at 70 percent capacity factor.

The Witness: That is correct.

Trial Examiner: Is it necessary to punctuate those two lines at any point with a comma to make them accurate?

. . . . . .

Mr. Culton: I am just about old fashioned enough, like the Examiner, to believe in a comma after that first word "capacity."

Trial Examiner: All right. That is where you would set your comma?

Mr. Culton: Yes, sir.

Trial Examiner: After the word "capacity"?

Mr. Culton: I know they don't use commas any more like they used to.

[fol. 9909] Trial Examiner: Would you agree with Mr. Culton that the placing of the comma in those two lines might affect the meaning?

The Witness: I don't know that it would affect the meaning, but I think it clarifies it.

[fol. 9910] Trial Examiner: One more question: After you have used the first line, how do you affect the meaning by adding the second line of the words which I have just quoted?

The Witness: Well, as Mr. Hinton testified, to get annual volumes, why, the second line is the determining thing. Annual volume sold.

Trial Examiner: That is, on the assumption that you will be unable at any time to operate continuously at 100 per cent capacity?

The Witness: The assumption, in the case of 226, is that it will be operated at 90 per cent of maximum capa-

city. The average day would be 90 per cent of maximum capacity.

Trial Examiner: When you have stated your pipe capacity at maximum, is that, in the case of Exhibit 226 307,000 M.c.f. each day in the year? Is that what you are talking about: a capacity to deliver continuously, day after day, 307,000 M.c.f. every day in the year?

The Witness: That is the capacity.

Trial Examiner: That is your maximum capacity?

The Witness: That is right.

Trial Examiner: Now, your second line, then, assumes that capacity and also assumes a market limitation, or, in other words, assumes that the market will absorb only 70 per cent of that capacity: is that right?

The Witness: In the case of 227?

[fol. 9911] Trial Examiner: In the case of exhibit for identification 226, page 1.

The Witness: 226 specifies 90 per cent. I beg your pardon, sir.

Trial Examiner: I beg your pardon also.

Mr. Littman: Of course, exhibits 225 and 226 are referring to operations and maintenance expenses, as distinguished from capital expenditures on pipe lines, wells, and so forth.

Trial Examiner: Yes, I understand, but we are referring only now to the contemplated service, to the contemplated capacity of the pipe line, which is stated in this phrase—

Mr. Littman: (Interposing) Contemplated use, as I understand it.

Trial Examiner: Very well.

Mr. Littman: Not contemplated capacity.

Trial Examiner: I simply want to get straight on some of these phrases that are being used and to know what is meant and what the effect is of assuming a maximum de-

livery, a maximum possible delivery, and then a maximum sales outlet, so to speak.

Mr. Culton: There is this distinction, I think, Mr. Examiner: I am not an engineer, but these engineers present may bear me out.

Note the use of the word "capacity factor" here, rather [fol. 9912] than load factor.

Load factor, as I understand it, is the average day to the highest day of a sale to a customer, for instance: is that correct, Mr. Burnham?

The Witness: Yes.

Mr. Culton: Whereas this deals with capacity factor. In other words it would be the relationship of the average day to the absolute capacity of the line: is that correct, Mr. Burnham?

The Witness: That is correct.

Mr. Culton: So that there is some difference between load factor, with respect to a particular customer, and capacity factor with respect to the line as a whole.

Mr. Littman: As a matter of fact, very frequently engineers use the term "load factor" when they refer to what you call "capacity factor" here?

The Witness: Sometimes it is loosely referred to by either term.

Trial Examiner: Well, your prospective betterments are intended to provide—

The Witness: (Interposing) Certain maximum capacities.

Trial Examiner: (continuing) —Certain maximum capacities.

Now, your operating expense depends on how much you actually handle?

[fol. 9913] The Witness: Correct.

Trial Examiner: Capital investment is determined by the capacity provided?

The Witness: Correct.

Trial Examiner: And your operating expense accounts in contemplation depend on the accuracy of your estimates of use, actual sales?

The Witness: Correct.

Trial Examiner: May I ask Mr. Watkins a question?

Mr. Culton: Yes.

Trial Examiner: You have used, in several of your exhibits, including the last one you submitted, the words "pro forma".

Will you please define those for the record, Mr. Watkins?

Mr. Watkins: Well, sir, those words bothered your witness as much as they apparently bothered the Trial Examiner. Where those words were used in connection with any of the exhibits that have been introduced through this witness it was the intent to show by means of tables the conditions that would have existed had the circumstances explained by the notes in those exhibits, or made a part of them, been present throughout the entire period.

I don't know whether that is sufficiently clear to you or not, sir.

[fol. 9914] Trial Examiner: Is it fair to infer from that statement that in every case where you have attached the words "pro forma" to some exhibit, that in part it is hypothetical or based upon assumed facts, the existence of which you do not guarantee?

Mr. Watkins: I would rather we would relate it to the latter part of your suggestion, sir, rather than the thinking of it in the nature of something that is hypothetical.

It is, if we may put it this way, a combination of information or facts extracted from the books and records of the companies combining certain conditions that are now present, but which were not present, in whole, in the books and records for the periods for which the ex-

hibits have been prepared, and includes, in addition to that, certain adjustments made, based on, for instance, the recommendations or proposal by the Secretary of Treasury of March 3, 1942, with respect to the revenue for 1942.

They purport to show, for Panhandle Eastern and its subsidiary companies as those companies now exist, what would have been the material that would have been included in similar exhibits had it been possible to prepare such exhibits under such conditions.

* * * * * * * * *

[fol. 9916] Mr. Littman: Mr. Burnham, you will recall that when you first took the witness stand and were first cross-examined by me, I made a number of requests asking that you furnish certain data and information: do you recall that?

The Witness: Yes, I recall that.

By Mr. Littman:

Q. I hand you a document entitled "Panhandle Eastern Pipe Line Company and subsidiary companies—additional information requested in re Exhibit No. 17," and ask you whether this was prepared by you in response to my numerous requests which were in connection with your exhibit No. 17.

A. Yes, prepared by me and with the help of various departments and members of the organization in Kansas City.

* * * * * * * * *

(The document referred to was marked for identification as Exhibit No. 252.)

* * * * * * * * *

[fol. 9918] (The Document Referred to Was Received in Evidence as Exhibit No. 252.)

* * * * * * * * *

Redirect Examination

By Mr. Culton:

Q. Mr. Burnham, you were asked about the meaning of some words.

What were you referring to in the use of the words "continuous daily capacity"?

A. One might infer that to mean day after day, but from a practical standpoint that means a period of 15 or 20 days, I would say, from a standpoint of pipe line operation.

Q. Why is that?

A. Well, it would be physically impossible to operate a system at the same load every day, particularly if there are no standby units provided in that system.

[fol. 9919] Q. In order to operate continuously on any of the bases which you have mentioned it would be necessary for you to have this additional standby equipment which you referred to: is that correct?

A. Indeed it would.

Q. If you operated the system at the present 250 million continuously, would it be necessary to have that same standby equipment?

A. Yes, it would.

Q. Do you know whether any of the pipe line companies do keep standby equipment available where the loads are high load factors, or high capacity factors?

A. Certain pipe line companies differ with the policy established by Panhandle Eastern Pipe Line Company in the matter of standby units.

The Panhandle Eastern Pipe Line Company, to date, has not adopted the policy that it should have a standby unit in every station.

It believes in properly maintaining these units and having them ready for any long, hard pull, such as might occur over a week or ten days.

Other companies, as I have just indicated, do sometimes provide an extra unit which is always available in case of a breakdown.

Now, as I mentioned a while ago, it would be physically [fol. 9920] impossible to operate at a hundred per cent capacity factor under any condition.

That would infer exactly the same quantity of gas each and every day. Such things do not happen.

Q. It is really rated capacity, then, when you refer to a hundred per cent capacity, isn't it, whether it is actual practical capacity or not?

A. That would be one way of terming it, so, as one increases his capacity factor, the need for standby units becomes greater and greater, until a capacity factor, as I testified yesterday, of something like 90 per cent makes it practically necessary that each and every compressor station be provided with a standby unit.

Now, there are other considerations, too, which would indicate whether or not a standby unit should be provided, and I have in mind, on the Michigan Gas Transmission System, the compressor station which is the first station west of Detroit, Edgerton compressor station; it consists now of five 1300-horsepower Cooper-Bessemer gas compressor units, with the necessary appurtenant equipment.

If, on a cold day, during which period the load would be at or near peak requirements, if one of those engines should fail for some reason, it is apparent that one fifth of the available capacity at Edgerton compressor station would be made unavailable for that period.

[fol. 9921] We have given some consideration, and are now studying, whether or not a compressor station as near the market, or as near our largest market, as is Edgerton compressor station, should not have a standby compressor unit, even under the present load factor.

Trial Examiner: All right. You stated the theory. Now in the last year how many engines have failed in service?

The Witness: I recall just during this last winter, during that very cold weather, we had one or two failures west of Illinois.

I can recall specifically one which occurred in, I think, Haven or Greensburg compressor station, during the very cold snap that we had, or during peak load conditions. That particular engine was down only an hour and a half. We were fortunate in being able to make the repairs rather quickly.

Trial Examiner: It didn't actually affect your service at all?

The Witness: Being that far west we were able to repair it, get it back on the line, without having felt the drop in pressure that would occur had it been near the market.

Trial Examiner: How many have you had in the last five years that you know of for sure?

The Witness: I can't testify as to that, because—

[fol. 9922] Trial Examiner (interposing): Well, quite a number, or just an occasional failure?

The Witness: I would say quite a number. These engines will wear out valves, they will get hot bearings, and they will do this and do that.

Trial Examiner: Knowing the Panhandle System as you do and its future program, what margin of safety do you figure is necessary in the long run?

The Witness: As I just indicated a moment ago we have no margin of safety, in so far as extra units are concerned.

Trial Examiner: What do you figure is necessary in percentage when you are talking about per cent capacity?

The Witness: If the load factor or capacity factor should increase substantially above 75 or 80 per cent, I would say that the factor of safety, in that event, should be increased by installing a standby unit.

By Mr. Culton:

Q. Do you have some safety now under present conditions during portions of the year?

A. As I just mentioned a moment ago, we run all compressor units on the coldest day, and we have no standby units.

Q. The Examiner, I think, probably had in mind a while ago whether there was an actual failure or not, teardowns. What has been the practice in tearing down and rebuilding the engines, whether there was a failure or not?

[fol. 9923] Trial Examiner: I was just referring to the practical fact of the liability to failures.

Mr. Culton: I see.

Trial Examiner: And the final question is perhaps this: When you provided this standby power in reserve, how much margin of safety do you then figure necessary?

In other words, how nearly are you sure to supply the maximum capacity, if you can sell it?

The Witness: Well, if you had a standby unit in each compressor station it would be a very unusual circumstance if you had more than one unit go down in any one station at a time.

Trial Examiner: When you have reached that point, then you are able to go one hundred per cent, if you could sell the gas?

The Witness: I would say you would be able to go one hundred percent under those conditions.

Trial Examiner: If you had it for sale and you were able to sell it?

The Witness: That is correct.

By Mr. Culton:

Q. Has it been the custom to rebuild your units during the summer?

A. Yes.

[fol. 9924] Q. Tear them down and work them over so as to have them ready for the winter run?

A. That is the only time that we have to recondition our units, inasmuch as they are all operating in the winter time.

Q. But if you had additional units you could be reconditioning all during the year, is that it?

A. That is correct.

Recross Examination.

By Mr. Littman:

Q. You said a moment ago that you had no margin of safety on your system.

Isn't is a fact that your interruptible industrial customers furnish a margin of safety?

A. Well, I was contemplating an operation at 100 per cent capacity at that moment. There is no margin of safety when you are operating at 100 per cent capacity.

Q. But I believe you said "under the present conditions," did you not?

In other words, we don't want any misunderstanding in the record with respect to the matter.

There isn't any question, is there, but what your interruptible customers do furnish a margin of safety, do they not?

A. Well, provided they can be interrupted, yes, and [fol. 9925] there is no question about it.

Q. Your contracts so provide, do they not?

A. Did you not mention a while ago that W. P. B. might order us to supply these interruptible customers, even though the contract specified otherwise?

Q. Yes, but you are still going to have some interruptible customers that aren't engaged, necessarily, in defense work, aren't you?

A. In the future or in the past, now, are you talking about?

Q. Well, let's take the past first.

A. Yes, we did have.

Q. You did have a certain margin of safety by reason of your interruptibles?

A. Yes.

Q. And let's put it this way: To the extent that you will have interruptible customers in the future you will have a margin of safety?

A. To the extent that they can be interrupted.

Q. Very well. Now, you also made some reference to the installation of an additional unit for the Edgerton compressor station, which is the last point of compression before Detroit.

Isn't one of the reasons why you might need that the fact that there is a variation in hourly take by Detroit?

[fol. 9926] A. Yes, that is another consideration that I did not mention.

However, the contract with Detroit specifies that that company should, to be best of its ability, although I am not quoting the contract, level off the hourly peaks with its holder equipment.

Q. As a practical matter has that been done?

A. I do not know.

Q. You have made no study of the hourly takes?

A. No. We have only recently assumed control of Michigan Gas Transmission, and for that reason it has not been given much study.

Q. But you do know that there is an hourly variation, do you not?

A. Indeed there is.

. . . . . .

[fol. 9928] LEONARD SPACEK was called as a witness, being first duly sworn, was examined and testified as follows:

Mr. Culton: Mr. Examiner, this witness will testify with respect to Exhibit 25? which has already been marked for identification, I believe, this morning.

Direct Examination.

By Mr. Culton:

Q. Will you please state your name to the reporter?

A. Leonard Spacek.

Q. What is your profession?

A. Public accounting.

. . . . . .

By Mr. Culton:

Q. Where do you live and with what firm are you con-
[fol. 9929] nected at this time, and in what capacity?

A. I live at 415 Laurel Avenue, Wilmette, Illinois. I am a partner of the firm of Arthur Anderson and Company.

Q. What is their business?

A. Public accountants, with offices in Chicago, New York, and twelve other cities in the United States.

Q. How long have you been associated with Arthur Anderson and Company?

A. I have been with Arthur Anderson and Company since 1928.

Q. And how long have you been a member of the firm?

A. Since 1940.

Q. Now will you state your education, training, and experience as an accountant?

A. I received my education in local schools and a college at Cedar Rapids, Iowa.

I took special courses at the University of Chicago, and took an accounting course at the Walton School of Commerce.

I became associated with Arthur Anderson and Company in 1928 as a junior accountant, and worked with that firm in various capacities until about 1935, and became accounting manager.

In 1940 I became a partner of the firm and am now in charge of all the public utility accounting work, of the firm, in the country.

[fol. 9930] Q. Have you done considerable accounting for various utility companies during that experience?

A. Yes, I have.

During that period I have audited, made several hundred audits, of public utility companies, and a few of our clients are:

The Southern California Edison Company.

The United Light & Power Company and its subsidiaries.

The Public Service Company of Indiana.

The Columbia Gas and Electric Corporation and its subsidiaries.

The Panhandle Eastern Pipe Line Company

The Northern Natural Gas Company.

The International Telephone and Telegraph Company.

The Commonwealth and Southern Corporation and its subsidiaries.

The Brooklyn Union Gas Company.

The Middle West Utilities Company.

We are also auditors for several public power projects, the lower Colorado River Authority at Austin, Texas; the Central Public Power District, Nebraska; South Carolina Power Authority; and several of the municipal electric utilities in the T. V. A. area.

[fol. 9931] Q. Over what period of time has your company been doing work for Panhandle Eastern Pipe Line Company?

A. I could not give you the exact date but it is from the beginning of that organization. I believe it is from the beginning of Panhandle Eastern Pipe Line Company when it was first organized.

Q. Have you been doing their work continuously since you have been with the firm of Arthur Andersen & Company?

A. Yes, sir. I might also add that I have been engaged on 15 or 20 rate proceedings, among which were the United Fuel Gas Company, where I represented or was in the employ of the City of Charleston; the Natural Gas Company of West Virginia, representing the company; United Air Lines Transport Corporation; the Commonwealth Edison Company of Chicago; Peoples Light, Gas and Coke Company, Chicago; the Chicago District Electric Generating Corporation, and the Chicago Motor Coach Company.

Q. Were you recently employed by Panhandle Eastern Pipe Line Company to make an investigation and prepare a statement showing the consolidated net operating revenue, pro forma, as adjusted for a full year's costs, as allocated between regulated and non-regulated sales for the year ended December 31, 1941? A. Yes.

Q. Is Exhibit No. 251 that document?

[fol. 9932] A. Exhibit No. 251 is that document and I might explain that the pro forma consolidated revenues and expenses for 1941, adjusted for a full year's costs, as appearing in Column (B) on that exhibit, represent the amounts which have been taken from the exhibits submitted in this proceeding by Mr. Watkins and agree with the results shown in particular on Exhibits 248 and 249.

I would like to incorporate those two particular references, on line 42 where it says, "(Exhibit)", it should be "(Exhibit 248)", which was identified this morning; and, on line 46, where it says, "(Exhibit)", it should be "(Exhibit 249)", which was identified this morning.

* * * * * * * *

Mr. Culton: So that counsel may all get their documents [fol. 9933] straight, let me state, on Exhibit No. 251, page

1, line 42, the figure "248" should follow the word "Exhibit" and lie within the parentheses. Is that right?

The Witness: That is correct.

Mr. Culton: Then, on line 46, the figure "249" should follow the word "Exhibit" and lie within the parentheses?

The Witness: That is right.

Mr. Culton: Then on page 6, in Note A, the last line, where it says, "shown in Exhibit ....", that should be filled in with the figures "247" so it reads "shown in Exhibit 247". Is that right?

The Witness: That is correct.

* * * * * * * *

By Mr. Culton:

Q. Mr. Spacek, in preparing your Exhibit No. 251, did you take the responsibility for the basis of allocation between regulated and non-regulated sales?

A. No, sir. I would like to point out that the heading of that column refers to Note B on page 6 which states that, "The basis of allocating revenues and revenue de- [fol. 9934] ductions between regulated and non-regulated sales is determined upon the opinions of the Independent Engineers", who, I understand, will follow me on the witness stand.

Q. Did you obtain, in addition to your consultation, did you obtain a written instruction from one of those engineers?

A. I received a confirmation of the conclusion reached on the basis of allocation in preparing this exhibit.

Q. You have that with you, do you, if anyone desires to see it? A. Yes, sir.

Q. Now, will you explain Exhibit No. 251?

A. I believe I explained the source of Column (B) and also the source of Column (C). The bases of allocation in Column (C) are explained on all the pages and I believe are more or less self-explanatory.

Columns (D) and (E) represent the percentages and the amount of Column (B), which applies to regulated sales, that is, the amount of operating revenue and operating

revenue deductions that are allocated to regulated sales on the basis of allocation explained in Column (C).

The amount in Column (F) shows a portion of the revenues and revenue deductions that apply to non-regulated sales, as those sales have been defined. The first section of page 1 shows the M. c. f. sales to the regulated and non-[fol. 9935] regulated classifications.

Q. After having made these allocations, did you arrive at a final allocation of the net operating revenues on the basis of the 1941 Federal income tax law?

A. Yes, sir.

Q. What was the total net operating revenue as reflected in Mr. Watkins' Exhibit No. 248?

A. The total net operating revenue reflected in Mr. Watkins' Exhibit 248 was $6,305,818.74.

Q. And on the basis of your allocation, how much of that operating revenue would be allocated to regulated sales?

A. 89.66 percent, or $5,654,052.04.

Q. And how much would be allocated to unregulated sales? A. $651,766.70.

Q. On the basis of Mr. Watkins' Exhibit No. 249, and using the recommendation of Secretary of Treasury for income and excess profits tax rates, what were the net operating revenues?

A. They were $4,514,047.86 for the company and its subsidiaries combined.

Q. But your allocation, how was that divided between regulated sales and non-regulated sales?

A. Of that amount, $4,038,053.88 was allocated to regulated sales, and $475,993.98 to non-regulated sales.

Q. Did you further, in your investigation, relate these [fol. 9936] various items to the Federal Power Commission's Classification of Accounts?

A. Yes. The following pages relate the total operation and maintenance, as appearing on line 25, to the classified accounts appearing in the Federal Power Commission's Uniform System of Accounts. That appears on pages 2 to 4, inclusive, of the exhibit, and, on page 5, the details of depreciation are shown as well as the amount of state, local, and miscellaneous Federal taxes, the last item in total appearing on line 36 of page 1.

Q. Then the Notes A and B shown on page 6 are explanatory of the method used by you in preparing this exhibit?

A. Yes, sir, and they apply to all pages of the exhibit.

Q. Yes. Based on the instructions given to you by Mr. Biddison and on the assumption that those instructions correctly reflect an appropriate allocation between regulated and non-regulated sales, do you think the matters reflected on Exhibit No. 251 are a correct reflection of the books and records of the company and of the exhibits of Mr. Watkins to which you have referred?

A. Yes, they do.

• • • • • • • •

[fol. 9937] Mr. Culton: And, on that assumption, do they reflect the amount of net income attributable to regulated sales and the amount attributable to non-regulated sales?

The Witness: Yes, as defined thereon, they do.

• • • • • • • •

Trial Examiner: I would like to ask Mr. Spacek if he heard the definition of Mr. Watkins for the words "pro forma".

The Witness: Yes, I heard that discussion.

Trial Examiner: You have used that phrase in connection with your Exhibit No. 51. Will you explain your definition of its use in connection with this exhibit?

The Witness: The words "pro forma", as used in Column (B) and, of course, as reflected in the other results shown in this exhibit, mean the consolidated revenues and expenses of the Panhandle Eastern Pipe Line Company and its subsidiaries, including the two subsidiaries that were acquired in 1942, for the full year 1941, after giving effect to operating costs which were actually effective for a part of the year but not for the entire year of 1941 as shown in Mr. Watkins' Exhibit No. 247.

The reason the words "pro forma" are used is that actually the Michigan Gas Transmission Corporation and the Indiana Gas Distribution Corporation were not subsidiaries of the Panhandle Eastern Pipe Line Company during the year 1941, and the "pro forma" is merely to [fol. 9938] indicate that those subsidiaries were combined,

together with the fact that the two other adjustments, namely, the taxes and the full year's costs, were also reflected in this amount.

Trial Examiner: Do you distinguish between consolidated analysis or an analysis of consolidated accounts for the purpose of the exhibit, and a pro forma exhibit or analysis?

The Witness: Well, you see, from an accounting point of view, the consolidation of Panhandle Eastern and the Michigan Gas Transmission Corporation and the Indiana Gas Distribution Corporation could not be consolidated as subsidiaries for the year 1941 because they were not subsidiaries during that period. Therefore, the pro forma indicates the effect as if they were subsidiaries for the whole year.

Trial Examiner: Does that mean it includes and is based upon the actual book records of the performance of those companies during the year 1941?

The Witness: It is based on the actual results of operations of those companies for the year 1941, adjusted only by the change there would be in the income taxes because the relationship of those subsidiaries to Panhandle Eastern, as compared to the relationship of those subsidiaries to Columbia, would have changed the taxes, so the result is this statement reflects the results of operation as if they would have been subsidiaries for the entire year.

• • • • • • • •

[fol. 9939] Cross-Examination.

By Mr Littman:

Q. Mr. Spacek, is there anything in Exhibit No. 251 which represents the result of the exercise of your judgment?

A. In general, my work and the work that I supervised was primarily the clerical allocation of the amounts appearing in Column (B) and submitted by Mr. Watkins in Exhibits 248 and 249.

Q. In other words, there is nothing in this exhibit which represents the result of the exercise of your judgment?

A. No. I would say, as a general matter, no. In other words, let me state this, that in the case of taxes and certain

items it was necessary for me to determine that the clerical work in allocation was performed on a basis consistent with the amount in the first instance. For example, take taxes on gas production which had to be allocated on the basis of production expenses. That was not judgment but it was merely to see that the calculation was applied properly in arriving at the amount assigned to regulated sales and non-regulated sales.

Q. You just pointed out that you did not exercise judgment in that respect.

A. I would say, if I understand your question right, I did not exercise any judgment in these calculations.

Q. Do you know what Mr. Biddison's theories of alloca-
[fol. 9940] tion are?

A. I am generally familiar with them but I am not in a position nor am I taking any responsibility for those theories.

Q. Nor do you subscribe to them?

A. I neither approve nor disapprove of them.

Q. Now, let's examine page 1 of Exhibit 254 for a moment, Mr. Spacek.

A. Yes, sir.

Q. I call your attention to the M. c. f. gas sales volume figures which appear in lines 2, 3, 4, as among residential, commercial, and industrial. Where did you secure those M. c. f. gas sales volume figures?

A. I secured those gas sales volume figures from the books and records after Mr. Biddison informed me which customers were regulated sales and which were non-regulated sales.

Q. Do your working papers show your instructions from Mr. Biddison in that regard?

A. Well, they merely state what sales to which companies are to be regarded as non-regulated sales.

Trial Examiner: Might it not expedite matters, Mr. Littman, since the witness says he has in his possession the written instructions under which he worked, to let them be produced at this time?

Mr. Littman: I think that is a good suggestion.

* * * * * * * *

[fol. 9941] Mr. Culton: It is rather lengthy, but we will be glad to have it read into the record.

Trial Examiner: I think, in view of the testimony to date, that should go into the record.

. . . . . .

Mr. Littman: Mr. Examiner, during the recess I have had an opportunity to examine the letter to which the witness has referred, addressed by Mr. P. McDonald Biddison, consulting engineer, to Panhandle Eastern Pipe Line Company, dated April 8, 1942. I believe it would be well to have that letter copied into the record at this point as was originally suggested.

Trial Examiner: If you will furnish a copy to the reporter, it will be copied in at this point.

(The letter referred to is here copied into the record as follows:)

[fol. 9942] Dallas, Texas,

April 8, 1942

Panhandle Eastern Pipe Line Company,
Kansas City, Missouri.

Dear Sirs:

This will confirm my conclusions as to the proper basis of allocating the combined operating revenue and expenses of Panhandle Eastern Pipe Line Company and Subsidiaries (including Michigan Gas Transmission Corporation and Indiana Gas Distributing Corporation) between regulated sales and non-regulated sales.

Of the total sales of the four companies all direct sales to the following are those determined to be non-regulated.

Panhandle Eastern Pipe Line Company

Industrial Sales:

Kansas—

Osawatomie State Hospital

Phillips Petroleum Co.

Missouri—

Edwards Conley Brick & Tile Co.

Fayette Brick & Tile Co.

John Freiling

Harbison Walker Refractories

Mexico Refractories Co.

Phillips Petroleum Co.

[fol. 9943] The W. J. Small Co., Inc.

United Brick & Tile Co.

Universal Atlas Cement Co.

Walsh Refractories Co.

Wellsville Fire Brick Co.

United Brick & Tile Co. (Local area-Vale)

Field Sales (Kansas)

Gas Utilities (For power plant use)

Missouri Power and Light Co.

Illinois Natural Gas Company

Industrial Sales:

Black White Lime Company

Marblehead Lime Company

Menke Stone & Lime Co.

Indiana Gas Distribution

Anchor-Hocking Co.

Gasoline sales for this purpose are allocable between regulated and unregulated sales on the basis of M.C.F. sales.

Operation and maintenance should be allocated as follows:

All natural gas production expenses including gas purchased and gasoline production expenses are to be allocated on the basis of M.C.F. sales.

Transmission expenses—

Supervision and engineering should be allocated on the basis of the composite result of all other transmission op-
[fol. 9944] erating expenses.

Pumping station labor should be considered 50% directly applicable to unregulated sales and 50% applicable to regulated and unregulated sales on basis of M.C.F. sold.

Pumping station supplies and expenses, and maintenance allocable on M.C.F. sales.

Pumping station structure maintenance as well as other transmission structure maintenance are demand costs of regulated sales only.

Measuring station labor, supplies, and expenses, and maintenance should be allocated to non-regulated sales to the extent applicable to facilities exclusively used for such sales and the entire balance represents demand costs of regulated sales.

Transmission main labor, supplies and expenses and maintenance are allocable to non-regulated sales to the extent applicable to laterals used exclusively for such sales and the entire balance of such costs represents demand costs of regulated sales.

Rents, other maintenance and other credits should be allocated on an M.C.F. basis.

Distribution expenses are all attributable to sales classified as regulated.

Customers' accounting and collecting expenses should be allocated on an M.C.F. basis.

[fol. 9945] Sales promotion expenses are applicable 50% to regulated sales and 50% to non-regulated sales.

Administrative and general expenses should be allocated on the basis of the composite results of all other operation and maintenance expenses as above.

Depreciation (including amortization) should all be allocated as a demand cost of regulated sales except the amount applicable to regulator and measuring stations and lateral pipe lines used exclusively for non-regulated sales which should all be assigned to non-regulated sales and depreciation on gasoline plant which should be allocated on an M.C.F. basis.

Amortization and depletion of producing natural gas land and land rights and abandoned leases to be allocated on M.C.F. basis.

Amortization of contracts, acquired and purchased, are all applicable to regulated sales.

Taxes—

Al valorem taxes should be allocated to regulated sales except such taxes reasonably applicable to stations and laterals used exclusively for non-regulated sales and to gasoline plant which should be assigned to non-regulated sales and allocated on an M.C.F. basis respectively.

Gross production, receipts and other taxes on a basis consistent with the method of assessment.

State franchise and capital stock taxes should be allo- [fol. 9946] cated entirely to regulated sales.

Payroll taxes should be allocated on payroll or on the same basis of administrative expenses.

Federal capital stock and state and federal income and excess profits taxes on basis of net operating revenues.

Yours very truly,

(sgd.) P. McDONALD BIDDISON.

By Mr. Littman:

Q. Mr. Spacek, calling your attention again to the first page of Exhibit No. 251, Column (B), am I correct in understanding that the figures shown in that column, from lines 12 to 46, inclusive, were taken by you from Mr. Watkins' exhibits heretofore presented in this proceeding?

A. They were taken from those exhibits. They may show more breakdown or less breakdown, depending on

the requirements for regulating sales, but the bases of them are from Mr. Watkins' exhibits.

Q. In other words, the source of these figures from line 12 through 46 on page 1 of Exhibit No. 251 is Mr. Watkins' exhibits?

A. That is true.

Q. Mr. Spacek, it follows, does it not, that you are not expressing any opinion with respect to any of the figures shown in Exhibit No. 251 as to the propriety of [fol. 9947] their inclusion in this proceeding for rate-making purposes?

A. No, I am not expressing an opinion either way from the opinion expressed by Mr. Watkins and am taking no responsibility for it. I mean by that I am not saying that they are in any way erroneous. I accept them as they are without verification.

Q. And you have made no study, for purposes of this proceeding, with respect to the propriety of the inclusion of certain operating expenses and costs for purposes of rate making?

A. For purposes of rate making, that is true.

Q. Now, with respect to the letter that Mr. Biddison wrote to Panhandle Eastern, which letter was just copied into the record, did you follow Mr. Biddison's instructions throughout as they appear in that letter? A. Yes, sir.

Trial Examiner: Mr. Littman, I wonder if it would be of any use to us all if Mr. Culton or Mr. Wheat should give us some statement concerning the allocation that clearly appears in this Exhibit No. 251 and its bearing upon the issues in our proceeding?

Mr. Culton: Mr. Examiner, frankly this evidence bears very substantially upon these proceedings, and it was prepared in light of the opinion of the Commission in the Colorado case. Mr. Biddison tomorrow will be in posi- [fol. 9948] tion to testify as to his judgment of allocations between receipts from gas subject to regulation, that is, income from gas subject to regulation and gas not subject to regulation.

We had Mr. Biddison present his views of allocation and his conclusions as to the basis of allocation to Mr. Spacek and then had Mr. Spacek apply those views to the com-

pany's records and to the exhibits which heretofore have been offered in evidence, and tomorrow morning Mr. Biddison will testify with respect to the various matters contained in Column (C) of this exhibit, that is, as to the propriety of the allocation and the basis of allocation.

Mr. Littman: Mr. Culton, may I interrupt to inquire whether you are saying that Mr. Biddison is not going to testify with respect to any allocation among the regulated customers?

Mr. Culton: You mean among our customers—that is correct. The allocation to which he will testify will only be as between regulated sales and non-regulated sales.

Mr. Littman: As reflected in Exhibit No. 251?

Mr. Culton: That is right, just the basis for apportioning between regulated and non-regulated. He will not attempt to testify anything at all about apportionment as between various cities.

Mr. Littman: And he will also testify, I take it, with respect to what sales are, in his opinion, regulated and [fol. 9949] non-regulated?

. . . . . .

Mr. Littman: Thank you.

Trial Examiner: From your statement and your reference to what you have called the "Colorado case"—

Mr. Culton: (Interposing) That is Opinion No. 73.

Trial Examiner: (Continuing)—and which, I assume to be an opinion of the Federal Power Commission?

Mr. Culton: In Docket G-124, G-118, and G-121.

Trial Examiner: You are evidently forming some theory of law which has induced you to present Exhibit No. 251, attempting an allocation thereby and proposing the testimony of Mr. Biddison in further support of some allocation of, I assume, facilities and expenses?

Mr. Culton: Probably a better way to express it, Mr. Examiner, would be to say that we recognize that the Commission, in Opinion No. 73, has recognized the distinc-

tion between income obtained from gas, the price of which is subject to regulation, and income obtained from gas, the price of which is not subject to regulation. We think they have properly recognized and attempted to apply that distinction.

Now, the facts of this case are somewhat different from the facts of that case. Whether or not the same method of allocation should be applied is doubtful because of the difference in facts, but we do expect to present, through [fol. 9950] Mr. Biddison, the judgment of an engineer of experience with respect to what he thinks the basis for allocation should be and what elements should be considered. He will discuss all of these various items which are reflected in Exhibit No. 251.

Trial Examiner: I have a copy of Opinion No. 73 of the Commission before me and I wish you would point out both parts of this opinion which you are endeavoring now to apply in this proceeding.

. . . . . .

Trial Examiner: (Interposing) Will you give us a statement of your application of this opinion to the present case?

Mr. Culton: Frankly, Mr. Examiner, I am going to be frank with the Examiner, and, in saying this, I do not wish to cast any reflection on the author of the opinion in Opin. No. 73. We do not know what formula was applied in that case. Frankly, we are groping in attempting to construe that opinion. The author of that opinion clearly recognizes the necessity of making an allocation between these types of gas.

All of the facts existent in that case do not appear from that opinion and, as happens so many times, a person writing an opinion will have things in his own mind which [fol. 9951] are very clear to him but which will not be clear to someone who is not thoroughly familiar with all the facts. Therefore, we expect to suggest a suggested method of allocation between the two types of commodities as to which the Commission properly recognizes a substantial difference.

Trial Examiner: Can you give us some fairly brief general statement of how that allocation would work out according to your theory and interpretation of Opinion 73 and as demonstrated by proposed Exhibit No. 251?

Mr. Culton: Mr. Biddison will do that at considerable length, Mr. Examiner.

Trial Examiner: You are thinking of the figures from Exhibit No. 251 and I am thinking of the legal aspects.

Mr. Culton: There are some differences between the Colorado case and our case which we think should be recognized. One is that in the Colorado case, the deliveries were all in an area which had similar temperature. In our case, we do not have, in our markets, an area of similar temperatures. It will be cold on one section of the line, hot on the other, and sometimes it will be hot on that section and cold on the other. It, therefore, makes it necessary for us to have capacities able to serve the entire area irrespective of whether we have a cold day all the way through or not.

Another situation is that we have a varying type of industries served by our line, whereas most of the nonregulated gas served by the Colorado line went to one [fol. 9952] industry, a considerable portion of it. Mr. Biddison expects to discuss those various matters and give his views as an engineer as to why he thinks the classification which he has made in the letter which was delivered to Mr. Spacek and which classifications are reflected in Exhibit No. 251 are fair and reasonable classifications, and if those are fair and reasonable classifications, then the operating revenues, as reflected in Mr. Watkins' Exhibits 248 and 249, would be apportioned as shown on page 1 of Mr. Spacek's exhibit.

Mr. Biddison desires to make a further calculation tonight as to one phase of this matter which has occurred to him after having read the opinion in Opinion No. 73 in much greater detail and several times. He will not be ready to fully explain his view on that until tomorrow morning and until after he has made that computation.

We frankly recognize that this Commission is now faced with problems not heretofore faced by other regulatory

bodies, at least in the detail which the Commission now faces. It has a very long pipe line here. It has a portion of gas the price of which is subject to regulation and a portion of which is not subject to regulation. The industries are located at numerous points along that line several hundred miles long and there are towns along that line. It may be necessary, before this matter is finally determined, to go into the question of allocation between towns. [fol. 9953] Panhandle Eastern Pipe Line Company does not propose to present any views in that respect, feeling that is a matter as between its customers. It is not material to Panhandle Eastern what that allocation should be as between its own customers. It does think it is of importance, as the Commission has recognized, for an allocation to be presented so that the Commission can determine as best posssible how much the expense of serving the regulated gas is and how much the expense of serving unregulated gas is.

Trial Examiner: Mr. Culton, in your proposed Exhibit No. 251 at page 5 and line 24, there seems to be a total indicated of 94.23 percent as percentage of the regulated sales to total sales.

Mr. Culton: Yes, sir.

Trial Examiner: What significance does that percentage have in this proceeding?

Mr. Culton: That happens to be an over-all percentage, Mr. Examiner. There are some items that are practically 100 percent allocated to regulated sales. Most of the rest of them are apportioned on the basis of M.c.f. sales volume.

Trial Examiner: Just assuming that 95 percent, roughly, is subject to regulation, and 5 percent or a little more is not subject to regulation, what is the effect of that fact on the determination of rate base and revenues and the other issues in this proceeding?

[fol. 9954] Mr. Culton: I do not understand that the Commission used those allocations in determining rate base, Mr. Examiner. As I understand it, they took the rate base—and this is as I understand their opinion and it is reasonable to me—they took the rate base and then determined cost of service.

These items which we have are all representing cost of service. That item to which Your Honor called attention happened to be the tax question and showed the percentage of the taxes which represented a part of the service of the regulated gas. There are other divisions with respect to all of these other types of expenditures, including the expense of amortization and depreciation. Some of those various items on an M.c.f. volume basis. Some of them are on the basis of all being charged to regulated sales and some items are all charged to non-regulated sales.

Have I sufficiently discussed the general aspects of the thing, Mr. Examiner?

Trial Examiner: Frankly, the Trial Examiner is anxious to have developed on this record your theory of the effect of the Commission's action as evidenced by its Opinion 73 insofar as it affects the issues in this proceeding, and I think it would be well to have as concise and coherent a statement as possible and as early as possisble because we are approaching the conclusion of this proceeding. These things are, of course, for full development in the briefs, but before we close the record, we should [fol. 9955] know your conception of the issues and Mr. Littman's conception of the issues as affected by the Commission's recent action.

Mr. Culton: We consider Opinion 73 as reflecting the Commission's view, which we think is correct, that this company is engaged in a business of selling gas; that part of that gas is to be sold at a regulated price and part at a price which is not regulated; that the Commission has jurisdiction to fix the price of the regulated gas but no jurisdiction to fix the price of the non-regulated gas, and that if the price of the regulated gas is to be fixed by consideration of the profits earned by the company, then the price can be fixed as to the regulated gas only by considering the portion of those profits which were actually earned by the regulated gas.

We consider that the Commission has properly construed the Natural Gas Act and its functions in that respect and we recognize that there must be some kind of an allocation and we wish to be of any service we may in determining what would be a reasonable allocation.

Trial Examiner: Do you have other exhibits that deal with an allocation in addition to your exhibit marked for identification Exhibit No. 251?

Mr. Culton: We do not, Mr. Examiner.

Trial Examiner: So that consideration of this aspect of [fol. 9956] the case will revolve around Exhibit No. 251?

Mr. Culton: That is right. This is a suggestion which we have offered. Mr. Biddison, of course, will testify with respect to this exhibit and present his views as an engineer.

Mr. Littman: Is it your idea, Mr. Culton, that Exhibit No. 251 is in accordance with the Commission's opinion in the Canadian River case?

Mr. Culton: I did not say that.

Mr. Littman: I wondered if you thought that?

Mr. Culton: I have never seen their exhibit in that case.

Trial Examiner: I think you misunderstood the question, Mr. Culton.

Will you read the question back?

. . . . . .

Mr. Culton: I do not know what the question means, but my answer is, Yes, we are presenting what we consider to be a fair method of allocation. I do not say it is the same method of allocation which was presented in that case.

Trial Examiner: This is your theory of the application of the Commission's action to the facts of this case?

Mr. Culton: That is right, of the principles of the Commission's action.

Trial Examiner: Yes.

Mr. Culton: That is right. The Commission recognized [fol. 9957] that you cannot just put up a single standard and go by it because they applied one method of allocation as to one of the companies involved there, and a different method of allocation as to the other company involved, which shows it is a matter of judgment as to how you shall make your allocation, and we are making our suggestion as to what that allocation should be.

Trial Examiner: Is the Commission in this case, then, according to your theory, facing a matter of judgment as relating to or involving the unregulated sales to a large number of customers, whereas, in the Colorado case, it had just a few customers?

Mr. Culton: That is a distinction. Whether or not it is of itself enough to require the use of a different rule, I do not know and, as I stated a while ago, we do not know what their rule was in that case.

We are sorry that we cannot determine from the opinion exactly how they reached the conclusion that they did reach. The only thing we can do is to take the philosophy which they present and attempt to apply that philosophy the best we can to the facts of this case.

Trial Examiner: And you are applying it by individual treatment as regards the individual unregulated customers?

Mr. Culton: Not separated, Mr. Examiner; we have used the individual customers only for the purpose of determining how much gas was purchased by the cus-
[fol. 9958] tomers whose rates are not regulated, and how much gas was purchased in the aggregate by those who are regulated.

We have not attempted to divide the cost of furnishing that gas up between the various customers whose rates are not regulated. We have made a division purely between the regulated business and the unregulated business.

Trial Examiner: Isn't your result, frankly, an arbitrary result?

Mr. Culton: As any method of allocation will be, that is true. It is a matter in that there is no absolute standard by which you can be guided. It is purely a matter of judgment in making your allocation, and whether or not it is the correct allocation depends on whether or not your judgment has been properly exercised. It may be properly exercised as to most of the items and not correctly exercised as to some others. Of course, that is a matter this Commission will take notice of and that is the reason why we have set all of these various items out in the way we have so that the Examiner and the Commission can be

advised of just exactly how we have arrived at this conclusion.

Trial Examiner: We won't ask Mr. Littman this afternoon to express his views of the application of the Commission's recent action to this proceeding but we would appreciate a statement tomorrow, after time is given to consider the proposed Exhibit 251 and the reference to [fol. 9959] those sections of the opinion which Mr. Culton has mentioned.

* * * * * * * * * *

Trial Examiner: It is evident that Exhibit No. 251 is one of the most important that has been introduced and it should receive very careful consideration before we recess and before Mr. Spacek is excused, and I think that should be accompanied by a statement from Mr. Littman as to his view at this time as to its relevancy and meaning [fol. 9960] or importance in this proceeding.

By Mr. Littman:

Q. Mr. Spacek, you have already testified you did not exercise your judgment in compiling this exhibit, did you not? A. That is right.

Q. I take it you have no opinion as to the use to which this exhibit should be put in this proceeding?

A. You mean I am not expressing an opinion to the Commission as to how the results should be used?

Q. Yes. A. No, I am not expressing an opinion.

* * * * * * * * * *

Redirect Examination.

By Mr. Culton:

Q. Mr. Spacek, your company does audit the accounts of Panhandle Eastern every year, does it not?

A. Of Panhandle Eastern?

Q. Of Panhandle Eastern. A. Yes, sir.

Q. And some of the members of your staff who do the actual auditing participated in this work? A. Yes, sir.

Q. Under your instructions? A. Yes, they did.

[fol. 9961] Q. And by saying that you took no responsibility, you merely meant insofar as the basis of allocation is concerned?

A. Yes, as to the basis of allocation and also as to presenting these amounts appearing in Column (B) for rate purposes. We have audited them for annual report purposes but we have not made an examination for the purpose of presentation in a rate proceeding.

Q. And by that you mean you are accepting no philosophy from a rate standpoint? A. That is true.

Q. For example, in residential sales, 78,213 is in accordance with the company's books, the very first item of M.c.f. sales volume?

A. Yes, the gas sales volume, of course, is just a summary of the statistical information shown in the company's books which we examined.

Q. That is right, and the various items shown in Column (B) are reflected in the company's books for the specific items shown in Column (A)?

A. They are shown in the company's books. They are taken directly from the company's books except those items—

Q. (Interposing) The "as-if" items?

A. The "as-if" items as pertaining to the taxes and the operating costs which are not effective for a full year.

[fol. 9962] Q. And those "as-if" items are fully described on page 6, or referred to, at least?

A. That refers to Mr. Watkins' exhibits, which in turn, show the adjustments which he made to the amounts shown by the books.

* * * * * * * * * * *

[fol. 9963] By Mr. Goodman:

* * * * * * * * * * *

[fol. 9964] Q. No; if there were no regulated sales, would it then follow that the non-regulated sales could be made or handled at a production cost of 13.2 percent of the total which is the amount allocated to production for non-regulated sales?

A. I cannot say what the conditions would be other than what actually happened here.

Q. Is there anything in this exhibit to indicate that fact or that conclusion?

A. Only insofar as Mr. Biddison might say that that would be a fact because he gave the basis of allocation.

Now, if the philosophy of his basis of allocation is such that Mr. Biddison could answer the question that you asked, that is the only method by which I could answer it.

Q. I see. Then, I will put it this way: So far as you know, there is nothing in this exhibit purporting to have the effect that the non-regulated sales, standing alone, could be made subject to a production cost of 13.2 percent of the total indicated production cost. Is that right?

A. I do not think the exhibit shows that, but I cannot answer your question.

Q. You cannot answer?

A. No, I cannot answer that question.

Q. All right, let's go on to another.

[fol. 9965] A. I would like to amplify on that and say I cannot answer the question because this exhibit is built upon conditions that actually did exist, not on what did not exist.

Q. In other words, the hypothetical production costs for the non-regulated sales, without the existence of regulated sales, might be an entirely different figure, isn't that so? A. I presume it might.

Q. Yes.

A. Mind you, that is just a guess, as far as I am concerned. I have no means of saying it will be or will not be.

Q. Let's turn to page 3 of the same exhibit and referring to Account No. 758, supervision and Engineering, are you able to say, from your investigation of the data before you, that if the non-regulated sales did not exist, $10,414.34 would be saved?

A. I cannot answer that question either.

Q. I see. Now, let's take it the other way. Would you be able to say, from your investigation of the books and records such as you have made in connection with this exhibit, that if the regulated sales did not exist, supervision and engineering could be had for the non-regulated sales at a cost of $10,414.34?

A. I am not able to answer that either.

Q. All right. Now, would your answer be of the same [fol. 9966] tenor to any other item of the same general nature in the exhibit?

A. Just looking the exhibit over, I do not believe I could state that there is any one item that exists under

conditions different from those under which they actually existed. I have no way to say that any item of expense would or would not exist. I do have reason to believe that these items were incurred in the normal course of business as we examined the books, subject, of course, to my previous comments.

Q. Well, now, we have an item here, pumping station structures, 100 percent of which is assigned to regulated sales. Now, I take it that means that that item would not be incurred, that is, that maintenance item would not be incurred, if the business were exclusively confined to the non-regulated sales such as exist, is that right?

A. You are asking me a question which directly should be directed to Mr. Biddisbn. I could not answer that either. That goes into the basis of allocation about which I am not in a position to answer.

. . . . . .

[fol. 9977] P. McDonald Biddison a witness, having been previously sworn, resumed the stand and testified further as follows:

. . . . . .

[fol. 9978] Redirect Examination

By Mr. Culton:

Q. Mr. Biddison, are you familiar with the Opinion No. 73 of the Federal Power Commission issued in Dockets No. G-124, No. G-118 and No. G-121?

A. I am familiar with it to the extent that I have read it and studied it.

Q. After having read and studied that opinion, did you attempt to determine a reasonable method for allocating costs of Panhandle Eastern Pipe Line Company and its subsidiary companies, including Michigan Gas Transmission Corporation, between regulated and non-regulated sales? A. Yes, sir.

Q. After having made that study, did you furnish to Mr. Spacek a letter dated April 8, 1942, with respect to the [fol. 9979] various classifications of sales and expenses?

A. I did.

Q. Were you present yesterday when a purported letter from you to Mr. Spacek was offered in evidence which now appears on page 9942 of the transcript? A. I was.

Q. Is that the letter? (indicating)

A. That is the letter. I have not read the letter as it is typed in the transcript, but that is the letter.

Q. In your opinion, does the classification of sales therein set out between regulated and non-regulated sales present a fair classification of such sales? A. Yes, sir.

Q. Does the classification of expenses set out therein, in your opinion, represent a fair classification between those classes of expenses of regulated sales and non-regulated sales? A. Yes, sir.

Q. What was the fundamental basis of your allocation of costs in your instructions to Mr. Spacek?

A. The fundamental basis was first, that direct sales, that is, sales not for resale were non-regulated business and that sales for resale were regulated business; that to each class of business there should be assigned those costs which were caused by the respective classes in the proportions caused by the respective classes; that the direct industrial sales of this company, that is, of Panhandle East-
[fol. 9980] ern Pipe Line Company and its subsidiaries, do not contribute to the requirement of the provision for capacity upon peak days.

That is the fundamental basis.

Q. Did the letter given by you to Mr. Spacek incorporate that basis throughout.

A. Yes, sir, it was based upon that basis.

Q. Have you now examined Exhibit No. 251 which has been offered in this case by Mr. Spacek? A. I have.

Q. Do the allocations therein contained comply with the basis which you have just given as your judgment for the proper allocation? A. They do.

Q. In your opinion, are the allocations therein provided reasonable between gas subject to resale or gas sold for resale and gas not sold for resale? A. Yes, sir.

Q. Is there any other cost connected with the production and transportation of gas which is not included among those costs which are reflected in Exhibit No. 251?

A. Yes. If we consider the return obtained, whatever that return may be, the fair return to be a cost of the service, that item of fair return must also be allocated in

addition to the items which have been allocated in Exhibit No. 251.

[fol. 9981] Q. Have you made a study of Panhandle Eastern's situation for the purpose of reaching a conclusion as to a reasonable method for allocating the return between the regulated gas and the non-regulated gas?

A. I have.

Q. What, in your judgment, would be a reasonable method for such allocation?

A. Following the same basis as outlined for allocation of costs as I have already stated that basis, the return which is based upon property should be allocated to the two classes of business in the proportions that the respective classes of business cause investment in property.

Q. Have you applied that rule in an attempt to arrive at a reasonable allocation of Panhandle Eastern's properties? A. I have.

Q. Will you explain what the result of your study in that respect has been?

A. The consolidated property account of Panhandle Eastern Pipe Line Company, as of February 28, 1942—

Q. (Interposing) Do you happen to have the exhibit number?

A. Yes, sir, from Exhibit No. 197 by Mr. Watkins.

(Continuing) is, in round numbers, $84,998,335. Included in that amount are production land and leaseholds, gas wells, production system structures, drilling and clean-out equipment and other production system equipment in the amount of $4,519,177 and gasoline and dehydration [fol. 9982] plant in the amount of $704,284. These two items total $5,223,461. They constitute 6.15 per cent of the consolidated plant account of $84,998,335.

The balance of the plant account is, then, in round numbers, $79,774,894. Of that amount, there is property consisting of lateral lines and their measuring and regulating stations in the amounts of $95,981 and $32,866, respectively, used exclusively in connection with direct sales. The sum of these two items is $128,848. This sum is 0.1625 per cent of the balance of $79,774,894. This constitutes the property, outside of production property and gasoline prop-

erty, required to be provided for the sale of the direct sales by Panhandle Eastern and its subsidiaries.

From Exhibit No. 251, Column D, line 10, 86.8 per cent of the volume of sales are sales to the regulated business. Therefore, of the return on this production property, 6.15 per cent of the total 86.8 per cent should be allocated to the regulated business. The product of these two figures results in an allocation on this account of 5.34 per cent of the return to the regulated business.

Mr. Littman: You mean the unregulated business, don't you?

Mr. Lee: 5.34, that is unregulated?

The Witness: I mean just what I said.

Mr. Culton: Will you explain it over again, please? Counsel think you probably used the wrong word.

[fol. 9983] Trial Examiner: Will you read back the answer, please?

(Whereupon, the last answer was read by the reporter.)

The Witness: That is right. When I have completed my allocation, I think the matter will be explained.

Mr. Culton: All right.

Q. Continue with your explanation and they can ask questions if they are not clear.

A. Now, I have allocated that portion of the return which is allocable to production and gasoline property. If we deduct the 6.15 per cent which is the production and gasoline property from 100 per cent, we have left 93.85 per cent of the return still to be allocated. This amount is to be allocated with reference to the $79,774,894. Of that amount, .1625 per cent is required by and devoted to non-regulated business so, dropping the fraction, 99.84 per cent is required by and devoted to the regulated business; so 99.84 per cent of 93.85 per cent of the total return or 93.70 per cent of the total return is allocable on this account to the regulated business.

The sum of the two allocations, that is, the sum of 5.34 per cent and of 93.70 per cent is 99.04 per cent of the return to be allocated to regulated business.

Q. Then what would be your final figures to apply to the regulated business and the final figures to apply to the [fol. 9984] unregulated business?

A. To allocate to the regulated business 99.04 per cent of the return and to the unregulated business, 0.96 per cent of the return.

Q. And to what return would those percentages be applied?

A. To whatever is, in final analysis, found to be the fair rate of return for this company applied to what is found to be the fair rate base. In other words, it is the total amount of the fair return.

. . . . . .

[fol. 9988] By Mr. Goodman:

Q. All right.

Now, referring to the item of supervision and engineering, would you say that under the hypothesis which I mentioned—that is, if the non-regulated sales were discontinued, that any part of the $3,214.75 would be saved?

A. Yes, sir.

Q. Now, can you state or calculate what part?

A. No, sir.

Q. Is it possible to do so?

A. Why, I think an estimate could be made of it, yes.

Q. Could you indicate what supervision and engineering services could be dispensed with?

A. Not without going to the work of making the study. The amount would be pretty small.

Q. Do you think you could dispense with an employee who does supervision and engineering?

A. I don't know, without making investigation.

Q. That is, you wouldn't know that?

A. I said I didn't know without making an investigation.

Q. You are not familiar enough with the business to be able to say; is that right?

A. I am not familiar enough with the business to be able to say whether you could dispense with an employee. I [fol. 9989] am familiar enough with the business to know that you could make some reduction in that amount.

Q. Well, if you couldn't dispense with an employee, you would have to reduce somebody's pay, wouldn't you?

A. No. Certainly not.

Q. Now, in what way, then, would that saving come about?

A. You might perform some other duties that would be charged against some other account.

Q. That is the way that you would suggest?

A. I don't make any suggestion about it at all.

Q. You mean that through the saving in time you would be able to dispense with some other employee or reduce his pay? A. No. I don't mean that at all.

Q. You don't? A. No.

Q. Now, just try to give some indication as to the manner in which the saving you have in mind would be accomplished.

A. Well, if the amount of time devoted to supervision and engineering in that account were lessened by virtue of the fact that there were not quite so many duties to be performed, the people who did perform these duties to the extent of $3,214.75 might remain on the payroll and perform some other duties which would be charged to some other account.

[fol. 9990] Q. Yes, but the saving would only take place if some other employee's pay were reduced or his services dispensed with? A. No, not necessarily.

Q. You don't think so? A. No.

Q. Well, would you save anything in gas well labor?

A. Yes. You would save some in gas well labor.

Q. And how would that come about?

A. It would come about by virtue of the fact that there wouldn't be as much of it required and, therefore, there wouldn't be as much of it charged to the account.

Q. Well, what kind of labor would be dispensed with, Mr. Biddison?

A. Gas well labor. The labor required for attendance upon gas wells.

Q. You mean to say if the output of gas were reduced by about 13.2 percent, you could dispense with some gas well labor? A. Yes.

Q. How much?

A. I don't know. I haven't made any estimate of it.

Q. 13.2 percent of it?

A. I doubt if, but I haven't made an investigation of it.

Q. You doubt it? A. Yes.

[fol. 9991] Q. Well, how about fuel line labor? Would your answer be the same?

A. That is really field line labor. My answer is the same. No, my answer on that is that as to that field line labor, there probably would be no reduction by virtue of the elimination of direct industrial sales. I believe that item would remain the same.

Q. Now, field measuring and regulating station labor. How would you answer that?

A. That labor would be slightly reduced if the sales to the direct industries were eliminated.

Q. Other production labor?

A. I think that item would be somewhat reduced if the sales to direct industries were curtailed.

Q. Now, gas well supplies and expenses.

A. I think that item would be affected very little, if any, by curtailment of those sales.

Q. And fuel line supplies and expenses.

A. I think there would be no curtailment of that item on that account.

Q. Field measuring and regulating station supplies and expenses.

A. I think there would be no curtailment on that.

Q. Other supplies and expenses.

[fol. 9992] A. I think there would be a curtailment of that item.

Q. Delay rentals.

A. I think there would be a curtailment of that item, yes, sir.

Q. Gas well royalties.

A. There would be a very definite curtailment of that item in direct proportion, probably, to the reduction in M.c.f. produced.

Q. In other words, approximately 13.2 percent?

A. Yes.

Q. Is that right? A. That is right.

Q. Now, in maintenance, would there be any reduction?

A. Very little, if any.

Q. All right.

Q. Now, that brings us down to the item marked "Residual Operation Expenses"; isn't that right?

A. Yes, sir.
Q. All right.

Now, will you give me an idea of what they are: these residual operation expenses?

A. Those are expenses of operating the gasoline and dehydration plant.
Q. And would there be any saving in that regard?
A. Yes, sir.
[fol. 9993] Q. Would you know how much? A. No.
Q. In connection with gas purchased, would there be a saving? A. Yes, sir.
Q. Could you say how much?
A. Well, it could be reduced in the proportion that the M.c.f. of sales was reduced.
Q. All right.

Now, you then have made no attempt to compute the amounts which would be saved or the avoidable costs, if the non-regulated sales were not made; is that right?

A. That is correct. I explained the basis on which I set that matter out.
Q. All right.

Now, passing on to transmission expense, would there be any saving in respect to the item of supervision and engineering if the non-regulated sales were not made?

A. I don't believe so, no.
Q. Now, pumping station labor: would there be any saving in that respect? A. Yes, sir.
Q. And could you indicate the amount in any way?
A. No. I haven't gone into that matter. I can't tell you the amount of it without investigation. I can tell you [fol. 9994] the trends on some of these items.
Q. All right.
Pumping station supplies and expenses, would there be any saving? A. Yes, sir.
Q. Would it be substantial?
A. Yes, it would be substantial.
Q. Now, looking at the items of maintenance shown on page 3 of the exhibit, would there be any saving in any of those items if the non-regulated sales were abandoned?
A. Yes.

Q. Will you point out the items?

A. Well, you have a saving in the maintenance of measuring and regulating station structures. You would have a saving in the maintenance of some of those mains that are used exclusively for that business—you wouldn't have them at all. You would have a reduction in the cost of maintenance for pumping station equipment. You wouldn't be pumping as much gas, therefore, you wouldn't have as much maintenance. You would have a reduction in the maintenance of measuring and regulating station equipment for the same reason that you would have it on structures.

Q. Now, referring again to page 2 of the exhibit. Will you assume that the regulated business were dispensed with? Could all non-regulated sales be made at the production expenses indicated in Column F of your exhibit? [fol. 9995] A. I don't know.

Q. Do you have any idea?

A. Not without some investigation on it, I don't.

Q. Do you think that if the regulated sales were eliminated that supervision and engineering for the plant could be had for $3,214.75? A. I just don't know.

Q. You don't know and you don't have any opinion; is that right?

A. That is right. I haven't made any investigation on it. I have no basis for an opinion on it.

Q. Well, take the item of $800.31 for gas well labor. If the regulated sales were eliminated, could the required production be accomplished on that amount of gas well labor?

A. Well, I don't know. If you eliminated the regulated business, you might run this non-regulated business on an entirely different basis. You might not have any production force. You might buy your gas for a business of that size. Any thing could happen. What would happen, I don't know, because I have made no investigation.

Q. Well, I am dealing with this particular business.

A. So am I.

Q. And I am attempting to develop the direct burden of each class by trying to observe what costs would be [fol. 9996] avoidable should a particular item of business be dispensed with.

A. Well, that method doesn't develop costs for classes of business.

Q. Well, we will argue about that later. I am just asking you for your conclusion as to certain facts. If you don't have the regulated business, Mr. Biddison, you indicate that your development of productive capacity would have taken a different course entirely; is that right?

A. No. I said it might have.

Q. It might have? A. Yes.

Q. Well, in all probability, you wouldn't have these extensive gas fields.

A. Well, there, as a matter of fact, whether you produce your gas or buy it; whether you sell regulated business or don't sell it; whether you sell non-regulated business or don't sell it; the fields are there.

Q. And would you drill the wells?

A. I don't know what you would do. I haven't made any study of what you would do if you didn't have any business or if you didn't have the big end of your business or if you didn't have the little end of your business.

Q. Well, now, it is a fact, is it not, that the costs of production of the non-regulated business are not in this [fol. 9997] business separately incurred?

A. That is right.

Q. Except possibly for royalties or a few items which vary with the units of production; is that right?

A. They are not separately incurred on any of those items—

Q. All right.

A. —for either class of business?

They are jointly incurred by the business as a whole.

Q. And it is reasonable to suppose, Mr. Biddison, that the joint product or the joint undertaking is a more economical venture than would be the undertakings separately considered? A. That is right.

Q. I think so. A. Yes.

Q. So that the regulated business contributes to economies in the regulated service? A. Yes, that is right.

* * * * * * * * * * *

[fol. 9998] By Mr. Chamberlain:

Q. I would like to see, Mr. Biddison, whether I have understood your allocation correctly, and I would like to

see if I can place it in a different way than you have and still reach your result.

If I understand it correctly, you have eliminated the production system as your first move, and then allocated a portion of that to the non-regulated business in proportion to the amount of the unregulated sales to the total sales?

A. Well, no, I didn't specifically allocate the property on that at all, but 6.15 percent of the total property is in property used for production of gas and gasoline and I think, therefore, that 6.15 percent of the total return should be allocated between the two classes of business in the proportion that those two classes of business cause the expense of gas and gasoline production.

Q. You have apportioned that directly in the proportion of the sales, have you not? A. That is right.

Q. The volume of use? A. That is right.

Q. Now, did I understand you correctly that the lateral lines and the measuring stations which you deducted were those which were used in serving the non-regulated busi-
[fol. 9999] ness? A. That is correct.

* * * * * * * * * *

By Mr. Chamberlain:

Q. Well, I have just had this, Mr. Biddison. It is a little difficult for me. I am merely trying to get at your ideas about this, and I would be glad to have you correct me anywhere in my questions here, but if I get at your position, you take the position that the return should be apportioned in such a way that the non-regulated business should contribute nothing for the use of the transmission system or for any of the property other than the production system plus these lateral lines that were built to serve
[fol. 10000] that non-regulated business?

A. Are you speaking now of return only?

Q. Yes.

A. Since the non-regulated business does not contribute to the investment required to meet peak requirements, I have held that there should be allocated to the non-regulated business only that portion of return represented by the proportion which these lateral lines and individual meter stations represent in the total of that property exclusive

of production property on the main body of your transmission system.

In other words, the non-regulated business causes no investment. Therefore, on the bulk of that property, it should be allocated no portion of the return.

Q. Yes, I so understood that.

Now, let me approach it from this way. You have first segregated, let me say, 6.15 percent of the property—or, let us say, of the plant accounts? A. Yes, sir.

Q. That is right, isn't it? A. Yes, sir.

Q. Now, you have assumed that 86.8 percent of the sales were made for the regulated business, which would leave 13.2 per cent for the non-regulated?

A. That is right.

[fol. 10001] Q. Now, if one multiplies the 6.15 percent of the property by 13.2, he arrives at .811, does he not—.8118? A. .8118.

Q. That would be .8118, would it not? A. Yes, sir.

Q. Now, as far as we have gone, that is the proportion of that part of the return which you would allocate by reason of this production property?

A. Against non-regulated business?

Q. Yes. A. Yes, sir.

Q. Now, if I understand you correctly, you are to add to that the percentage which the property used exclusively for non-regulated business bears to the remaining portion of the plant account, or .1625 percent?

A. That is the ratio. I used .16 in working it out. Dropped a fraction.

Q. All right.

Now, by adding your .81 and your .16, you arrive at .97, which is substantially what your figures were for that portion of the return which you would allocate to the unregulated business; is that right?

A. No. No. Of this, what we will call the main line property, that is property exclusive of the production property that I have eliminated, about 16/100 of one per-[fol. 10002] cent is devoted to the non-regulated business.

Now, .16 percent then of the return not previously allocated is to be allocated to that business. Now we have

already allocated 6.15 per cent, so we have 93.85 percent to allocate, which will allocate .16 percent to the non-regulated business, so .16 times 93.85 gives—93.85 percent of—wait a minute—of the .16 percent is in round numbers, .15 percent, and that together with the .8118 percent gives you .9618 percent.

Q. Yes. Well, all right. I mistook the .16.
A. That balances out the other one.
Q. Yes, that is correct now. That balances. I was taking it of the lesser amount.

Now, then, the effect of that is that you would make a charge against the public on the regulated sales for all of the return except that upon the 13.2 percent of the production property and .15 percent for property used exclusively for delivering the non-regulated gas?

A. That is correct.

* * * * * * * * * *

Mr. Chamberlain: That should be 13.2 percent of the [fol. 10003] percentage, would it not?

The Witness: Yes. 13.2 percent of 6.15 percent.

By Mr. Chamberlain:
Q. Yes, that is right.
A. The 6.15 percent representing the proportion that production property is of the total properties.
Q. Now, I observe that you have allocated to the non-regulated sales a portion of the gasoline revenues. Will you give us your reasons for that allocation? That is in exhibit 251.
A. While it is true that the revenues from the sale of gasoline are not fixed by this Commission, yet during the conduct of this case, the gasoline business has been handled as if it were part of Panhandle's utility business. The expenses of that base are included in expenses, and the earnings from that business become, therefore, a credit to the cost of doing the strictly utility business.

In effect, then, the distribution of the operating costs in Exhibit 251 for gasoline production and of the reve-

nues is an allocation between the two classes of business of a little bit of net profit. That net profit being derived substantially in proportion to the volume of gas consumed by the two classes of business.

Q. In making your apportionments, you have taken the volume of sales or deliveries, have you not?

[fol. 10004] A. That is correct; yes, sir.

Q. And the gasoline extraction process is a process for —well, it is a processing of the natural gas, is it not?

A. Yes, sir.

Q. And it makes it easier delivery and also extracts the condensable hydrocarbons, does it not?

A. That is right.

Q. And they would otherwise make trouble in the line?

A. That is correct.

Q. It is then, in effect, a part of the natural gas business, is it not, and really a necessity, or, at least, an improvement in the art of transporting gas?

A. Well, it is an improvement in the art of transporting gas, without question. Whether it becomes a necessity is dependent upon the character of the gas, in the first instance, and how it is going to be handled and where it is going to be marketed, in the second instance.

Q. Now, the allocation you have made of costs is one in which you have applied a very small amount of depreciation to the non-regulated sales. Will you give us your reasons for that?

A. Well, the reason is that depreciation, as an item of expense, is accrued against property. The property required to conduct this non-regulated business is a small [fol. 10005] percent of the main line property. Therefore, the amount of depreciation which is allocated against this non-regulated business is a small proportion of the total accrual for depreciation, being that proportion which the property devoted to the service bears to the total property for the two services.

Q. In other words, you have attempted to deduct and make as a charge against non-regulated sales, the depreciation only of that property which you hold was of service in the non-regulated business?

A. Which was required for the carrying out of that business, yes, sir.

Q. Now, you find, as shown by exhibit 51, that the revenues from the non-regulated sales amounted to $1,500,527, do you not?

* * * * * * * * * * *

Q. I refer, of course, to your allocation.

Trial Examiner: Do you mean 51 or 251?

Mr. Chamberlain: 251.

A. That is the result of the allocation of the total operating revenues.

[fol. 10006] By Mr. Chamberlain:

Q. Now, eliminate the expense for Federal income and excess profits tax and give me the amount of the entire operating revenue deductions which you have allocated against this class of business.

A. The total revenue deductions for that class of business, as shown at Line 42—no, Line 41— is $848,761.19.

The Federal income and excess profits taxes allocated to that business are $349,062.28. Cross out that entire answer.

Q. That would be correct. The subtraction there would give you the answer.

A. No. The answer is all right there so far. The amount of deductions exclusive of the Federal taxes is, therefore $499,698.91.

Q. Yes.

Now, what would be the net revenue for these non-regulated sales before provision for Federal income and excess profits tax? I can give that to you the same as Mr. Spacek did last night, if you wish, and you can correct it later, if you find it wrong.

A. Well, the total operating revenues for that business, as shown in Column F, at Line 23, is $1,500,527.89, and if we deduct the $499,698.19, which I have just derived for you, we have left about a million dollars, in round numbers.

[fol. 10007] Q. $1,000,882.98, is it not?

A. I make it $1,000,882.98. Does that check your figure?

Q. Yes, that is right.

Now, that is what you figured to be the net operating revenue or income on the non-regulated sales before provision for Federal income tax and excess profits tax, is it not?

A. Well, I didn't figure it, but that is the amount that results from the basis I set for the computation.

Q. Yes, and that you believe to include all of the costs which should be allocated to the non-regulated sales, does it not? A. No, it does not.

Q. Other than return and Federal income tax?

A. Yes, other than return and Federal tax, it does, yes.

Q. Yes. All right.

Now, have you made any computation to see what proportion of the return you would allocate to this non-regulated business?

A. Proportion?

Q. I mean, you have fixed it as .96 percent of the fair return, but let us go back to your first figures and assume a [fol. 10008] fair return. You started out in your computation with $84,998,335, did you not? A. Yes, sir.

Q. Let us assume now—take any figure near that that you want and set your return, let us say, 6.5 percent as was fixed in a recent case.

What would that return be by that amount and what amount would you allocate now to the non-regulated sales under your theory?

Trial Examiner: For convenience in figuring, I suggest ninety million base and 6 percent return.

Mr. Chamberlain: Yes. All right. Try that.

A. Well, ninety million base with a 6 percent return would give a total return of $5,400,000.

Q. Now, what portion of that would be allocated to 13.2 percent of the volume of sales which you would classify as non-regulated?

A. Well, to the non-regulated business, I would allocate .96 percent.

Q. Yes.

A. That is close to 1 percent or about $54,000, roughly.

Q. In other words, you would ask the public to pay for the regulated business all but $54,000 out of a five million

four hundred thousand return, and you would allocate to that part which has a net profit before income tax and [fol. 10009] before return of a million dollars?

A. I don't ask the public to pay for anything except pay their gas bills.

Q. Well, that is a result of your allocation, is it not, Mr. Biddison?

A. No. The result of the allocation is to allocate the return against the classes of business in the proportion that the classes of business have caused investment and have caused costs.

Q. Now, I would like to have the record show a couple of more details here.

Will you give me the amount received per M.c.f. for these non-regulated sales?

A. In Exhibit 251, Line 10, Column F, the sales shown to be 8,259,026 M.c.f., and the revenues from them are shown in the same column at Line 20, to be $1,403,497.60, and from that I derive that the average revenue per M.c.f. is approximately 18.2 cents.

Q. Are you including Line 20 there or 23? My figures would indicate it is 18.2 for the million and a half.

A. Which figure did I read off there?

Q. You read the million four hundred three.

A. The revenue from gas sales shown at Column F, Line 20, this being gas sales only, is $1,403,497.60, and the [fol. 10010] revenues per M.c.f. from that figure—that is, gas only—is about 17¼ cents.

Q. 17.24? A. About 17¼ cents.

Q. About 17¼ cents? A. Yes.

Q. Now, include in that, then, the revenue which you have allocated to the non-regulated sales arising from the gasoline revenues and see what the total revenue per M.c.f. is.

A. Well, that total revenue, including a little bit of miscellaneous—however, none of that miscellaneous is allocated against the non-regulated business—that total revenue amounts to $1,500,527.89, and revenues per M.c.f. of sales from that total amount is about 18.3, I guess, cents.

Q. Now, what are the expenses other than Federal income and excess profits taxes per M.c.f.?

In other words, to apply your—

A. (Interposing) The expenses other than the Federal income tax?

Q. Yes. A. Per M.c.f. of sales?

Q. Yes.

A. Well, the expenses exclusive of those items are $499,698.91, substantially a half million dollars, and on [fol. 10011] 8,259,026 M.c.f., that amounts to approximately 6.07 cents per M.c.f., as near as I can read it on the small slide rule.

Q. Substantially 6.1, is it not? A. Yes.

Q. Now, if you were to deduct the costs that you have allocated, other than the Federal income and excess profits tax, you would have a net income from the sale of the non-regulated gas of 12.1 cents per M.c.f., would you not?

A. Well, I have been running some calculations through here without keeping a memorandum on them, but my recollection was that we had, including gasoline sales, about—

Q. (Interposing) 18.2?

A. (Continuing) —18.2 cents per M.c.f., and this last calculation of expenses, exclusive of Federal tax, was about 6.1. That leaves a spread of about 12.1.

Q. Now, take the net operating revenue, as shown in Line 42 of your Exhibit 251, and give us the amount per M.c.f., that you find that to be.

A. Well, the amount is $848,761.19.

Q. I am sorry, but I intended to ask you about Line 42, the net operating revenue which I believe would be $651,766, would it not?

A. Yes. That is my error. I am on the wrong line. The net operating revenue. $651,766.70, which, on 8,259,026 M.c.f., is approximately 7.9 cents.

[fol. 10012] Q. Now deducting from the 18.2 cents which—

A. (Interposing) No. Wait a minute. Wait just a minute.

Q. That checks with our figures, doesn't it?

A. That is right.

Q. Deducting that amount from the 18.2 cents which was the revenue per M.c.f., you would have a net operating revenue of 10.3 cents per M.c.f., would you not?

A. That is right.

Q. Now, I would like to compare that with the revenues for the regulated sales.

Will you give me the same figures with respect to those?

A. Well, on the regulated sales, we have a quantity as found in Column E, at Line 10, of 54,302,700 M.c.f., and operating revenues, including gasoline, as shown in Column E, at Line 23, of $16,289,045.01. That is a revenue of approximately 30 cents.

Q. Per M.c.f.? A. Per M.c.f.

Q. Now, what are the revenue deductions without Federal income and excess profits taxes per M.c.f.

A. The total revenue deductions, as shown at Line 41 are $10,634,992.97, of which $3,209,166.84 are Federal income deductions. So the deductions, exclusive of that, amount to $7,425,826.13, and that, on 54,302,700 M.c.f., [fol. 10013] amounts to about 13.65 cents.

Q. I have 13.7 here.

A. Well, that might be it. I am working with a five-inch slide rule and trying to read it in three places.

* * * * * * * * * *

Q. Then the net revenue, before deduction for income tax and excess profits, would be the difference between 30 cents and 13.7, would it not? A. Yes.

Q. Or 16.3?. A. That is right.

Q. Now, give me the amount of the net operating income per M.c.f. of the regulated sales, as you have found them in your Exhibit 251.

A. Well, that net figure is $5,654,052.04. And, on 54,302,700 M.c.f., that is approximately 10.4 cents.

Q. Now, if I understand your Exhibit 251 correctly, the allocation which you have made is one by which the company would make from its regulated sales as net operating revenue, after income tax, of 10.4 cents, and from their non-regulated sales, 7.9 cents?

A. I don't know. I haven't a record of those figures. [fol. 10014] Q. Those are just as you gave them to me, Mr. Biddison. A. I believe 7.9 was right.

Q. Yes, sir.

We can always correct these, if you don't find them right.

A. Yes, sir.

Q. And notwithstanding the profit is so nearly the same, you figure that the allocation of the rate of return which is the only element of the cost which you say is now left out, should be the proportion of .96 percent of the return allocable to the non-regulated sales?

A. That is right, and if you were to take these spreads that we have just worked out and weigh them against the respective volumes of business for making an allocation, you wouldn't have a widely variant answer from what I have.

Q. Just one more question now with regard to the allocation of income tax: I notice that you have allocated that in a definite proportion of the sales to each class, regulated and non-regulated, to wit, 90.19 per cent to the regulated sales. A. That is right.

Q. Now, you are aware that in the excess profits taxes that a portion of that revenue is taxed as high as 72 per cent.

A. I know that the rate goes up quite high on some of [fol. 10015] it. I don't know what the limit is now.

Q. In my question I should have included with the excess profits tax and the Federal income tax. And you have applied then to the unregulated business substantially 10 percent of the income tax, whereas the volume is 13.2 percent. A. That is correct.

Q. What is your idea in making an allocation of the heavy taxes against the non-regulated business?

A. I didn't allocate heavy taxes against the regulated business or against the non-regulated business.

The item of taxes is fixed by dollars subject to tax. The source of those dollars doesn't fix the tax. It is fixed by the amount of dollars, regardless of its source. I have allocated, therefore, the taxes on those dollars which were taxable in proportion to the source of those dollars, in proportion to the two businesses which caused those dollars to be made subject to tax.

Q. You have allocated here to the business which you say utilized—you have allocated to the non-regulated business the sum of $349,000 for the payment of taxes on a portion of the business which you say utilizes only about something less than 1 percent of the property.

A. No. I haven't said it uses only 1 percent of the property. I have estimated that of property, exclusive of [fol. 10016] production and gasoline property, there was caused an investment of about .16 percent of that property.

Now, I have followed precisely the same principle in the allocation of return that I have followed in the allocation of Federal tax, allocate them back in the proportion that the two businesses caused them.

Q. Well, you figured this, then, as two separate businesses? A. They are separate businesses.

Q. That is the basis—

A. (Interposing) And each one of them has several subdivisions.

Q. And that is the basis of your allocation, that they are two separate businesses?

Well, they are separate in this manner: that they are different classifications of the total business conducted. They are not separately and individually carried on. They are carried on simultaneously.

Q. Well, wherein arises the privilege of using the transmission system without expense to the non-regulated portion of the business?

A. They don't use it without expense.

Q. Expense for return.

A. In my allocation, they bear the expense of return upon the investment which they have caused.

[fol. 10017] Q. But not for the property which they use in distributing their gas?

A. For the property which they use for distribution of their gas alone they bear all the costs.

Q. Yes, but what do they pay in the return for transmission facilities that bring their gas from Texas to Hannibal, Missouri?

A. As far as the company's books are concerned, they don't set up separate charges for that. They don't attempt, so far as I know, to make a determination of the individual costs for delivery to any class of consumers, nor to any point on the system. Now, I think that could be done, but it hasn't been done.

Q. Well, what is the reason for not allocating a portion of the cost for the facilities used for transmitting your gas from Texas, let us say, to Hannibal?

A. None whatever, and I have made such an allocation.

Q. Of the facilities?

A. No, I have not allocated facilities. I haven't gone entirely through that process. In order to determine costs, it is not necessary to make a complete allocation of facilities to the various classes of business. I think, in some instances, you would be able to allocate facilities, but you don't need to do it in all the property.

Q. Is this a fair statement, then: that it is your thought [fol. 10018] in your testimony here that the pipe line company has a right to take such gas as it wishes to sell on direct industrial sales, and to utilize the entire transmission facilities of the company without any return upon them, and still have their income taxes paid at these high rates as a charge to the public for the gas they get through those same transmission facilities?

A. No, nor have I so estimated any such thing as that. I do think that they are entitled to transmit gas for direct sales without allocating part of their capacity against those direct sales, so long as those direct sales don't entail the construction of capacity. If they entailed a construction of capacity, they certainly ought to bear the cost of that capacity.

Q. A few months ago, did they not have to shut off some of their customers on account of a lack of capacity?

A. Yes, sir, they did.

Q. Well, then, somebody required some capacity, didn't they?

A. Yes, sir, they did, and during that period of cutoff which I have studied, I reached the conclusion fortifying my knowledge that they don't build capacity for this class of business that they had then no capacity for this class of business, and have none now for this class of business.

Mr. Culton: You mean for direct sales?

[fol. 10019] The Witness: That is right.

Trial Examiner: May I ask counsel whether, in your opinion, the Commission has the authority under the Natural Gas Act to require discontinuance of industrial sales

in order to serve communities which are connected and under contract, if the gas is required.

Mr. Culton: I don't think that power is given by the Natural Gas Act, Mr. Examiner, but the question has not yet arisen so far as Panhandle Eastern is concerned.

Trial Examiner: We are at the recess time, but I would like to suggest this question to Mr. Biddison, and perhaps he can answer it after luncheon.

At page 9942, where the letter of instructions to Mr. Spacek appears, you have listed 19 additional customers. I assume that in order to serve each of these customers, some investment was necessary.

Have you made any segregation or computation of the investment required solely for the service to those industrial customers?

The Witness: I have testified to that amount, Mr. Examiner. I had the amount determined for me by Mr. Spacek from the accounts of Panhandle Eastern Pipe Line Company.

Trial Examiner: Does that appear in Exhibit 251?

The Witness: That detail does not appear in Exhibit 251, but the details are available in the working papers of Mr. Spacek.

[fol. 10020] Mr. Culton: The aggregate, however, does appear, does it not, in 251, or do you recall? Give the figures to the Examiner: that is the important matter.

The Witness: The aggregate is $128,848.

Trial Examiner: And that represents the total investment necessary to convey the gas from facilities otherwise provided, or provided for other purposes, to these industrial customers?

The Witness: That is correct.

Trial Examiner: That includes your mains and any other facilities necessary to serve them?

The Witness: Yes; mains and any other regulating and measuring equipment.

. . . . . .

[fol. 10021] Recross Examination.

By Mr. Littman:

Q. Mr. Biddison, the allocation study presented by you in Exhibit No. 251 is necessarily an estimate, is it not?

A. The allocation in Exhibit No. 251 was presented by Mr. Spacek. I supplied him with the instructions or basis for making the allocation. The amounts of money which are to be allocated have been explained in testimony by Mr. Spacek and Mr. Watkins.

Q. Mr. Spacek testified that he did not exercise any judgment in connection with Exhibit No. 251 but merely did a mechanical accounting job, as I understood his testimony. Is that your understanding of it?

A. That is right. He followed the rules which I set out.

Q. Now, these rules which you set out are essentially shown in Exhibit No. 251 under the column headed (C)?

A. That is correct. Those are condensed statements of the principles to be followed.

[fol. 10022] Q. Now, those principles represent necessarily the exercise of your judgment in each of the premises? A. They do.

Q. And are essentially estimates, are they not, as distinguished from the application of a particular set of rules or formula?

A. Well, the rules and formula are set out, in substance, in Column (C).

Q. What I am driving at and I think we will have no difficulty once I make myself clear which perhaps I have not as yet, is this: That there are various methods of allocating expenses and returns, are there not?

A. Yes, sir, that is true.

Q. Various recognized methods, as a matter of fact?

A. Well, various methods are used. Some people recognize one set of rules as valid in one condition and another set is valid in another condition.

Q. And engineers differ with respent to various methods to be used or applied to a given set of circumstances, isn't that correct?

A. Sometimes that is correct, yes.

Q. Now, you have employed here chiefly the M.c.f. sales basis, have you not, that is, the annual sales basis?

A. No, not chiefly, no.

Q. You used that basis as shown on page 2 of Exhibit [fol. 10023] No. 251 as applied to natural gas production expenses, did you not? A. That is correct.

Q. You did not anywhere utilize the so-called demand basis or as it is sometimes called, the peak day basis, did you? A. Yes, sir.

Q. Where?

A. That has been used with reference to transmission expenses, both operation and maintenance.

Q. Where is that shown in Exhibit No. 251?

A. The detail of that is on page 3.

Q. Of the items that are shown on page 3, which are the ones to which you applied the peak day sales basis?

A. To 50 per cent of the pumping station labor, line 6; with respect to measuring and regulating station labor at line 9; with respect to measuring and regulating station supplies and expense, line 13; with respect to transmission mains labor at line 14; with respect to transmission mains supplies and expense, at line 17; it is involved over in the maintenance item of supervision and engineering, line 20; although that is not the sole basis; with respect to pumping station structures at line 22; with respect to measuring and regulating station structures at line 23; with respect to other transmission system structures at line 24; with respect to transmission mains at line 26.

[fol. 10024] Q. Just a minute. Let's look at line 25 for a minute. You have applied 100 per cent of those other transmission system structures to the regulated sales?

A. That is correct.

Q. Now, where does the peak day come in there?

A. The regulated sales constitute the peak day output in capacity.

Q. Are there any others, Mr. Biddison?

A. With respect to measuring and regulating station equipment, line 30.

Q. Are there any other bases other than the annual M.c.f. sales basis and peak day sales basis ordinarily used for allocation purposes?

A. Yes, there are a host of ways of making allocations.

Q. And there are a good many disagreements among engineers and I presume even accountants as to which is the proper method to use, isn't that correct?

A. No, I think the disagreement is largely as to the matters of expediency in the application of the fundamental principles.

. . . . . .

Q. This allocation study which you have presented in Exhibit No. 251 represents, I take it, your best judgment with respect to the application of various methods of allo-
[fol. 10025] cation to the facts in this proceeding?

A. It does. At the same time, with a long series of investigations, there are some modifications that could logically be made. There is, in fact, some portion of production expense and some portion of the return on production property which could rationally be allocated on the basis of the requirements of the peak load. The amounts of those are small compared with the total amounts to be allocated and, in any allocation, some judgment must be exercised in situations similar to that in order to get a workable method and a workable answer.

I have tried, in this instance, where there were some comparatively minor items that could rationally be allocated on a demand allocation, to resolve the doubt in favor of throwing them into the commodity costs and have done so with those items of production property to which I referred and with some other items.

Q. I take it from your testimony that an allocation study is not necessarily an exact thing, is it?

A. There is nothing exact that I know of in engineering or science except the adding up of units.

Q. And a half a dozen very capable and equally expert engineers could very well take—

. . . . . .

[fol. 10026] Q. (Continuing) could very well take the facts in this proceeding and come out with entirely different results in making an allocation study, isn't that a fact?

. . . . . .

The Witness: It is my opinion that expert engineers, making a serious attempt to fairly solve this problem would, among them, each have a different answer but that

the difference between the answers would be very, very small. They would arrive very closely at the same result if they followed the primary principle that costs are to [fol. 10027] be allocated against the service that causes the cost.

* * * * * * * *

Q. Well, you mean if they followed the same philosophy and principles which you have followed, they would come out with about the same results?

A. If they followed the principle which I have just enunciated, that costs should be allocated against the service that causes the cost.

Q. They do not all agree, do they, on that philosophy or the application of it?

A. Everybody that I know of that is competent to have an opinion on it does.

Q. Well, is the allocation study set forth in Exhibit No. 251 purely a mathematical matter or is it a judgment matter?

A. Well, as I have explained, the setting forth of the rules to be followed involved judgment. From that time on, it is a matter of mathematics.

Q. And engineers differ as to the rules to be followed in these allocation studies, do they not?

A. I suppose that some engineers would differ slightly in some of these rules as to specific quantities, yes.

* * * * * * * *

[fol. 10028] Q. Well, I take it, then, you are saying that yours is the only method that could be used for purposes of this proceeding?

A. I did not say that at all or even intimate it. On the contrary, I firmly believe that the fundamental principle which I have stated is sound and is acceptable to [fol. 10029] engineers who are competent to have an opinion on the matter. As to the detailed rules which I laid down, I have already stated that some variations from those would be had by other engineers.

Q. And the matter is, by and large, a matter of the exercise of judgment, is it not?

A. The fundamental principle is not a matter simply of judgment. The setting down of the rules for the han-

dling of individual amounts involves the use of judgment and that judgment must be based upon an understanding of the problem. That understanding can come by experience and that is where I got mine.

Q. It is therein that engineers disagree?

A. No, not wholly. That could quite well account for some disagreement.

Q. Within what over-all percentage limit would you say that you were exactly right in your allocation shown in Exhibit No. 251?

A. Oh, I think I am within 10 per cent either way.

. . . . . .

Q. Now, you have made a separation or allocation in Exhibit No. 251 as between the unregulated sales and regulated sales, have you not?

A. No, Exhibit No. 251 is not my exhibit, but Exhibit [fol. 10030] No. 251 does make an allocation between those two classes of business.

Q. Do you agree with Exhibit No. 251? A. Yes.

Q. If there is anything about it you don't agree with, I would like to have you point it out.

A. I have not disagreed with it. I have stated time and time again that it was made according to my instructions but I did not label it my exhibit because I did not prepare it nor did I present it.

Q. You take the responsibility for the philosophy behind this exhibit, don't you?

A. Exactly. I have taken it and I have testified I took it two or three times.

Q. And if Exhibit No. 251 is accurate mathematically, you take full responsibility for the result, do you not?

A. Absolutely.

Q. Well, assuming that Exhibit No. 251 is accurate mathematically, does it or does it not make an allocation as between unregulated sales and regulated sales?

A. It does make such an allocation. It shows on the face that it does and I have so stated that it did three or four times.

. . . . . .

[fol. 10031] Q. Are any of these unregulated sales to war industries?

A. I am sure that several of the industries in that classification are engaged in the production of materials used directly or indirectly in war activities.

* * * * * * * *

[fol. 10032] Q. What return does Exhibit No. 251 show is being earned on your allocated rate base, allocated to unregulated sales as shown on page 1 of Exhibit No. 251?

* * * * * * * *

The Witness: Page 1 does not show anything on that.

* * * * * * * *

Q. Well, look at line 42 under the column headed, "Non-regulated Sales," Column (F) entitled "Net operating revenue," $651,766.70.

Now, those are the net operating revenues, aren't they, according to Exhibit No. 248, and according to page 1 of Exhibit No. 251?

A. I do not have Exhibit No. 248 before me. I do not know what that shows right there but, on Exhibit No. 251, at line 42, Column (F), the net operating revenue for non-regulated sales is $651,766.70.

Q. Now, I want you to compare that figure with the re-[fol. 10033] turn which you have allocated to the unregulated business?

A. I have not allocated any return to it.

Q. Well, suppose we help you do it. Remember Mr. Chamberlain asked you to assume a rate base of $90,000,000. Do you remember that?

A. No, but I do recall he asked me to assume a rate base of some $84,000,000 and the Examiner suggested we take an example of $90,000,000.

Q. All right. Now, you have got the $84,000,000 from Exhibit No. 197 which amount is labeled, "Gas Plant—Consolidated"? A. That is right.

Q. Now, for purposes of convenience, suppose we just call it, as the Trial Examiner suggested, $90,000,000. Of course, when we use any such figure as $84,000,000 or

$90,000,000 we are making no deduction for depreciation, are we?

A. I do not know what you are doing but reaching out and getting a figure to use as an example.

Q. What figure did you start with when you started your allocation?

A. I did not start with any figure.

Q. Well, didn't you start with $84,998,335?

A. No, sir, I did not start with anything. I set down the rules and regulations to be followed by the man who made the computations and presented them.

. . . . . .

[fol. 10034] Q. Suppose, before we make the assumption of a rate base of $90,000,000, I ask you to what use you put the $84,998,000 figure?

A. In the allocation of return, I apportioned that return over property values which totaled $84,998,335. That is not in Exhibit No. 251, however.

Q. That is right, Mr. Biddison. I think, perhaps, you did not get what I had in mind and perhaps I did not make myself clear. Perhaps I should have said in starting your method of allocating return, you started out with $84,998,000. Is that right? A. That is correct.

Q. Now, that represents the book cost of the gas plant of all these companies consolidated before any deduction for depreciation, doesn't it?

[fol. 10035] A. That is the property account as shown in Exhibit No. 197 by Mr. Watkins and any description further than that will have to come from somebody besides me. I think it has been explained.

Trial Examiner: Those are the figures that you adopted as the basis for the testimony you gave in segregating and allocating return, did you not?

The Witness: That is correct.

Trial Examiner: And did you not add to the segregated return the segregated base from which that return would derive? In other words, did you not break down the $84,000,000 plus in your previous testimony?

The Witness: Yes, I have broken that down in previous testimony.

Trial Examiner: What is the lesser figure?

The Witness: The lesser figure, after deducting the amounts for the gas and gasoline production property, is $79,774,894.

Trial Examiner: And that leaves, as a basis for earnings of $651,766.70 what sum?

The Witness: For the basis of earnings on property exclusive of that production property, $128,848.

Trial Examiner: No, you misunderstand me. The formula, as I understood your testimony, would be—and for these figures look at line 42 in page 1 of Exhibit No. 251—[fol. 10036] $84,000,000 plus is to X as $5,654,052.04 is to $651,766.70.

In other words, you segregated your return. Now, what is the effect of that segregation if you apply it to your base?

The Witness: Well, I will have to make a determination of base the first thing, Your Honor, because I have not made a determination of base.

Trial Examiner: You took the $84,000,000 for your base, did you not, in calculating your return?

The Witness: That is the total base that I started with in allocating return but I have not determined what that base would be as to either one of the classes of property.

Mr. Culton: That is the rate base.

The Witness: Rate base, yes.

Now, on the unregulated business, you would have $128,848, other than production property which you have in addition to that portion of the production property.

Trial Examiner: Is that not included in the $84,000,000 plus figure which has been given?

The Witness: Yes.

Mr. Culton: I think what the Examiner wants to know is the fraction which you used for the purpose of applying to whatever rate base the Commission shall select. I think that is what you are after.

The Witness: In substance what it amounts to and I think this will answer the Examiner's question, to [fol. 10037] determine from the $84,998,335 the respective rate basis conforming to the allocation of return which I have made, you should take 13.2 per cent of $5,223,461 of gas and gasoline production plant plus the item of $128,848 of plant other than gas and gasoline production plant. That would be $498,497 of production property including gas and gasoline production property allocated to the non-regulated business and $128,848 of other property allocated to that business, the sum being $618,345.

* * * * * * * *

Trial Examiner: (Interposing) Just a moment, Mr. Littman: Exhibit No. 251, page 1, line 42, has a segregation of net operating revenues in which, under the column "Non-regulated Sales," Column (F), appears the figure of $651,766.70.

The Witness: That is correct.

By Mr. Littman:

Q. Now, what rate of return is indicated by that kind of a net earning as applied to a rate base of $618,345. Will you make the calculation for us, please?

A. About 94 per cent.

Q. Per annum? A. Yes, sir.

Q. Well, it is more than that, isn't it? Will you please calculate it again? It would be more than 100 per cent, [fol. 10038] wouldn't it?

A. Yes, that is correct. It is about 103¼.

Q. Percent return per annum? A. That is right.

* * * * * * * *

[fol. 10039] Mr. Goodman: In the opinion of the Commission in the Canadian River Gas case, it is said:

"The Commission is aware that in an investigation such as this, it is incumbent upon it to determine the reasonableness or unreasonableness of the rates and charges subject to its jurisdiction. This requires that the total costs of operations, including depreciation, taxes and a fair return be distributed among the various customers served individually or by appropriate groups. To the

extent that such costs allocated to sales under the Commission's jurisdiction are less than the revenues received, [fol. 10040] the rates and charges made are unjust and unreasonable and revenues must be reduced accordingly. It does not follow from this obligation of the Commission that an allocation of physical property or portions thereof must be made before any excessive returns are determined as seems to be the contention of the companies.*** All that can be accomplished by an allocation of physical properties can be attained by allocating costs, including the return."

Now, if I may be permitted to reword a phrase in the foregoing statement, I should like to do so. In place of the phrase "cost including return," I would like to substitute the words "revenue requirement". I make this suggestion because, to me and I know to many others, cost on the one hand and return on the other are distinct concepts whereas total costs, including the portion thereof allocated to depreciation plus a reasonable return, equal the revenue requirement.

I, therefore, repeat and endorse the following paraphrase of the last paragraph of the opinion referred to: "All that can be accomplished by an allocation of physical properties can be attained by allocating the revenue requirement. The latter method is by far the most practical and businesslike."

Now, I do not wish to assert or even endorse a quoted proposition without giving a reason for it. Briefly, it is this:

[fol. 10041] The allocation of a revenue requirement among classes of customers is in no sense a consequence of cost allocations. While differentials in the direct costs of each service, if free, must be recognized, and a fair test of their existence is the amount saved or avoided if the particular service is dispensed with, joint costs are the indivisible burdens of the total operations. Subject to the requirements that each unit should bear its direct or ascertainable avoidable costs, any different price classes per unit of service, that is, any different rates, must be the consequence of considerations of policy, not of cost. This

policy accords with the relative value of the different services which may be developed by the full utilization of the facility.

The opinion just referred to apportions the revenue requirement set by the fixed charges in accordance with the relation on the peak day of the customer's demand to the system peak. The evident object, which is approximated, is to apportion the general burden equally per unit of demand. There is nothing compelling about this policy. If at this equal price per unit the capacity is filled, the policy proves it is sound.

Now, I do not say this in disagreement with that policy. On the contrary, I say it is in fair accord with the application of that policy to that case and very likely to this case but in order to state and apply a general principle, that [fol. 10042] may be tested by the generality of its application and I do not believe that there is any general principle of law or of policy which brings one out to the necessary conclusion that, say, investment in transmission property shall be allocated equally in accordance with the ratio of the customer's demand on the peak day to the total peak demand.

I can conceive of occasions where that would not be a sound or even a business-like policy. Mr Biddison has gone to the far opposite extreme and has concluded that since there is no capacity whatsoever to be allocated to the non-regulated customers, they make no demand whatever on capacity, no capacity was provided for them. Therefore, no transmission line capital is to be allocated to them whatsoever.

But now let me cite a possible example that will bear on this question of allocation. As is well known and has been brought into the testimony in this case, a relatively small increased investment proportionately will pay for the installation of a very large quantity of increment capacity. That is to say that if the price of pipe line be roughly related to the diameter, a relatively slight proportionate increase in the [diaeter] will greatly increase the capacity of the line and if this line had been built, let us say, as a looped line of high capacity pipe, there would

have been plenty of reserve capacity in advance of the present demand and that reserve capacity would have [fol. 10043] been provided at a not impossible increased cost.

Now, let us suppose that there is an industrial customer on the line and he says, "Well, I will take your gas at, say, 15 cents per thousand cubic feet," and the pipe line company calls in its accountant and the accountant starts to figure on the basis of allocating an equal proportion of capacity relative to the demand of this customer on the peak day and the accountant figures out that if this is done, why, the gas will have to be sold at 15 cents per M.c.f. below the total allocated cost.

Yet Mr. Morton has shown to us that production costs and transmission or pumping costs are something around, on an average, 6 cents per M.c.f. and an average price, say, of 15 cents, will bring in 9 cents to relieve the burden of general costs and to afford some profit.

Well, if those figures be correct, I do not state them as correct but merely as general indications of a 9 cent differential between, let's say, the direct cost of the gas and what you are going to get, the businessman is entirely justified in taking on the business for, to him, the problem is, "Am I better off with this business than without it?" and he would be justified, as I know he frequently does—and now I am merely figuratively speaking—in throwing the accountant out the window. I do not mean this as a reflection on the accountant for there are, of course, many [fol. 10044] exceptions but I have heard numerous discussions and arguments between businessmen and accountants to precisely the same effect. The accountant's allocations have a certain tendency to prove that he is selling at a loss but the man operating the business knows that he is better off taking the business than leaving the business because he is going to have those costs anyway. The costs are there and whatever relief he gets is all to the good.

It is clear, then, that if there is plenty of capacity not being utilized and a new customer comes on and will take

some capacity, the question to be considered is not an equal division of the cost of that capacity among the users but this question, that this capacity that this particular customer is using does not have the same value as the capacity that a more necessitous customer is using. Now, I submit that is not any question of cost at all. I submit that one could start figuring from now to doomsday on the subject of cost and never approach a practical, workable solution of the problem. I submit that the efficacy of your cost calculations where joint costs are incurred and where they are inseparable is exhausted by using those costs for a determination of the total revenue requirement.

Now, having exhausted the efficacy of your cost work, your distribution of that total revenue requirement among customers derives and is derived from considerations of [fol. 10045] pricing policy as to where that burden should fall. Your Honor is undoubtedly familiar with the phrase, "what the traffic will bear" which has a primary reference to the subject under regard. I only point that out because it is perhaps better to refer to differences in the value of the service.

Now, let me try to relate this somewhat to this case. If it were possible to take one particular activity and compute the direct expense incurred in it, then the thing to do is to proceed in that way. Well, a customer uses up so much gas but we do not know what that cost is because that gas was obtained under a development project for a completed industry. There is no project in existence whereby fields are developed, gas wells are drilled, purely for a limited, we will say, 8 million M.c.f. per year capacity for non-regulated customers.

Now, a great field is developed. A pipe line is built in no sense for any limited operation but it is built not only for the customers of today but for the customers in the distant future. It is all engineered to handle great volumes and possess great capacities.

Now, I think that it may be assumed, even without argument, that gas can be sold and is being sold to the non-regulated customers at a price far below what would be conceivably possible if a separate industry had been estab-

lished for them. I think, on the other hand, that the de-
[fol. 10046] votion of a certain proportion of the gas, and that is after all production and of the transmission capacity and I think some of it is devoted to non-regulated customers, to some extent cooperates with and relieves the burden of fixed charges which fall upon regulated aspects of the business or would fall anyway if the business were exclusively serving the regulated customers.

I, therefore, think that the direct charges that one can develop here are so small and so trivial as to cut absolutely no figure in the picture and that it is a complete and futile waste of time to attempt to find out how much labor, for example, is expended in serving the direct customers if it were even possible to do so and I doubt it is possible and how much production labor is devoted to extracting the particular gas which they require. The whole thing becomes very small. There are, of course, some laterals which serve these industrial customers, as I recall the figure, about $125,000 worth, and also an infinitesimally small figure in this picture.

Now, following the Indiana Gas case which purported to do just exactly what I think should be done but finding in this case that there is no particular point in starting to make an attempt to allocate so-called variable costs or direct costs serving one or the other classes of customers, we get down to this situation which will do justice in this case with the minimum of trouble and which comports
[fol. 10047] with good theory. We must first study the requisites of a rate structure and we must find out if the policy embodied in that rate structure is a sound policy. It has been mentioned that the company, in general, has a policy of pricing so-called good load factor gas at one price with a differential between that for poor load factor gas and that differential—I do not know the figures, Mr. Culton told me that it was 30 and 40 but I doubt whether that is right:

Is that right, Mr. Culton?

Mr. Culton: That is right. That is what most of them have. It is in the record.

Mr. Goodman: Let's assume, for the minute, that is the differential. In other words, poor load factor gas sells at three-quarters of the price of good load factor gas. Is that it?

Mr. Culton: No, you have that backwards.

Mr. Goodman: Poor load factor gas sells at approximately three-quarters of the price of good load factor gas?

Mr. Culton: Poor load factor gas sells at more than good load factor gas.

Mr. Goodman: Yes, poor load factor gas sells at one and one-third times what the good load factor gas sells for.

Now, in making differentials which, as I say, should accord with the relative value of the service, persons who know something about that should be consulted. The [fol. 10048] matter is not one for merely cloistered scholars. I would consult and pay rather close attention to the practical experience of the persons operating the business as to what those differentials should be for it is not a cost deduction at all. It is a policy deduction, a policy that is pursued by a gas merchant who has practical experience in his business and I do not mean to say, for that reason, that I am prepared to approve of everything or every conclusion that may come from the defendants in this case in that regard but I do say that, in a matter such as this, some attention should be given to what experience is shown on the subject because it is not a matter that can be figured out with a sharpened pencil.

Now then, if we have in mind that level of differentials which experience has shown will work as regard the development of the business and as adapted to a reasonable utilization of the capacity of the business, we should proceed to ascertain the demand of the non-regulated customer for poor load factor gas on the one hand and for good load factor gas on the other hand and then, on that basis, we may proceed to allocate the revenues.

That is to say, we take our differential of one is to one and one-third and we apply that to the total business, total sales to meet the price requirement. We will then

get a rate or a price per unit of service for good load factor gas and for poor load factor gas. That rate, con-
[fol. 10048] sidering all the business is then the appropriate rate for the regulated business, it not being our concern what the company charges in the non-regulated business, where it cares to adhere to the price we set in the regulated business or not but we do know, and we use the same price in general because we apply the same policy for purposes of allocation, the differential between good load factor gas and poor load factor gas for our calculations. When we have calculated those revenues in that manner, we have accomplished our purposes. We could relate that to capital values. It would be a very simple proposition to transpose that into the capitalized amounts.

In my judgment, they would be correct, having in mind that correctness in this subject is conformance to an appropriate regulator or pricing policy and not to a delusive idea of cost.

* * * * * * * *

[fol. 10050] Mr. Culton: The Examiner made one suggestion a while ago as to our position on this exhibit.

I hope I made myself clear yesterday but, if not, I will try to do it at this time. We recognize that whether we can properly interpret the opinion of the Canadian River case or not, and whether the method of allocation which they used there is appropriate or not in this case, we do think that the Commission in that case clearly recognized that the best method of allocating was to allocate costs and that, in determining the allocation which should be made of costs, you should take into consideration an allocation of the return, whatever that return may be.

In that particular case, there was capacity in excess of all demands. In the Panhandle Eastern case, the demands are in excess of the capacity. Therefore, the ordinary coincidental rule or peak day rule would not apply. Here we have a deficiency in capacity if, in determining capacity you add the firm demand, that is, the resale gas, to our interruptible gas and, therefore, it becomes necessary for us to cut off interruptible gas during the peak days. As this witness has testified, the company does not have ca-

pacity in excess of its demands. This witness has presented what he thinks is a fair allocation of costs. If any-[fol. 10051] body else has a better method of allocating costs or any other method of allocating costs, it is appropriate for the Commission to hear it in this hearing.

Trial Examiner: Of your nineteen industrial customers, Mr. Culton, how many of them have contracts which make them subject to domestic requirements?

Mr. Culton: Every one, I think. I am informed that every one of our contracts, our direct sale contracts, is an interruptible contract without exception.

Mr. Littman: Mr. Examiner, I would like to be heard briefly on this subject of allocation.

I would like to express my opinion that this witness has not at all, in my judgment, followed the rules set forth by the Commission in the Canadian River decision. I shall undertake to demonstrate that either by cross-examination or by the introduction of testimony in rebuttal to Mr. Biddison's exhibit or Mr. Biddison's study or both.

The decision, of course, speaks for itself. I consider that the principle is stated on page 56 of the Commission's mimeographed copy of Opinion No. 73 which reads as follows:

"Commission staff exhibits on cost allocation followed principles that have long been recognized as reasonable in the public utility field and are widely accepted. Therein costs are divided essentially into two groups, fixed and variable. Fixed costs are largely joint costs which do not vary with the volume of sales. The total amount of such [fol. 10052] costs are largely proportional to the maximum demand on the system or system capacity. Accordingly, these costs have been allocated basically in proportion to each customer's responsibility for the peak day demand."

Mr. Culton: Would you mind interpreting that sentence, giving your judgment of it? Does that mean that if, on the peak day, our firm customers took all of our capacity and we were required to cut off all of our interruptible gas, then there would be no allocation of cost to the interruptible gas?

Mr. Wheat: That is our problem.

Mr. Littman: You mean where there is an interruption?

Mr. Culton: That is right.

Mr. Littman: Or curtailment?

Mr. Culton: That is right, talking about the peak day.

Mr. Goodman: I would like to answer that question, if you will permit me.

Mr. Culton: We would like to have the Commission's interpretation of it, if we can get it.

Mr. Littman: Of course, you will have that in greatest detail and in practical application very shortly. I would rather not undertake a general answer that may be misconstrued. I would prefer to present it either through cross-examination or direct testimony but I assure you our position will be made clear in detail.

Mr. Culton: Well, that is the thing that gives us difficulty.

[fol. 10053] Mr. Littman: I am glad to have you point out the part of this opinion which does give you difficulty because we may be able to enlighten you as to our detailed interpretation of that.

Continuing with the reading of the opinion:

"Variable costs are largely those that vary proportional to output or volume of sale. Accordingly, these costs have been allocated in proportion to volume of gas purchased by each customer."

Of course, there are other portions of this opinion which elaborate somewhat but, personally, I perceive the section that I have read to announce the principle. As I stated a while ago, I have in my own experience always looked at a result as one of the tests to determine the reasonableness of a method.

Now, according to this witness' method, he comes out with a result which shows, if these figures in Exhibit No. 251 are to be believed and if this witness' testimony is to be

believed, that the gross investment in plant applicable to these non-regulated sales, to-wit, the direct industrial sales, is $618,345. Exhibit No. 251 shows, in Column (F), line 42, that the net operating revenues, to-wit, the return applicable to non-regulated sales for the year ended 1941, amounted to $651,766.70. It is easy to see that the $651,776 represents a return in excess of 100 percent per annum [fol. 10054] upon the alleged gross investment applicable or allocable to the unregulated business according to the testimony of this witness.

Mr. Culton: Mr. Littman, do you know whether there is any difference in that situation which existed in the Colorado-Wyoming Company case so far as the allocation of return was concerned?

Mr. Littman: Certainly the Commission did not adopt this witness' method in that case.

Mr. Culton: I know, but on the allocation of return.

Mr. Littman: As I have heretofore stated, in my opinion the Commission does not and has not sanctioned any such method as this. I mentioned something with respect to profiteering. I firmly do not believe that the company is earning anything like 100 per cent return per year on its investment that is truly applicable to this business but that is where you come out when you use this witness' figures and if I may predict, I believe this witness who thus far has made estimates every one of which is either out the window, so far as this case is concerned, or so close to being out the window that it is almost there now, I would like to predict that this estimate will go the way of the others and will not be utilized.

I am going to urge very strongly that it not be utilized for purposes of this proceeding. However, when the time comes and we shall proceed to prepare ourselves for the eventuality of presenting for the Commission's considera- [fol. 10055] tion the staff's views on allocation, we shall present those views for Your Honor within the shortest possible time.

Trial Examiner: One thing that no one seems to have remarked about is the Commission itself makes a decision

between a company such as Panhandle or Natural Gas Pipe Line Company and a company such as the Colorado Canadian Company with its huge output to Colorado Fuel and Iron Company and affiliate. That is on page 1 of the opinion and that unusual relationship is commented on before anything is said about allocations.

Mr. Culton: That is true, Mr. Examiner. However, it is in connection with showing that the rates to industrials are not subject to the jurisdiction of the Commission.

Trial Examiner: They frankly recognize that in the opinion.

Mr. Culton: Yes and in the Colorado-Wyoming Gas Company case, on page 59, that does not, of course, relate to the industrial sales of the Colorado Fuel and Iron Corporation. They allocate those costs, that is, the costs of the Colorado-Wyoming Gas Company and the comment is made as to that. The principal purchaser, so far as Colorado-Wyoming Gas Company is concerned, is the Portland Cement Company and the statement is made that industrial gas is curtailed regularly during system peak days and they make this statement, "The demand on the system peak day is, in our opinion, a proper measure [fol. 10056] of its proportionate share of the demand costs than its highest off-peak demand."

Now, there is a possibility that if that sentence were the rule by which we would be governed, a considerable portion of Panhandle Eastern's gas would have no cost whatever attached to it.

We are not making that contention. I stated yesterday that, frankly, we do not know just exactly how the Commission allocated the return. We have presented here a method of allocating return which we think is a fair method.

Mr. Littman: In answer to your Honor's inquiry, I would like to point out that in the Canadian River case, the total volume of direct industrial sales was quite considerable. Here, according to Exhibit No. 251, the amount of direct industrial sales sold on an annual M.c.f. sales basis is approximately 13 per cent to non-regulated business

and, on a revenue basis, it is approximately 8½ per cent so we do not have here nearly so large a volume of gas not subject to regulation as was the fact in the Canadian River case.

In the Chicago Pipeline Case or the Natural Gas Pipeline Company of America proceeding, my understanding is that there was a very small percentage of direct industrial sales, something in the vicinity of one or two per cent, perhaps, and no allocation whatever was made there, so far as I know.

Mr. Culton: And no evidence was offered on that, either?

[fol. 10057] Mr. Littman: That is my understanding also, Mr. Culton. No evidence was offered by the company or the Commission, as I gather it.

Mr. Culton: That is right.

. . . . . .

[fol. 10064] By Mr. Littman:

Q. Mr. Biddison, do you know whether it is possible for a company to earn more than a hundred percent per annum under the existing tax laws? A. I do not.

Q. Do you know how much of the capital stock tax and excess profits tax a business earning more than 100 percent profits per annum would have to pay?

A. I do not.

Q. How much have you allocated to non-regulated sales for capital stock tax?

A. Federal capital stock tax has been allocated [fol. 10065] $4,706.53 to regulated sales, and $11,388.97 to non-regulated sales.

Q. That appears on page 5 of Exhibit 251 in Lines 17 and 18. A. Yes, sir.

Q. How much have you allocated to non-regulated sales for excess profits associated with capital stock tax?

. . . . . .

A. Well, Federal excess profits taxes have been allocated $3,209,166.84 to regulated sales and $349,062.28 to non-regulated sales.

By Mr. Littman:

Q. Now, is the sum of $349,062.28 which you just mentioned the proper amount allocable to non-regulated sales for excess profits tax associated with capital stock tax?

A. I don't know about the association you are referring to. I think that is the proper allocation of this amount of tax.

Q. Do you know whether or not you have allocated any [fol. 10066] excess profits tax associated with capital stock tax applicable to non-regulated sales?

A. What I have allocated are the amounts shown in Column B. As to their association, one with the other, I don't know.

Q. Then, you don't know whether you have done it or not, do you?

A. I think I have answered your question. I have simply allocated the amounts shown in Column B. What their association is, one with the other, I do not know.

Q. Well, will you state whether you have or have not allocated to non-regulated sales a business which shows 100 percent return per annum on the gross investment for excess profits tax associated with capital stock tax? Have you or have you not?

. . . . . .

Mr. Culton: Counsel is talking about a non-existent item that isn't listed on the exhibit at any point.

By Mr. Littman:

Q. Do you know that to be a fact, Mr. Biddison, what Mr. Culton has just said?

A. No, I don't. What I have done is to allocate the [fol. 10067] amounts in Column B. As to the association of one with the other in the respect that you have mentioned, I don't know anything about any such association.

Q. Do you know whether a business earning a hundred percent on its investment would have to pay such an excess profits tax associated with capital stock tax?

A. I do not.

Q. How much have you allocated to non-regulated sales for excess profits tax associated with Federal income tax?

A. I have allocated excess profits tax as shown in the exhibit, or had them allocated as shown in the exhibit. As to the association of the one form of tax with the other, I know nothing about the association.

. . . . . .

[fol. 10076] RAWL B. COFFMAN was called as a witness, and, having been first duly sworn, was examined and testified as follows:

Mr. Wheat: Mr. Examiner, I should like to have [fol. 10077] marked for identification two documents.

. . . . . .

I should like to ask, Mr. Examiner, if it will be agreeable to you, that the document entitled "Study Relative to Minimum Requirements of Panhandle Eastern Pipe Line Company (giving effect to property acquisition)" be marked for identification with the next exhibit number.

. . . . . .

(The Document Referred to Was Marked Exhibit No. 253 for Identification.)

Mr. Wheat: And in order to save time, I should like to [fol. 10078] ask also that at this time there be marked for identification as Exhibit No. 254 the document entitled "Investors' Appraisal of the Risks of Capital in 153 Stable Industrial Companies for the Years 1937-1941, inclusive, (also it contains 1941 full year data for the Utility Industry supplemental to Exhibits 63 and 64.)"

. . . . . .

(The Document Referred to Was Marked for Identification Exhibit No. 254.)

Direct Examination

By Mr. Wheat:

Q. Mr. Coffman, you have already been sworn in these proceedings, have you not? A. I have.

Q. Now, since you appeared at a prior date in these proceedings, have you made further analyses?

A. Yes, I have. And the analyses contained in the Exhibit No. 253 and the supporting data to certain of the charts contained therein are presented in Exhibit No. 254.

Q. In order that we may conserve time, Mr. Examiner, I should like to ask Mr. Coffman at this time, please, briefly to restate for the record what you have done in making this analysis.

A. Well, the purpose of this analysis was to present [fol. 10079] factual and objective data on the minimum earnings requirements to maintain the credit position of the company, and enable it to secure capital when needed, giving full consideration to the bonds, preferred stock, and common stock of the company under its present status, after acquiring various properties as of February 6, 1942.

Trial Examiner: Before you leave your Exhibit 253 for identification, will you kindly relate that and the other exhibit to the exhibits you previously offered, namely, Exhibits 63 and 64 and 65, I think?

Mr. Wheat: May I make the suggestion, sir, I think that as the discussion proceeds, the relation of Exhibits 253 and 254 for identification with Witness Paul Coffman's previous Exhibits 63 and 64 and 65 will become evident, and I think it would both conserve time and add to the understanding of what Mr. Coffman has done if he could proceed in this connection as we have done, and explain at each individual point the relation between the exhibits shown.

Trial Examiner: Thank you.

By Mr. Wheat:

Q. Then, Mr. Coffman, will you proceed with, I think, the statement that you had begun, of what you did in [fol. 10080] making this analysis, the results of which appear in Exhibits 253 and 254 for identification?

A. Well, as we all know, the important relationship between return and capital and the total costs of rendering service is due to the relatively large proportion of fixed capital which is required in the utility industry.

The average public utility, for example, requires a plant investment equal to from four to six times its annual gross revenues, whereas the annual gross revenues of most industrial corporations ordinarily exceed this total investment.

In view of the fact that variations of huge monetary amounts may thus result from relatively minor fluctuation in allowed rates of return, it is apparent that too much care and attention cannot be devoted to the factors upon which that rate must itself be predicated.

As I stated when I appeared before this Commission a month or so ago—

Q. You mean about last October, was it not?

A. Well, several months ago, as a matter of fact, now.

(Continuing) —I had reviewed the leading cases on the subject to ascertain what body of principles had been amassed and used for determination of the proper "return," but it seemed to me that in many instances necessary facts had never been available to do what the Court [fol. 10081] said should be done, and at that time I cited the portion of the Bluefield case to which I referred, and which I thought gave a body of principles that was usable for the analysis I presented particularly in Exhibit 65, and which analysis I have brought down to date in Exhibit 253, and that portion was the statement which I quote from the Bluefield case: "A public utility is entitled to such rates as will permit it to earn a return on the value of the property which it employs for the convenience of the public equal to that generally being made at the same time and in the same general part of the country on investments in other business undertakings which are attended by corresponding risks and uncertainties."

Mr. Wheat: Mr. Examiner, may I, off the record, correct his statement?

I believe that the word "general" as you read in here, does not appear.

Does it appear?

The Witness: It appears in the same general part, is that what you mean?

Mr. Wheat: Yes, all right.

A. I believe that is exact. I checked it a couple of times.

Mr. Wheat: All right.

[fol. 10082] By Mr. Wheat:

Q. Now, did you attempt to present data on that subject in Exhibit 65?

A. I did. In my Exhibit No. 65, I presented data on this subject and in my present exhibit, which is now No. 253, I have expanded the data so that one would have the relevant facts upon which to exercise one's judgment.

For example, I have attempted to measure the risks and uncertainties attaching to other business undertakings at the same time and, in so far as data are available, in the same place.

My method, as will be shown later, treats of this latter in a substantial and substantive way, although it may not be apparent on its face. The reason for this is that what I call investors' appraisal has as one of its parts the market prices of securities

Various kinds of investment possibilities are available to investors who finally make a selection, all available facts taken into consideration, such as risk, uncertainty, geographical areas, type of service, type of product, and so forth.

It is my belief that so far as available facts are concerned, I have presented all the relative ones so that a person can exercise enlightened judgment.

Q. You mean all the relevant facts. "Relative," I [fol. 10083] think you said.

A. All the relevant ones, yes.

Q. Now, what else have you to say as to what you formerly quoted in the second sentence from the Bluefield decision?

A. Well, in the Exhibit 65 at the time I was testifying, I said I further relied upon that portion of the Bluefield case which is stated as follows: "The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under

efficient and economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties."

In so far as the efficiency of management can be measured by the operating results of the company as compared with the results of other companies—and I think this is by far the most reliable method—I made sufficient analysis to lead me to the conclusion that its management was efficient.

My end finding, which I call "Minimum Return Requirements" is based upon this belief, and supplies all the relevant facts on this subject dealing with the return being sufficient to assure confidence in the financial soundness of the utility and maintaining and supporting the company's credit and enabling it to raise the money nec- [fol. 10084] essary for the proper discharge of its public duties.

As a matter of fact, I do not see how a determination on return, as defined above, can be made without using the data contained in my present exhibit which is now No. 253.

I should like to emphasize the fact that so far as the company's credit, risk factors, and so forth, are concerned, it does not make any great difference what I think or what the management of the company thinks or what those of us here present think. The real fellow to tell us about this matter is the man outside who is going to put up the money. He is the person to tell us what the credit risk is and he is the person who will insist that certain yields be granted him or he will not put up the money. In the end, therefore, it is the investor, as a class, who determines with finality what return is necessary.

What I have tried to do in Exhibit 253 and the supporting tabular data give in Exhibit 254, is to show, as completely and fully as possible, what the investor is saying about these factors of risk, management, financial soundness, and raising new money, and I believe that if companies wish to continue to finance through public offerings, it will behoove them to look at this investors' appraisal in these matters.

In other words, all of the elements of risk affecting a particular enterprise are ordinarily reflected in its costs [fol. 10085] of capital which are determined by amounts which must be paid to investors to induce them to supply the capital needed in the enterprise.

Q. Mr. Coffman, in developing your present analysis, what, in general, did you do?

A. Well, primarily, I used my former general approach as presented in Exhibits 63, 64, and 65 to this problem of return, and I have set forth the earnings required to maintain the capital of Panhandle Eastern Pipe Line Company giving consideration to the securities which have been issued since my former testimony.

In other words, this includes now all the events that have taken place which are recorded as of February 6 in the acquisition of these new properties.

Q. By that do you refer to the new bonds and the new preferred stock which were issued in connection with the acquisition and purchase, we may say, of Michigan Gas Transmission Company, and Indiana Gas Distribution Company properties?

A. Yes, I refer to the $10,000,000 in bonds and the $15,000,000 in new preferred stock that was issued in connection with the purchase of Michigan Gas Transmission Company and Indiana Gas Distribution properties, and a small amount of property of Ohio Fuel Gas Company, and the amount involved to refund the former class A preferred stock.

[fol. 10086] Q. As of February 6, 1942?

A. As of February 6, 1942.

Q. In other words, are we to understand that you have here given effect to these transactions and reflect the situation as we now find it in respect to Panhandle Eastern Pipe Line Company?

A. That is exactly correct.

Q. Now, in consideration particularly of the Trial Examiner's suggestion, I wish you would refer to Exhibit 65 and state to what particular charts in that exhibit you would say that your new study, as reflected in Exhibits 253 and 254, refer?

A. Well, I am referring in Exhibit 65, Charts Nos. 36 and 37, to the column and the figure which bears the caption "Current Capital Requirements."

Q. Now, those charts 36 and 37 in Exhibit 65 refer, do they not, to Panhandle Eastern Pipe Line Company as it existed prior to February 6, 1942?

A. That is correct.

Q. Now, in what way would you say that your present study differs from that which is reflected in those charts 36 and 37 of Exhibit 65?

A. Well, in Exhibit 65, I went beyond the earnings required to maintain the company's capital and credit—that is, the item usually denominated "return"—and took [fol. 10087] data from the published sources in respect to operating expenses, labelling the final figure "Total dollars needed by management". Such column and caption is also shown as the left-hand bar on each of the Charts Nos. 36 and 37 in Exhibit 65. In the present study numbered Exhibit 253, I made no attempt to determine this total figure of overall needed earnings, but confined myself to the factor of return.

That is, the amount of revenues required by this company as it now exists, and in its present status, over and above the requirements for basic operating expenses, depreciation and taxes.

Q. Why did you make this present analysis on that basis?

A. Primarily because the time available for study was so short that I found it impossible to develop data beyond that involved in the item of return, that is, the earnings necessary to maintain the credit position of the company.

The fact is that was only by working a large staff both day and night that I was able to have the six copies of Exhibit 253 completed, which has been presented at this hearing.

Q. Now, would you say that there are any further differences which ought to be explained now at the outset between your present analysis in Exhibits 253 and 254 [fol. 10088] and the analysis which you presented in Exhibit No. 65?

A. Yes, there are certain differences. In the present analysis, as shown in Exhibit 253, I have given no time and have presented no charts in regard to the general trends in the industry as was shown in Exhibit No. 65 in Charts 2 to 6, inclusive, and I have made no comparisons of Panhandle Eastern Pipe Line Company's gross revenues and its operating revenues with industry figures—

Q. (Interposing) Operating ratios?

A. (Continuing) And its operating ratios.

with industry figures as shown on Charts Nos. 7 and 8 of Exhibit No. 65.

Q. I wish you would state why you omitted those particular items.

A. Well, as I recall it, in the course of the discussion in the last hearings, no question was raised in regard to the trends in the industry or the comparison of Panhandle Eastern Pipe Line Company's figures with industry figures; consequently, I did not feel it was necessary to include these items in my present analysis as shown in Exhibit 253, since it was already included in numerous charts.

However, so far as the industry figures are concerned, I have included, as Table No. 1 in the tabular section of tables, showing latest available figures, which when considered with tables presented in Exhibit No. 65, would [fol. 10089] bring the tabular material down to date in case any question should be raised as to what any figure might be.

Q. Well, in other words, you have included in the appendix to Exhibit 253 the basic data upon which the charts you have just mentioned in Exhibit 65 could be brought down to date?

A. The very last table captioned "Appendix Table No. 1" in Exhibit 253 contains all the data on the industry figures shown in Charts 2 to 6, in Exhibit 65, that I could find which became available since that last study in Exhibit 65 was made.

Q. Are there any other differences between your present study and the analysis that you presented in Exhibit

65 which you think should be drawn to the attention of the Commission?

A. Well, with the exceptions noted above, my approach is generally the same in this study as that shown in Exhibit No. 65.

However, in the present analysis in Exhibit 253, I have expanded the period covered in certain charts over that which was covered in similar charts in Exhibit No. 65 because my present study is based largely upon figures contained in Exhibits offered through Mr. Watkins, while in my prior analysis, contained in Exhibit No. 65, I took all of my figures so far as the company was concerned, [fol. 10090] from annual reports to stockholders and other published data, the first of which available to the public covered the year 1934. Consequently, my prior analysis was more restricted so far as Exhibit No. 65 was concerned than is true in the present analysis as shown in Exhibit No. 253.

Furthermore, by confining my attention to one item, namely, earnings necessary to meet capital requirements, I was able to make a more detailed analysis of certain items with the result that my present study includes certain items which were not shown in Exhibit No. 65, such as detailed analysis of 153 industrial companies which have paid dividends continuously over a 10-year period and analysis of the various natural gas pipe line companies and the effect upon quality ratings of their securities as the result of certain assumed alterations in their revenues.

[fol. 10091] Q. Would you say, Mr. Coffman, that what you have now stated generally describes the major differences between your present study and that contained in your exhibit 65?

A. Well, broadly speaking it does. However, you realize I have not attempted to particularize by chart number but have covered the subject generally.

On that basis I think I have outlined the principal differences.

. . . . . .

Q. Now, Mr. Coffman, just one more question before I leave this subject:

Is the impression that may have been gained from what you have said correct that all of the figures relating to the company, with the possible exception of one or two minor items, are based upon figures which Mr. Watkins has testified to in this record?

A. Yes, sir. That statement is correct.

You will find the references to Mr. Watkins' exhibits in the sheets of supporting data referable to the various charts in my present exhibit No. 253, and I followed the same procedure that I did in my exhibit 65, namely, in [fol. 10092] the back portion of the exhibit there is a table supporting each chart where a table is necessary, and each table is completely sourced as to data, so that it can be told exactly what figures I am using and from what source I took those figures.

Q. Now, as a result of this study, Mr. Coffman, what figure have you determined to be necessary to meet capital requirements and maintain this company's credit as of February 28, 1942, based on the figures for the consolidated company?

A. According to my determinations, $5,382,677, as shown in chart No. 26 of Exhibit 253 would be required on the consolidated basis, and that figure compares with $5,064,821 for Panhandle Eastern Pipe Line Company alone, as of June 30, 1941, as shown in chart No. 37 in my exhibit No. 65.

Q. When you refer to the first figure you have just stated, you are referring to net income, are you—net operating income?

A. That is the minimum earnings that are necessary to maintain capital requirements, yes, sir.

Q. Now, does this new figure $5,382,677 reflect all property or security acquisitions made by the company prior to February 28, 1942?

A. Yes, it does.

Q. And this figure is after taxes but before interest? [fol. 10093] A. That figure is after taxes, that is correct.

Q. But before interest? A. That is correct.

Q. Now, without at this moment discussing the detailed construction of this figure, I would like to ask you why you believe such a figure as this should be determined at the outset, and why you believe it must necessarily be considered as you have said in a rate of return determination.

A. Well, as I have outlined a few minutes ago, I feel exactly the same now as I felt at the time I testified before this Commission some months ago, so far as the figure representing dollars needed to meet current capital requirements is concerned.

In determining such figure I believe I am following to the letter, as I stated before, the principles of return determination as laid down in the Bluefield Waterworks and Improvement Company vs. Public Service Commission of West Virginia.

Q. You are referring to the case reported at 262 U. S. Reports 269? A. That is correct.

Q. All right. Proceed.

A. Among other things, in regard to determining an annual rate, the court there said:

"The return should be reasonably sufficient to assure [fol. 10094] confidence in the financial soundness of the utility, and should be adequate, under efficient and economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties."

All I have done, as I see it, is to follow a literal interpretation of that statement and present my conclusions objectively in statistical and graphic form.

I believe the Bluefield case stated most clearly the various factors that should and must be considered in the determination of an annual rate, and it was my further belief in that case, and I quote:

"What annual rate will constitute just compensation depends on circumstances and must be determined by the exercise of fair and enlightened judgment, having regard to all relevant facts."

So far as I am concerned, confining my attention to the financial soundness and corporate position of the com-

pany, I think I have given full, fair, and adequate regard to all facts relative to this particular phase of the problem.

Q. I note, however, Mr. Coffman, that you have not related your figure of return to any rate base. Why did you not do that?

A. Well, I had various reasons. I think I explained before, in connection with Exhibit No. 65.

[fol. 10095] The main one is that the use of a rate base, however it be obtained or measured, and the multiplying of that base by a so-called rate of return, comprehends merely one method of arriving at the final end figure of required return in dollars.

I was able to arrive at that figure directly without going through the mathematical process of multiplying a rate base by a percentage rate of return.

As a matter of fact, whatever figure were to be adopted as a rate base—let us, for example, say prudent investment—you would have to make the very studies I have made in order to determine the proper percentage by which to multiply it.

In other words, I have merely done directly what the classical rate base times rate of return method must do indirectly, if a correct result is to be obtained under the Supreme Court's pronouncements in respect to requisite return.

In either case you must arrive at the same result in dollars of required return if you do a fair and proper job in the light of the economics and the objective data.

Q. Now, Mr. Coffman, if you were to be asked to assume a rate base, how would you go about developing the element of fair return?

A. I would make exactly the same studies which I have made, and then I would divide the required return in [fol. 10096] dollars by the assumed rate base.

This would give me the percentage of fair rate of return.

Q. I take it, then, that you are not objecting to the use of the so-called classical method?

A. No. I think I discussed that before in connection with Exhibit No. 65, and I think I said that I didn't see any particular necessity for going through that mathematical process when you can get your end figure directly.

Q. I want you to make it perfectly clear on this record just why you think that is true.

A. For one reason—and I believe it is a compelling one—and that is to do the job properly one must make the economic studies, the objective economic studies, of what such a company must have in order to maintain its credit position and thus be able to go forward and continue to render the service required of it, and when you have done that you arrive at the end figure directly and don't have any further arguments about rate base of rate of return.

Q. Now, just to be sure that the record is clear: What is the rate of return that your study indicates to be required in this present proceeding?

A. I can't answer that. I don't know what the rate base is.

Q. Well, now, I will give you an opportunity. Let us [fol. 10097] assume, for the moment, for the purpose of this question, and purely as an example, as has been done in other questions in this case, that you arrive at a rate of return by taking the total gas plant classified as shown on Mr. Watkins' Exhibit 200—

Mr. Littman: You mean "rate base"? You said "rate of return".

The Witness: I am sorry. Rate base.

By Mr. Wheat:

Q. If we take the total gas plant classified as shown on Watkins Exhibit 200 of, I think, $78,700,000 approximately, and we then reduce it by the reserves for depreciation and depletion, which are in round figures $13,097,700 as shown on Exhibit 197—I believe both of these figures are February 28, 1942—now what would you have to say about a rate of return?

A. Well, using those figures the net plant would then total $65,600,000 in round figures.

Applying my rate of return—

Q. (Interposing) Do you mean your rate of return?

A. My required return. (Continuing)—of the $5,382,677 as shown in chart No. 26 of Exhibit 253 to the base gives a required rate of return, in percentage, of 8.2 per cent.

[fol. 10098] Q. Now, suppose that, for some reason, the Federal Power Commission, in fixing rates for Panhandle Eastern Pipe Line Company, were to desire to use some other figure than we have thus assumed for the rate base: how would that affect your testimony as to the required rate of return?

A. Obviously the results would change if any base figure used in the calculation changed.

If there was a reduction of the net investment figure by an amount it would therefore reduce the rate base by this calculation made.

In that case I would apply the figure of $5,382,000 of required return in dollars to the lower rate base, and arrive at the percentage which the one bears to the other.

That percentage would then be the required rate of return.

Q. And would that same fact hold good, or the same machinery hold good, if the Commission wished to increase that rate base?

A. It would work exactly the same.

Q. Now, do these examples bear out your opinion what you have said in respect to your method as the direct method, as compared with the classical method which I think you referred to by the term "indirect"?

A. Yes, as I have testified, under either method you must eventually come out with the number of dollars [fol. 10099] needed by the company as earnings over and above its reasonable operating expenses, its taxes, and proper accruals for depreciation, depletion, and amortization.

The end figure is what you have after and what you must—

Q. (Interposing) "What you are after" don't you mean?

A. The end figure is what you are after and what you must somehow secure.

My method uses the basic objective studies that must be used to reflect the economics involved, and while, as I have shown, I can go through the process of determining fair rate of return upon any given rate base, that is not a necessary piece of machinery, and the whole process is simplified by using direction instead of indirection.

As a matter of fact I have included a chart in this exhibit No. 253 which makes this point very clear.

Perhaps I could start discussing the individual charts and let further development of this idea come out as I proceed.

Q. Well, I think that is a good idea.

Now, with that in mind I would like to ask you now to turn to Exhibit No. 253 and state first whether you have included, at the outset, an index of the charts and tables for the convenience of anyone considering this document.

A. Yes. There is such an index included in Exhibit [fol. 10100] No. 253.

Q. I notice that the next general section of that exhibit is headed "Graphic Presentation".

I wish you would turn to what you have labeled "Chart No. 1" in that graphic presentation and state what that chart shows.

A. In Chart No. 1, Exhibit 253, captioned "Condensed Actual and Pro Forma Balance Sheets of Panhandle Eastern Pipe Line Company as of December 31, 1941", I show two columns of balance sheet figures, one column captioned "Actual" and the other captioned "Pro Forma".

The pro forma figures give effect, as told in the note, to financing transactions consummated on February 6, 1942, and the acquisition on that date of capital stock and debt of Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation, and purchase of certain property of Ohio Fuel Gas Company.

The two columns are self-evident.

Looking at the total asset figures for the moment, the actual figure shows $79,000,000 in round figures, and the pro forma statement shows $96,800,000 in round figures.

Q. This all is as of December 31, 1941, is it not?
A. Yes, it is.

A breakdown of the important classifications shows that assets on the actual basis totalled $69,650,000, and [fol. 10101] this is including the net intangibles.

Q. Do you not mean, Mr. Coffman—rather than the assets that the gas plant included in the assets totalled the figure you just gave: $69,650,000?

A. I don't recall what I said. What you say is perfectly correct.

Q. That is correct, is it not? A. Yes.

Q. Will you proceed?

A. And in the pro forma the same item carries a dollar figure of $82,952,000 in round figures.

The only other item in the total asset group is under the caption "Current and Accrued Assets," which in the "Actual" column totalled $8,959,000 and in the pro forma totalled $13,418,000, and that particular item carries a footnote explaining that the investment in tax anticipation notes, amounting to $2,750,000, was included in the current asset group.

Q. Now, there are two other items under "Assets", but I don't believe it will be necessary for you to mention those for the record: they are self-explanatory.

We now turn to the item of "Liabilities and Capital." State what, in general, are the main differences between the "Actual" as of December 31, 1941, and the "Pro Forma" as of that date, giving effect to the acquisition of [fol. 10102] properties and securities made February 6, 1942.

A. The main differences, as shown, between the Actual and Pro Forma occur in the preferred stock items, which under Actual totalled $11,000,000, and under Pro Forma is $16,000,000; under the caption "Long Term Debt" which in the Actual column was $23,259,000 and Pro Forma was $33,259,000.

Q. That is because—is it not—of the increase of bond issue by $10,000,000? A. That is correct.

Q. Proceed.

A. The other item that has any appreciable change is that captioned "Reserve for Depreciation, Depletion, Amortization, and so forth," which in the Actual Column totalled $10,900,000 approximately, and in the Pro Forma was $12,598,000, and I merely presented these data in Chart No. 1 to contrast the Panhandle Eastern Pipe Line figures only with the new situation after the acquisitions as shown in the Pro Forma column.

Q. Well, in general would it be fair to say that what has happened is really an increase in the assets and the accompanying liabilities of Panhandle Eastern Pipe Line Company from $79,000,000 approximately to something just slightly under $97,000,000?

A. I think that is correct.

Q. I think, Mr. Coffman, there are some other minor [fol. 10103] changes that come about by virtue of consolidating the figures, but are the ones which we have mentioned the most important, so far as your analysis is concerned? A. Yes, they are.

Q. Now, I wish you would turn to your chart No. 2 which I note consists really of four separate subcharts. I wish you would state to what chart in your Exhibit No. 65 this chart No. 2 refers, and then explain in some detail what you have shown on chart No. 2.

A. Chart No. 2, captioned "Trend of Revenue and Expenses of Panhandle Eastern Pipe Line Company, 1932-1941," and Pro Forma in Exhibit 253 contains the same information—that is, similar information—to Chart No. 9 in Exhibit No. 65—in chart No. 2 of Exhibit 253 there are these additions, because on this study I had company data available, as already explained, by virtue of Mr. Watkins various exhibits.

Q. Where does that show up?

A. What do you mean?

Q. That shows up all through your figures, does [—] not, but does it particularly show up in the earlier years?

A. Well, what has happened is that under Mr. Watkins' exhibits I have been able to add figures for nine months of 1932 and all of 1933, which were not available before and have been able to add the 1941 full year figure,

[fol. 10104] and have been able also to show the pro forma after the acquisitions.

Q. Yes. You were enabled to do those things by receipt of the data from Mr. Watkins, which he has placed in evidence in this case; is that true?

A. That is correct, and as I have explained before, if one refers to the back of Exhibit 253, to table supporting chart No. 2, wherein are contained all of the figures, there is an item at the bottom captioned "Source" which says: "Watkins Exhibits No. 173, 195, 198, 199," and computations are made by Standard and Poor's Corporation, which are merely these percentage calculations which have been added as I analyzed the figures.

Q. Were those computations made under your direction? A. Yes, they were.

Q. I think you previously stated that you are an officer of Standard and Poor's Corporation.

A. I am a vice-president and director of Standard and Poor's Corporation.

Q. Now, will you turn to the upper left-hand subchart contained on chart No. 2, which is headed "Gross Revenue," and state in general what that shows?

A. Well, I don't think, in discussing these data, that it is necessary to go through the various years.

Q. No.

[fol. 10105] A. I have explained the additions.

Q. I don't want you to do anything that you don't feel is necessary, so that this will be completely understood in the record.

A. The important figures really are contained in that box captioned "Gross Revenue" in the last three columns, namely the red bar, which is the 1941 figures. Actual, for Panhandle Eastern Pipe Line Company alone, which were not available when I made the analysis for Exhibit No. 65, and that figure amounted to $15,434,858.

The next figure is the 1941 figure on the Pro Forma, and that figure totalled $17,789,573.

The second blue column, or the last bar in the section, "Gross Revenue," shows the actual consolidated figures for the year ended February 28, 1942, and that figure totalled $18,378,378, and those figures, as I have stated, are from Mr. Watkins exhibits.

Q. Now, Mr. Coffman, looking at this chart of Gross Revenue, and at the gradual increase which is shown, would you conclude that this company is still a growing enterprise?

A. I think that a fair interpretation of the trend of the data is exactly that.

The 1941 figure, for example, on Panhandle Eastern Pipe Line Company, prior to acquisition, showed quite a marked growth over 1940, and the 1941 figure, Pro [fol. 10106] Forma, for the consolidated picture showed a larger amount.

It would seem to me that it was fair to say that the company was still in a growth stage.

Q. Now, looking at the right-hand box, or subchart at the top of Chart No. 2 on Exhibit 253, I wish you would state generally what that subchart shows.

A. That particular division of chart No. 2 contains the operating expenses before taxes, and the more important figures there again, aside from the earlier ones that have been added, is the full year 1941 for Panhandle Eastern Pipe Line Company alone, which figures totalled $5,827,828.

The 1941 figures on a pro forma basis show $6,635,138, and the Actual figures for the consolidated company, as of February 28, 1942, of $6,758,914.

In addition to those specific amounts, which were presented in Mr. Watkins' exhibits, I have calculated the per cent of the operating expenses before taxes to gross revenue, which shows that the actual 1941 figures for Panhandle only were 37.8 per cent.

The 1941 figure, pro forma, 37.3 per cent, and the actual figure for the consolidated company, for the year ended February 28, 1942, 36.8 per cent.

Q. By the way, Mr. Coffman, your figures shown in the bars running along the bottom of this particular subchart include general operating expenses, and the depre- [fol. 10107] ciation, depletion and amortization charges?

A. Yes, sir. That is correct.

Q. All the operating expenses, in other words, except taxes; is that true?

A. That is correct.

Q. And I note particularly that this per cent of gross revenue is a generally decreasing line, is it not, from the high point at the year 1932?

A. Well, yes. It has shown a marked decrease over the years.

It looks like it is beginning to level out, but the February 28, 1942, figure was the lowest shown to that date.

* * * * * * * * *

[fol. 10108] Q. Will you turn, then, to the lower left-hand subchart of chart No. 2 on Exhibit 253 and state what that shows?

A. In that section I show the taxes as a separate item, giving the full year 1941, and there I show three additional bars: one covering the pro forma 1941 figures, the actual for the year ended February 28, 1942, using, in both instances, the 1941 tax rates, and then in the last bar the figures for February 28, 1942, using the statement that was made by Secretary of the Treasury Mr. Morgenthau in his recent discussion of the proposed new tax bill.

Q. March 3, 1942?

A. March 3, 1942.

Q. Now, what is shown on the right-hand side subchart at the bottom of chart No. 2?

A. In that section is shown the net operating income after taxes, giving the same type of figures, namely the full year 1941 for Panhandle Eastern Pipe Line Company alone, then the pro forma as of December 31, 1941, the year ended February 28, 1942, based on the 1941 tax rates, and the year ended February 28, 1942, based upon the statement of the proposal by Secretary of the Treasury Mr. Morgenthau, and that shows that the influence of the tax would be equivalent to a reduction from approximately $6,400,000 to $4,500,000.

[fol. 10109] Q. Mr. Coffman, do the figures contained on all these subcharts of chart No. 2 come from Mr. Watkins' exhibits?

A. As stated on table supporting chart No. 2 they come from Mr. Watkins exhibits Nos. 173, 195, 198, and 199.

* * * * * * * * *

[fol. 10112] PAUL B. COFFMAN having been heretofore duly sworn, resumed the stand and was examined and testified as follows:

Direct Examination (Resumed)

By Mr. Wheat:

Q. Mr. Coffman, I believe at recess last evening you had completed your discussion of your Chart No. 2 in your Exhibit 253; is that correct?

A. Yes, sir.

Q. Now, will you turn to Chart No. 3 and briefly state what that chart shows.

A. Chart No. 3 in Exhibit 253, captioned "Percent Earned on Invested Capital of Panhandle, Based upon Net Gas Plant and Working Capital 1932-1941," is similar to Chart No. 11 in Exhibit 65.

In Chart No. 3 I have merely added the nine months figures for '32, the full year 1933, and the full year 1941. It shows in the left hand portion the invested capital and for the full year 1941, that was, in round figures, $62,200,000, which was an increase from the 1940 figure of $59,900,000 shown in Chart No. 11 on Exhibit 65.

[fol. 10113] In this exhibit the average which has been calculated now covers 9¾ years as against the shorter number of years covering 1934 to 1940, shown in Chart No. 11 in Exhibit 65.

The average invested capital for the 9¾ years was $53,300,000, in round figures, and invested capital here is defined as net working capital plus net gas plant.

Q. Well, note in two years you do not have any indication of working capital, that is, the years 1935 and 1937. Will you please explain that situation?

A. Well, those two years are marked in the exhibit and are explained by the fact that there was a deficit of net working capital in those two years.

Q. Now, in respect to operating income, what does the chart show?

A. Well, the chart covers the same period, 9¾ years, shows the net operating income in the bars, a 1941 figure of $5,541,000, in round figures, comparing with the $5,700,000 in 1940.

The average for the 9¾ years was $3,300,000, and the average return on invested capital was 6.14 percent for the nine and three-quarters years.

Q. I notice, Mr. Coffman, on Chart No. 11, Exhibit 65, that up to the close of 1940 was 7.11 percent, and that in Chart No. 3 of Exhibit 253, it is the figure you have just [fol. 10114] stated, namely, 6.14 percent. Will you explain the reasons for that difference?

A. Well, it is explained by two facts in Chart No. 3 of Exhibit 253, a longer period considered and taking those figures into consideration, you get a different percent earned on invested capital.

Further than that, the Chart No. 11 in Exhibit 65 did not carry the 1941 figures, whereas this one does.

Q. I notice that the 1941 figure is below the 1940 figure. Will you state what that situation is and what was the cause of that particular decrease?

A. Well, that is just merely registering the increase in taxes taking place.

Q. A decline of something over 1 percent; is that true?

A. That is correct.

Q. Now, is it your view that that particular factor will be equally or increasingly operative in 1942?

A. I think the evidence points in that direction very definitely.

Q. Now, will you turn to Chart No. 4 and let me ask—

Mr. Littman: Pardon me, may I interrupt?

Mr. Wheat: Yes, any time.

Mr. Littman: May I ask whether the figures for the year 1941, reflected in Chart No. 3, are before the consolidation.

[fol. 10115] The Witness: Yes, those figures are before the consolidation. They are for Panhandle Eastern Pipe Line Company alone.

By Mr. Wheat:

Q. May I ask you whether uniformly through your Exhibit No. 253 you have shown items which do contain the consolidated figures with the notation "pro forma"?

A. Yes, they are shown. They are clearly marked when we come to them.

Mr. Wheat: I think that explanation should be made so we all know that where it is marked "pro forma" we will know that the consolidated figures are included.

Mr. Littman, I hope you will interrupt for any purpose such as this at any time. I think it saves time to do it and is a preferable method of handling the examination on a detailed matter such as this.

Mr. Littman: Thank you.

By Mr. Wheat:

Q. Now, will you turn to Chart No. 4, Mr. Coffman? I note that is also percent earned on invested capital of Panhandle Eastern, and I will ask you whether this chart contains information similar to that on Chart No. 3, except that it is based upon the capital structure rather than on book investment.

A. Yes, that is the only difference. It is similar cal- [fol. 10116] culations, but just using a different base upon which to make the calculation.

Q. Does it also contain identical data to that contained on Chart 10 on Exhibit 65, except for the addition of the years 1932 and 1933 and 1941?

A. Yes, that is correct.

Q. Now, on Chart No. 4, I note that the average operating income is $3,300,000, which, of course, is the same figure shown on the right-hand bar of Chart No. 3. I note also that the percentage average for the nine and three quarters years is 6.14, which apparently is the same percentage figure as that shown for percent earned on invested capital in the average in Chart No. 3, those two figures happen to come out exactly the same; is that correct?

A. That is correct. The average invested capital for the nine and three-quarters years regardless of whether you base it upon the capital structure or whether you base it upon the net working capital and net gas plant after reserves, gives you an average of $53,300,000 so that the two approximate each other, for there is no difference in the percent earned on invested capital.

Q. Now, I think we should now turn to your Chart No. 5 in Exhibit 253.

You there also added the periods at the outset and at the end, have you not, that you have mentioned in respect [fol. 10117] to the other charts?

A. Yes, sir, that is correct.

Q. So that you now have an average of nine and three-quarters years in all the subcharts of Chart No. 5? Is that correct?

A. That is correct.

Q. Now, will you please explain what is shown on Chart No. 5?

A. In Chart No. 5 of Exhibit 253, I show information similar to that contained in Chart No. 12 in Exhibit 65, with the exceptions you have just mentioned by way of addition on the nine months figures for 1932, full year of '33, and the full year of 1941.

Chart No. 5 of Exhibit 253 is divided into three parts. The first part shows the investment represented by common stock and surplus, and that indicates that the average for the nine and three-quarters years in round figures amounted to $22,300,000.

The second portion represents the dividend return to the common stockholders from the 1932—April, 1932—beginning to and through 1941, showing that the dividend return to common stockholders for the average of the nine and three-quarters years was $780,000.

The third section shows the percent return to common stockholders which is merely converting the dividend return [fol. 10118] actually received into the investment represented by the common stock and surplus showing that for the nine and three-quarters years on the average the common stockholder has had a return of 3.48 percent and that figure has the significance, as I think I pointed out in connection with Exhibit 65, that I believe that a common stockholder is perfectly willing to invest in a company and he is perfectly willing to bide time to get a return on the investment. But some place along the line he expects to receive enough return so that on the average he will receive what he believes to be a figure sufficient to com-

pensate him for the risk he took, and certainly 3.48 on this common stock wouldn't be considered sufficient.

Q. It wouldn't be sufficient to attract additional capital?

A. No, it wouldn't, unless the company could be permitted to earn money so that over the coming years dividends can be paid on the common stock which will tend to bring that average up to a higher level.

I think it is pretty obvious it would be rather difficult to expect new money on any common stock financing on any such percentage basis as that.

Q. You mean the lean years would have to be compensated for?

A. Yes, you have to make up for the period of waiting [fol. 10119] you have had in the period of bad years you have experienced.

Q. And in saying what you have, you are not referring only to this particular company, but to the general principle of the stock market?

A. I generalize on that point.

Q. Now, will you turn to your Chart No. 6 and state what is shown on that chart?

A. Chart No. 6 in Exhibit 253, captioned "Percent Earned on Invested Capital of Panhandle, Pro Forma for Twelve Months Ended February 28, 1942." This exhibit contains data which does take into consideration the property acquisition. As the title indicates, it is the pro forma, considers the consolidated company, and it shows the invested capital as of February 28, 1942, amounting to $78,477,214, defining here invested capital as the net gas plant which amounted to $71,900,471, and net working capital which amounted to $6,576,743.

In the next two bars I show the net operating income, the first figure of $6,361,247 taking into consideration or after the application of the 1941 tax rates. I show a second bar in the amount of $4,526,619, which is taking into consideration net operating income, but applying Mr. Morgenthau's proposal as of March 3, 1942, as to what the new 1942 tax may be.

Q. Well, you mean, do you not, that based on actual [fol. 10120] net operating income for 1941, should Mr. Morgenthau's proposal, or any approximating it, come to pass, the income on that basis would have been about $1,800,000 less than it actually was?

A. That is right, if the 1942 Act, as he proposed it, were in effect, with the present earnings, instead of having $6,361,247, you would have $4,526,619, or about a million eight hundred thousand dollars less, because of the increased taxes which are proposed.

Q. Now, as I recall it, Mr. Coffman, when you were discussing Exhibit No. 65 some months ago in these proceedings, you used an estimate of $1,000,000 1941 tax increase; is that correct?

A. Yes. In Chart No. 14 of Exhibit 65 I have a similar calculation.

Q. That was for Panhandle alone?

A. That was for Panhandle Eastern alone, as of the 12 months ended as of June 30, 1941, showing an operating income of $5,814,975, applying the 1940 rates, and then taking that same net operating income, but believing that the 1941 rates were then in force, would have shown that the net operating income would have dropped because of increased taxes to $4,811,075, or their one million dollar difference just by change in tax rate.

Q. Well, is the $1,800,000 you have mentioned in con- [fol. 10121] nection with the Morgenthau proposal in addition to that million dollars?

A. Well, for all practical purposes, it is; because we have just come down an additional year and the 1941 rates were applied and now taking the 1942 situation, it is additional taxes that the company would be forced to pay.

Q. What effect does that have on the percent earned on invested capital?

A. Well, on the present reported net operating income for the twelve months ended February, 28, 1942, the company would be showing an 8.11 percent earning on invested capital.

That is where the 1941 tax rate is applied, but it would only show 5.77 percent earned on invested capital if Mr. Morgenthau's proposal becomes an actuality.

Q. Well, that is based upon the assumption that the gross revenue would remain the same?

A. Well, that is just talking about the revenue for the 12 months ended February 28, 1942.

Q. Well, we will come to the question of amounts of revenue later, but let me ask you would those percentages be lower, were a lower base to be used, than the seventy eight million odd dollars which you show?

A. Well, it would depend on the change in figures. Any change in the two base figures, either the net operating income figure or the invested capital figure, necessarily [fol. 10122] will change your percentage, so whichever way the figures change, the percentages will—

Q. (Interposing) You used the 1941 in this chart?

A. Yes, that is correct.

. . . . . .

By Mr. Littman:

Q. Before you leave Chart No. 6, I want you to just refer to "actual 1941."

Mr. Wheat, did you mean that?

A. I was talking about the 1941 tax rate.

Mr. Wheat: Yes.

Mr. Littman: Tax rate?

The Witness: $6,361,247 is after application of the 1941 tax rate.

Mr. Wheat: Yes, that is what I think we both meant.

The Witness: Yes, actual figure.

By Mr. Littman:

Q. Mr. Coffman, I want to make certain, before you leave Chart No. 6, that your computation of "percent earned on invested capital" reflects a purported working capital in the amount of $6,576,743.

A. You mean there that the $6,576,743 was included in the invested capital?

[fol. 10123] Q. Yes.

A. Yes, that is correct.

Q. Now, Mr. Coffman, are the details of the calculations on the tax proposed by Mr. Morgenthau available?

A. I have some calculations that I come to later?
Q. In this Exhibit No. 255?
A. 253.

. . . . . .

Q. Might you give us the reference now? Could you do that for us while we are on the subject? I don't mean that you should elaborate on it. Just merely give us the reference to the exhibit which shows your calculations of taxes.

Mr. Wheat: In this connection, you took Mr. Watkins' figures, didn't you, Mr. Coffman?

The Witness: Yes, that is correct.

A. It starts on Exhibit 253 table supporting Chart No. 4, Page 2 and page 3.

By Mr. Wheat:
Q. That shows the calculations; is that correct?
A. That is correct.

Mr. Littman: Thank you.

By Mr. Wheat:
Q. Of course, that does not show the precise tax rates [fol. 10124] proposed by Mr. Morgenthau, does it? That matter is a matter of public information.
A. Well, I understood Mr. Littman to ask me what the procedure was I followed.
Q. Yes.
A. And I am merely showing him where the figures are. I do not have the newspaper release or a photostatic copy of it in which Mr. Morgenthau made his statements in the newspaper; but I have that reference.
Q. But on the tables supporting Chart No. 4, you do show the actual rates that were applied?
A. Yes, and the principle of calculation; that is correct.

. . . . . .

By Mr. Wheat:
Q. Now, Mr. Coffman, I want to be sure that everyone knows in connection with each of these charts in Exhibit 253 where there is any necessity for any basic data beyond

that shown in the charts themselves, it is shown on tables supporting the individual charts at the end of Exhibit 253, is it not?

A. Well, there is either a full statistical presentation in the tables at the end of Exhibit 253 supporting the charts as designated, or a summary table which would [fol. 10125] give the resume of facts and then reference is made to another exhibit for the detailed facts.

I mean, after all, I couldn't put all this business in one volume, so I put a summary in 253.

Q. When you referred to "this business," you meant Exhibit 254?

A. That is right, 254.

Q. All right.

Now, then, will you turn to your Chart No. 7 and state whether that is similar to Chart No. 6, except that it is upon the basis of invested capital represented by the capital structure of the company as against invested capital as represented by net gas plant plus net working capital, which is shown on Chart No. 6?

A. Yes, that is correct, and this chart No. 7 in Exhibit 253, captioned "Percent Earned on Invested Capital of Panhandle, Pro Forma for 12 Months Ended February 28, 1942," shows that the invested capital on this method of a calculation which is based on capital structure, totalled $77,830,553, and the information contained in here is similar to that contained in Chart No. 15 in Exhibit 65.

Q. Mr. Coffman, I note that the titles of both charts Nos. 7 and 7 were identical.

The important point to recall is that Chart No. 6 as shown at the bottom left-hand side is based on net property [fol. 10126], intangibles and working capital, and Chart No. 7 as shown at the bottom left-hand side of that chart is based on capital structure; is that not correct?

A. That is correct.

Q. The titles themselves do not show that difference, do they?

A. No, sir. That is right. They are both invested capital.

Q. Now, to return to your Chart No. 8, will you state what you have shown on that chart?

May I first preliminarily ask you whether a chart similar to this chart No. 8 was included in your Exhibit 65.

A. No, sir, there was not any.

Q. Why did you include it in Exhibit 253?

A. At the time of the last hearing there were several questions asked regarding the size of the working capital which I had included in the calculation to determine invested capital.

Q. You mean the items which you have labelled, through your exhibits, as net working capital; is that true?

A. That is correct.

Q. Cash on hand, in other words; is that right?

A. That is right.

Q. Proceed, please.

A. The figure as of June 30, 1941, as shown in Exhibit [fol. 10127] No. 65 amounted to $4,661,875.

Q. May I ask whether that is not the same figure shown on Chart No. 14 of Exhibit 65?

A. That is the same figure.

Q. Yes. As of the same date?

A. As of the same date.

Q. Now, what happened to that as time went on?

A. Well, between June 30, 1941, and December 31, 1941, there had been a drop of a little over a million dollars so that the net working capital figure, as of December 31, 1941, amounted to $3,507,683, and in the following two months, over to February 28, 1942, it had suffered further decline to $2,951,908, but in the course of the acquisition of the new companies and the refunding or the refinancing, a certain amount of capital to replenish the working capital was received, so that the total net working capital as of February 28, 1942, was $6,576,743. But against that were estimated plant expenditures carrying out through the ten months of this year to December 31, 1941, which was already budgeted and under way, amounting to $6,530,900, and I show that merely to indicate that although a particular figure of net working capital may be of certain size at one time, by itself it doesn't mean a great deal without further investigation as shown here clearly that if the net working capital of $6,576,743 is considered high, one must [fol. 10128] also consider the estimated plant expenditures

which will use up that working capital and will use it up in the next ten months.

. . . . . .

Q. In other words, all this cash will be used up and eaten away during the year 1942, won't it?

A. That is correct.

Q. Now, there will have to be some replenishment, won't there, in order to run this business?

A. Yes, the company can't continue as a going concern without having working capital day to day as it continues to operate.

Q. Where will it have to come from?

A. Well, it will comes from earnings if the company continues to operate on a profitable basis.

Q. All right.

Now, explain how that can be accomplished.

A. Well, as the company continues to sell its service [fol. 10129] to the public, it receives revenue therefrom out of which the cash is built up and from that cash account are items paid out for expenses, salaries, wages, and so forth, and so long as the revenue flowing through cash account exceeds the amount of outgo, you have a balance in the cash account for working capital purposes.

Q. Well, the company has to pay interest, doesn't it?

A. Well, in addition to the regular operating expenses, there are several different corporate purposes that have to be taken care of: that is, the interest on the bonds and the preferred dividends, and if there is to be a dividend upon common stock, that will take a certain portion of cash and the cash has to be sufficiently large also to meet the sinking fund requirements when bonds and preferred stock must be purchased to meet the requirements as stated in those additional securities.

Q. It will have to pay additional taxes, won't it?

A. Yes, very definitely.

Q. Now, is there anything further you think ought to be said with respect to your chart No. 8 in explanation of it?

A. Well, I don't think there is. The one point that I think is significant: that some question was raised about

the size of the net working capital as of June 30, 1941, but as shown, that had dropped almost 50 percent in a matter [fol. 10130] of eight months, so that it indicates that there is this conversion process going on from week to week and month to month where working capital at one time, converted to other purposes at another time, so that there is a matter of how much you need.

Q. I think, Mr. Coffman, that you just mentioned in connection with Chart No. 8 the necessity for the company having earnings to cover sinking fund and maturity provisions for debt and preferred stock.

Now, will you turn to Chart No. 9 and state what is shown on that chart.

Mr. Littman: Before you turn from Chart No. 8, isn't there a typographical error in the table supporting Chart No. 8, Mr. Coffman? I refer to your caption where you use the term "Net Worth Capital."

The Witness: Yes, sir, Mr. Littman. It is "Net Working Capital."

. . . . . .

[fol. 10131] By Mr. Wheat:

Q. Now, will you proceed with your explanation of Chart No. 9, and state, first, whether it contains data of somewhat similar character to that which was contained on Chart No. 17 in Exhibit 65.

. . . . . .

A. The data contained in Chart No. 9 of Exhibit 253 is somewhat similar to the data contained in Chart No. 17 in Exhibit 65.

Q. What differences are there between these two charts?

A. Well, the principal difference is that in the Chart No. 17, Exhibit 65, there is there shown a schedule of the outstanding debt and the schedule of debt retirement, but in addition to that information on Chart No. 9 is also [fol. 10132] taken into consideration the preferred stock which new preferred stock being issued, carried sinking fund, and therefore the sinking fund provisions had to be taken into consideration, so this shows both preferred and bonds.

Q. Mr. Coffman, would this be a fair statement of the situation: that at the time you prepared Chart No. 17 of Exhibit 65 you had a certain long term debt with a certain sinking fund provision and that now, as reflected on Chart No. 9 of Exhibit 253, you have a larger long term debt or bond issue with a sinking fund and also you have a preferred stock with sinking fund provisions which did not exist at the time you testified before?

A. Yes, that is correct.

Q. What is the annual cost of those sinking funds?

A. Well, referring to table supporting Chart No. 9, in Exhibit 253, the detailed figures are given showing that as of March 1, 1942, the par amount outstanding at the beginning of the year was $33,250,000.

The retirements during the year will amount to one million and a half dollars. The cost of retirement $1,503,125, making the accumulated cost $1,503,125 when the sinking fund begins to operate and then it steps up as is shown in table supporting Chart No. 9.

Q. And also as shown on the right-hand subchart of your Chart No. 9; is that true?

[fol. 10133] A. Yes, except it is a little easier to pick those figures up from the table than it is from the chart to get the total, because the preferred stock also has a cost of retirement feature which must be included.

Q. Now, I notice that for the year 1942 that latter item is considerably less, also with respect to the bonds, than it is in the later years, down to 1961; is that correct?

A. Yes, the figures begin as of March 1, 1942, so that you do not have a full year there, in the first place, so that you get a total funded debt and preferred stock retirement cost in 1942 of $1,503,085, but then starting with January 1, 1943, that figure immediately goes to $2,307,500 and continues at about that same amount over until 1960, so that the annual amount really that has to be provided for sinking fund purposes is equivalent in round numbers to $2,300,000.

Q. In other words, I take it that this chart shows, as compared with Chart 17 of Exhibit 65, that under the new financing and because of these added sinking funds that you have mentioned, a greater cost was placed on the

company than is shown above, and that must be provided for?

A. Yes, there is a greater cost on the company and a larger amount has to be provided for.

This chart No. 17 on Exhibit 65, the annual amount was [fol. 10134] $1,250,000, whereas, as just discussed in table supporting Chart No. 9 in Exhibit 253, that cost will be $2,307,500 per annum.

Q. And will be two million and a quarter at least down to 1961, will it not?

A. Well, I have made a general statement there that it would be approximately that figure to 1961.

There are slight annual variations, but it is better than $2,200,000 through to 1960.

Q. Now, Mr. Coffman, will you now turn to your chart No. 10 in Exhibit 253. Let me ask you whether that chart is similar generally to a chart which was contained in your Exhibit No. 63, and I refer here to chart shown opposite page 23 of Exhibit 63.

A. Yes, that is generally correct. The information at the time of the last hearing which was submitted on investors' appraisal of over-all capital risk in various divisions of the utility industry for 1937-1940, was contained in two separate exhibits: Exhibit 63 in which opposite page 23 there is a chart showing similar information, and then in Exhibit 64 which supported 63; were given the detailed statistics from which the study was originally compiled.

[fol. 10135] Q. Now, how in general does your chart No. 10, Exhibit 253, differ from the previous data?

A. In Exhibits 63 and 64 I had data only for the years 1937 through 1940.

In chart No. 10 of exhibit 253 I have added the figures for the full year 1941, where they were available, and have calculated an average for a five-year period instead of an average for a four-year period, as was the case in exhibits 63 and 64.

Q. Let me ask you, Mr. Coffman, whether the addition of the 1941 data made any real change in the over-all re-

sult or relationships which were shown in the previous exhibits.

A. Well, generally speaking I don't think that the addition of the 1941 figure had changed the over-all figures materially.

For example, in the water companies I show a weighted average figure of investors' appraisal of over-all capital risks for the five-year period of 5.34 per cent.

Q. That is, contrasted with 5.38 per cent for the four-year period, is that true?

A. Yes, that is correct, and in contrast to the various figures which are shown for the individual years, 5.53, for instance, for 1937; 5.24 per cent for 1938, 5.64 for 1939, 5.13 for 1940, and 5.32 for 1941.

I think that is remaining remarkably close for a five-[fol. 10136] year period. I wouldn't say that there are any radical variations in it.

Q. I note that the data on the five-year period, with respect to electric operating utility companies, shows also a fairly close relationship over the years, does it not, in connection with investors' appraisal of your securities?

A. Well, it, I should say, could be described as remaining about as stable as any of the divisions shown here, and the weighted average for this five-year period shows 5.53—or you might call it 5½ per cent on the average.

Q. Well, that is as against 5.47 which you showed for the average of the four preceding years, is it not?

A. That compares with 5.47 per cent as a four-year average for 1937-1940, both inclusive.

Q. Now, what happened with respect to manufactured and mixed gas companies?

A. Manufactured and mixed gas companies showed a variation in 1941 that was higher than 1940. The '41 figure was 7.37 per cent as against 6.89 per cent for 1940, but the average for the five-year period was 6.94 per cent as compared with 6.61 per cent as shown in my exhibit 63.

Q. Now, what did the addition of the year 1941 do with respect to the data on all natural gas companies?

A. Well, on all natural gas companies the 1941 figure tended to reduce the average because the 1941 figure was [fol. 10137] somewhat lower. It amounted to 7.83 per cent

as compared with 8.03 per cent for 1940, and the average was then 7.82 per cent.

Q. Now, what about natural gas pipe line companies?

A. Well, natural gas pipe line companies, the drop is somewhat sharper than the one for all natural gas companies. The 1941 figure was 8.89 per cent compared with the 1940 figure of 9.55 per cent, and the weighted average was 9.19 per cent as compared with 9.38 per cent, the four year average as shown in exhibit 63.

Q. The weighted average, with respect to the natural gas pipe line companies, then was slightly below the arithmetic average of the four year period shown in exhibit 63, is that correct?

A. Yes, that is correct.

Q. In all instances in chart No. 10 of exhibit 253 have you weighted these averages?

A. In each case, in the data shown in chart No. 10 of exhibit 253, the data have been weighted, and by "weighting" I mean there giving the highest weight to the last figure, and so on back.

In other words, being a five year period, I have given the 1941 figure a weight of 5; 1940 figure a weight of 4; and so on back to 1937, which has a weight of 1.

In other words I have weighted the average according [for 1913S] to the most recent information.

Mr. Littman: Is my understanding correct that the weighting feature was not used in your earlier exhibit No. 63?

The Witness: That is correct.

. . . . . .

The Witness: Yes, sir.

Mr. Lee: I don't quite understand your definition of weighting.

. . . . . .

The Witness: If you will refer to table supporting the chart No. 10 at the back of the volume you will see the statistics for each of the groups—water companies, electric operating utility companies, and so forth—for the five

divisions, and there I have given the rate for each year, and then have shown the weighting in reverse, namely that 1941 is given a weight of five, 1940 a weight of four, and so forth, and applied that to get the weighted average which is shown.

* * * * * * * *

By Mr. Wheat:

Q. Now, Mr. Coffman, as shown in the note on the table supporting chart No. 10, the method which you used in selecting the companies and also working papers covering the data up to and including 1940, were actually [fol. 10139] included in your previous exhibits in this matter, 63 and 64, were they not?

A. Yes; that is correct.

Q. And also to working papers covering the 1941 period those data are included in exhibit 254: is that correct?

A. They are included in Section 4 of Exhibit 254.

Q. By the way, in connection with exhibit 254 each separate section is separately numbered by pages: is that correct?

A. Each section is consecutively numbered, and then a new section appears to start new numbering, and that goes on consecutively for just the section only.

Q. Now, is it a fact, in connection with the data shown on your chart No. 10 of exhibit 253, that the general relationships between the various types of utility services included, are shown to continue throughout the years in question?

A. Well, when I originally presented data of this sort at the last appearance I made, I said that I believed this information indicated that investors were demanding more by way of return in the natural gas pipe line companies than the other divisions of the utility field, and showed that there was the graduation in the amount required as shown now by the five-year average of 5.34 per cent for [fol. 10140] water companies, up through the various divisions to 9.19 per cent in natural gas pipe line companies, and I believe that investors are still doing what they have been doing for a great many years: drawing distinctions in risk, and as the risk goes up in their opinion,

the demand for a return on their capital must go up, and does go up.

In other words I think these figures here—it isn't what I think, really, or what anyone else thinks: it is what the man that put up a thousand dollars or a hundred thousand dollars, or is willing to do it, thinks about it, and that is what this figure represents: it is his opinion, and he is the man who is furnishing the capital.

Q. Well, is this chart based entirely on objective data?

A. Yes, all of it is based upon earnings shown by the companies and based upon quotations on their securities which is all objective data.

Q. I think you stated yesterday that, so far as you knew, there is no way to force investors to put up their money in companies of this sort.

A. No, there is no way; it is a matter of making an investment that is a security which you are trying to sell, sufficiently attractive among the great many possible selections, make it attractive enough to have people put their money in so that you can have the use of it.

[fol. 10141] Q. Mr. Coffman, you have used the words "over-all capital risks": I take it that includes both the fixed capital and common stock participations.

A. That includes bonds, preferred stocks, and common stocks.

Q. All those types of securities?

A. That is correct. And notes, if there were any. Any kind of borrowings that might have been made.

Q. Is there anything further that you think should be stated in respect to chart No. 10 at this time?

A. Well, I don't believe there is. I think I have covered the facts pretty well.

Q. All of the data on which you based your chart No. 10 is contained either in the tables in exhibit 253 or in the appendix in exhibit 254 or in exhibits 63 and 64 in this proceeding, is it not?

A. That is correct. If I can restate it: if a person wanted to examine now all the information I have presented on this subject it would be necessary for him to refer to exhibits 63 and 64 and exhibits 253 and 254.

Between those four exhibits are all the basic material and data that are represented here in graphic form.

Q. So that everyone who now has those exhibits in his hands has not only your conclusions, based upon that data, but has all of your working papers, so to speak?

[fol. 10142] A. That is exactly correct.

Q. Now, I wonder if you will turn to your chart No. 11 of exhibit 253, and first briefly state what that chart includes.

A. Well, chart No. 11 in Exhibit 253, captioned "Investors' appraisal of over-all capital risks, 153 stable industrial companies": I had in mind in such tabulation to make a study of industrial companies which could be considered by their record, particularly their continuance and regularity of [dividend] payments, to be as stable as any industrial activity you could get, and therefore closely approximating stability that one would expect in a regulated industry, but I wanted to go out of the regulated field to see what the over-all capital risk, the investors' appraisal, was for that group of companies.

Q. Why did you select a certain group of companies?

A. In order to be sure that I was including all companies I based the data in chart No. 11 on all the securities listed and traded on the New York Stock Exchange over the past ten years.

Q. Let me ask you, right there: How many such securities have been traded on the New York Stock Exchange over the past ten years?

A. Well, there were approximately three thousand different issues.

[fol. 10143] Q. And how many are there traded on that exchange now?

A. Well, according to the last yearbook of the New York Stock Exchange the total is now 2405.

Q. I take it from what you have said, and from the fact that chart No. 11 contains data, according to its title, on 153 companies, that you must have eliminated some companies in arriving at the list which you studied as a basis for chart No. 11: is that correct?

A. That is correct.

Q. Well, will you state, briefly but carefully, for the record, just what you did and how you went about making any eliminations which you may have made?

A. Well, I was interested here in common stock, so I first eliminated all of the bonds, which totalled 1,173. I next eliminated all the preferred stocks, which totalled 398.

That left remaining 934 issues of common stock, but from that group I had to make certain further eliminations.

Q. Why?

A. I eliminated 207 companies which did not pay dividends in 1941.

The remainder of 637 companies were studied for the period January 1, 1932, to April 1, 1942, and from these I had to make certain eliminations.

Q. What were those?

[fol. 10144] A. First I eliminated all the companies that were not listed on the New York Stock Exchange for the entire ten-year period, and secondly I eliminated all companies which had not paid a dividend on common stock in each year of the ten years.

That gave me a remainder of 153 companies, all of which were listed for ten years, all of which paid a dividend on common stock in each of the ten years.

Q. They didn't pay the same dividend, probably, for each of those ten years?

A. No. When I say they paid a dividend, I am not saying that they paid the same dividend: I am saying that they paid a dividend on the stock in each year. That dividend varied from one year to another.

Q. Now, in your studies, after you had made these eliminations, did you develop the investors' appraisal of the over-all capital risks of those companies that were left for that period?

A. Yes. On the remaining 153 stable industrial companies I then made the calculations to determine the investors' appraisal of risk.

Q. Now, as a matter of fact have any of these 153 companies continuously paid dividends for more than ten years?

A. Well, I have got certain figures here. Some of [fol. 10145] them have been paying dividends for quite a period. Most if not all of the 153 stable industrial com-

panies paid common cash dividends for a number of years prior to 1932; while the time available did not permit a detailed study to ascertain all facts for earlier years, data published in the New York Stock Exchange Yearbook indicate that 74 of these 153 companies have paid common cash dividends consecutively for at least 25 years.

48 have paid such dividends for at least 35 years; 21 for at least 45 years, and 18 for at least 50 years.

One company—Pullman, Incorporated—paid cash dividends on its common stock in [ever] year since 1867: a period of 75 years.

Q. Now, the chart No. 11 in exhibit 253 is, in effect, a summary chart of your study, is it not?

A. Yes, that is correct.

Q. Now, where have you included the details which lie behind the summaries shown on chart No. 11?

A. Well, first in exhibit 253 there is a table supporting chart No. 11 which gives summary figures, and then to get the basic data or working papers for more detailed information reference has to be made to exhibit 254.

Q. What is included in that exhibit?

A. That exhibit, in section 1, contains a complete list of industrial companies whose common stocks were listed [fol. 10146] on the New York Stock Exchange from January 1, 1932, to April 1, 1942.

Q. Now, what page are you referring to now in exhibit 254?

A. I am referring to the first section heading which is just before page 1 of section 1.

Q. Now, will you turn to page 1 of section 1 of that exhibit and explain how you have shown that data?

A. Well, beginning on page 1 of section 1, which is captioned "Complete list of industrial companies whose common stocks were listed on the New York Stock Exchange from January 1, 1932, to April 1, 1942," I start there, in alphabetical order, to list the companies that are in the group, and I have shown there the companies which paid dividends each year 1932-1941, both inclusive, as marked with an X in the accompanying column.

Q. So that, by looking at the several pages—I think three of them—of section 1 of exhibit 254, one can de-

termine which companies paid common stock dividends in each year from 1932 to 1941 inclusive, and which companies, therefore, were included in your detailed study the summary of which is reflected in chart No. 11 on exhibit 253?

A. Yes. That is a correct statement.

Q. What detailed data have you included in exhibit [fol. 10147] 254 with respect to the companies which were studied?

A. Well, in section 2 of exhibit 254, captioned "Summary showing computation of investors' appraisal of the risk of capital represented by 153 stable industrial companies," starting on page 1 of section 2, the companies are listed again—that is, the 153 which were selected—and there I show for each of five years 1937 through 1941 the indicated market value of capital of these 153 companies individually, and then I show the earnings available for capital for each of the companies for each of the years 1937-1941.

Q. I notice that in some instances there are no figures shown in the columns under the heading 1941 on pages 1, 2, and 3, of section 2, exhibit 254: why is that?

A. Yes, that is correct, and the reason for it is that the time we were producing this study was early in this year, and as we know annual reports for a number of companies are not available until perhaps in the second quarter or third quarter of the year, so that all annual reports for all these 153 companies were not available.

Q. You used what were available, did you?

A. I used what were available, and if you will refer to chart No. 11—

Q. (Interposing) Exhibit 253?

A. (Continuing)—of exhibit 253, you will see that the [fol. 10148] 1941 figure carries a star, which explains that that figure is based on 119 companies for which 1941 annual reports were available prior to April 1, 1942.

Q. In other words you used every company that you could get 1941 data on out of this group of 153 companies, up to April 1, 1942?

A. That is correct.

Q. This being April 17, 1942?

A. This study for the 153 companies is as all-inclusive as we could make it at the time.

Q. Well, as a matter of fact, even for 1941 the total indicated market value of capital was over 44½ billion dollars, was it not?

A. Yes, the amount involved here in indicated market value is tremendous for most of the years—that is, 1937 through 1940, anyway.

The average would be something in excess of 20 billion dollars, which is a very substantial representation.

Q. Well, that is almost as much—or is as much, isn't it—as the entire national debt prior to the most recent period of increase in that debt?

A. Yes; that would be approximately correct.

Q. In other words you have adopted a very broad base for this study; is that not true?

A. That is correct, both as to the method of selecting [fol. 10149] the companies and as to their dollar value.

Q. Would you say that, in selecting these companies, you used objective data solely after you had determined that you were going to use only companies which paid a dividend in each of the last ten years?

A. What I am doing here is showing exactly what the investor is saying about these securities.

In other words, to get at the over-all investors' appraisal of risk, as I have explained, I used the earnings available for capital, and I used the indicated market value of capital, which is gained from quotations, and those two figures are certainly objective.

I had nothing to do with them except list them and tabulate percentages thereon.

Q. Now, in adopting that period of ten years during which these companies paid common stock dividends in each year, do you believe that you used some abnormal period?

A. Well, as I look upon the five-year period, as indicated by the figures, I think generally throughout there isn't anything especially peculiar about the period.

Q. As a matter of fact, the ratios that you found run fairly close together, do they not?

A. Yes. That was particularly true, it seems to me, of the figures shown on chart No. 10. There are no striking changes there at all.

[fol. 10150] Q. Well, you used the same period, didn't you, here?

A. Same period 1937-1941.

* * * * * * * *

[fol. 10151] Q. Mr. Coffman, I think at the time the recess was called, we were discussing the companies which you have used in your study contained in Exhibit No. 254 and summarized on Chart 11 of Exhibit No. 253. Let me ask you to explain in some detail what you had in mind in connection with the various eliminations which you have already described as having been made by you from the total list of companies whose securities were traded on the New York Stock Exchange?

A. My purpose was to start with some recognized source and, since the New York Stock Exchange is the leading stock market in the country and taking into consideration the time factor, I took all the securities listed on that Exchange solely. If I had had more time, I would have liked to have included the tradings on the New York Curb Exchange, but time would not permit but, nevertheless, since everyone is acquainted with the securities that are listed and traded on the New York Stock Exchange, I believe that to be a well-known and recognized source.

Q. And you had some 3,000 companies, did you, to start with?

A. Some 3,000 companies.

Q. You consider that a sufficient base for such a study as you have made, did you?

A. Not only do I think it is a sufficient base but I think it is probably the most reliable and best recognized base [fol. 10152] because, after all, the New York Stock Exchange has been in existence for many years and they have had some rather definite rules and restrictions as to what companies could be listed and traded so that every company did not get on that Exchange to begin with. I mean they really performed quite an elaborate elimination long before this list that I am talking about was made. They automatically eliminated what they considered to be poor companies or unreliable companies or companies that could not qualify for listing and trading privileges on that Exchange.

Q. Now, you have told us what your eliminations were and given us the number of companies eliminated. Will you go ahead and discuss, briefly, the reasons behind those eliminations?

A. I was principally interested in the common stock phase because the common stocks in any company are the ones which depend for their return on the type of risk involved. In other words, their bonds carry very definite stipulations as to interest, sinking funds and so forth so that if any company should, some place along the line, run into difficulty, presumably the bond holders are the best protected of the various security holders of securities in a particular corporation.

Next in line are the preferred stockholders who are fairly well protected. The common stockholder, on the other hand, [fol. 10153] has to take the luck of the corporation in facing the risks and, if the earnings are sufficient to pay all the operating expenses, all the interest on the bonds, the dividends on the preferred stock and there is something over, then the common stockholder will get his return to the extent that the management feels they can declare dividends upon such stock so, in the last analysis, the real test in this matter was to see, in the companies that are listed here that paid dividends throughout the years, just how stable they were and they were the most stable in the group, what the investors said the risk was as measured by this investors' appraisal of risks.

Q. When you made the computation of the investors' appraisal of risks of capital on each of these companies, just what did you do? Where is that computation shown in your Exhibit No. 254?

A. Well, you will first find in section II the material that I have already recited, namely, the indicated market value of capital for each of the 153 companies except in those instances where the 1941 material was not available up to April 1, 1941, and I show earnings available for capital with the exception mentioned for the years 1937 through 1941.

In section III of Exhibit No. 254, I present the details of the calculations. For example, on page 1, of section III, information is presented in regard to Abraham & Straus,

[fol. 10154] Inc., in which I show the market value, that is, the indicated market value for the various types of capital outstanding as of January 31 for the years 1937, 1938, 1939 and 1940. I show for each of those years the price range for the year and each of the years the high, low and average. I used the average of the high and low in each year as the figure to multiply against the type of capital outstanding—

Q. (Interposing) That is what you did in connection with all your other studies of investors' appraisals, did you not?

A. That is correct.

Q. Go ahead.

A. Now, in the case of Abraham & Straus there is no figure for the year 1941 and that was first clearly indicated in section II, page 1, where it is shown that the Annual Report was not yet available at the date of study so there will be no 1941 figure but, if you take the second company which is shown on page 2 of section III, the Adams Millis Corporation, on page 2, I think the detailed information for the years 1937, '38, '39 and '40 and, on page 3 of section III, I show the same information for the year 1941 so that, if one goes through section III of Exhibit No. 254, you will find always on the first page, covering the company, the figures for 1937, '38, '39 and '40 and if the 1941 figure is available, it is always contained on the second page.

[fol. 10155] Q. Or the page following?

A. The next page following. These pages are numbered consecutively.

Q. Now, there are, I note, 275 pages in section III, is that correct?

A. Yes, that is correct. There are 275 pages in section III of Exhibit No. 254.

Q. Now, is it a fact that section III contains the data by individual years, as you have just described, for all of the corporations which are listed in section II of Exhibit No. 254?

A. That is correct. It contains all the companies listed in section II and that section has three pages.

Q. And is it also a fact that section II and the companies listed in section III are the companies which are

denoted by an "X" in the list of 470 corporations contained in section I of Exhibit No. 254?

A. That is correct or, to state it differently, it contains the companies whose figures are shown graphically on Chart No. 11 in Exhibit No. 253.

Q. And without going through section III, is it your view that anyone who might so desire can determine how you arrived at the figures you used as the basis for your Chart No. 11, Exhibit No. 253, by consideration of these detailed data in Exhibit No. 254?

[fol. 10156] A. That is correct with perhaps the additional statement that there is contained in Exhibit No. 63, in pages 5 through 8, a general statement of method which I used for Exhibits Nos. 63 and 64 which is exactly the same procedure except in connection with industrial companies for which data are supplied in Exhibit No. 254.

Mr. Littman: Mr. Coffman, can you advise whether your list of 153 "Stable industrial companies" includes all of the 30 Dow Jones Industrials?

The Witness: I do not think it does because I do not think that some of those stocks paid dividends throughout this period but that will be an easy matter to ascertain.

Mr. Littman: I thought perhaps you could tell us offhand.

The Witness: I think my answer is correct to say I am sure it does not but I can check it and get the list so there will be proof of it.

. . . . . .

By Mr. Wheat:

Q. I think you have explained why you selected these corporations and why you denoted them as stable industrial companies in connection with the study of the return which you have here made in this proceeding. Now, will you turn to section III of Exhibit No. 254 and state for [fol. 10157] the record what you have included in section III of that exhibit?

A. Section III or section IV?

Q. I am sorry, section IV is the one I meant.

A. In section IV of Exhibit No. 254 which section contains 51 pages, I have presented the working papers show

ing the computation of the investors' appraisal of the risks of capital in the natural gas industry as compared with other divisions of the utility industry for the full year 1941. Such data for water companies begin on page 1; for electric operating utility companies, it begins on page 9; for manufactured and mixed gas companies, it begins on page 25 and natural gas companies on page 36.

Q. Now, all of section IV of Exhibit No. 254—

A. (Interposing) That takes care of section IV of Exhibit No. 254.

Now, supplemental data for the years 1937, '38, '39 and '40—

Q. (Interposing) You mean this is supplemental to that?

A. This is supplemental to that, which data has already been shown in Exhibits 63 and 64 which are already in the record.

Q. So that by consideration of the data in Exhibits 63 and 64 and the data included in this section IV of Exhibit No. 254, all of the basic data underlying the supplementary Chart No. 10 of Exhibit No. 253 can be found?

A. That is correct.

[fol. 10158] Mr. Littman: Mr. Coffman, where is the underlying data for the natural gas pipe line companies shown in Chart No. 10 of Exhibit No. 253?

Mr. Wheat: I think if you will look at page 37 of section IV, you will find those companies listed. Also I think you will find separate sheets for each of those natural gas corporations in the sheets which follow page 37. In other words, they are grouped together there, Mr. Littman.

Is that not correct, Mr. Coffman?

The Witness: Yes, that is correct. Page 37—

Mr. Littman: (Interposing) The reason I inquire is because your caption sheet for section IV has a title that it includes natural gas companies but does not have a separate reference to natural gas pipe line companies.

The Witness: That is correct. I think that was an error. It might well have been put in although the natural gas

companies were put in at page 36 and there should have been included—

Mr. Wheat: (Interposing) You mean you made a separate page 37 listing them alone?

The Witness: That is correct but such page is not listed on the opening page for section IV but might well have been listed there.

By Mr. Wheat:

Q. As a matter of fact, Mr. Coffman, if you take the [fol. 10159] companies listed on page 37, you will find data upon them in the proper alphabetical place among the other natural gas companies for which data is shown on subsequent pages of section IV, is that not true?

A. Yes, that is correct.

Q. So that all the data is here, is it not?

A. All the data is here.

Q. Now, Mr. Coffman, is there anything further that you wish to state in explanation of your Chart No. 11 in Exhibit No. 253?

A. Well, the same statement applies to Chart No. 11 in Exhibit No. 253 that was made to Chart No. 10 of the same exhibit, namely, that the figures shown therein are the investors' appraisal of the over-all risks of capital and these again are objective data. It is not an opinion that I hold. It is merely finding out what investors today are saying in regard to securities and a particular group of securities and, following the processes of elimination which I did to arrive at the 153 companies, I think probably that is as complete a tabulation as was ever made covering a ten-year period with detailed figures showing companies that have paid dividends each year in that ten-year period and I thought that that was a pretty good measurement of industrial stability, any company that could qualify in that list, taking the list as a composite, was a pretty good indication and it would seem to me [fol. 10160] would prescribe a minimum, so far as average is concerned, of 6.97 or call it 7 per cent in round figures which could be described as what investors are demanding in the most stable industries on the average.

Now, if you will break down the average to the individual years, it is obvious, in Chart No. 11, that the figures varied.

The figure for 1937 was 6.38 per cent; in 1938, it was 5.21 per cent; in 1939, it was 6.25 per cent; in 1940, it was 7.14 per cent and, for 1941, it was 7.99 per cent or, call it in round figures, 8 per cent. Now, the 1941 figure, as I have explained, covers only 119 companies, those being the only ones who had issued their annual reports up to April 1 of 1942.

Q. You have already stated also that does include market value of capital of a total of over 14½ billion dollars, does it not?

A. Yes, it does.

Q. That is about a cent higher than your weighted average, 8 against 7?

A. That is correct.

Q. There has been a marked and noticeable increase in investors' appraisal of risks of capital of these companies over the past four of the last five years, is that true?

A. That is correct. The figure has risen from 5.21 per cent in 1938 to a round figure of 8 per cent in 1941.

* * * * * * * *

[fol. 10162] By Mr. Wheat:

Q. I think you stated that your weighted average of investors' appraisal of risks of capital for these 153 stable industrial companies shown on Chart 11 of Exhibit 253 was 6.97 and I believe you stated you would round that out to 7 per cent. Is that correct?

A. That is correct. I said that would indicate a round figure of 7 per cent.

* * * * * * * *

[fol. 10163] Q. Will you turn to your Chart No. 12 headed, "Panhandle Eastern Pipe Line Company Invested Capital as of February 28, 1942," and state what that chart shows and also state its relationship to Chart No. 24 in Exhibit 65.

A. In Chart No. 12 of Exhibit No. 253, I have shown calculations similar to those presented in Chart No. 24 of Exhibit No. 65 but, in the case of Chart 12 of Exhibit No. 253, the figures there are based upon the condition of the company as of February 28, 1942, which takes in the

acquisition of the properties or, to state it differently, considers the consolidated company.

Q. And the new financing?

A. And the new financing, whereas the figures that were shown in Chart 24 of Exhibit No. 65 related only to Panhandle Eastern Pipe Line Company.

Now, in Chart No. 12, a comparison is made between the book value on the one hand and the market value on the other and it shows that as of February 28, 1942, the total invested capital, book value, was $77,830,535.

Q. I note, Mr. Coffman, in that connection where you have a column headed, "Per Cent of Total", that there has been some considerable change in the percentage of the total represented by common stock and surplus. Will you state what that change was and whether you believe it to be significant?

. . . . . .

[fol. 10164] The Witness: You are now making the comparison of the data in Chart No. 12 of Exhibit No. 253 with Chart No. 24 of Exhibit No. 65?

Q. Yes, that is exactly what I had in mind.

A. The changes represent, for the most part, those that were created by the recent financing put out by the company in connection with the new property acquisitions and the figure for common stock and surplus, as of February 28, 1942, for the consolidated company or its present status, was 36.71 per cent of total invested capital whereas the common stock and surplus at book value as of June 30, 1941, for Panhandle Eastern Pipe Line Company alone was 47.63 per cent of the total book value as of June 30, 1941, and the reason for those changes in the percentages is chiefly attributable to the issue of additional bonds and preferred stock in the recent financing which necessarily made changes in the capital structure and the book value thereof and, therefore, changed the percentages.

Mr. Littman: Was the 47 per cent you gave, Mr. Coffman, as of June 30, 1941?

The Witness: The figure of 47.63 per cent is based upon the balance sheet figures as of June 30, 1941, and, [fol. 10165] therefore, applies to book values as of that date.

Mr. Littman: I thought it might be well to note at this point that, in the Securities and Exchange Commission's opinion which is in evidence as Exhbit No. 147, page 17 shows the ratio to be, as of September 30, 1941, 43.62 per cent. It has, however, been called to my attention that the figure which I read is a consolidated figure and, therefore, would not be strictly comparable.

The Witness: That is correct.

By Mr. Wheat:

Q. I think, Mr. Coffman, you also a few moments ago were about to make some comparison between the book value and market value figures as shown on Chart 12 of Exhibit No. 253. Is that correct?

A. Yes, that is correct.

In Chart No. 12 in Exhibit No. 253, the market value of that total invested capital was $73,328,771 and that figure, which is on the consolidated basis, has no counterpart in Chart No. 24 of Exhibit No. 65 so there is no comparison that can be made but it is of interest to see that the figure of $73,328,771 on the consolidated basis at market value compares with the $77,830,535 on book value on a consolidated basis as of the same time.

In the case of Chart No. 24 in Exhibit 65, the market [fol. 10166] value of the total invested capital on June 30, 1941, was $64,219,240, compared with book value at the same time for the same invested capital of $61,423,853.

Now, in Chart No. 12, there are one or two other items that I think have some significance.

Mr. Lee: Mr. Coffman, right on that, if you will pardon me for asking you, right on that last statement you made a comparison between the book and the market value, didn't you?

The Witness: Yes.

Mr. Lee: If the book value of $77,830,535 is so greatly in excess of the market value, $73,328,771, the excess being accounted for, as I understand it, by, in part at least, the earned surplus on the books, if that earned surplus exists why isn't that factor reflected in the larger market value?

The Witness: Well, I think that there are several answers that can be given to the question.

In the first place, I think one must distinguish between an earned surplus item which is already accumulated and on the books as one measuring standard and the earning capacity of the company or its ability to continue its same rate or thereabouts of earnings that it has in the past as another standard.

[fol. 10167] Now, I think the market usually gives more weight to earning capacity than the market has given to book values at any time and the reason for that is that you can conceive of a situation at which, at a given moment of time, a company could show a very good book value with earned surplus and yet be in a dilemma where its business was going to be wiped out with no earning capacity. The minute that was known or believed by investors, prices would begin to go off, naturally.

Mr. Lee: Has that earned surplus shown on Chart No. 12 been distributed?

The Witness: No, it is a part of book value. As long as it is there, it naturally has not been distributed.

Mr. Littman: Mr. Coffman, may I interrupt to ask whether, in this illustration which you just gave, it is the fact that the earnings-price ratio would be high, very high?

The Witness: Well, I will answer it this way: That, as you get into a situation of that kind so that the prices go off more rapidly than earnings, your price ratio will tend to increase but, if the earnings were off too and if they both went off in the same proportion, they would not be relatively high.

Mr. Littman: Well, in your illustration, the earnings-price ratio would be very high.

The Witness: If I took it at that given moment of time, at twelve midnight of December 31 of whatever year, [fol. 10168] it was and the earnings in the particular year had been good or all prior years but, as of that time—just like, for instance, Prohibition. The Act goes in and earnings go out—it would be high at that point but only at that time. In making a study as I have done over a period of years, that would have no significance. It would be washed out.

Mr. Littman: In such event, the earnings-price ratio would be enormous, wouldn't it?

The Witness: It would depend upon the relationship, Mr. Littman. I mean, if you had zero earnings and a price, you have no ratio.

Mr. Wheat: As a matter of fact, it might go to infinity under those circumstances, might it not?

The Witness: As a matter of fact, it would go to a point where you could not calculate the ratio because, if you had no earnings, you could not even calculate it.

Mr. Wheat: Of course no such situation at present, in connection with the studies you have made of earnings-price ratio, is here?

The Witness: No. I was just trying to make clear the answer I was trying to give in regard to the question.

Mr. Wheat: I see.

* * * * * * * * *

[fol. 10169] By Mr. Wheat:

Q. We all realize, don't we, Mr. Coffman, that individual days, with respect to individual companies, may create abnormal relationships?

A. That is correct but, so far as my study is concerned, all such companies with those particular items have practically been eliminated by one process or another. I mean, when you take a five-year period or a ten-year period obviously a thing that happens on one given moment of time has no significance.

* *

Q. Now, is there anything further you think should be stated with respect to your Chart No. 12 in Exhibit No. 253?

A. Well, there is one further point that I think stands out clearly in Chart No. 12 of Exhibit No. 253. At February 28, 1942, on the consolidated basis at market value, the total debt was 45.70 per cent of the total invested capital at market value. The total preferred stock was 21.82 per cent and the common stock and surplus was 32.48 per cent of the total invested capital at market value.

Now, that shows that the common stock and surplus or equity capital, so-called, is getting down to a fairly low percentage in comparison to total capital and I think that there was some discussion of that at the time we went through Exhibit No. 65 several months ago. If you com- [fol. 10170] pare the new figures on the consolidated basis at market value with the situation on the Panhandle Eastern Pipe Line Company June 30, 1941, at market value, the total debt now of 45.70 per cent compares with a total debt of 36.59 per cent.

Q. At that time?

A. At that time for Panhandle Eastern Pipe Line Company alone and the preferred stock now has 21.82 per cent of total invested capital at market value as against 17.52 per cent as of June 30, 1941, for Panhandle Eastern and the common stock and surplus, or the equity, was then 45.89 per cent as against this 32.48 per cent.

Q. At the present time?

A. At the present time. Now, of course, I admit there has been the property acquisitions in between and you have the consolidated company as against just Panhandle Eastern as of June 30, 1941, but regardless of that fact, the present situation of capital now; it seems to me, is such so that the equity portion is to about as low a per cent as one should think it might go.

There is one further fact and that is that, in the new preferred stock that was issued, the preferred stock carries sinking fund provisions and is entirely different than the preferred stock that was outstanding in the old setup and there is, I think, some reason for saying this new preferred stock is more in the nature of a debenture or

[fol. 10171] part of the debt than it is in a straight preferred classification.

Mr. Lee: Isn't that a benefit to the common stockholders of Panhandle because of the unusual voting rights that some of the preferred stock had heretofore in Panhandle?

The Witness: Well, in describing advantages, I do not know because there are several ways to look at it.

For example, if you have added to the debt which has brought on additional sinking fund provisions which must be met year by year and, in addition, now you have brought out preferred stock which also carries sinking fund provisions, this matter, for example, of having to meet every year, according to these debentures, $2,300,000 in order to buy these securities for sinking fund purposes as against the earlier arrangement of $1,250,000, on that score I think there is some question. There is an additional load there.

On the other hand, the old preferred stock was a participating preferred. It is not now a participating preferred so at least whatever earnings come over available for equity are entirely available for equity.

Mr. Lee: And over and above all of that, so far as the common stockholder is concerned, since the acquisition of or the consolidation of the two companies, hasn't he been very fortunate to be able to acquire 100 per cent ownership of Michigan Gas Transmission by moneys furnished by the public and at a price lesser than the market price of [fol. 10172] Michigan Gas Transmission? Hasn't that been of great benefit to the common stockholder of Panhandle?

The Witness: There again there are two ways to look at it. It seems to me the pragmatic test on the thing is what the investor says about it. The investor says, as I interpret it, from looking at the quotations on the common stock, that he does not see any great benefit for the moment because, as of June 30, 1941, the common stock was then quoted at $36.50 and, as of February 28, after all this business had been consummated, it was $29.50. There has been a drop of $7.00 per share so far as market quotations are concerned.

Mr. Lee: Isn't that due to other causes?

The Witness: I cannot say that it may be due to other causes. There may be a number of causes that have a bearing on this and no doubt there are but even so, the investor is saying to this company that, so far as he is concerned, even after the consolidation and all the benefits and everything else, $29.50 is all he can see and that is all he is going to pay for a share of common stock so that, to me, is the significant thing. It makes no difference, as I have said, what I think about it. If the investor out here, who has got $1,000 or $200,000 to invest says the stock is worth $29.50, he is the fellow we have got to talk about. It isn't what I think about it or anybody else thinks about it, [fol. 10173] it is the investor.

Mr. Littman: You do not mean to infer this was a bad piece of financing, as far as the common stockholder was concerned, do you?

Mr. Lee: That is what I meant.

The Witness: I do not see there is any inference in that. All I said was as of February 28, 1942, because of an issue of preferred stock and because of more bonds, the percentages now of these various phases of capital have changed quite materially and that the equity capital, it seems to me, [it] getting down to a fairly low per cent. I mean [some-] like 30 per cent out of the total capital is not in line with what the people in S. E. C. have been talking about when they have used ideal [radios] in looking at funded debt on the one hand and equity capital on the other.

Mr. Littman: Of course, S. E. C. approved this particular financing.

The Witness: That is correct but I believe they made some comment about the fact that they felt that the equity here was getting a little on the low side.

Mr. Littman: Where did they make comment on that?

The Witness: I think I remember seeing that, Mr. Littman. I will check it and see. I think there was some statement in the S.E.C. release to the effect that they

thought that the equity capital was somewhat low. I may [fol. 10174] be wrong but I will check it.

* * * * * * * * *

Mr. Wheat: Regardless of that, the facts are shown on Chart No. 12 of Exhibit No. 253, are they not?

The Witness: That is absolutely correct.

Mr. Wheat: That is not your opinion or the S.E.C.'s opinion or anybody else's opinion except the investors'?

The Witness: That is right.

* * * * * * * * *

[fol. 10189] By Mr. Wheat:

Q. Mr. Coffman, will you turn to Chart No. 13 of Exhibit No. 253, please?

A. Mr. Wheat, before we proceed, do you want me to answer the question that Mr. Littman left with me?

Q. Yes, I think that would be a good idea. State first what the question was so we will have it before us.

A. Before the noon recess, I had made some comment by way of answer regarding the sentiment of the Securities and Exchange Commission regarding the capital structure of Panhandle Eastern Pipe Line Company as it now exists under the consolidated condition and it was my recollection that the Securities and Exchange Commission had made some comment which would indicate that perhaps the equity of this company was approaching the minimum and Mr. Littman asked me just where, in the Securities and Exchange Commission's release, that was and in Exhibit No. 147.

My statement was predicated upon the statement made in the conclusions on page 23, the second full paragraph which I quote:

"Since the company is engaged in the business of the production and transmission of natural gas and hence is dependent upon a wasting asset, an all common-stock structure would seem to be preferable to that here contemplated. In view of the fact, however, that the ratios of [fol. 10190] debt and of debt and preferred stock to property are within reasonable limits and of the fact that

the sinking fund provisions with respect to both the bonds and the new preferred stock of the company should, if earnings are adequate, result in the retirement of all such senior securities prior to the prospective exhaustion of its gas reserves, we deem it proper not to impose any term or condition with respect thereto."

My comment that the equity under the consolidated situation was perhaps as low as it could go and my recollection that the Securities and Exchange Commission had believed that a larger proportion would be wise, came from the statement I have just quoted and particularly the first sentence where they say that—

"an all common-stock structure would seem to be preferable to that here contemplated."

Mr. Littman: You do not agree with the first sentence of that paragraph which you just read from the Securities and Exchange Commission's opinion, do you?

The Witness: In regard to the first sentence, you mean, "Since the company is engaged in the business of the production and transmission of natural gas and hence is dependent upon a wasting asset,—"?

Mr. Littman: That is right. And continuing—"an all common-stock structure would seem to be preferable to [fol. 10191] that here contemplated."

You do not agree with that, do you?

The Witness: I believe that it would be wise for the company to build up its equity position, very definitely. Whether or not it has to have an all common stock seems to me to not be too important.

What I am principally interested in is that a 32 per cent equity in a company engaged in this business seems to me to be approaching the lowest possible point for equity and the equity really should be built up rather than reduced.

Mr. Littman: Can you state yes or no whether you agree or do not agree with that sentence of the Commission's opinion?

The Witness: I should say that in any company dealing in a wasting asset, if they can finance the entire business by common stock, I would think that was preferable.

Mr. Littman: You do not think they can, do you, or should, do you?

The Witness: I do not know that I said anything to that effect any place in the record.

Mr. Littman: Look at your Chart No. 28, Exhibit No. 65, where you show your so-called ideal capital structure of 40 per cent of debt and 60 per cent of common stock.

The Witness: Well, you say [—] me "ideal capital structure." As a matter of fact, those ratios were based upon the ideal ratios that the Securities and Exchange Com- [fol. 10192] mission has been talking about and they have said, I believe repeatedly, a 40 per cent bond and 60 per cent common stock is within reason.

Now, if you can go beyond that and finance it, that is perfectly all right. My whole contention and belief in this evidence that I have submitted is that the common stock and surplus has been reduced to about as low a point as is consistent with the condition of this company.

Mr. Littman: Well, it appears that the Securities and Exchange Commission has said that the ideal capital structure for a natural gas company is an all common stock structure rather than the so-called ideal capital structure shown in your Chart No. 28. Is that correct?

The Witness: I do not think we are talking about the same thing at all, Mr. Littman. You have to start out with what is and what is [is] shown exactly in the chart that I presented in Exhibit No. 253. With the situation what it is, I do not see how it could be possible at the moment to change the capital structure to all common stock. That usually is not done. What you do is try to correct the situation as time permits and conditions enable you to do it and, therefore, I would say if you could work from what is to more in line with 40 per cent and 60 per cent, you would be working certainly in the right direction and if you could go beyond that finally to all common stock, as this company will be if the sinking funds work out and [fol. 10193] so on, for all practical purposes your trend is in exactly the right direction and I say no more.

By Mr. Wheat:

Q. Now, Mr. Coffman, will you turn to Chart No. 13 and state what is shown on that chart?

A. Chart No. 13 in Exhibit No. 253 captioned, "Cost of Financing Panhandle Eastern Pipe Line Company 1st Lien and 1st Mortgage Series 'C', Sinking Fund 3's due January 1, 1962 (offered to public on February 3, 1942)" shows a price to the public of $100.75; shows underwriting commissions of 73 cents, expenses of 60 cents, leaving $99.42 as the net price received by the company. The new Series "C" bonds carried sinking fund provisions and, therefore, had retirement prices and the retirement price graduates downward through the years to maturity from [fol. 10194] $101.25 to $100 at the last call date.

Q. Now, what do you mean by your column colored red at the right-hand side of Chart 13 in Exhibit No. 253 which you have headed, "Adjusted Yield Weight Giving Effect to Sinking Fund Requirements"?

A. It is obvious as the company issued these bonds and the bonds had sinking fund requirements and would have to be called at some price in excess of the original price or carried a premium, that that premium cost must be included with the other cost of financing. I have merely taken into consideration those sinking fund premiums and made the calculation as to what the over-all cost is on an average and that is 3.13 per cent.

Q. Now, is there anything further you want to state about Chart 13?

A. There is merely the one further remark that Chart No. 13 is supported with full details by the table supporting Chart No. 13 at the end of Exhibit No. 253 where the figures are shown and the calculations.

Q. This is purely a mathematical deduction, is it not?

A. That is right. It is purely arithmetic.

Q. Will you turn to Chart 14 of Exhibit 253 and state if that is the same as Chart No. 16 in Exhibit No. 65, except for the addition of the years 1941 and 1942?

A. Chart No. 14 captioned, "Historical Costs of Debt [fol. 10195] Capital of Panhandle Eastern Pipe Line Company—1930-1942" in Exhibit No. 253 contains similar matter to that presented in Chart No. 16 in Exhibit No. 65 with the exception of the additional material that has been presented.

Q. What is that additional material?

A. It shows the figures for the full year 1941, shows the situation as it existed in 1942, February 28, 1942, taking into consideration the consolidated facts.

Q. And the weighted average at the right-hand side is 4.85 per cent instead of 5.17 per cent, is that true?

A. Yes, that is correct and the weighting procedure is exactly the same here as I have described before. It is giving the most recent figure the greatest weight.

* * * * * * *

By Mr. Wheat:

Q. Now, turning to Chart No. 15, Exhibit No. 253, that deals with the preferred stock of the company, does it not?

A. Yes, it does.

Q. Will you state what is shown on that chart?

A. On chart No. 15 in Exhibit No. 253 captioned, "Cost of Financing Panhandle Eastern Pipe Line Company, 5.6 Per Cent Preferred Stock Offered to Public on February 3, 1942", I show the price to the public of $104 per share; [fol. 10196] the underwriting commission which amounted to $3.72; the expenses, amounting to 60 cents, and the net price received by Panhandle of $99.68. I show also, since this is a sinking fund preferred stock, the retirement price of $105.

The total price, that is, the cost including the sinking fund costs, shows the rate to be 5.86 per cent based on the net price received by Panhandle. In other words, the difference between 5.60 per cent and 5.86 per cent registers the additional cost by virtue of having to buy this preferred stock for sinking fund requirements at a premium of $5.00 per share.

Q. The table supporting Chart No. 15 discloses all of the mathematics through which you went to get your final figures, does it not?

A. Yes, it does.

Q. And is the table self-explanatory?

A. I think so. I have listed out each retirement date, the amount involved and explained through the columns how I have used one figure to the next and they are all so captioned that they should be self-explanatory.

Q. What is the cost, then, of this new preferred stock, taking into consideration these items that you have mentioned?

A. The cost will be 5.86 per cent.

Q. That instead of the 5.60 per cent which has been mentioned previously in this record?

A. That is correct.

[fol. 10197] Q. Now, apparently this 5.86 and even the 5.60 are well above the 4.5 per cent that I think was mentioned earlier in the record, is that true?

A. I recall and tried to refresh my memory about the prior discussion that reference was made during the testimony on Exhibit No. 65 to the Exhibit No. 147 which is the Securities and Exchange release and I was asked a question as to whether I had been aware of the fact that certain offers had been made by bankers for a 4½ to 5 per cent preferred stock. In Exhibit No. 147, there is a statement on page 9 carrying that fact and I quote:

"In July, 1939, however, offers were made by banking groups to market a cumulative non-convertible, non participating preferred bearing dividends of 4½ to 5 per cent, the proceeds of which could be used to retire the Class A stock."

Then, as we were discussing that, I think I was asked what I thought this new preferred might sell for, whether or not it could come out at around 4½ per cent and, at the time of the hearing, the bids were opened but they were not opened when I was asked the question but it shows, since we now have the facts on the situation, what the actual cost is as against the presumption, that perhaps 4½ per cent preferred stock could have been sold.

Q. Well, I believe you made some statement at the time [fol. 10198] you were examined that you did not believe a 4½ could be sold?

A. That was my general statement, that I felt certain they could not sell a 4½ per cent preferred although I said that if there were sinking funds and so forth involved, it would make a different type of preferred than had been discussed before and those provisions might have some bearing but, even so, I did not think that it would be possible for this company to sell a 4½ per cent preferred stock.

Q. Now, isn't it a fact, Mr. Coffman, that this Chart No. 15 and the four or five subsequent charts in Exhibit No. 253 have been included in this exhibit largely in order to give to Mr. Littman all the facts about this preferred stock on which he was questioning you at the time which you mentioned?

A. Well, that is generally correct, because of the prior discussion and the fact that I did not know what the specific rate might be and thought it wise to wait until the bids were opened. We now have the actual history and, instead of making some conjecture about it, can determine exactly what happened.

* * * * * * * * * * * *

[fol. 10199] Q. Then you arrived, mathematically, at a cost of 5.86 per cent, did you, for this preferred stock?

A. That is correct.

Q. That is the cost to the company, is it, at the present time?

A. That will be the cost to the company over the years.

Q. All right.

Now, I take it from Chart No. 16 that that is merely a showing of the 1936-1942 items and the weighted average of historical costs of preferred stock capital, isn't that true? A. Yes, that is correct.

Q. It shows a weighted average of 7.46 per cent, is that correct?

A. That is what is shown in Chart No. 16 in Exhibit No. 253.

Q. Will you turn to Chart No. 17 in Exhibit No. 253 and state what is shown in that chart?

A. The information shown in Chart No. 17 in Exhibit No. 253 captioned, "Record of Sales of Panhandle Eastern Pipe Line Company 5.60 Per Cent Preferred Stock to Public—February 4 to March 30, 1942—Public Offering Price—$104 Per Share", is a new exhibit. There was no [fol. 10200] such data or similar data in Exhibit 65.

Q. It was not available then, was it?

A. It was not available so what I have shown on the one portion captioned, "Report to Dealers and Selling Group Members" is a memorandum which was circulated to the

participating group by Glore, Forgan & Company and Kidder, Peabody & Company as of March 30, 1942.

Q. Who were they?

A. They were the bankers who accepted the original offer to make to the public or rather had their bid accepted in order to secure the issue.

Q. In connection with this new preferred stock?

A. That is correct.

Q. Proceed.

A. This memorandum states:

"To Dealers and Selling Group Members:

"It has been our policy to keep you advised of sales progress and we have sent you reports covering certain dates. We again give you below the sales totals as reported to you previously together with the figure of this date"—

The bankers are there talking about how the sales of the 150,000 shares were going.

On February 4, which is the date of the sale, 74,000 shares were taken or sold.

[fol. 10201] Q. Out of 150,000 total?

A. All these figures relate to the 150,000.

Q. Yes.

Mr. Littman: Pardon me, may I interrupt to ask whether the firm of Glore, Forgan & Company and Kidder, Peabody & Company were the same firms that handled the bonds as well as the common stock?

The Witness: I think that is correct, both firms were in on it.

Mr. Wheat: I assume by that that you mean they bid on both bonds and the preferred stock and secured the bid?

Mr. Sperry: They were successful bidders.

Mr. Littman: The picture on the over all deal is not presented here?

The Witness: No, sir, this is the preferred stock only.

Mr. Wheat: We have already discussed the bonds, have we not?

The Witness: I have shown the facts on the bonds and the bonds were sold but the preferred stock is the question.

By Mr. Wheat:

Q. All right. Now, go ahead and tell us what is shown by Chart No. 17?

A. Well, on February 7, it is indicated by this report [fol. 10202] dated March 30, 1942, from Glore, Forgan & Company and Kidder, Peabody & Company to dealers and selling group members that an accumulated total of 83,000 shares had been sold;

On February 14, the total had increased to 93,000 shares;

On February 19, the total had increased to 97,000 shares;

On February 28, the accumulated total had reached 103,000 shares;

On March 14, the total was 110,000 shares, and

On March 30, it was 115,000 shares.

Q. Mr. Coffman, have you taken those figures and those dates and so broken them down by an analysis that you can tell us the average daily sales throughout the period that is covered?

A. Yes, I have. That is also shown on Chart No. 17 in Exhibit No. 253.

Q. What does that show?

A. Well, in the section captioned, "Analysis of Sales February 4, 1942, to March 30, 1942", I show a series of columns; one including the date; the next column showing the trading days, excluding Sundays and holidays; the next column showing shares sold during each period; and the fourth column showing daily average sales.

This shows that after the first initial sale of 74,000 shares, the average daily sales declined 3,000 shares.

Q. What do you mean "declined"? You mean it was [fol. 10203] 3,000 shares during the period February 5 to 7, do you not, Mr. Coffman?

A. I mean to say that, in computing the daily average, a decline in the average daily sales is shown from one period to the next in which these calculations were made.

Q. Yes. Fine.

A. And I want to make clear that the 74,000 shares really is not a daily average because that was the sum total that went out all at once at the opening of the offer, went out on the first day of the sale and then thereafter, the shares sold during each of these periods was taken to find out what the average daily sales would be and those average daily sales declined from 3,000 to 2,000, 1,000, 857, 583 until, as of March 30, the average daily sales had shrunk to 385.

Q. That is true for that fourteen-day period?

A. That is true for the period mentioned.

Q. How many shares were still unsold on the first of April?

A. The number of shares that remained unsold as of April 1, 1942, was 35,000 shares.

Q. Well, what happened on the second of April?

A. In Chart No. 18 in Exhibit No. 253 captioned, "Price to Public of Panhandle Eastern Pipe Line Company 5.6 Per Cent Preferred Stock Reduced on April 2, 1942—Former Price—$104 Per Share—New Price—$100 Per Share;". In other words, the bankers had dropped the [fol. 10204] price $4.00 per share and in this chart is a telegram which states:

"The following is a copy of wire sent to selling group dealers today—

"'You are hereby notified that selling agreement dated February 4, 1942, for Panhandle Eastern Pipe Line Company 5.6 per cent cumulative preferred stock is terminated effective close of business April 1, 1942 a limited amount of such stock has been made available by certain of the original purchasers for offering to approved dealers subject to confirmation by the undersigned as representatives and to your agreement that no such stock will be offered below the public offering price on and after April 2, 1942. The public offering price will be $100 flat—a concession of $1.50 per share will be allowed to you on stock confirmed to you provided such shares are not repurchased for the

account of the several purchasers in the market at or below the public offering price of $100 flat prior to May 15, 1942, or such earlier date as we may determine.

"Stickers for all prospectuses used hereafter may be obtained from the undersigned."

So that this chart shows that as of April 2, the bankers realizing and experiencing what is shown on Chart No. 17 in regard to this slowing up process in the sales in spite of all the effort they put on to sell the issue, decided that if [fol. 10205] they dropped the price $4 per share, it might be somewhat more attractive to the investing public.

Q. By the way, that telegram was signed by Glore, Forgan & Company and Kidder, Peabody & Company, is that true?

A. Signed by Glore, Forgan & Company and Kidder, Peabody & Company.

Mr. Littman: That did not cost the Panhandle Eastern anything, did it?

The Witness: To answer your question, that did cost the company something in this respect, not in dollars, but it is my firm conviction that if this company wishes to issue securities and has any more experiences like this, it is going to be an unpalatable type of security so far as the investing public is concerned.

Trial Examiner: Mr. Coffman, isn't it true that the market right now is the lowest in volume since 1933?

The Witness: I think, generally, that is correct, Mr. Crosby. I do not have the specific figure.

Trial Examiner: And there has been a rapid and alarming deterioration of that market from February 4 consistently to this date?

The Witness: The market, generally, has been declining over a period, including the February 4 period, down to date. That is true.

Trial Examiner: What you have said about the effect of [fol. 10206] this market on these securities would not then necessarily be confined to these securities?

The Witness: With this exception, Mr. Crosby, that here as I see it, we have a new issue and various banking groups bid for it on a closed or sealed bid basis and at the time they did and they certainly must have made some study, they felt that 5.60 per cent basis seemed to approximate what they could do in the way of selling this particular type of preferred stock but subsequent facts have indicated that they could not.

Now, I draw the distinction between a new issue and shares that you can go into the market and buy because these brokers and dealers went directly to their customers to sell the stock and the people bought it at $104 a share but before they have had this stock a month and a half, the bankers who originally sold it to them dropped the price $4. I [illegible] a banking group or a group of brokers on a new issue has very many experiences of that kind, they no longer hold their particular investment clientele as distinguished from being a broker where people call up and say for them to buy so many shares of this, shares already in the market. That is the distinction I want to draw between a new issue and a broker's office where people would call up and say for them to buy ten shares or twenty shares of General Motors or anything else.

Trial Examiner: Nevertheless, this is an abnormal market?

The Witness: That is true but this is part of the financing. We have to take the capital markets as we find them when we do the financing.

By Mr. Wheat:

Q. As a matter of fact, Mr. Coffman, even after the price was thus dropped by the bankers, all of those remaining 35,000 shares have not been sold, have they?

A. No. In Chart No. 19 in Exhibit No. 253 captioned, "Record of Sales of Panhandle Eastern Pipe Line Company 5.60 Per Cent Stock to Public—April 2 to April 10, 1942—Public Offering Price—$100 Per Share", I show that the number of shares unsold on April 1, 1942, when the price was reduced from $104 to $100, was 35,000 shares.

The shares sold from April 2 to April 10, 1942, at the reduced price of $100 were 20,000 shares so that the shares

unsold on April 11, 1942, after seven trading days at the reduced price of $100 was still 15,000 shares.

Q. Can you state any later data on that subject?

A. Yes, I asked to have a wire sent me this morning in regard to what the remaining shares were and I have a telegram dated April 17; 10:33, signed by Glore, Forgan & Company addressed to me which reads as follows:

"Response your inquiry most recent check indicates unsold balance of shares of Panhandle Eastern Pipe Line Company 5.60 per cent preferred set aside for dealers plus [fol. 10208] additional shares in hands of underwriters totals in excess of 12,500 shares";

So apparently it is about the same 15,000 shares at the time I checked it last.

Q. Now, have you shown on Chart No. 20 what the effect of these various changes is?

A. In Chart No. 20 in Exhibit No. 253 captioned, "Assumed Cost of Financing Panhandle Eastern Pipe Line Company 5.60 Per Cent Preferred Stock Based on Present Price to Public of $100 and Assumed Price to Company of $95.68" I have concluded that the original offering price was too high and presumably was too high by $4 so I have taken $100 as the price to the public. The underwriting conditions would have remained the same at $3.72; the other expenses of 60 cents would have remained the same, making the assumed net price to Panhandle $95.68 in comparison with the original price which was the actual amount to the company of $99.68 as shown in Chart No. 15. The retirement or call price would have remained the same at $105.

On this basis, making the same calculations as I did before in regard to the sinking fund requirements or calling the preferred stock at a premium, would indicate that 6.24 per cent comes closer to approximating the actual cost on that preferred stock today than did either the 5.60 per cent on which the bids were opened or the 5.86 per cent [fol. 10209] which I calculated in Chart No. 15.

235—12,466

Mr. Lee: Now, Mr. Coffin, will you pardon me if I interrupt here?

Mr. Wheat: I think this is a proper time. We have finished our general discussion on this preferred stock and I think it would be very well—

Mr. Littman: (Interposing) Mr. Lee, I just want to make this observation if I may, in connection with an alleged response by this witness to an alleged inquiry that I made with respect to the preferred stock.

I would like to state that we did not request any further information with respect to the history, the rather sordid history, I should say, of this preferred stock of Panhandle Eastern. We have at all times been in full possession of all the facts.

I would like to point out that the Securities and Exchange Commission in its opinion which is in evidence as Exhibit No. 147 at page 26 said:

"Since April of 1937, various proposals have been made to refinance this Class A stock, all of which is held by Columbia Oil. These proposals and attempts to put out such a refinancing have failed and the history of that failure is a significant indication of Columbia Oil's control over Panhandle Eastern."

[fol. 10210] Now, we have the situation here where this witness is now stating that it has cost Panhandle Eastern close to 6.24 per cent for the refinancing of its preferred stock. This, in the face of the Securities and Exchange Commission's statement at page 9 of its opinion which is Exhibit No. 147 in this case:

"In July, 1939, however, offers were made by banking groups to market a cumulative, non-convertible, non participating preferred bearing dividends of 4½ to 5 per cent, the proceeds of which could be used to retire the Class A stock."

In other words, we claim that it requires a great deal of gall to come in here and claim an extra 1½ per cent of cost for preferred stock and to saddle that 1½ per cent on the rate payer today when the evidence in this case clearly

shows that Panhandle Eastern could have, but for the misdeeds and sins of its parent, Columbia, refinanced this stock at least 1½ per cent below that cost.

Mr. Wheat: Mr. Littman, we certainly are not interested in arguing this case now. If you want to go ahead—but I will say this to you—you will not deny this cost, will you?

Mr. Littman: We certainly shall contend—

Mr. Wheat: (Interposing) You will not deny the dollars of cost, will you?

Mr. Littman: We certainly shall contend that this extra 1½ per cent of cost foisted upon this company by reason [fol. 10211] of the sins of its parent should not be borne by the rate-payer, as this witness contends.

Mr. Wheat: Do you deny this cost?

Mr. Littman: Yes, sir, for purposes of this proceeding.

Mr. Wheat: For purposes of any proceeding, do you deny these dollars are being paid and have to be paid?

Mr. Littman: It is being paid because of the sins of the parent.

Mr. Wheat: It is being paid, is it not?

Mr. Lee: It is right on that point—

Mr. Wheat: (Interposing) I am not going to argue this case now but I do not think we ought to have that kind of remarks in this proceeding at this stage.

Mr. Littman: Wherein have I not spoken the truth?

Mr. Wheat: You have not spoken the truth when you have intimated there has not been this cost and, only after many questions that I asked you, have you said there has been this cost.

Mr. Littman: Of course, there is this excessive cost which was occasioned by reason of the misdeeds of the parent company.

[fol. 10212] By Mr. Wheat:

Q. Mr. Coffman, will you turn to your Chart No. 21, in Exhibit No. 253, and first state whether this chart, in effect, brings down to date the respective Charts 19 and 20 which were included in Exhibit No. 65?

A. Yes, it does.

Q. What does it generally show?

A. Chart No. 21 in Exhibit No. 253 captioned, "Earnings—Price Ratios of Natural Gas Pipe Line Company Common Stocks—1937-1941" shows the earnings-price ratios for each of the years mentioned on the El Paso Natural Gas Company, Interstate Natural Gas Company, Memphis Natural Gas Company, Northern Natural Gas Company, Southern Natural Gas Company and Panhandle Eastern Pipe Line Company.

Q. I believe you explained previously why you chose those particular companies; did you not?

A. That was explained in connection with the discussion of Chart No. 19 in Exhibit No. 65 and all I have done is proceeded to add on the full year 1941 which could not be done at the time Exhibit No. 65 was prepared.

At that time, as shown in Chart No. 20 in Exhibit No. 65, I had to use interim figures covering January 1 to August 31, 1941. In Chart No. 21 in Exhibit No. 253, I [fol. 10213] have the full year figures and there, because of questions that were asked before, I have shown both the simple average and the weighted average right in the chart so the figures would be available.

Q. Whether anyone asked you to do that or not, you have done it, haven't you?

A. That is correct.

Q. And you now show it both ways?

A. I show it both ways.

Q. Yes. What would you say with respect to what is shown by the data which you have been able now to include for the year 1941?

A. Chart No. 21 in Exhibit No. 253 shows, if you refer to the average figures, whether they be simple averages or weighted averages, that the common stocks are still showing 12 per cent. The figures for 1941 indicate that, for the individual companies, there was smoothing out of differences from one company to another as existed in some of

the prior years but the important thing is that, over the five-year period, these data indicate that, so far as the averages are concerned, they are running along the same levels.

Q. I think you were questioned before concerning something about Southern Natural Gas Company. That has come down, hasn't it?

A. Southern Natural Gas Company is bar No. 5 in each of these boxes and the figure has come down from a level of [fol. 10214] 21.60 per cent in 1939 to 14.73 per cent in 1941.

Q. Now you were also questioned, I believe, at some length about Interstate Natural Gas Company. What happened to that? And you were questioned about Memphis Natural Gas Company. What happened to that?

A. Interstate Natural Gas Company is the second bar in each of the boxes and that was at a low of 8.90 per cent in 1939 and increased so that, in 1941, it was 10 per cent.

Q. It was at a really lower low of 8.67 in 1940, wasn't it? A. That is correct.

Q. In other words, those extremes are apparently leveling out some, are they not?

A. That is what the box showing the 1941 figures would indicate.

Q. But I think you have said that although there is this general evening out, that 12 per cent remains as the investors' appraisal of risks in these stocks.

A. That is what the data on the averages here would indicate.

Q. And would you say, as you have already put it today, that this is what investors actually demand?

A. I have merely recorded here the earnings-price ratio which is an objective test, merely saying what the investors are saying about these common stocks of these companies [fol. 10215] listed.

Mr. Littman: Are those judgment figures?

The Witness: No, this is just arithmetic.

Mr. Littman: I meant the 12 per cent.

The Witness: The 12 per cent, I have just used a round figure based on these averages shown here which are either, depending on which average you use, above 12 or a little below it.

Mr. Littman: In other words, the 12 per cent, as I understand it, represents your judgment based upon these data shown in Chart No. 21?

The Witness: That is correct and I come to a chart in which I make that point.

Mr. Wheat: Well, but the simple average in 1941 was 12.70 per cent and the weighted average was 11.98 per cent, was it not?

The Witness: That is correct.

Mr. Lee: Pardon me, I would like to ask a question.

Mr. Wheat: Yes.

Mr. Lee: Is this 12 per cent, is that the average return earned on the common stock of these companies?

The Witness: That is the relationship of the price, the quoted market price to the earnings. In other words, it is the amount that the investors now are having by way of yield on the securities, the common stock.

Mr. Lee: And yet with that condition, you say you are [fol. 10216] claiming that the underwriters cannot dispose of the balance of the stock?

The Witness: Of course, we are talking about two different things. We were talking about the preferred stock and here we are talking about common.

Mr. Lee: Yes, but which is the better offer, the preferred or the common?

The Witness: Well, you cannot make a comparison of that kind because the 12 per cent may represent what the investor actually says he is willing to invest money at at this particular time and this particular risk but the investor, as I have shown in the preceding charts related to preferred, so far as 5.60 per cent preferred stock with sinking fund provisions, he does not like it so that means the 5.60 was too low. Otherwise, the preferred stock issue should have sold in a few days and certainly in not more than a couple of weeks.

By Mr. Wheat:

Q. Now, will you turn to Chart No. 22 and state what that shows and how that refers back to your Chart No. 21?

A. Chart No. 22 in Exhibit No. 253 captioned, "Average Earnings-Price Ratios of Natural Gas Pipe Line Company Common Stocks—1937-1941" merely summarizes the figures, the average figures which are shown in Chart No. 21. In other words, I merely wanted to make the average [fol. 10217] figures clear so that the weighted average on what would be termed the weighted average of simple averages shows 13.31 per cent for the five-year period, 1937-1941, both inclusive, and the weighted average shows 11.96 per cent for the same period.

Q. As a matter of fact, as we look across these two subcharts of Chart 22, there are relatively small fluctuations over the five-year period, is that not correct?

A. I would say that the fluctuations shown therein are very small. I think the widest one shown involves a point and a half, from one year to another.

Q. Do you consider that fact significant?

A. It indicates to me that the period 1937 to 1941 apparently has not had any peculiar circumstances surrounding it. I mean a five-year period in which the figures all fall within a point and a half of each other would indicate some degree of normaley about this particular phase of the problem.

Q. All right.

Now, turn to Chart No. 23 and state just what that shows.

A. Chart No. 23 in Exhibit No. 253 captioned, "Accepted Earnings-Price Ratio for Panhandle Eastern Pipe Line Company Common Stock" shows 12 per cent which is the figure I took to represent what the investors' appraisal is for common stocks of a natural gas pipe line company and that figure was accepted because of the data shown in Charts Nos. 21 and 22 which indicated that to be the round percentage representing the investors' appraisal of the [fol. 10218] risks connected with common stocks in the natural gas industry.

Q. As a matter of fact, Mr. Coffman, this does not include any amount for costs of financing common stocks, does it, or anything of that sort?

A. No, this is based upon the quoted market prices and the earnings and has not anything to do with new issues that came out or the cost thereof.

Q. You simply used the earnings price ratio and taken this directly from those?

A. That is correct.

Q. In this business during the past five year period?

A. In this industry during the past five year period.

Q. In this industry?

A. That is correct.

Q. Now, will you turn to Chart No. 24 and state what that shows?

A. Chart No. 24 in Exhibit No. 253 captioned, "Minimum Earnings Required for Common Stock of Panhandle Eastern Pipe Line Company" shows the total amount of common stock and surplus as of February 2[illegible]42, which is the consolidated figure in the amount of $28,574,090 and, to that, I have applied the 12 per cent ratio which shows that the amount of earnings required for the common stock and surplus would be $3,428,891.

[fol. 10219] Q. All right. Now, that is purely an arithmetical calculation?

A. That is merely multiplying the $28,574,090 which is taken from Mr. Watkins' exhibits by the 12 per cent which I have just secured from the preceding exhibits to give me this resulting figure of $3,428,891.

. . . . . .

Mr. Littman: (Interposing) Pardon me, Mr. Wheat, I would like to ask a clarifying question with respect to Chart No. 23.

Did I understand you to make a statement in connection with this 12 per cent, the earnings price ratio for Panhandle Eastern Pipe Line Company common stock, that it did not include the cost of financing or that it did include the cost?

The Witness: It did not. In other words, it is based on quoted market prices as given over the Exchanges in comparison with the earnings available. In other words, all these securities I am using, you see, are not new issues so I have no opportunity to calculate cost of financing. I am merely taking the stocks on the market and their prices.

Mr. Wheat: At least you did not calculate any cost of financing and add them on?

The Witness: I had no way to make such a calculation.

Mr. Littman: Do you show anywhere in your exhibits the cost of financing the common stock?

[fol. 10220] The Witness: The only one that I had available to me was the one that I showed in Exhibit No. 65 in regard to that Northern Natural issue.

Mr. Littman: I recall that.

The Witness: That is the only one.

Mr. Wheat: That is shown, is it not, on Chart No. 21 of Exhibit No. 65?

The Witness: Yes, that is correct, Chart No. 21 of Exhibit No. 65.

Mr. Littman: Apparently you do not consider it necessary to show the cost of financing of common stocks and the effect on the earnings requirement?

The Witness: I think it is very good if you have the figures to do it but, if you do not have the figures to do it, you cannot do it.

Mr. Wheat: At any rate, you have not done that and, therefore, you have not added anything in to your 12 per cent for that item?

The Witness: No, and the point must be true without calculations that if you took out costs of financing, the percentage would be higher rather than lower, obviously, because you would make the calculation then on the net price to the company.

Mr. Littman: Mr. Coffman, I would like to have you clear me up on this point. Is it or is it not necessary, for [fol. 10221] purposes of these studies which you have submitted, to take into account the cost of financing with respect to the common stock?

The Witness: If I could get the figures, I would make such calculations.

Mr. Wheat: But it would increase your 12 per cent to something higher than that, would it, not?

The Witness: That is correct. The point is that there have not been many new issues. The Northern Natural was the one most recent to the date of the case at the time we were having the last hearings and there is no way that I know of, until such issues come out, that you could make such calculations and I do not see, on an issue which came out many years ago, where it would be pertinent now. If you could get a new issue and make your calculations now, that would be the very best test you could get.

Mr. Littman: It seems to me it is my recollection when you testified when you were last on the stand under cross-examination, that your 12 per cent included the cost of financing the common stock. Is my recollection correct?

Mr. Wheat: I think, if you are going to ask him a question like that—I have no such recollection—you ought to cite chapter and verse because I am quite sure it is not in the record and I just now asked if he did it in this calculation and he has answered, "No".

[fol. 10222] The Witness: The earnings-price ratios are used throughout. There is no way that I have of making such calculations. Where there were issues available, new, such as this preferred or the common stock of Northern Natural, obviously with all facts available, I could do it.

Mr. Littman: The record speaks for itself. I merely wanted my recollection refreshed. Inasmuch as I have this impression, I thought perhaps he might clear me up on it.

The Witness: I do not believe I said anything like that. I would have to read the record myself.

By Mr. Wheat:

Q. Mr. Coffman, if you used earnings-price ratios, as such, and adopted your 12 per cent both before and now from earnings price ratios, as such, then clearly you did not include any cost of financing the common stock, did you?

A. That is a correct statement.

Q. Now, turn to Chart No. 25 of Exhibit No. 253 and state whether that is, in general, similar to Chart No. 26 in Exhibit 65 except, of course, that it applies to Panhandle Eastern Pipe Line Company as it now exists. Is that correct? A. Yes, that is correct.

Q. Would you say that the $5,325,677 which you have labeled, "Earnings Required to Maintain Credit Position" compares with the $5,077,648 marked or labeled, "Earnings Required to Maintain Quality" in the earlier chart?

[fol. 10223] A. Yes, I think it compares with that figure.

Q. How did you arrive at that figure of $5,325,677?

A. In Chart No. 25, Exhibit No. 253, captioned, "Minimum Earnings Required to Maintain Credit Position of Panhandle Eastern Pipe Line Company", I show, as of February 28, 1942, the total invested capital of $77,830,535. Included in that total invested capital were bonds in the amount of $33,256,445 and I had already shown that the cost was 2.88 percent for that portion of capital, so I merely took 2.88 per cent of the bond total to ascertain what was required for that part of the capital structure, so far as the investor was concerned. In the total invested capital was preferred stock in the amount of $16,000,000 and I applied the rate to that, the rate I have discussed, of 5.87 percent.

Q. What was that?

A. That is the cost of the preferred stock.

Q. To Panhandle Eastern Pipe Line Company, is that correct? A. That is correct.

Q. All right. What else did you do?

A. And then I applied the 12 per cent figure to the equity of $28,574,090 and took the sum of those three multiplications which gave me a total of $5,325,677 which I called the earnings required to maintain credit position on that basis.

Q. Now, how does Chart No. 26 in Exhibit No. 253 dif-

[fol. 10224] fer from Chart No. 25?

A. Chart No. 26 in Exhibit No. 253 captioned, "Minimum Earnings Required to Maintain Credit Position of Panhandle Eastern Pipe Line Company Based on Actual Cost of Bonds and Investors' Appraisal of Preferred and Common Stock" differs from the data in Chart No. 25 to the extent that I took the 6.23 per cent which is what the

current market conditions are evidencing in regard to the preferred stock and applied that as the investors' appraisal. The total earnings required by that change were $5,382,677 and that figure, in my opinion, represents the earnings that are required by the company to maintain the credit position.

Q. All right.

Now, will you turn to your Chart No. 27, Mr. Coffman, and state first why you included this and the succeeding five charts in Exhibit No. 253 and then state what Chart No. 27 shows?

A. In Exhibit No. 253, I present a series of charts covering, from Chart No. 27 through Chart No. 35, on money rates and the trend of money rates and the purpose of inserting these charts was to show that there has been, in the earlier years, a downward trend, a very substantial downward trend in money rates but that, in the last few years, such rates have been leveling off, going from what would be termed the shortest term and best money to longer term and more hazardous money through [fol. 10225] corporate financing.

Q. I believe you answered previously in this record, in response to a question by the Presiding Examiner, that there has been a reduction in money rates over the past several years, did you not?

A. Yes, I think I mentioned that.

Q. And these charts reflect in detail what those changes have been, do they not?

A. That is correct.

Q. And show, for all these types of use of money, what has actually been the experience?

A. That is correct.

Q. Now, will you turn to Chart No. 27 and tell us in some detail what that shows?

A. Chart No. 27 in Exhibit No. 253 captioned, "Prime Money Rates Monthly, 1930 to March, 1942" shows the money rates on 60 to 90 day time loans of the New York Stock Exchange, the call loan renewals of the New York Stock Exchange and four to six months prime commercial paper. These are what you might term the shortest term and highest grade money.

The chart shows that four to six months commercial paper (prime), was carrying a rate as of February, 1942, of 0.56 per cent and that call loan renewals of the New York Stock Exchange were carrying a rate of one per cent and that 60 to 90 day time loans were carrying a rate of 1.25 per cent.

[fol. 10226] Q. Does that, in itself, show an investors' appraisal?

A. That indicates that investors are drawing a distinction between the type of loans they are making.

Q. As a matter of fact, Mr. Coffman, the spread between the three different types of paper that are shown on this chart at the present time is greater, by a considerable amount, than the spread between a similar type of paper back in 1930?

A. Well, in January of 1930, the lowest rate there applying to call loans was 4.64 per cent and the highest rate, which applied to four to six months commercial paper, showed 4.85 per cent or approximately 0.20 per cent difference.

In February of 1942, the lowest rate was, four to six months commercial paper (prime) at 0.56 per cent and the highest was on 60 to 90 day time loans at 1.25 per cent or almost 0.70 per cent spread.

Q. As a matter of fact, although there have been large reductions in the interest rates on such so-called prime money, there has been a very definite leveling out over the past few years, has there not?

A. Yes, I think the exhibit shows that pretty clearly.

Q. Now, will you turn to Chart No. 28 and tell us whether somewhat similar facts are reflected by the chart there dealing with commercial loan rates?

A. In Chart No. 28 of Exhibit No. 253, I show commercial loan rates charged customers by banks in principal [fol. 10227] cities, by months, 1930 to and including 1942 to the date of this exhibit.

Q. This also shows that there has been a considerable drop in these rates, does it not, but that there has been, over the past several years, a very marked leveling out of such rates?

A. Generally that is true. Included in the rates are rates for seven cities, eleven southern and western cities, seven other northern and eastern cities and for New York City and in recent years, there has been more of a leveling out but it still shows that rates charged customers by banks vary in different parts of the country and there is a spread as of January 1942, from 1.88 per cent to 2.99 per cent.

Q. Well, otherwise, that chart seems to be self-explanatory, does it not?

A. I think so, and the detailed indexes or figures are all in the tables.

Q. Would you say that your Chart No. 29, which deals with yields on United States Government and high grade municipal bonds also shows a reduction in general interest rates on such paper but a somewhat general leveling out over the past three or four years and also a spread of investors' appraisal of such paper?

A. I think so. Chart No. 29, showing "Yields on U. S. [fol. 1022] Government and High Grade Municipal Bonds, Monthly, 1930 to March 1942", shows short term United States Government bonds which are about 3½ years maturity, intermediate term United States Government bonds which are about 7½ year maturity; long term United States Government bonds which are anything over 20 years, and municipal bonds and, aside from the trend which has been down, but leveling out in recent years, it shows very definitely that investors are appraising those different types of monies at different risk factors.

Q. As a matter of fact, the spread of investors' appraisal is here again much greater in February, 1942, than it was back in 1930, is that not correct?

A. That is correct. The shortest term money which presumably has the least risk shows the lowest rate and the municipal bonds, which the investors believe have the greatest risk, carry the highest rate.

Q. Will you turn to your Chart No. 30 which, I understand, deals with the highest grade of industrial or corporate bonds and state what is shown on that chart?

A. Chart No. 30, Exhibit No. 253, captioned, "Standard's Highest Grade (A1 plus) Corporate Bond Yields Monthly, March 1930 to March 1942", there is a comparison of high grade corporate yields between industrial

bonds, railroad bonds and public utility bonds and that shows in February of 1942 that industrial bonds carried [fol. 10229] the lowest rate, public utility bonds carried a higher rate and the railroad bonds carried the highest rate of those three. In other words, investors were continuing to exercise their appraisal as between these different types of investments as a class.

Q. Here again, do we find that the spread of that appraisal in 1942 was greater than it was in 1930?

A. Yes, it is.

Q. As a matter of fact, during such period as 1936, the spread was very, very slight, was it not?

A. Yes, it was less than since, beginning around 1938.

Q. On these highest grade A1 plus corporate bonds, is the composite figure now 2.88 per cent?

A. That is correct. That is just the composite index figure of the industrials, public utilities and railroad bonds.

Q. Here again do we find that, as Examiner Crosby pointed out when you were on the stand before, there has been a considerable drop in interest rates over the years?

A. That is shown here.

Q. But does it also appear that there has been a rather general leveling out of such rates over the past two or three years?

A. I think that is indicated in the chart.

Q. Now, will you turn to Chart No. 31 and state what is shown there?

[fol. 10230] A. In Chart No. 31 of Exhibit No. 253 captioned, "Standard's Corporate Bond Yields By Quality Rating Months, 1937 to March 1942", is shown the yields on various quality groups, Composite A1 plus, A1, A, B1 plus, B1 and B.

Q. What do you mean by those letters?

A. Those are the ratings that are assigned because of the peculiar situation of a bond, so far as a number of tests are concerned and the bond that is in the best position, from the standpoint of its relation to earnings, interest coverage and so forth, carries the highest quality rating, A1 plus, and so forth. They are graduated downward in the various quality rating scales as their position is less worthy than the higher grade bonds.

Q. Well, throughout this chart over all the years, have investors' appraisals of these various types of bonds followed very distinctly these very classes, classifications?

A. I think the chart makes that very clear. The lines have never crossed, for one thing. Secondly, the highest grade bond has always carried the lowest rate and the more speculative bond tends to get, as you approach a quality rating of B, a higher rate so that, in February and March of 1942, Composite A1 plus, corporate bonds were yielding 2.88 per cent and they graduate up the scale of per cent as the quality rating goes down so that bonds, carrying B quality ratings were demanding 6.79 per cent.

[fol. 10231] Q. In each instance, these are yields to maturity based on market prices, are they not?

A. That is correct.

Q. For every month of the chart?

A. That is correct.

Q. In other words, would it be fair to say that an average bond which, because of earnings or coverage would be classified as B1 would, in the present market, cost around 5½ per cent?

A. If the bond had no peculiar qualifications which might take it into some special class, you would assume that 5.32 per cent was approximating the type of rate the bond would have to carry if it were to find a market at the present time.

Q. And if it were so much more speculative that it would be classified as B, it would have to carry a rate of almost 7 per cent, wouldn't it?

A. As indicated here, the B quality rating carries 6.79 per cent so it would be somewhere between 6¾ and 7 per cent.

Q. Now, are similar investor appraisals of bonds in the public utility field also shown in your Exhibit No. 253?

A. Yes. Those are shown in Chart No. 32 captioned, "Standard's Public Utility Bond Yields—By Quality Rating Monthly, 1937 to March, 1942".

[fol. 10232] Q. And these carry the same types of quality rating; do they not?

A. That is correct.

Q. And the spread is between 2.77 per cent for A1 plus public utility bonds and, in February, 1942, to 6.45 per cent for Class B public utility bonds at that time?

A. That is correct.

Q. And the rest fall in between, as shown on the chart?

A. That is correct, and as the details are shown on the table.

Q. Will you turn to Chart No. 33 and state what that is and the source?

A. In Chart No. 33 of Exhibit No. 253 captioned, "Bonds, Debentures and Notes Issued by Natural Gas Companies—1936-1941", there is a tabulation taken from the Securities and Exchange Report in which they listed all of the bonds, debentures and notes issued by natural gas companies for the period mentioned. To that, in our analysis, we added certain securities which they had not included to make the list as complete as it could be made.

Q. Are those shown on Chart No. 34?

A. The list is shown in Chart No. 34.

Q. All right.

What does your Chart No. 33, in general, show?

A. Well, is shows that the average yield on bonds and [fol. 10233] debentures, based on price to public as represented by the green line, had showed a decline from 4.59 per cent, on the average in 1936, to 3.11 per cent in 1941.

Q. Is there anything you think you should state about that chart?

A. Not particularly. It indicates that the general rates have been down but even on these new issues in 1941, the rate was still a little above 3 per cent and when you look at the quality ratings for each of those issues, which I show on a later chart, you can find there are some rather wide variations in quality ratings and wide variations in investors' appraisal.

Q. You are referring, are you not, to your Chart No. 35?

A. That is correct.

Q. Will you now state what is shown on Chart No. 35?

A. In Chart No. 35 in Exhibit No. 253 captioned, "Yields on New Security Issues of Natural Gas Companies According to Quality Rating—1936-1941", I merely took the list of securities as reported by the Securities and Ex-

change Commission, added thereto some securities which were issued which they had not included and then analyzed them from the standpoint of their quality rating for each of the years.

Mr. Littman: Pardon me, Mr. Coffman, I would like to ask one question about Chart No. 34.

You have not included in that chart the Natural Gas Pipe Line Company of America notes secured by bonds [fol. 10234] issued in 1941. I wondered why you did not include those under your year 1941?

The Witness: The only answer I can give you at the moment, Mr. Littman, is that we went through all of our files and apparently we did not have the release of information on that at the time we made the study because I combed every particular copy we had in the file and I do not think I missed any so, if I do not have it, it is because we have not yet received any information on it.

Mr. Wheat: It is not in the list given by the S. E. C., is it?

Mr. Littman: I believe it was exempt from S. E. C.?

Mr. Wheat: That is what I thought, yes.

Mr. Littman: Would you please respond to this request? Will you please verify my understanding that Natural Gas Pipe Line Company of America issued, in the year 1941, something like seventeen and one-half million dollars of one and three-quarter per cent serial notes?

Mr. Wheat: We will be glad to check on that.

The Witness: We do not have it in the file. If they were privately sold, we would not have the information.

Mr. Littman: In other words, that information would not come to you through the ordinary and usual channels but will you please check and ascertain the facts?

[fol. 10235] The Witness: Yes, I will see if I can get the facts.

Mr. Littman: That is about as low a cost of financing funded debt as you know, is it not, for a natural gas pipe line company, 1¾ per cent?

The Witness: I would say that was.

By Mr. Wheat:

Q. Let's go back to Chart No. 35, Mr. Coffman. Will you go ahead and state what is shown on that chart?

A. I think I had already stated I took the list as shown in Chart No. 34 and broke it down according to quality ratings for each of the years. I do not think it is necessary to go through each year. If I explain one, you will get the idea of how the table is made up.

In 1936, this indicates that the securities which were issued, one issue carried an A rating, the per cent of which was 4.18 per cent and that is at the top of the box and the rating is below with the per cents shown at the top of the bar. There were four issues of B1 plus carrying a rate of 4.59 per cent. There were two issues carrying a rating of B1 and a per cent of 4.80 per cent and two issues carrying a rating of B and a per cent of 4.91 per cent.

In 1937, it is evident there were four issues but only one quality rating. The four issues that came out carried B1 plus and a per cent of 4.31 per cent so that, as you go through each of the years analyzing these new issues, not [fol. 10236] generally but more specifically as to their quality rating a person can then get a better idea of what the investor was saying about those particular securities.

Q. Are these quality ratings well recognized things in the financial markets?

A. Well, quality ratings are at least 25 years old, if not older and, secondly, banks are very definitely regulated in regard to bonds so that if they buy certain bonds which carry a rating of less than B, they are immediately classified as substandard and speculative and they do not qualify for bank investment so, for any bond to carry a quality rating for bank investment, it must be rated B1 plus or better so that gives a pretty good idea of the importance of ratings.

Q. That importance is clearly shown, is it not, for example, in 1941, in the difference in cost between the four B1 plus issues and the one B1 issue there?

A. That is correct.

Q. And the A1 issue in 1941 had the highest rating and, as was to be expected, the lowest in cost?

A. That is correct. The ratings are one measurement of the risk that is involved and the greater the risk, the greater the rate has to be.

Q. Now, will you turn to Chart No. 36 and state how that chart discloses, graphically, what you have just been [fol. 10237] saying with respect to ratings of bonds?

A. In Chart No. 36 of Exhibit No. 253 captioned, "Ideal Earnings Coverage Ratios for High Grade (A Group) Natural Gas Company Bonds as Submitted to the New York State Bankers Association for Qualifying High Grade Bonds", in 1939 at the annual meeting of the New York State Bankers Association, they were trying to refine their processes of classifying bonds to enable bankers to be better safeguarded in their investment and these ratios here shown in Chart No. 36 show two methods of checking the position of a bond, particularly as it relates to natural gas company bonds.

On the left-hand side, it shows the fixed charges times earned and there, we are not referring to a single year but, as shown in the note, considering an average for the last six years with latest year results at least as good as average. Retail distributors in the gas field, 3.5 times—

Q. (Interposing) This is for the A rating?

A. This is for the A group as shown in the caption.

For integrated companies, 4 times; for pipe line wholesalers, 4 times.

Another check is that made by considering the income available for fixed charges to par value of fixed debt, and here again, as explained in the note, it is the average for the last six years with latest year results at least as good as average.

[fol. 10238] Q. What are those particular percentages?

A. For retail distributors, 14 per cent; integrated distributors, 16 per cent; pipe line wholesalers, 16 per cent.

Q. Now, may I ask, Mr. Coffman, whether either one of these two tests of bonds carry a greater weight in the rating or are both important and essential?

A. No, the Association uses the ratings and the investors look at them or we use them to advise investors. We look at both.

Mr. Littman: Will you submit to us the source of the data and information shown in Chart No. 36?

The Witness: Well, I can give you one source now. The original discussion is in the Annual Proceedings of the New York State Bankers Association for 1939 but, in our own service, we have taken all of this out and I can leave this copy with you which is Standard's Corporation Records, Current News Edition T to Z, Special Table Section in which, on page 5, there is a section captioned, "Bond Quality Yardsticks" and this explanation:

"In the spring of 1939, the New York State Bankers Association pioneered a new approach to the problem of determining the relative suitability of individual bonds for inclusion in bank bond accounts. Standard & Poor's Corporation has had the privilege of working in close cooperation with the Bond Portfolio Committee of this Association in establishing, for this purpose, concrete meas-[fol. 10239] ures of bond quality", and then a detailed explanation of these items is given so I think that should answer your question.

Mr. Wheat: Does that show these figures that you have shown on Chart 36 of Exhibit No. 253?

The Witness: Yes, on page 9, the discussion begins on natural gas companies and runs over on to page 10 and the per cents shown in here are contained in the written matter on page 10.

Mr. Littman: Are you saying that the New York State Bankers Association specifically discussed pipe line wholesalers?

The Witness: No. At the Proceedings in 1939, they developed this method of ratios to test bonds and worked out a formula and that formula we have applied throughout all bonds. They did it on one series. We worked it out on all series for them.

Mr. Littman: By pipe line wholesalers, do you mean natural gas pipe line wholesalers or others?

The Witness: No, I would include all natural gas pipe lines.

Mr. Littman: But does that mean that it would include other pipe line wholesalers as well, such as oil?

The Witness: No, this is talking about natural gas here altogether.

Mr. Littman: In other words, the "Pipe line wholesalers" refers specifically to natural gas?

[fol. 10240] The Witness: Well, that is stated clearly in the caption there, Mr. Littman.

Mr. Littman: I see.

Now, what do you mean by "integrated"?

The Witness: That is where a pipe line might be performing two functions, part of it is wholesaling and some other portion of it retail distributing.

Mr. Littman: And the bankers do not show any difference in risk as between the "integrated" and "pipe line wholesalers" as you do in your study of investors' appraisal of risks?

The Witness: For integrated and pipe line wholesalers, so far as ratios are concerned, there is no distinction drawn, so far as this formula is concerned, that is true, but this is not the investors' appraisal that I have been talking about. This is merely a guide that they are using as to a quality yardstick that must be met to qualify a bond on a quality rating.

Mr. Wheat: May I suggest, Mr. Coffman, the retail distributors are given a different percentage and times earned, are they not, as compared to the pipe line wholesalers and the integrated companies?

The Witness: Yes, there is that difference but I said there was no difference between integrated and pipe line [fol. 10241] companies.

[fol. 10242] By Mr. Wheat:

Q. Mr. Coffman, will you turn now to your Chart No. 37 and state what that shows?

A. In Chart No. 37 in Exhibit No. 253 captioned, "Debt Coverage Ratios for El Paso Natural Gas Company Actual and Adjusted to a 6½ Percent Rate of Return", I have taken the El Paso Natural Gas Company and the total invested capital as shown by the books, which amounted to $23,748,010, invested capital here being computed on the basis of the net debt, preferred stock, common stock, and surplus.

In the second column, I show the actual dollar return on invested capital which amounted, according to the company's report, to $2,610,478. Then I applied 6½ percent to the total invested capital of $23,748,010, which gave an assumed return of $1,543,621. The bonds outstanding of the company carried actual fixed charges in the amount of $415,877.

Q. What were the ratios to be found from those figures?

A. In the second column, I show the actual computation of the ratios which would, on their reported earnings, show that fixed charges were earned 6.28 times and that the income available to par value of debt was 21.80 percent.

Q. Now, in your next group of two bars, I notice it is headed, "Actual Ratios." Didn't you mean "Ideal Ratios"?

A. Those were the ratios discussed in Chart No. 36 dealing with the New York State Bankers Association.

[fol. 10243] Mr. Littman: Should we correct our exhibit, Mr. Wheat?

Mr. Wheat: Yes.

. . . . . .

By Mr. Wheat:

Q. Now, you have shown those same ratios and times earnings in that group of two bars that you showed on Chart 36, haven't you?

A. Yes, that is correct.

Q. Now, what are the last two bars on this Chart No. 37?

A. Well, I have taken the assumed return on the 6½ percent basis of $1,543,621, used that for the basis of the calculation in which case the fixed charges would then be earned 3.71 times and the income available to par value of debt would then be 12.89 percent.

Q. What does that figure show you?

A. It would indicate that in that return both the times earned and the income available to par value of debt would be lower than the ideal ratio which would indicate [fol. 10244] that the ratings on the bonds would be lowered, and, as I have shown in the yield charts, whenever, the rating on bonds goes lower, the yield goes up.

Q. This does not assume anything about income tax changes, or anything of that sort, does it?

A. No, sir, this is just simple arithmetical calculations as I have indicated.

Q. Now, on Chart No. 38, have you gone through similar calculations with respect to Northern Natural Gas Company? A. Yes, I have.

Q. And does that show that with the same assumed return, those bonds would fall below these so-called ideal ratios?

A. Yes, it would show a substantial reduction from what they actually show now and, so far as the fixed charges times earned figure is concerned, although it would be lower on the assumed return than the actual return, it would still be a little higher than the ideal 4 times, but, looking at the income available to par value of debt, the figure would be 14.8 percent, which would be below the 16 percent on the ideal basis so that there would be the question of reduction of quality rating on that bond should these results become actualities.

Q. How about Chart No. 39 which I think deals with Southern Natural Gas Company?

A. In Southern Natural Gas Company, as shown in [fol. 10245] Chart No. 39 in Exhibit No. 253, the fixed charges times earned on their present reported earnings are below the 4 times on an ideal ratio basis and, if you assume a return of 6½ percent, the times earned would be reduced to 2.23 times and the income available to par value of debt would be 12.69 percent. In other words, that bond also would carry quite a reduction in rating if that assumed situation were to become real.

Q. Is that a similar result and similar reaction upon ratings which is shown on your Chart No. 40 with respect to Cities Service Gas Company?

A. Yes, the same result is shown there.

Q. Both the times charges earned and the income available to par value of debt are below the ideal ratio for a bond?

A. That is correct.

Q. How about Chart No. 41, Mississippi River Fuel Corporation?

A. The same thing holds true in the case of Mississippi River Fuel Corporation as shown on Chart No. 41 of Exhibit No. 253.

Q. I wish you would explain your Chart No. 42, please.

Before you do that, is it a fact, then, that as to each one of the companies considered in Charts 37 to 41, inclusive, should the rate of return be fixed at 6½ percent, the bonds would fall under the ideal ratio for A bonds?

A. Yes, they would.

[fol. 10246] Q. Now, what is shown on your Chart No. 42?

A. In Chart No. 42 of Exhibit No. 253, captioned, "Debt Coverage Ratios for Natural Gas Companies Adjusted to 6½ Percent Return on Net Property and Working Capital", I have gone through the same procedure to get at the effect of the 6½ percent return but have calculated invested capital as defined by the net property and net working capital instead of the capital structure which was used in the others.

Q. Did you find a somewhat similar result over all of these companies?

A. Yes, I did, and the figures are shown completely in that table.

Q. And from those figures, would you conclude that the rating on these bonds would have to be changed?

A. Yes, the same effect would work out here as worked out in the preceding charts that, in most instances, the ideal ratios would not be met, which would indicate that, should such condition become a reality, the quality rating would be lowered.

Q. And the cost, therefore, raised?

A. That is correct.

Q. Now, I wish you would turn to Chart No. 43, Mr. Coffman, and state what is shown on that chart.

A. On Chart No. 43 of Exhibit No. 253, captioned, "Debt Coverage Ratios of Panhandle Eastern Pipe Line [fol. 10247] Company at Various Levels of Net Operating Revenue", I have taken, in the first two columns, the actual results for the 12 months ended February 28, 1942, which is the consolidated company, and shows the net operating revenue as reported on a consolidated basis of $6,361,247 and, on the basis of the 1941 tax rates, shows that fixed charges would have been earned 7.19 times and that the income available to par value of debt was 19.13 per cent.

In the next group, I have made the same calculations except that I used the proposals made by Secretary of Treasury, Mr. Morgenthau, to see what effect, on the basis of operations ended for 12 months, February 28, 1942, such tax would have. The net operating revenue on that basis would then total $4,526,619 or about $1,800,000 less than on the basis of 1941 rates. On the $4,526,619 of net operating revenue, fixed charges would be earned 5.12 times and the income available to par value of debt would be 13.61 per cent.

Q. That would be under the ratio of the New York State Bankers' Association?

A. The income available to par value of debt would then be under that ratio.

Q. All right, proceed.

A. Then, in the next part of the exhibit, I show the minimum earnings necessary to maintain credit position which is the $5,382,677 which I have shown previously in [fol. 10248] Chart No. 26 and, on that basis, the fixed charges would be earned 6.09 times and the income available to par value of debt would be 16.19 percent, just about even with the ideal ratio.

Q. And, in that instance, should that net minimum earnings be actually earned, the bonds would not lose an A rating, would they?

A. No, the bonds on that basis, should that level be maintained, would still carry an A rating.

Q. But, on the figure of $6,361,247 in 1941, had the 1942 proposed rates been applied, they would have lost that rating, is that true?

A. Yes, there would have been a very definite question about reducing the quality rating.

Q. Will you turn to Chart No. 44 and state what is shown on that chart?

A. Chart No. 44 of Exhibit No. 253, captioned, "Debt Coverage Ratios of Panhandle Eastern Pipe Line Company at Various Levels of Net Operating Revenue", here assuming a 6½ percent return on the $77,830,535 which is the total invested capital of the consolidated company, the net operating revenue, using the 1941 tax rates, would amount to $5,058,985. On the basis of such earnings, the fixed charges would be covered 5.72 times and the income available to par value of debt would [—] 15.21 per cent.

Q. Slightly under the 16 percent?

[fol. 10249] A. That is slightly under the ideal figure of 16.

Q. What about the 1942 Morgenthau tax proposal?

A. Then, if you use the tax proposals as given by Secretary of the Treasury, Mr. Morgenthau, the net operating revenue would then be $3,541,749, on which basis of earnings the fixed charges would be covered 4.01 times and the income available to par value of debt would be 10.65 percent.

Q. That is well below the 16, isn't it?

A. Yes, that is very low.

Q. Where would that bond go in a rating on that basis?

A. I do not have any idea but it would certainly be considerably under A.

Q. All right. Now, turn to the right-hand portion of this Chart No. 44 and state what is shown thereon.

A. In the right-hand portion, I assumed a rate of 6½ percent of return on $66,935,894.

Q. Where did you get that figure?

A. That is invested capital. Mr. Dunn had made some calculations in a previous exhibit and I used that to find out the items that he had used in his calculations and applied the same principle as best I could to the consolidated company, and that showed an invested capital of $66,935,894. Then I assumed thereon the 6½ percent and, using the 1941 tax rates, the company would receive net oper-

ating revenue of $4,350,833 and, on such basis of earnings, [fol. 10250] the fixed charges would be covered 4.92 times and the income available to par value of debt would be 13.08 percent.

Q. Well below the 16?

A. Yes, well below.

Q. All right

A. Then, following the same procedure but using the proposal of Mr. Morgenthau, the net operating revenue would then amount to $3,134,250 and, on such earnings, the fixed charges would be earned 3.54 times and the income available to par value of debt would be 9.42 percent.

Q. Well, what would happen to the rating of the bonds under those circumstances?

A. The decline there is such, I do not know. The point is that if the figures get too far out of line, there are points where we just do not rate the bond if it falls within that category.

Q. It becomes too highly speculative, is that what you mean?

A. That is right.

Q. It falls under the B class?

A. It would certainly be in the very lowest B class or in the C.

Q. May I ask if these two figures, $77,000,000 odd and $66,000,000 odd, which you have used in this Chart 44 are merely for illustrative purposes?

[fol. 10251] A. Yes, that is the only purpose of the calculations.

Q. You are not suggesting those particular dollar figures for any particular purpose, are you? A. No, sir.

Q. Now, will you turn to Chart No. 45 and state what that chart shows?

A. In Chart No. 45 of Exhibit No. 253, captioned, "Effect of Increased Gross Revenue and Taxes upon Panhandle's Net Operating Revenue", I show, in the first bar, the earnings reported on the consolidated basis as of the year ended February 28, 1942, in the amount of $6,361,247, which was based on the 1941 tax rates, and that figure comes from one of Mr. Watkins' exhibits and I have the page number noted in the table.

In the second figure is the one already presented, which gives effect to Mr. Morgenthau's proposal, in which case the net operating revenue would then be $4,526,618.

Then, in the next three bars, I made assumptions of increases in gross and used figures determined in this fashion: The first bar, that is, the first one on the chart, I assumed an increase in gross revenue of $1,154,390 which figure I arrived at by taking the average annual increase as experienced by Panhandle Eastern Pipe Line Company in the years 1937-1941.

Q. 1937 to 1941, inclusive?

A. Inclusive, yes.

[fol. 10252] Q. What did you show in that connection?

A. On that basis, the net operating revenue would be $4,088,630 and, on such basis of earnings, the fixed charges would be earned 5.30 times and the income available to pay value of debt would be 14.10 percent.

Q. Well below the 16 which measures the ratings, is that true?

A. Yes, that is correct.

In the fourth bar, I assumed an increase in gross of $3,438,088—

Q. (Interposing) Pardon me; you mean an increase in gross revenue, do you not?

A. When I say "gross" that is what I mean, "gross revenue".

Q. During the year 1942, is that correct?

A. That is correct.

Q. Go ahead.

A. I assumed an increase in gross revenue of $3,438,088 and that assumed figure was the actual increase that took place in the gross revenue of Panhandle Eastern Pipe Line Company from 1939 to 1941 and, on that increased gross revenue, still applying Mr. Morgenthau's tax proposal—

Mr. Littman: (Interposing) Pardon me. Is this increase in gross revenue attributable to regulated or unregulated business of Panhandle Eastern?

[fol. 10253] The Witness: Well, what I have assumed is a total over-all dollar figure by which the gross revenue increased with no regard as to breakdown of the gross revenue.

By Mr. Wheat:

Q. Let's go on. What does this show?

A. On that basis, this would show that the net operating revenue would amount to $4,936,510 and, on such earnings, the fixed charges would be earned 5.58 times and the income available to par value of debt would be 14.84 percent.

Q. Still well below the 16, isn't it?

A. Yes, it is below the 16.

Q. All right. Now, what is your next to the last bar in Chart No. 45?

A. In the next to the last bar, I have assumed an increase in gross revenue of $5,771,948 which was the actual [fol. 10254] increase shown in Panhandle Eastern Pipe Line Company from 1937 to the end of 1941.

Q. Five full years?

A. Five full years; and applying again the tax proposal of the Secretary of Treasury, Mr. Morgenthau, the net operating revenue would be $5,190,437 and, on the basis of those earnings, the fixed charges would be covered 5.87 times and the income available to par value of debt would be 15.61 percent.

Q. Still under the 16?

A. Still under the 16. Then, in the last column, I merely repeat the figure that I had already given in Chart No. 26 of $5,382,677, which is the amount which I say is the minimum that is necessary to maintain credit position.

Q. What are the figures resulting from that? I think you have given them before, have you not?

A. I have given them before. The fixed charges would be earned 6.09 times and the income available to par value of debt would be 16.19 percent.

Q. Just over the 16 percent on the ideal basis?

A. That is correct.

Q. Now, Mr. Coffman, there is not anything magic, is there, about these three particular bars showing the various increases? You might just as well have taken $1,000,000, $2,000,000, $3,000,000, $4,000,000, or $5,000,000, might you not, to show your illustrations?

[fol. 10255]. A. Yes, that is correct. I just selected a basis where I could use actual figures as against taking a round figure out of the air.

Q. And even when you assume an increase in gross revenue, the total increase over the past five years, you were still under the minimum which you testified was necessary to maintain credit position?

A. That is, applying Secretary of Treasury, Mr. Morgenthau's tax proposal, yes.

Mr. Littman: I would like to ask a question for clarification.

Mr. Coffman, what operating expenses do you assume in connection with your assumed increase of operating revenue?

The Witness: I took the percentage relationship of cost on the consolidated basis, that is, the February 28, 1942, figures, and I assumed that the relationship existent then of operating cost to that gross would be the same percentage that would apply against the increase here. In other words, if the operating expenses were 40 percent of gross, then I applied 40 percent of the increase to get the cost calculations to arrive at net operating revenue.

Mr. Littman: Do you show those details anywhere in your exhibit?

The Witness: Yes, table to Chart No. 45 will give you the detailed figures.

[fol. 10256] Mr. Littman: Have you assumed any increase in investment would be necessary to produce this increase in gross revenue?

The Witness: No, I did not.

Mr. Littman: Does it make any difference, for the purposes of calculation, to what classes of customers this gas is sold, for purposes of your study?

The Witness: Well, for purpose of this study, it won't because I assumed a lump dollar amount added to the Feb-

ruary 28, 1942, figure, and then I have applied the percent of cost to that, so there was no need for talking about classes of service.

. . . . . .

By Mr. Wheat:

Q. Mr. Coffman, will you now turn to your Chart No. 46 and tell us what is shown on that chart?

A. In Chart No. 46 of Exhibit No. 253, captioned, "Calculation to Show Rate of Return Necessary to Produce $5,382,677—Assuming Various Rate Bases", I am merely here showing statistically what I said yesterday when I began to testify, namely, that once I directly compute the minimum earnings necessary to maintain credit position of $5,382,677, if I can find out or be told what the rate base is, then I can determine what the rate of return should be to produce those minimum earnings necessary to maintain the credit position so that here, if 6½ percent rate of return is to be used, then the assumed base would have to be $82,810,415 in order to produce $5,382,677.

Now, I have just worked out figures at intervals down the line to show that the figures or rate base go down as the rate of return on this base goes up.

Q. That is necessarily true since they must be in inverse ratio, mustn't they?

A. That is correct.

Q. If you are going to have this particular minimum earnings to maintain the credit position?

A. That is correct.

Q. And this chart is self-explanatory, is it not?

A. I think it is self-explanatory because the figure which I have determined which is of importance for my study is the $5,382,677 which I think has been fully covered and the application of that figure to assume rate bases was merely for the purpose of illustration to show concretely what I said verbally yesterday.

. . . . . .

[fol. 10258] Recross Examination

By Mr. Littman:

Q. Mr. Coffman, have you testified in any other proceedings since you were last on the witness stand here?

A. Yes, I believe I have. Well, the Philadelphia Transportation Company I am sure of. Do you mean before the Federal Power Commission.

Q. I mean any courts or commissions.

A. I testified in the case of the Philadelphia Transportation Company before the Public Utility Commission of Pennsylvania.

Q. On the subject of rate of return on the same material?

A. I do not recall just when I was down here last—how many months ago has it been?

Q. My recollection is that you left the witness stand on the 3rd or 4th of January.

Mr. Wheat: That is right. It was just when the new deal was coming in with respect to this financing, was it not?

[fol. 10259] Mr. Littman: That is right.

The Witness: That is the only one.

By Mr. Littman:

Q. How about the Carolina Power & Light Company proceeding before this Commission?

A. Yes; I believe that was before, wasn't it? Wasn't that before February?

Q. No, it was since.

A. Just a moment, let me check my memory—all right, it was just after. I did appear in the Carolina Power & Light Company proceeding before this Commission.

Q. Have you ever testified before on the subject of rate of return before this Commission or any other commission or court?

A. No, I do not believe so.

Q. Do you know how much common stock of any of the six natural gas companies referred to in your Chart No. 21 is sold on the market?

A. You mean just the volume?

Q. That is right.

A. Well, I would want to check that. I could not answer just now.

Q. You made no study of that?

A. Well, as to volume, what I have gotten in the market [fol. 10260] quotations. I have not listed volume in any case in any of these exhibits.

Q. You are not prepared at this time to state whether the markets are thin or otherwise?

A. No, the question here is one of market quotations.

Q. Whether it be for one share of stock or 100,000 shares of stock?

A. Except I am considering the average of the high and low price over a period of time, not on any single day, so it is hardly one single share if any shares were traded at all.

Q. So far as you know, the market for the common stocks of these six natural gas companies may be even thinner than was the market for the common stock of Carolina Power & Light Company in 1925?

A. I cannot answer that question.

Q. Then, so far as you know, it might be?

A. Well, it could be anything. If I do not know, I presume is could be anything.

Q. Well, if the market were thinner than that which I just described for the Carolina Power and Light Company in 1925, would they be reliable?

A. Well, when you are talking about market quotations and several shares change hands between a willing buyer and a willing seller, it is indicative of a price, certainly.

Q. As a matter of fact, you disregarded market quo- [fol. 10261] tations on the common stock in the Carolina Power & Light proceeding before this Commission, did you not, because of the fact the market was so thin?

A. As a matter of fact, Mr. Littman, if you want to ask me some questions, I would like to go over and see just exactly what I did say and what the figures are on Carolina Power & Light. I do not mind being interrogated but I would like to freshen my memory if I am going to be interrogated on it.

Mr. Wheat: If you do not remember, you are at perfect liberty to say so now, and then freshen your memory.

The Witness: That study was exactly like this, so far as volume was concerned, and I would certainly hate to be put to the test of relying on my memory as to this figure or that figure without having a chance to refer to it.

By Mr. Littman:

Q. You do not mean you submitted the same kind of a study in the Carolina case that you did here, do you?

A. I said as to volume, I think, talking about the quantity of work that was done.

Q. You mean volume of pages in the exhibits or volume of what?

A. Volume of work that was done.

Q. You would not want to rely upon the quotations of common stock in a thin market for any purpose, would you, Mr. Coffman?

[fol. 10262] A. So far as getting the investors' appraisal over a large group of companies, I would have no question about that. On a single company, if there was just one share, it would depend then on what you were talking about. I would say that the one-share transaction indicated the price that was necessary between the buyer and the seller for the one share. Now, what effect a great block of stock on the market might have is another question, as to what that price would be, so that questions of valuation on the one hand are entirely different than the questions that you have here.

Q. There are more data available with respect to electric companies than there are with respect to natural gas companies, isn't that a fact?

A. You mean there are more electric operating utility companies?

Q. Yes, and more information, more reliable market prices?

A. Generally, I would say that was true.

Q. But you disregard the market in the Carolina proceeding, didn't you?

A. In the case of the Carolina proceeding, I determined what I believed to be the fair market value of stock on a particular date.

Q. Was that more than twice as much as the market value?

A. I am sorry, I cannot remember that. I still say if [fol. 10263] you want to interrogate me on this, either produce the copies of the exhibits on this or let me send to New York and get them.

Q. You just testified there not more than 60 days ago.

A. That is right, and I am just like you told me you were at the recess, Mr. Littman, when you quit a case you forget it and go on to something new.

* * * * * * * *

Q. Have you made any effort to determine the volume of sales of Panhandle Eastern Pipe Line Company's common stock on the market?

A. Yes, I think I have, some figures on that someplace along. I think I could get them again. I do not remember what they were, but, over a period of some five years or a little longer, as I remember it, there was quite substantial trading.

Q. When was that?

A. I mean over the last five years, I will say about over the last five years up to the time I testified before.

[fol. 10264] Q. Was it as substantial as the Carolina Power & Light trading in 1925?

A. There again I do not recall what the trading was on Carolina Power & Light in 1925.

Q. As a matter of fact, when only something like 5 per cent or less of the common stock is being traded on the market, it is your opinion that the market price derived from those sales cannot be relied upon for any purpose?

A. Well, I think that we are getting somewhat confused on one issue. In this particular study I have made, I have made an analysis of all the companies that were available, which gives you, I would say, a reliable check.

Now, if you can come down to a particular company and a particular day, there is some question about that. You may find it necessary, depending upon the problem that is before [your] and particularly if it is a valuation problem, to look at other aspects of the price besides the market price.

Q. Are you saying that if you have unreliable data for six companies, you can add them up and divide by six and get something that is reliable?

A. I would say that it would have to be demonstrated that the data were unreliable for the six companies.

Q. You do not know right now whether these data for these six natural gas companies, to wit, El Paso Natural Gas Company, Interstate Natural Gas Company, Memphis Natural Gas Company, Southern Natural Gas Company, [fol. 10265] Panhandle Eastern Pipe Line Company, and Northern Natural Gas Company, are reliable, do you, because you do not know what kind of a market there is with respect to their common stock?

A. No; the basis of the calculations that I made here was taking all companies upon which I could secure market quotations from reliable sources.

Mr. Wheat: May I ask a question there, if I may interrupt a minute?

You included, did you not, in your study, the very large sale of common stock by Northern Natural Gas Company to the public?

The Witness: I included that one, yes, in Exhibit No. 65.

By Mr. Littman:

Q. That was the time the stock was issued?

A. Well, it was the sale of a large block of common stock which was as good a test as any we have as to what the investor thinks of a particular security.

Q. Suppose you describe the market of Southern Natural Gas Company common stock.

A. What do you mean by "describe"? Do you want to know the number of shares over the last five years, the daily trading, monthly, or what?

Q. Give us any of those that you mentioned.

A. Well, as I have told you, I did not use them, so I [fol. 10266] do not have them. If you want the tabulations, I will prepare them for you.

Q. Didn't you make any study of that feature at all?

A. None whatsoever in this study. I have stated very clearly in the record, I believe, that I took every security upon which there was a reliable market quotation and used it. If there were no such figures, I did not include the company.

Q. How do you know whether it is reliable or not without first ascertaining the volume of the market?

A. I am talking about a reliable source.

Q. You testified in the Carolina Power & Light Company proceeding that a thin market was unreliable, didn't you?

A. For a single company, and I say that right here.

Q. Suppose it is unreliable for six single companies. Can you add them up and divide by six and get any more reliable information than the reliability of any one of those six companies?

A. We do not want to get too many issues confused here. At this point—

Q. (Interposing) I am not getting confused.

A. I think you are, very definitely. We have been talking about all the over-all risks of capital and, in that, I was taking into consideration bonds, preferred stocks, and common stocks. A good many of the bonds and a good many shares of the preferred stocks are outstanding in the [fol. 10267] hands of the public.

. . . . . .

[fol. 10270] PAUL B. COFFMAN a witness, having been previously sworn, resumed the stand and testified further as follows:

Recross Examination (Continued)

By Mr. Littman:

Q. Mr. Coffman, you were going to report this morning with respect to the Natural Gas Pipeline Company of America notes that were issued in 1941. Are you prepared to give us the information?

A. I have some information on the subject. The notes were serial notes, 1¾ per cent, 8 years, on a semiannual basis and they were secured, I think, with the first mortgage bonds on the property. At least, for all practical purposes, they were a very highly secured note and carried the rate of 1¾ per cent.

Q. What was the principal amount of these securities?

A. $17,500,000.

Q. Mr. Coffman, in connection with yesterday's cross-examination, you wanted to have me refer to your statement in the Carolina Power & Light Company proceeding

that dealt with the market of the common stock of that company. I hand you a copy of Exhibit No. 307 in that pro-[fol. 10271] ceeding entitled "Study Relative to Valuation of Common Stock of Carolina Power & Light Company (Old) as of April 6, 1926", and refer you to the text opposite Chart No. 6, a paragraph, which I shall read:

"It is obvious from this review of the market action of the common stock of Carolina Power & Light Company this year preceding the date of valuation that the market was an extremely thin affair with wide fluctuation occurring on only a small number of shares traded. In view of the thinness of the market and the fact that no quotations were available subsequent to December, 1925, I considered it necessary to approach the determination of a fair market value of the common stock of the Carolina Power & Light Company as of April 6, 1926, on the basis of earning power."

Have I correctly read from your exhibit?

A. Yes, you have.

Q. Mr. Coffman, you have submitted Exhibit No. 253 in this proceeding which exhibit is entitled, "Study Relative to Minimum Return Requirements of Panhandle Eastern Pipe Line Company (Giving Effect to Property Acquisitions)". Is this exhibit the same character of study as the one which you previously submitted in this proceeding as Exhibit No. 65?

A. So far as the earnings requirements are concerned, it is the same with the exception, as I explained in direct [fol. 10272] examination, I had added certain additional figures for earlier years and for the full year 1941. Also, I think I said that one difference is that in the time that I had to work upon this material, I did not find time to continue to deal with those figures which were considered in Exhibit No. 65 which led to an item which I captioned, "Total dollars needed". Otherwise, I would say that the two studies are identical.

Q. Your study which is identified as Exhibit No. 65 bore the title, "Study Relative to Rate of Return on Panhandle Eastern Pipe Line Company", whereas your new exhibit, No. 253, is entitled, "Study Relative to Minimum

Return Requirements for Panhandle Eastern Pipe Line Company".

I wonder if there is any significance in the fact that you have changed the title of your new exhibit?

A. I would not attach any significance to it. The fact is that, in Exhibit No. 65, the important figure, from my standpoint, was the so-called "end" figure, that is, the capital requirements figure which I referred to yesterday in Exhibit 65 on Chart No. 37 and that end figure was the one that I was trying to determine again as of February 28, 1942, taking into consideration the changed status of the company and showing the consolidated results.

* * * * * * * * *

By Mr. Littman:

[fol. 10273] Q. Were you referring to the end figure in Chart No. 37 of Exhibit No. 65 in the amount of $5,064,821 to which you refer in that chart, as "a fair return to investors" and "current capital requirements"?

A. That is correct.

Q. Am I correct in understanding that in Exhibit No. 253, your Chart No. 25 entitled, "Minimum Earnings Required to Maintain Credit Position of Panhandle Eastern Pipe Line Company" contains the same character of study in so far as the "current capital requirements" are concerned, sometimes called by you "a fair return to investors"?

A. That figure is the same.

Q. When you said "the figure is the same", you did not mean the dollar amounts were the same but that the figure was of the same character?

A. That is correct.

Q. In view of your testimony it would be proper, would it not, to refer to the figure of $5,325,677 which appears in Chart No. 25 of Exhibit No. 253 as "a fair return to investors"?

A. That is not exactly correct, as I outlined yesterday, because of the fact that I believe in this case, since the preferred stock facts are out, that evidence must be taken into consideration and, therefore, it seems to me that the [fol. 10274] figure shown in Chart No. 25, which is $5,382,677, is the proper figure.

Q. Well, is the $5,382,677 figure one which could properly be labeled "a fair return to investors"?

A. I would say that that was correct.

Q. Now, the figure in Chart No. 25 in the amount of $5,325,677 reflects, does it not, the actual present earnings requirement of the outstanding bonds and preferred stock of Panhandle Eastern?

A. Yes, that is correct.

Q. The reason you refer to the larger figure as the proper figure is because of the circumstances surrounding the sale of the preferred stock by the underwriters within recent weeks, is that correct?

A. Generally, that is correct. The point that I was making in regard to the preferred stock was that in the experience of the sale of the preferred stocks since February 4, it would rather prove to me that perhaps the original offering price was not quite in tune with the investors' appraisal. Therefore, investors have not purchased it. If that is true, then to get at a more accurate appraisal, it seems to me those facts must be taken into consideration and, therefore, I would use the 6.23 per cent as applied against the preferred stock instead of the 5.87 per cent.

Q. You label both figures "earnings required to main-
[fol. 10275] tain credit position", do you not?

A. Yes, I do.

Q. Is it correct to say that the amount of $5,325,677 which appears in Chart No. 25 represents, in truth and in fact, the earnings required to maintain the credit position of Panhandle Eastern Pipe Line Company and subsidiary companies as of February 28, 1942?

A. Based upon their actual experience at the time, that is correct. My point still remains, however, that looking at this matter from the investors' point of view, the 6.23 per cent has significance, particularly if further financing or need for financing should arise.

Q. Which one of the three figures, namely, $5,325,677 related to invested capital as of February 28, 1942, $5,382,677 related to invested capital as of February 28, 1942, and $5,064,821 related to invested capital as of June 30, 1941, is the amount required to attract capital?

A. Well, the answer to that can be only one, it seems to me—$5,382,677.

Q. That represents what percentage of the invested capital of Panhandle Eastern Pipe Line Company and subsidiary companies, including Michigan Gas, as of February 28, 1942, in the amount of $77,830,535?

Mr. Wheat: May I suggest, Mr. Littman, that is shown on Chart No. 46?

[fol. 10276] Mr. Littman: It is also shown on the table supporting Chart No. 25, I believe.

The Witness: 6.92 per cent.

By Mr. Littman:

Q. In other words, Mr. Coffman, as I understand your Chart No. 26 of Exhibit No. 253, the return required to attract capital to the enterprise as of February 28, 1942, is 6.92 per cent?

A. I think the better way to say it is that the amount that is needed is the $5,382,677. If you are going to use the rate base which you have mentioned of $77,830,535, all right. If there is going to be some other figure, as shown in the last chart, No. 46, why, the percentage would be different.

Q. Now, Mr. Coffman, in truth and in fact, Panhandle Eastern attracted the invested capital as of February 28, 1942, on an actual basis with a 6.84 per cent return, did it not, overall, as shown by your Chart No. 25?

A. That is correct because, as I have explained in Chart No. 25, I have applied the actual rate on the preferred stock but, when you consider the market, the actual market weight must be given to the fact that this preferred stock really has not sold on the basis originally offered.

Q. And that would simply raise the per cent, according to your theory, to 6.92 per cent?

[fol. 10277] A. That is correct, based upon the $77,830,535.

Q. In other words, it would require a return of 6.92 cents per annum for each dollar of capital required, according to Chart No. 26 of Exhibit No. 253?

A. That is correct.

Q. Is my understanding correct, Mr. Coffman, that when you last testified here the comparable percentage which you stated was necessary for the attraction of capital was 7.99 per cent as shown in your table for Chart No. 26 in Exhibit No. 65?

A. Yes, that is correct.

Mr. Culton: That was on the old Panhandle Eastern Pipe Line Company alone at that time, was it not?

The Witness: Yes, Exhibit No. 65 is based altogether on the old Panhandle Eastern.

By Mr. Littman:

Q. Mr. Coffman, I want you to again refer to Chart No. 25 in Exhibit No. 253 where you show the actual return required to maintain credit position in the amount of $5,325,677. Now, when you previously testified here, the comparable amount which you there labeled, "fair return to investors" was $5,077,648 as shown in your Chart No. 26 of Exhibit No. 65, is that correct?

A. That is correct.

Q. The additional capital requirements or return re- [fol. 10278] quired after the acquisition of Michigan Gas and the other properties acquired by the recent transaction in February of 1942 is represented by the difference between those figures, to-wit, $248,029, is that right?

A. Yes, the difference is $248,029.

Q. How much new capital was attracted by the financing in February of 1942? To shorten the matter, it is my understanding that it would be the difference between the $77,830,533 of invested capital per your Chart No. 25 in Exhibit No. 253—

Mr. Wheat: I think, Mr. Littman, that is not quite correct because the common stock amount in Chart No. 26 of Exhibit No. 65 and the common stock and surplus amount in Chart No. 25 in Exhibit No. 253 are not quite alike. Possibly you overlooked that. What you are getting at, is the difference between the preferred stock and bond amounts, isn't it? When you said, "how much capital was attracted" by the financial transactions, I just thought possibly you had overlooked that common stock difference there.

Mr. Littman: The figure I wanted, Mr. Wheat, was the difference between the invested capital as of June 30, 1941, and as of February 28, 1942.

Mr. Wheat: Yes, that is quite different. Thank you.

Mr. Littman: That is, as Mr. Coffman has defined the term "invested capital".

[fol. 10279] Trial Examiner: Your question was interrupted, Mr. Coffman. Do you understand what was desired?

The Witness: As I understand the question, Mr. Littman would like to know the amount of difference between the invested capital as of June 30, 1941, and the invested capital as of February 28, 1942, and that difference would be $14,305,000, approximately.

By Mr. Littman:

Q. In other words, you have got $14,304,696 more of invested capital as of February 28, 1942, than you had as of June 30, 1941. Is that correct?

A. Yes, that is correct.

Q. The additional capital requirements or return required to finance that additional amount of invested capital is how much, expressed in terms of per cent? We get 1.7 per cent. Does that check?

A. That is just about correct.

Q. Is that about right? A. Yes, sir.

Q. Mr. Coffman, I want you to assume, and we must necessarily make this assumption because we do not know what the rate base is going to be, that for each $1,000,000 of invested capital, $990,000 is allocable to regulated business and $10,000 is allocable to unregulated business. In other words, 99 per cent of the invested capital is properly [fol. 10280] allocable to regulated business and one per cent is properly allocable to unregulated business. Do you understand me so far? A. Yes.

Q. I want you to further assume that the unregulated portion of the business earns a modest return of at least 100 per cent per year or $10,000. What annual return would investors require on the regulated portion of the business in order to get an over-all annual return of 6.84 per cent on its invested capital or a return of $68,400, expressed in dollars?

A. Well, it would take me a few minutes to work that out but I might say—

Q. (Interposing) Won't the answer be, and I think you can very quickly follow my arithmetic, the over-all return of 6.84 per cent on $1,000,000 of invested capital is, of course, $68,400, isn't it, Mr. Coffman?

A. That is correct.

Q. Now, one portion, to wit, the unregulated portion, is earning $10,000 so you deduct that amount from the $68,400 to get the amount of $58,400 which is applicable or allocable to the regulated business, do you not?

A. That is correct.

Q. And that represents 5.8 per cent of the regulated business, does it not, by way of return, that is, of the [fol. 10281] investment in the regulated business. Is my arithmetic correct?

A. That arithmetic is correct but I still have some difficulty with the illustration you give because, so far as the investor is concerned and this return is concerned, he is not breaking the matter down between regulated and unregulated business.

Q. Let me make it clear upon the record.

The effect of my calculation which you have checked is, if 90 per cent of $1,000,000 of invested capital is properly allocable to the regulated portion of the business and one per cent is properly allocable to the unregulated portion of the business and if the unregulated portion of the business is earning a return of 100 per cent per year then, assuming a necessary over-all fair rate of return of 6.84 per cent, the division in per cent of return, as between the regulated and unregulated portions of the business would be, mathematically, 5.8 per cent return of the regulated portion of the business in order to produce the over all return of 6.84 per cent. Is that a correct summary?

A. Yes, using the hypothesis you gave, the arithmetic is as you have stated but I still say there are some further angles to it that should be considered.

Q. In other words, if the unregulated portion of the business produces a very high return, the investor would [fol. 10282] require a correspondingly low return on the regulated portion, wouldn't he, because he is interested, as you say, in the total over-all return?

A. He is interested in the total over-all return and he has no way to break the figure down as to component parts so that, so far as allocation is concerned, which you are talking about, it really does not affect him directly.

Q. Well, carrying the example further, so far as the investor is concerned, if the unregulated portion of the

business is enjoying so high a return as to make the over all return satisfactory to him, then the investor does not care how much is being earned on the regulated portion at all, does he?

A. Well, it is true that the investor is looking for return for the investment he has in the business. Now, I think it is also true, if he saw an investment in which a large portion of it were of a peculiar type, then he would give some consideration to his over-all return. What he will try to do, in looking at the company, to the best of his ability, is to see what the components of earnings are. He may not be able to refine it too much but, after knowing that, he will depend upon what he believes to be a required return without attempting mathematically to work each individual component out.

Q. You have not undertaken to make such a breakdown [fol. 10283] as between regulated and unregulated portions of the invested capital here, have you?

A. No, I have not.

. . . . . .

By Mr. Littman:

Q. Assume that a natural gas pipe line company is selling gas to wax industries at an annual profit of at least 100 per cent of its investment dedicated and allo [fol. 10284] cated to that business, would the investors be wary of such a company in view of present conditions?

A. I think I have made it pretty clear, Mr. Littman, right along that investors, to the best of their ability, will analyze all factors having a bearing upon the security and obviously, if they thought a business, that is, a company was engaged in a business which, although profitable at the moment might some place along the line discontinue because of the peculiar nature of the business, they would give that weight.

Q. And, therefore, they would require a higher rate of return than otherwise, wouldn't they?

A. They would require a higher rate of return.

Q. And, of course, if such a situation were present, it would unduly inflate the indicated over-all return?

A. It would. In so far as it was a proportionate part of total, it would have an influence to that proportionate extent.

Q. You have, in this new exhibit, undertaken to show the effect of Mr. Morgenthau's proposed tax law upon this company's operation but before taking up the subject of Mr. Morgenthau's proposal, I would like to ask whether you have or have not abandoned your opinion on the subject of amortization which are shown in your Exhibit No. 65 but which do not appear in your new Exhibit No. 253?

[fol. 10285] A. There is only one question and that is about that word "abandoned". I have not abandoned the matter as one of approach. The fact is in this particular study, Exhibit No. 253, I have not included any study on amortization because that item, along with operating expenses and so on, were determined prior to this earnings required to maintain credit position figure which is the only one which has been included in this study. I mean just because it is not included in this study you are not pinning me down to the statement I have abandoned an idea I had at one time but I still am willing to talk about amortization.

Q. Mr. Coffman, I want to be altogether fair about the matter. In other words, the mere fact that you do not include an amortization study in your new exhibit should not be taken or construed as any indication that you are abandoning your contentions with respect to amortization, is that right?

A. Yes, that is correct.

Q. Now, if you had had the time, as I understand your testimony, you would have made a similar study here, would you not?

A. Yes, I could if I had the time.

Q. In other words, you would still divide the total investment by 25 years, or 24 years to determine the annual amortization requirement, wouldn't you?

[fol. 10286] A. Well, I would not want to answer that question just at the moment until I had more time to see from that particular item the over-all picture on the consolidated basis as against Panhandle Eastern alone but, so far as the principle was concerned, I would continue that.

Q. And you, so far as the principle is concerned, still amortize cash in bank?

A. As long as it was invested capital and in the business, I contend and believe that the investor wants a return upon that just as well as other invested funds.

Q. I am not talking about return. I am talking about amortization, that is, the amortization of the investment or invested capital.

A. Well, I do not know as I can answer. If I were to work the problem out again obviously, if I thought I had made some error in my previous calculations, I should correct it. I have not made the calculations for the moment and I cannot give you a specific answer.

Q. You do not consider your previous amortization theories in error, do you?

A. Well, to date I have had no reason to.

Q. And you did amortize, as your previous exhibit shows, cash in the bank?

A. That is correct.

Q. And working capital?

[fol. 10287] A. That is correct.

Q. And any write ups, if any existed and were present in the amount of invested capital?

A. We amortized the invested capital as defined in that study.

Q. Which definition is simply the addition or total of the outstanding amount of bonds, preferred stock, common stock and surplus?

A. That is correct.

Q. Now, we will take up your treatment with respect to Mr. Morgenthau's proposed taxes.

You secured most of your book figures for purposes of your new study and I refer particularly to Chart No. 45 in Exhibit No. 253, from certain of Mr. Watkin's exhibits?

A. Yes, sir, that is correct.

Q. And that same situation is true with respect to Chart No. 43 of Exhibit No. 253?

Mr. Wheat: Which chart?

Mr. Littlejan: Chart No. 43 of Exhibit No. 253.

May we have an understanding that, unless designated, the chart numbers to which I refer, unless otherwise stated, will be the charts in Exhibit No. 253?

* * * * * * * * *

[fol. 10288] The Witness: Do I have a question pending?

(Whereupon, the pending question was read by the reporter.)

The Witness: Yes, that is correct also.

By Mr. Littman:

Q. I hand you a copy of Mr. Watkins' Exhibit No. 199 and ask you to state the net income shown on that exhibit in the consolidated column, pro forma, for the twelve months ended February 28, 1942, as adjusted to give effect to Federal income and Federal excess profits tax rates proposed in recommendation of Secretary of Treasury Morgenthau.

A. The net income reported in that exhibit is $3,710,634.26.

Mr. Wheat: Pardon me, Mr. Littman, you are referring to the net income on Exhibit No. 199, are you?

Mr. Littman: Yes.

Mr. Wheat: And not the net operating revenue?

Mr. Littman: Yes.

* * * * * * * * *

By Mr. Littman:

Q. Now, referring to Chart No. 43 of your new exhibit, you show net operating revenue for the twelve months [fol. 10289] ended February 28, 1942, based on Mr. Morgenthau's tax proposal in the amount of $4,526,619. Now, that is the net operating revenue as distinguished from net operating income in the smaller amount which you just read, is it not?

A. It is the net operating revenue as distinguished from the net income figure.

* * * * * * * * *

By Mr. Littman:

Q. Now, we will confine our discussion to net income for the moment, Mr. Coffman, as distinguished from net operating revenue. Of course, in your opinion, Mr. Coffman, both of the figures are reliable for our use here, are they not, as shown by Mr. Watkins' exhibit?

A. I believe so.

Q. Will you please turn to Mr. Watkins' Exhibit No. 198 and read into the record the net income, consolidated, as there shown for the twelve months ended February 28, 1942, which I believe reflects the 1941 actual tax rate?

A. Do you want the net income?

Q. Yes, the one at the very bottom of the exhibit.

A. That figure in Exhibit No. 198 is in the amount of $5,546,261.94. That is net income.

Q. Now, the effect of Mr. Morgenthau's tax proposal, according to the figures which you have just read, will be to [fol. 10290] reduce the net income by 33.1 per cent, isn't that correct?

A. That is approximately correct.

Q. Obviously, this new tax proposal is not directed solely at Panhandle Eastern Pipe Line Company but applies to all pipe line companies as well, does it not?

A. That is correct.

Q. Now, let's look at some of the other natural gas pipe line companies which are shown in your Chart No. 21. There you show earnings-price ratios of natural gas pipe line company stocks for the year 1941 for El Paso Natural Gas Company, Interstate Natural Gas Company, Memphis Natural Gas Company, Northern Natural Gas Company and Southern Natural Gas Company, do you not? A. Yes, I do.

Q. Now, those companies are comparable, in your opinion, to Panhandle Eastern Pipe Line Company, generally?

A. Well, the matter of comparability is a little bit tough but they are pipe line companies, I will say that. They are in the same industry, conducting about the same kind of business.

Q. They are of sufficient comparability, in your opinion, are they not, to warrant their placement on this chart in close juxtaposition to each other for comparative purposes in so far as earnings-price ratios are concerned, are they not?

[fol. 10291] A. What I was doing was showing what was happening to all the companies in the industry. That is what the investor does, he looks at the industry and all the information he can get on the industry.

Q. Well, the effect of the Morgenthau tax proposal will be approximately the same on these natural gas pipe line companies as on Panhandle Eastern, will it not, generally?

A. Well, it will depend upon their taxable income positions. Obviously, in so far as, let us say, all these companies were in the same tax brackets, excess profits tax rates and so on, the effect would be about the same but, if they are in a different bracket, dollar-wise, obviously there will be considerable differences.

Q. What you mean to say is if Panhandle Eastern is earning more excess profits than the other companies, it will have to pay more taxes under Mr. Morgenthau's proposal than the other companies?

A. It has been stated in the record that this company is already in a certain tax bracket. If that tax bracket is different from some other company, naturally there will be a difference in the rate applied and in the dollars paid.

Q. I believe you said that certain differences applicable to individual companies would wash out if you considered them altogether, as a general theory. Is that correct?

A. I made that general application in regard to one point.

[fol. 10292] Q. Well, can we agree, as a general proposition, that the Morgenthau tax proposal will affect these six natural gas pipe line companies in more or less the same fashion?

A. Well, I am perfectly willing to say it will affect them but, until I have made calculations to know that the result was 33 per cent in each individual case, I would not go that far in my answer.

Q. You have not made a study to determine the precise effect on each of these natural gas pipe line companies?

A. Except dollar-wise, as I have shown, Mr. Littman. I did not go ahead and make a percentage calculation to see how much difference it means here and how much difference there, as you are now discussing the question.

Q. Let's assume for purposes of our discussion that the Morgenthau tax proposal will affect these six pipe line companies equally.

Now, please turn to your table supporting your Chart No. 21. There you show that the earnings available for

common stocks, that is, the net income for these six natural gas pipe line companies for the year 1941 totaled $13,921,893. Is that correct?

A. That is correct.

Q. And from that figure, you made a determination of earnings price ratio by applying those earnings to the aggregate market price of common stocks in the amount [fol. 10293] of $116,241,981 and you secured the weighted average earnings-price ratios for those companies of 11.98 per cent. Is that general characterization correct?

A. That is correct.

Q. Now, if the Morgenthau tax law were to affect these six companies in like fashion, the 1941 net earnings of those companies in the amount of $13,921,893 would be reduced by 33.1 per cent, is that correct?

A. That is correct.

Q. Will you please give us the resulting earnings available for common stocks of those companies on that basis?

A. It would be approximately $9,284,262.

Q. That is close enough for our purposes.

A. I took 33⅓ per cent instead of 33.1 per cent.

Q. Now, will you use those earnings available for common stocks in the amount that you have just read and apply it to the aggregate market value of common stocks and tell us what the weighted average indicated earnings-price ratio is for these companies, giving effect to the Morgenthau tax proposal?

* * * * * * * *

The Witness: It would just be approximately 8 per cent.

* * * * * * * *

[fol. 10294] Q. That checks close to our figure. It is your opinion, is it not, Mr. Coffman, that the investor is more interested, in fact much more interested, in the projected earnings of a company than in historical earnings?

A. The investor, if he is contemplating the purchase of a security where it is particularly an industrial security, is interested in what he thinks the earning capacity of the corporation is. He will try to determine that by its past record and then will make a calculation as to what he can expect if he should happen to make his investment in the

company. In other words, all past earnings have already been taken by some other person so that when he makes his investment, he is chiefly interested, so far as earnings are concerned, in the earnings to come.

Q. The informed investor would got through somewhat the same general calculation as we have just gone through, would he not, to ascertain the effect of the Morgenthou tax proposal upon the coming year's business?

A. Yes, I think he would very definitely make calculations to see what the effect was going to be.

Q. And calculations probably similar to those which we have made here for testing purposes?

[fol. 10295] A. I should think so.

Q. By the way, Mr. Coffman, what per cent of return, in your opinion, is required by Panhandle Eastern common stockholders? Now, by per cent of return, I am talking about dividends and I have in mind your Chart No. 5.

A. I cannot give a specific figure. My statement in regard to both Exhibit No. 65 and Exhibit No. 253 was to this effect: That certainly, if a common stockholder believes that, as a return on his common stock investment, he will receive on the average only 3.48 per cent. I know that he will not supply any more money because he can do better than that in preferred stock and even in some bonds so that some earning has to be allowed which would enable this company to make a return to the common stockholder which will bring that average up quite a bit. I do not know what it is. I have made no calculations in regard to what the figure might be.

I merely stated that so long as this average remained around 3.48 per cent, it was a pretty tough situation, so far as common stockholders were concerned. They were perfectly willing, when they invested money, to wait in the lean years, as I think I stated before, but they made their investment in the hope that when this company got on its feet and had its markets established, earnings would be sufficient to permit a return which would compensate them for their risk.

Q. Now, the common stockholders received no dividends, [fol. 10296] according to this chart, through the year 1936, is that right?

A. I do not know. I would not want to say quite that, Mr. Littman, because the only company figures I have are

those in Mr. Watkins' exhibit and I believe they started as of April, 1932. In other words, there were nine months of 1932 and the remaining years.

Q. I had reference to that date. I did not intend to be technical about the date of the actual commencement of operations.

A. Yes. Then no dividends on common stock were paid from April of 1932 until January 1 of 1937.

Q. Then the dividends were 1.66 per cent in 1937; 7.27 per cent in 1938; 4.19 per cent in 1939; 8.62 per cent in 1940, and 7.32 per cent in 1941. Is that correct?

A. Yes, that is correct.

Q. An over-all average for the 9¾ years of 3.48 per cent of dividends on common stock?

A. Yes, that is correct.

Q. Now, you have told us that the earnings-price ratio for common stock should be 12 per cent, have you not?

A. Yes, I have.

Q. Are you able to advise us how much of that, in your opinion, will be necessary to make the common stockholders satisfied? Simply advise us what portion of this 12 per cent is truly applicable to the common stockholders by [fol. 10297] way of dividends and by way of surplus or haven't you made any such study?

A. I do not have calculations on that at the moment, Mr. Littman, because, as you know, the earnings price ratio is talking about earnings whereas the ratio in Chart No. 3 is talking about dividends so, naturally, there are two different things to start with.

Now, the question comes down, so far as the dividends are concerned, as to what, in the management's opinion, can be paid by way of dividends on the common stock from one year to another. I mean I think the dividend payment is a managerial question. Estimates could be made on the matter. I just have not made them so I cannot answer your question right now as to what it is or should be.

Q. Well, you know that Panhandle Eastern was certainly able, if it had so desired, to pay more dividends, at least since 1937, since they actually paid, do you not?

A. Well, I do not know as I am prepared to say that. The Company has been expanding pretty rapidly. It is a question of whether the management feels that to protect

their position they should maintain their working capital position, as they did, or whether they would pay more of it out in dividends. I do not know as I would want to make the statement that you have just made.

Q. In other words, it was simply a matter of discretion with the company as to whether or not it wanted to pay its [fol. 10298] earnings out in dividends or apply a portion of them back into the business?

A. Yes, that is a matter of managerial policy. The management would have to decide that.

Q. Now, you have not seen any signs of these stockholders being dissatisfied with the returns on their common stocks which are shown historically on Chart No. 5, have you?

A. Well, that is a rather hard question to answer, Mr. Littman. I mean about the only way I know that you can tell whether a stockholder is dissatisfied is about on two counts. Either he just gets mad and sells his stock or he brings a lawsuit against the corporation to bring his bone of contention before the Court. He may form a stockholders' committee or something else to start a little agitation for this or that but, otherwise, I do not know how you can tell whether he is dissatisfied or not.

Q. Columbia Oil owns slightly more than 50 per cent of the common stock, does it not?

A. That is correct.

Q. You do not know of any efforts that have been made by Columbia Oil to voluntarily dispose of its common stock in Panhandle Eastern, do you?

A. I do not know of any, no.

Q. As a matter of fact, you know that certain gentlemen connected with Mo-Kan would be delighted to buy [fol. 10299] some of Columbia Oil's common stock, and pay a handsome premium. Don't you know that?

A. No, I really do not know that. I have heard gentlemen talk a lot of times but, if we are talking facts, I really do not know the facts.

. . . . . .

[fol. 10300] By Mr. Littman:

Q. Will you please turn to Chart No. 25, Exhibit 253; this chart shows that earnings of $5,325,677 are required to service the $77,830,535 of invested capital in Panhandle

Eastern and subsidiary companies as of February 28, 1942; is that correct?

A. Well, if we could use the terminology that I have used, it would be a little preferable to me. It is the amount of earnings required to maintain the credit position. "To service" is subject to some broad interpretations.

Q. Those are the requirements to maintain the credit position?

A. That is correct, not giving effect to the experience of the preferred stock sale.

Q. How much of this $77,830,535 represents net working capital?

A. Well, it is a little hard to answer your question just as you put it, because here we are talking about capital structure only. The most that I could say is that as of the date of the $77,830,535 the net working capital, including the amount received from the new financing was $6,576,743 which is shown on Chart No. 8 and which I have already explained has been committed to the estimated plant expenditures for the ten months, from February 28 to December 31, 1942.

[fol. 10391] Q. Well, roughly, for every dollar of net working capital which is included in your invested capital, the earnings required are 6.84 cents?

The Witness: May I have that read, please?

. . . . . .

A. Well, the 6.84 percent, that is percent of earnings required on the total invested capital, or $6.84, as you wish to put it, is the amount that I have stated in Chart No. 25 and table supporting Chart No. 25 in Exhibit 253.

Q. Will you please tell me how much in dollars of earnings is required per your Chart No. 25 for the net working capital which is in the amount of $6,576,743?

A. I just don't know how you can do that, Mr. Littman. The total invested capital, as computed in Chart No. 25 includes the bonds, the preferred stock, common stock, and surplus, and that is the total amount of invested capital computing invested capital on that basis.

Now, at the time of that computation there was, in working capital, the figure that we have just mentioned of $6,576,743, but I haven't talked in terms of earnings per work

ing capital; I am talking in terms of securities that are held by the investors.

Q. You are providing, however, sufficient earnings to cover an invested capital which reflects six and a half mil-
[fol. 10302] lion dollars of working capital; isn't that right?

A. The invested capital, as of February 28, 1942, does take into consideration the amount of working capital mentioned, that is true, but when the investor gets down to the particular security he holds, which is either a bond, a preferred stock, or a common stock, you can't talk about the earnings required on that particular section.

I can talk to you of the amount required on bonds, preferred stocks, and common stocks, but net working capital, in other words, is not sold as a security, and I can't tell you whether the working capital is so much in the bonds section and so much in the preferred section and so much in common stock. I don't believe anybody else can, unless you liquidate the company, and then the bonds come first.

Q. Well, wouldn't it be fair to say that the six and a half million dollars of net working capital was distributed as among the common stock, preferred stock, and bonds, in the same general ratio as is indicated in your Chart No. 25?

A. Well, I wouldn't want to make that statement because if some catastrophe should happen today, for example, where the company was going to liquidate, as I say, the bonds would be paid off first, and the first thing you use is cash which is working capital. If there wasn't enough cash to pay off the bonds, the preferred stockholders get nothing, and the common stockholders get
[fol. 10303] nothing, so I don't know how you can distribute one way or another.

Q. I think we can perhaps avoid these difficulties you have raised by putting the question this way: Assuming that the company did not have this $6,576,000 working capital, what would its investment be as of February 28, 1942?

A. The total invested capital excluding the net working capital, would be $71,253,792.

Q. And what would be your earnings required, if that were the invested capital?

A. The earnings required then would be approximately $4,663,467.

Q. What is that again? A. $4,663,467.

Q. Now, that is how much less of earnings required than you show in your Chart No. 25? A. $689,210.

Q. Now, we are agreed, are we not, that $689,210 of your "earnings required to maintain credit position" is required by reason of a six and one-half million dollar amount of net working capital as of February 28, 1942; isn't that right?

A. Making the calculations on the basis I have done; that is correct.

[fol. 10304] Q. Now, if this Commission were to allow, let us say, one million dollars of working capital as compared with the figure of six and a half million dollars there would be a substantial reduction in earnings required to maintain credit position, wouldn't there?

A. On that basis, it would be about $569,210.

Q. Less than the earnings required shown in Chart No. 25 of $5,325,677?

A. That is correct.

Q. Now, please refer to our Chart No. 8.

Now, there you show that the estimated plant expenditures for the next ten months, February 28 to December 31, 1942, are $6,530,900; is that right?

A. Yes, that is.

Q. And am I correct in understanding your testimony yesterday that the large amount of net working capital on hand on February 28, 1942, was occasioned by reason of the company having on hand moneys which it had received through its financing program for the purpose largely of financing new capital additions; is that correct?

A. Yes, a portion of it. I have tried to show that in Chart No. 8 in Exhibit 253, showing the decline from June 30, 1941, of $4,661,875 to $3,507,653, as of December 31, 1941, and $2,951,908, as of February 28, 1942, so the difference between the $2,951,508, as of February 28, 1942, [fol. 10305] and the $6,576,743 was the amount realized from the financing in February, 1942, to the amount of $3,624,835.

Q. Well, in other words, your return expressed in dollars and called by you "earnings required to maintain credit position" contemplates the return necessary on this large amount of six and a half million dollars of net working capital?

A. Well, I don't think that is quite an accurate statement.

What I am trying to observe in these data is this: that between June 30, 1941, and February 28, 1942, a matter of about eight months, the working capital had declined almost 50 percent. That is excluding the new financing, which means that the working capital, as of June, must have been needed in corporate business for one purpose or another; so that it automatically declined, was used in the business.

Now, when you come to February 28, 1942, and you have the $6,576,743 of working capital, it is evident, if the estimated plant expenditures and the program that is laid out works out to the estimated figures, that the working capital, as of February 28, 1942, has already been spent, for all practical purposes, so the company really hasn't any working capital.

Where it is going to replenish that supply will be from earnings, and the point I am trying to make there is that [fol. 10356] working capital, as such, must be determined by the needs of the corporation so that if it is converted from liquid form to fixed form, or goes out in the way of an expenditure, then the item in itself does not tell you much of anything, you have got to look at these other facts, and I find from these other facts that what seemed to be high when we last discussed this was actually needed in the business over those remaining eight months after February 28.

Q. You mean actually needed for capital additions, for instance?

A. Might have been capital additions or maybe it was meeting the sinking fund requirements, any corporate purpose, paying of wages, salaries, and so forth.

Q. Isn't your testimony, Mr. Coffman, that a rate payer should pay a return on estimated plant expenditures before they are even installed and in service?

A. There I think you are using a coincidence to prove a fact. I mean it is true, as shown right here in Chart No. 8, that the estimated plant expenditures are approximately six and a half million dollars. Those are to be paid during the remaining ten months of the year. Net working capital at the time was six and a half million dollars. I am just saying to operate any business as a going firm, you necessarily have to have moneys in the till to do the things that are necessary to maintain and provide the [fol. 10307] service and keep this company going.

Q. Now, the effect of that method, however, used by you, is to give the company a return upon that portion of its net working capital, which is yet unexpended for capital additions which have not as yet, of course, been installed; isn't that the effect of your method?

A. Well, to me, a business is a combination of fixed assets and working assets, and it takes the combination of the two to make the wheels go around to produce and render the service. Now, if it is shown, as I think these facts clearly indicate, that the working capital of a certain figure at a moment of time is already to be needed to maintain and render the service by this company to the consuming public, then those dollars are working just as effectively for the consumer as the pipe line company.

Q. And under your theory of rate making, the rate payer should pay a return upon those dollars before they are even converted to property in service?

A. As I stated, in connection with Exhibit 65—and I think it holds true here—people have just recently put in $15,000,000 or approximately that—in the plant through the preferred stock and bonds that the money is invested, and it is going to work and they expect to have a return, otherwise they would not have put the money in.

Q. In other words, your answer to my question is [fol. 10308] "Yes" with the amplification you have given?

A. I would say it was, yes. So long as it is a part of invested capital, it certainly has to have a return.

Q. I wanted to get on the record very clearly your theories, and I want you to tell me whether I am right in saying that it is your theory that the moment a dollar goes into the till of a utility, it then should earn a re-

turn, even though it is not yet expended for property in service.

A. I say that so far as the investor, the man who is putting in the money, is concerned, so long as that money stays in the business, he expects a return.

Now, at any time that you want to bring that investor's return to a conclusion, all you have to do is to just declare a dividend or a liquidating dividend or buy his stock or bonds.

Q. Now, your exhibits have been constructed upon that theory, have they not?

A. These exhibits altogether have been based upon the investor's point of view, the man who puts in the money.

Q. And, in effect, you utilize the invested capital as represented by the total of [outstanding] securities and surplus as representing the rate base?

A. Well, I wouldn't want to go quite that far. I have just taken the invested capital, as you have outlined it, and I am not talking about rate base.

[fol. 40309] The Commission, I assume, is going to determine the rate base, but if that rate base still involves the same amount of capital that is in the business now—that is, the moneys that have been put in—then it will take certain required earnings to maintain the credit position of the company.

Q. Well, suppose the Commission fixes a rate base that is, let us say, ten million dollars below your invested capital of $77,830,535 shown in your Chart No. 25. What, then, becomes of your earnings required figure of $5,325,077? Does that figure then go down correspondingly?

A. It will go down, yes, but if the Commission is going—

Q. (Interposing) Should it go down?

Mr. Wheat: Let the witness finish. I think he hadn't finished his answer.

A. (Continuing) It will go down, but I am just saying that the Commission will, I think, very definitely, in determining the rate base that you are talking about, consider what already is in this business.

Now, you can take the extreme case: suppose the Commission comes down with a rate base that is, let us say, twenty-eight million—suppose the Commission comes down with a rate base that is $28,574,000 less than the total invested capital. That just merely means that the Com- [fol. 10310] mission wiped out all the common stock and surplus. Well, there just isn't any. If that can be done and can be worked upon the investors with no difficulty and will stand, why, quite all right, but what you are really saying is that you are just wiping out a part of an investment and there are still some constitutional rights about what a man gets when he buys a security. At least, I think so.

Q. Do you think the constitutional rights of the investor are violated when the Commission uses actual original cost of the property devoted to public service less the depreciation reserves accumulated to date plus reasonable working capital?

A. That depends altogether on what the facts have shown with regard to that determination.

The only point I am trying to make here is that so far as the investors are concerned, if changes are going to be made so that the invested capital is changed to the extent that it actually creates a tangible loss to the investor, they do not believe that investors are going to continue to finance industrial enterprises in this country.

The financing will have to be done through other than public channels.

Q. Will you turn to Chart No. 46? There it appears that your "minimum earnings necessary to maintain credit position" in the amount of $5,382,000 is a very rigid figure. [fol. 10311] and remain constant regardless of the numerous and various assumed rate bases shown there.

Now, how do you reconcile that with your statement a moment ago that the minimum earnings necessary to maintain credit position will go down if the invested capital goes down?

A. Because here, as I have stated, at the present time the bondholder, the preferred holder and the common holder of this business $77,839,000—whatever that in

vested capital was—and that is the amount those various security holders say of their money is still in this business and that is what they expect to get a return on. Now, if we are going to agree that that is the case, then the $5,287,000 is necessary.

What I have just told you is that if some action is going to be taken so that you just wipe out a part of the investment, just take it away from the investor, then the figure I have given you is correct, but I say, if you go far enough along in that, the people that have bought these securities are, at least, going to find out what it is all about.

If you buy a preferred stock or bond, it says very definite things, and they believe there is value behind it, and these various items now are pretty closely checked with the Securities and Exchange Commission, and that is the only way I know that you can continue public financing. Other-
[fol. 16312] wise the people will refuse to finance any of these companies.

Q. Mr. Coffman, that takes us back to the illustration which we discussed when you were last on the stand for cross-examination, of a corporation having a balance sheet showing $60,000,000 of assets of which $30,000,000 was represented by property actually devoted to public use and $30,000,000 represented cash in the bank. According to your theory, you would allow, in determining the earnings required, a full return up on the $60,000,000 rather than upon the $30,000,000 of cost of property actually dedicated and devoted to public use, would you not?

A. I think I recall about what I said there, and my opinion hasn't changed one iota in regards to it.

The first thing is that I don't think you can find such a situation as that in a going business.

The second thing is that the investor put the money in and if the management wanted to follow a procedure whereby fixed assets are converted finally so that half remains in fixed and the other half in cash in the bank, the investor will tell the management any time or anybody else that he believes that he can use that cash in the bank just as well to make a return by another investment as by leaving it idle there, and, therefore, he is going to tell the manage-

ment, "I want a return on it whether you put it in plant [fol. 10313] or whether you leave it in the bank, because if you are not going to use it, give it back to me, and I will use it."

That is a perfectly sound investor point of view, it seems to me.

Q. And that is why you use as a base, in computing the amount of dollars of earnings required to maintain credit position, the invested capital as represented by the total outstanding securities and surplus?

A. Yes; and to be sure we are talking about the same thing, when you shift from a consideration of total invested capital, as I am defining it, which is the investor's point of view, to discussing the matter from the standpoint of a rate base, as the Commission and utility industry speak of it, we are talking about two different things at that point.

The Commission can determine the rate base as it finds it, considering all the facts, but I am saying, on the other hand, that the investor has put certain capital in here, and unless we can find that there are erroneous entries or other inaccuracies in the accounting, what the investor sees in audited and certified balance sheets, which are given to him, is what he relies upon; it is what he relies upon when he puts more money into it. That is the figure I am going by. Those two things are just different things.

[fol. 10314] Q. On that very subject, are you aware of the fact that there is testimony in this record to the effect that the plant accounts contain a writeup in the amount of approximately one million one hundred thousand dollars, ascribed to gas sales and purchase contracts?

A. Well, I don't know the specific record that you are referring to, but I am aware that there are some gas sales and purchase contracts in some amount. I have forgotten what it is, but on that point, Mr. Littman, I am perfectly willing to make my position clear, that I am using total invested capital here as I have found it from the most reliable figures I can get.

Now, if the Commission makes other findings which show that certain things were inaccurate or improper, then

I would be perfectly willing to use those figures and go forward.

Q. In other words, if there were a writeup of $1,100,000 in plant accounts, then the earnings required to maintain credit position, as that term is used by you, would be correspondingly less than as shown?

A. Would be correspondingly less, and for the reason that there the investors, it seems to me, cannot contend that either good money went in for the value or that earnings had accumulated to create the value.

Q. Now, will you please turn to Chart 3, and I am asking you to do that purely for illustrative purposes. You [fol. 10315] show on that chart certain operating income, do you not, for various years?

A. Yes, I do.

Q. And you have a number of other charts in this Exhibit 253 which show operating income for various years, do you not?

A. Yes, I do.

Q. Now, discussing those charts generally, without making specific reference to them, in arriving at those operating income figures you have accepted the figures as they appear on the company's books without adjustment, have you not?

A. No. In the case of Chart No. 3 and other charts you have referred to, so far as Exhibit 253 is concerned, those now come from Mr. Watkins exhibits, and in particular reference to Chart No. 3 come from Exhibits Nos. 172 and 173.

The percentage calculations I made, but the base figures come from Mr. Watkins' exhibit.

Q. Well, the point that I am driving at is: Neither you nor Mr. Watkins made any adjustments of the company's books in arriving at these net operating income figures?

A. Oh, no. No; that is correct.

Let me answer I don't want to answer for Watkins, but I didn't make any.

[fol. 10316] Q. Well, you don't know of any that he made?

A. No, I don't.

Q. Neither do we.

Now, do you know that there is testimony in this record, that the operating expenses of Panhandle Eastern Pipe Line Company have for the past few years included the amount of $290,000 of charge per year for amortization of a writeup in gas sales and purchase contracts?

. . . . . .

A. I don't believe I have the detailed figures here from which I can answer that question.

By Mr. Littman:

Q. Well, I merely asked you whether you know of such testimony.

A. No, I don't know of the testimony; no.

Q. Well, you know of no adjustment that has been made in any of your figures in this exhibit to eliminate such amortization of gas sales and purchase contracts, do you?

A. No, not unless Mr. Watkins made them, and if he did, then I have, because I have used his figures.

Q. Now, assuming that the company is charging $290,000 per year in its operating expenses for the purpose of [fol. 10317] amortizing a writeup, it is clear, is it not, that to that extent the net operating income is understated in those years; isn't that true?

A. Well, let me answer it in this way: If they had decided, if such item as existed as you were describing, to write it off directly, and had made the entry through surplus, then, obviously there would have been no annual amount to be taken care of; therefore, it wouldn't have existed in the profit and loss [account,] and the earnings would have been higher by that amount.

I merely want to make the point that there is a question in what you say as to the soundness or unsoundness of amortizing a figure on an annual basis. All I will say is that if you should charge an item off all at once to surplus, there would obviously be no annual charge.

Q. If an investor knew that the company was amortizing a writeup at the rate of $290,000 a year by direct charges to income through the medium of operating ex-

penses, would he know that the net income per books is understated to that extent?

A. Well, if he can read a statement intelligently, he can make his interpretation, certainly.

Q. If the facts are as I have stated them, then the net operating income figures that you have shown in your exhibits are subject to that adjustment, aren't they?

[fol. 10318] A. If it were decided in regard to that particular point that a change should be made, why, they are subject to that correction; that is right.

Q. Now, you have made no adjustment anywhere in your exhibit for any overaccruals of income taxes, have you?

A. No, sir.

Q. Have you investigated whether the company has recorded on its books larger accruals for Federal income taxes than was actually incurred for those years and paid for those years?

A. No. I have taken the exact figures used in Mr. Watkins' exhibits, and if such item was included there, it is included in my figure. I am not aware of it, but if it is in his figure, it is in my figure.

Q. Now, assuming that there are such overaccruals, according to the company's books for Federal income taxes, then to the extent of such overaccruals, the net operating income is understated?

A. Yes, that would be true, but I would venture a guess that such total, so far as the annual influence is concerned, would not be large.

Q. Well, for your information, Exhibit No. 222, which was presented by Mr. Duffy, shows that there have been overaccruals for charges in lieu of Federal income and excess profits taxes in the amount of $823,882 for State, [fol. 10319] local, and miscellaneous Federal taxes in the amount of $69,550, for Federal income taxes in the amount of $600,530, and for Federal excess profits taxes in the amount of $219,881, over the period April 1, 1932, to December 31, 1941. You wouldn't call those small amounts, would you?

A. What exhibit are you reading from?

Q. 222.

The lines aren't numbered, but you will find it in the column headed "Adjustment for Items Admittedly not Cost."

Well, those things are a matter of record. You, at any rate, did not delve into that problem or make any adjustments for such overaccruals, have you?

A. No, I used Mr. Watkins' figures.

Q. Now, will you please turn to Chart No. 45 which is entitled "Effect of Increased Gross Revenue and Taxes upon Panhandle's Net Operating Revenue."

Now, at the extreme left-hand side of this chart, you show net operating revenue in the amount of $6,361,247 pro forma for the 12 months ended February 28, 1942, do you not?

A. Yes, I do.

Q. By "pro forma" you mean that that amount reflects the acquisition of Michigan Gas Transmission Cor- [fol. 10320] poration and the other properties to which reference has been made from time to time in this proceeding?

A. Yes, that is correct, and with the one further qualification that the figure you have just read is on the 1941 tax rates.

Q. That is right. And it is that figure which you compare with other figures there shown under the assumption of Mr. Morgenthau's tax proposals?

A. That is correct.

Q. Now, over on the extreme right-hand side, you show that the "minimum necessary to maintain credit position" is $5,382,677, do you not?

A. Yes, I do.

Q. Well, now, on the basis then of the 1941 tax rates, it is apparent that the Panhandle Eastern and subsidiary companies had excess net operating revenue of one million dollars or, stated differently, had an excess profit of one million dollars over and above the "minimum necessary to maintain credit position"?

A. Yes, I very definitely show that, but I also show, Mr. Littman, that Mr. Morgenthau, so far as I can see, has really already done what the Commission had in mind to do by this proposed tax raise.

Q. Well, he hasn't done it yet, and the Commission [fol. 10321] hasn't done anything yet, either.

A. Well, I say, from his proposal, he contemplates just exactly taking care of that matter.

Q. I assure you I don't know what either are going to do, and I don't think anyone else here does.

A. Well, Mr. Morgenthau wasn't talking through his hat when he made his press release on March 3, I don't believe. At least he hasn't been given to that up to the present time.

Q. Well, now, we are clear, are we, that on the basis of the figures shown here, using the 1941 tax rates, Panhandle Eastern's net operating revenue or dollar return is approximately a million dollars in excess of the amount which you claim is necessary to maintain the credit position?

A. Yes, sir, that is correct.

Q. Now, I want you to do something for me. I want you to tell me how much of a rate reduction would have to be made on the basis of the 1941 income tax rates, in order to reduce the net operating income from the $6,361,000 to $5,382,000.

[fol. 10322] A. I have made a calculation, and this I would want to check very carefully.

Q. Let's see how close you come to our figure.

A. According to the result I get about two and a half million dollars.

Q. Well, according to our figures you are about one million dollars too low, but will you please calculate that?

A. I would like to check that more carefully; but that figure, once I determine it, is not taking into consideration any change in taxes.

Q. That is right. It is based upon the 1941 tax rate, we understand.

A. All right.

Q. Now you have introduced a number of charts in your new exhibit 253, which did not appear anywhere in your other exhibits previously presented.

Now, those deal with the Bankers' ratios—at least we will call them that for purposes of brevity. Am I correct in understanding that the sum and substance of the findings as you show them, of the New York State Bankers As-

sociation—well, perhaps I have misspoken myself there. Let me repeat:

The sum and substance of these charts is that interest must be earned four times, and the net available for charges must be equal to 16 per cent of the outstanding debt?

[fol. 10323] A. That is for the gas companies integrated, and pipe line also?

Q. Yes.

A. Yes.

Q. And such a status would have the effect of giving the securities of such pipe line company the very highest credit rating?

A. Or, to state it the other ways around what the New York State Bankers Association is saying: that in order for a gas bond to be in the A quality rating group it must have at least a times-earned of four, and an income available to par value of sixteen per cent.

Q. Now, assume that we have a natural gas pipe line company with a capitalization of $30 of debt represented by 3 per cent bonds and $70 of stock out of each $100 of capitalization.

. . . . . .

A. I missed a couple of points there. $30 of debt and 3 per cent bonds?

Q. Yes.

A. What next?

Q. $70 of stock for each $100 of capital. What is the cost of servicing the $30 of bonds?

A. That is three per cent on the $30—$9.

[fol. 10324] Q. You mean 90 cents?

A. 90 cents.

Q. Per $100?

A. That is right.

Q. And what is the cost required to service $70 of stock?

I beg your pardon; I skipped a point.

Assuming that this company was allowed an over-all rate of return of six per cent on its capitalization, what

would be the cost of servicing the $70 of stock on that basis?

A. $5.10.

Q. Now, how many times are charges earned?

A. About 6½ times.

Q. That is right. 6.66, is that right?

A. Yes. Well, I didn't figure it that close. By inspection of figures I said it was about 6½ times.

Q. What is the relation of the over-all net available to par value of debt?

A. You mean the total income to par value of debt?

Q. Yes.

A. It is six per cent. Have I got that wrong? Oh, to par value of debt, pardon me. Twenty per cent.

Q. 20 per cent is the figure we have too.

Now, does this situation meet the Bankers requirements for highest grade bonds?

[fol. 10325] A. Well, you have 6½ times charges, and you have 20 per cent, so that they are both above the ideal.

Q. And yet this company has an over-all return of six per cent?

A. On the basis of the assumption that you gave me.

Q. I would like to have you refer again to chart No. 45. I am afraid I left that chart a little bit too soon. You will recall this is the chart entitled "Effect of Increased Gross Revenue and Taxes upon Panhandle's Net Operating Revenue."

A. Yes, sir.

Q. Now, you not only show the figures to which we alluded a few moments ago of the net operating revenue on the basis of the 1941 tax rates, as compared with the "Minimum necessary to maintain credit position," but you show the effect of Mr. Morgenthau's proposed tax laws upon the net operating revenue, do you not, on the various assumptions?

A. Yes, on various assumed increases in gross revenue.

Q. Now, you show that if the gross revenue remained the same, then based on Mr. Morgenthau's proposal the net operating revenue would drop from $6,361,000 to $4,526,000; is that right?

A. That is correct.

Q. Next you show that if the gross revenue increased $1,154,000 the net operating revenue would go up to [10326] $4,688,000; is that right? A. That is right.

Q. And going to the next bar, you show that in order to raise the net operating revenue to $4,936,000 under Mr. Morgenthau's proposal, it would be necessary for Panhandle Eastern to earn an additional $3,438,000 of gross revenue; is that right? A. That is correct.

Q. And likewise in order for the company to earn net operating revenues of $5,190,000 Panhandle Eastern would have to have $5,771,000 of additional gross revenue?

A. Yes, that is correct.

Q. Each year? A. Each year.

Q. And I observe that even under that assumption—to-wit: the assumption, that Panhandle Eastern would earn an additional $5,771,000 of gross revenue—that even then your minimum necessary to maintain credit position would not yet be reached? A. That is correct.

Q. Will you advise us how much additional gross revenue would be required by Panhandle Eastern under the Morgenthau proposal to reach the minimum amount of net operating revenue required, according to your theory, to maintain credit position in the amount of $5,382,677? [fol. 10327] A. Well, I can't calculate that right here. I will have to have some time on that.

Q. Does $7,500,000 of additional gross revenue look about right to you?

You may check it, of course, and report back.

A. Well, offhand, by an inspection, that would sound like a close figure; but I would like to make some calculations.

Q. Let's accept it for purposes of discussion, subject to check. A. All right.

Q. Now, as I understand this chart No. 45, if Mr. Morgenthau's tax proposals go through, then according to your calculation, in order for Panhandle Eastern to even secure the bare-bones minimum necessary net operating revenue for the purposes of maintaining its credit position in the amount of $5,382,000 it will be necessary for Panhandle Eastern to earn 7½ million dollars of gross revenue in addition to that which it earned in the year

1941: is that correct, under the assumptions which we have made? A. That is correct.

Q. And that condition could only prevail and could only be met if Panhandle Eastern didn't spend any money for capital additions: isn't that true?

A. Well, I wouldn't want to say that. If I get your [fol. 10328] point—

Q. (Interposing) I think I could have stated my position more clearly.

Let me repeat it; I think we will be together on it. This chart does not reflect any amounts by you for capital additions, does it? A. No; that is correct.

Q. In other words, under the hypotheses that we have just made, the additional 7½ million dollars of gross revenues would be earned without the expenditure of any moneys for capital additions: is that right?

A. That is correct.

Q. Now, you don't have any thought in mind, do you, that Panhandle Eastern could earn another 7½ million dollars of additional gross revenue without spending any money for capital additions?

Mr. Wheat: Let me ask you, Mr. Littman: Are you assuming there that earnings are on the present rates of the company?

Mr. Littman: That is right.

Mr. Wheat: Present rates as now published?

Mr. Littman: That is right.

I am assuming precisely what the witness has assumed for purposes of chart 45.

[fol. 10329] Mr. Wheat: Without what seems to be indicated as probable necessity for a rate increase, I assume?

Mr. Littman: Yes. We want to get an idea of how much of an increase you people think you have to have, on this assumption.

As I understand it, the company, according to Mr. Biddison, is now earning a hundred per cent on its unregulated business.

We want to see how much more is going to be required each year to meet these requirements.

Mr. Wheat: Your understanding, of course, in that regard, is highly faulty, but go ahead with your procedure.

Mr. Littman: I don't remember whether you answered that last question.

The Witness: I don't remember the question.

Mr. Wheat: He hadn't answered when I asked you the question.

Mr. Littman: Was there an answer, Mr. Reporter?

The Reporter: No, sir.

Mr. Littman: Will you please read the question?

(Whereupon the pending question, as above recorded, was read by the reporter.)

A. I shouldn't think so.

By Mr. Littman:

Q. Well, about how much would have to be expended for [fol. 10330] capital additions to secure another 7½ million dollars of gross revenue?

A. I don't know. Along the general point I would like to say, Mr. Littman: So far as my chart 45 is concerned the only purpose at all in showing it is just one and that is to show that if Mr. Morgenthau's tax proposals do go through the alterations in net operating revenue are going to be rather substantial, and if one would then suppose that you could increase the gross revenue to offset a part I am just saying that if Mr. Morgenthau's proposals go through, or anything like his suggestions go through, it is going to take substantial increases of gross revenue to enable the company to have sufficient money to meet its minimum requirements to maintain credit position, or to have about the same earnings it has now would take substantial increases in gross revenue.

Now, so far as how much plant it is going to take to furnish such additional gross revenue, I haven't made any estimates.

I am not an engineer and I haven't even considered it.

Q. We would like to follow this thing through to its logical conclusion.

It may altogether be that this company is facing bankruptcy or something worse than that, and so we want to follow through.

[fol. 10331] Now, what is the present annual gross revenue of Panhandle Eastern?

A. The gross revenue, gross operating revenue, as contained in the statement for the year ended February 28, 1942, was $18,378,378.

Q. And the total invested capital was how much?

A. Total invested capital was seventy-seven million—

Q. (Interposing) —eight hundred thirty thousand five hundred thirty-five dollars?

A. Yes, that sounds correct. It is correct.

Q. Well, roughly the company has about four dollars of invested capital for each one dollar of gross revenue, has it not? A. Just about.

Q. Just roughly: A. Yes.

Q. In fact that is on the low side, if anything?

A. Well, or turning it the other way around, according to the gross revenue figure it is turning its capital about once in four years.

Q. Now, if the ratio of gross revenue to invested capital were to remain the same, obviously it would take about $30,000,000 of capital expenditures to produce the additional 7½ million dollars of gross revenue, would it not?

* * * * * * * * *

[fol. 10332] A. Whatever figures you use you can get the arithmetical result, but I have made no assumption at all as to increases in plant.

I was merely working on one point: namely, what would have to be done, if the tax increase is an equivalent of a million eight hundred thousand dollars, what has to be done by way of increase in gross to at least partially offset it, and I have made no calculations on the plant account at all.

By Mr. Littman:

Q. Let's see how unreasonable my assumptions are: [fol. 10333] You have increased your annual allowance for

amortization in direct proportion each year, have you not, to the increase in gross revenue; don't your calculations show that?

A. Which exhibit are you talking about now?

Q. I am talking about your chart No. 45, table supporting chart No. 45.

A. I don't follow your remark about amortization and so on. What is your point?

Q. Haven't you assumed, for purposes of chart No. 45, that your expenses are going to go up directly proportionately to your gross revenue?

A. What I assumed was that the ratio of operating expense to gross revenue, as existed February 28, 1942, that percentage would remain the same.

Q. And that includes depreciation and amortization, doesn't it? A. That is correct.

Q. In other words you were providing for amortization of sufficient invested capital to provide for this increase or these various increases in gross revenues under the various assumptions, were you not?

A. Well, that is generally correct. It would increase by the percent I have stated.

Q. And your increases for depreciation and amortization are in direct proportion to the gross revenue increases [fol. 10334] assumed by you, are they not?

A. Well, they are in proportion to the amount of the percent that is used, sure.

Q. Well, certainly that assumption presupposes that your plant and property account was going to increase in the same proportion, does it not?

A. Well, it isn't quite as good a case as you are making out, Mr. Littman, because amortization and depreciation is just one of the many items of operating expenses. In other words, the operating expenses, excluding the taxes, were about 61/2 million, so it isn't quite—when you say "direct proportion" I don't like to see you load it all on the amortization and depreciation: that is going a little too far, I would say.

. . . . . .

Q. Very well. That gets us up to something like $30,000,000 on that assumption of capital additions that would be required under my assumption.

Mr. Wheat: And under present rates for the service?

Mr. Littman: Yes.

[fol. 10335] By Mr. Littman:

Q. (Continuing) Under all the assumptions, and there are a great many of them under chart No. 45.

You would have about $30,000,000 of capital additions wouldn't you?

A. That would be about right.

Q. In order to produce the additional 7½ million dollars of gross revenue? A. That is right.

Q. Now, the minute you get into a situation like that and you have another $30,000,000 of capital additions, why, your "minimum necessary to maintain credit position"—or, differently stated, your return—has got to go up too, doesn't it?

A. Well, the capital additions can't come out of the air. They will have to have money to finance it, or earnings to finance it, one or the other.

. . . . . .

[fol. 10337] Mr. Wheat: We have succeeded in borrowing, through the courtesy of Commission's counsel, a copy of the exhibit of Mr. Coffman in the case involving valuation of common stock of Carolina Power and Light Company, to which Mr. Littman adverted this morning, and since this exhibit, I think, is from the files of the Trial Examiner in that case, we should like to be able to return it.

It will only take us one moment to ask the one question we would like to ask on that, if we may be allowed to do that.

. . . . . .

By Mr. Wheat:

Q. Mr. Coffman, you heard Mr. Littman read to you this morning a passage which included, I think, two sentences from your text which appears in the exhibit in question opposite chart No. 6, and I think that is exhibit 307 in [fol. 10338] Docket—

. . . . . .

Q. (Continuing) Well, in the case which has been pending, involving Carolina Power & Light Company.

Did you hear Mr. Liftman read those two sentences, Mr. Coffman?

A. Yes, I did.

Q. I should like to ask you whether those two sentences are a portion of the following text:—

Mr. Wheat: I don't think, Mr. Examiner, possibly, that I need to read this all into the record, if it may be quoted in the record.

It starts with the beginning of the chart—it will only take me a minute. I will read it.

By Mr. Wheat:

Q. (Continuing) "On Chart No. 6, captioned 'Carolina Power & Light Company Common Stock, Daily Price Range & Trading Volume—January 1, 1925 to April 6, 1926' I have reviewed the market action of the company's common stock during the year prior to the date of valuation.

"As noted on the chart, there was no trading in the stock on the New York Curb Market after December, 1925, [fol. 10339] at which time all of the common stock outstanding of the Carolina Power & Light Company had been acquired by the National Power & Light Company through an exchange offer of 15 new shares of National Power & Light Company common stock for each share of Carolina Power & Light Company common stock. Accordingly, my review covered the calendar year 1925.

It will be seen from the chart that at the beginning of 1925 the Carolina Power & Light Company common stock sold at a price of $319 per share.

"After the sale of few additional shares at 320 and 329 during the month of January, the stock declined to a low of 300 on the sale of only 10 shares on February 16. In March, however, the shares jumped to a high price of 360 on an increasing number of shares trades.

"The market was quiet during the month of April around the 340 level, but in May, the price soared to a high of 430, or an increase in value of some 26 percent.

"During the last six months of the year the stock fluctuated between a low of 375 reached both in June and September and a peak of 456½ attained on November 5. Volume of shares traded also reached the highest level on November 5, amounting to 1,220 shares.

"It is obvious from this review of the market action of the common stock of Carolina Power & Light Company the year preceding the date of valuation that the market was an [fol. 10340] extremely thin affair, with wide fluctuation occurring on only a small number of shares traded. In view of the thinness of the market, and the fact that no quotations were available subsequent to December, 1925, I considered it necessary to approach the determination of a fair market value of the common stock of the Carolina Power & Light Company as of April 6, 1926, on the basis of earning power." Does that represent the testimony which you gave in that case?

A. Yes, it does.

Q. And the part which I have read, which was also previously read by Mr. Littman, is that portion only following the words beginning "It is obvious that this review"; is that correct? A. That is correct.

. . . . . .

[fol. 10344]

PAUL B. COFFMAN having been heretofore duly sworn, resumed the stand and was examined and testified as follows:

Recross Examination (Resumed)

By Mr. Littman:

Q. Mr. Coffman, during the last session I asked you to check one or two figures in connection with Chart No. 45 of Exhibit No. 253 which chart was entitled "Effect of increased gross revenue and taxes upon Panhandle's net operating revenue."

The first one that I recalled dealt with the amount of gross reduction in rates that would be required to bring about the indicated reduction net to the company in order to reduce the net operating revenue from the $6,361,247 shown for the full year 1941 shown in the—

. . . . . .

[fol. 10345] By Mr. Littman:

Q. (Continuing)—which was computed on the basis of the 1941 tax rates to the figure of $5,382,677, which is the "minimum necessary to maintain credit position."

A. The figure which I calculated would show approximately $3,390,000. In that connection, however, I would like to say that in using some figures that Mr. Watkins had made showing a reduction of approximately a million dollars which is about the difference we are talking about that is, from the $6,300,000 down to the $5,300,000 which we are talking about, on his basis would indicate something slightly under $3,000,000, but the figure I have is $3,390,000 for checking your calculation.

Q. Now, Mr. Coffman, in order that there may be no confusion in the record, I want you to very briefly explain what this $3,300,000 figure represents. I want it stated in our own language so that there will be no misunderstanding.

A. Referring to Chart No. 45 in Exhibit 253, I show in the first column captioned "Pro forma 12 months ended February 28, 1942, based on 1941 tax rates," net operating revenue of Panhandle on the consolidated basis of $6,361,247.

On that same chart No. 45 in Exhibit 253, I show a last column captioned "minimum necessary to maintain credit position" of $5,382,677, which is the base figure as originally determined on Chart No. 26 in Exhibit 253.

[fol. 10346] The question was how much of a reduction in gross revenue would be made to bring the $6,361,247 down to $5,382,677 and the calculation, as I have made it, would indicate that gross revenue could be reduced $3,391,000 on that basis, although, as I have explained, calculations based upon Mr. Watkins' figures would indicate that a more correct figure was something slightly under $3,000,000, but I believe the difference there comes in the fact that I used a consolidated figure, whereas on his computations, I think he worked it out for Panhandle, for Michigan Gas Transmission, and so forth, because those various companies, as you know, have different tax bases, which would make a slight difference, but I used the overall figure and made the calculations.

Q. Will you please refer to Mr. Watkin's exhibits that led you to the slightly less than $3,000,000 figure, to which you just referred?

A. Well, his figure is not contained in a separate exhibit, as such, but working from figures that he had placed in his exhibit, so far as taxes and so on are concerned, he indicates that, based on 1941 tax rates, a reduction in gross income of $3,000,000 would show, taking into consideration excess profits tax of $1,514,000 and normal taxes of $461,000, that the reduction in net operating revenue based upon the 1941 Revenue Act would be a million twenty-five thousand dollars, and the difference between the [fol. 10347] $6,361,247 and the $5,382,677 equals $980,570, which is somewhat lower than his $1,025,000, so I have concluded from that that on his basis of calculation, the amount of reduction in gross revenue would be slightly under the $3,000,000, which was his original base of calculation.

Q. To summarize, if we use the 1941 tax rates in our calculation, the indicated rate reduction necessary to bring your net operating revenue down to your "minimum necessary to maintain credit position" is something between, about three million, according to Mr. Watkins, and $3,300,000-odd, according to you?

A. Well, say something less than $3,000,000, according to Mr. Watkins and $3,300,000-odd, according to me; that is correct.

Q. In connection with this same chart No. 45, Mr. Coffman, on last Saturday I gave you a figure of seven and a half million dollars of gross revenue increase over the gross revenue of Panhandle Eastern and subsidiary companies for the 12 months ended February 28, 1942, which we computed was, according to your assumptions in Chart No. 45, required to bring about the net operating revenue of $5,382,677, which you call "minimum necessary to maintain credit position" in Chart No. 45.

You stated that the figure sounded about right to you; that is, the seven and one-half million dollar amount of [fol. 10348] gross revenue increase, and I believe you

said that you were going to check that figure. Have you done so?

A. Yes, I have checked that, and seven and a half million dollars is the figure. That is, there are a few odd dollars, but in round figures seven and a half million is correct.

Q. Substantially correct? A. Yes, that is right.

Q. I would like to have you turn now to Chart No. 11 in Exhibit 253, which chart is entitled "Investors' Appraisal of Over-all Capital Risks, 153 Stable Industrial Companies." Is my understanding correct that in this chart you have summarized the data which is compiled in the rather voluminous exhibit for identification No. 254, Sections I, II, and III, this exhibit being entitled "Investors' Appraisal of Risks of Capital in 153 Stable Industrial Companies for the years 1937-1941, inclusive"?

A. Yes, that is correct. Of course, you are aware that in this same volume to which you refer is a section IV which gives the detailed information on Chart No. 10.

Q. Yes.

A. Just so that we account for the whole Exhibit 254.

Q. Yes. Well, I wanted for the present, to discuss your Chart No. 11 of Exhibit 253. A. Yes.

[fol. 10349] Q. Now, the upshot of your study in this connection is that the weighted average "Investors' Appraisal of risks of Capital" for these 153 stable industrial companies for the five years 1937-1941, inclusive, is 6.97 percent. A. That is correct.

Q. And for the year 1941, the investors' appraisal is 7.99; is that right? A. Yes, sir.

Q. For 1940, it is 7.14; for 1939, 6.25; for 1938, 5.36; and for 1937, 6.83? A. That is right.

Q. Have I read the figures correctly?

A. Yes, sir, you have.

Q. Mr. Coffman, I would like to read a portion of your testimony given on April 17, 1942, on direct examination at page 10152 of the transcript of testimony. I would like to read this so that we may discuss this part of your testimony:

"Question: Now you have told us what your eliminations were and given us the number of companies elim-

inated. Will you go ahead and discuss, briefly, the reasons behind these eliminations?"

You were, of course, here discussing your Exhibit No. 254, were you?

A. Yes.

Q. And Chart No. 11 of Exhibit 253? A. Yes.

[fol. 19350] Q. Is that right? A. That is correct.

Q. "Answer: I was principally interested in the common stock phase because the common stocks in any company are the ones which depend for their return on the type of risk involved. In other words, their bonds carry definite stipulations as to interest, sinking funds, and so forth, so that if any company should, some place along the line, run into difficulty, presumably the bondholders are the best protected of the various security holders of securities in a particular corporation."

I shan't read the balance of the answer unless you feel it is necessary as we discuss the problem.

Now, am I correct in understanding from that statement that in your judgment the investors' appraisal of risks of the common stock of these 153 stable industrial companies is important in connection with this proceeding?

A. No. If I understand your question correctly, the information shown in Chart No. 11 is the investors' appraisal of over-all capital risks, that is, taking into consideration the bonds, preferred stock, and common stock, but when it came to the process of elimination to arrive at the 153 companies, it seemed to me that if a company had paid a dividend on its common stock each year for a ten-

[fol. 19351] year period that was about as close a measurement of stability for an industrial corporation as I could find, so that I used the regularity and continuity of dividend payments, although the dividend payment might have varied from one year to another, of common stocks as the final test of arriving at whatever the resultant figure was, which was 153 industrial companies, but so far as the figures contained in Chart No. 11 of Exhibit 253 are concerned and the supporting data in Exhibit 254, it covers the over-all capital risks.

My point is that to determine whether an industrial company has any degree of stability, in my opinion, the best test is whether an industrial corporation has been able for a period of years—and here I said ten—to pay a dividend on its common stock each year.

Q. Well, is it true to say that the common stocks of natural gas pipe line companies, such as Panhandle Eastern, compete in the money market with the common stocks of companies such as these 153 stable industrial companies?

A. Yes, I should think all the securities of various companies are competing in the market for investment money.

Q. In other words, one type of security of one company competes in the money market with the same type of security of another company, generally speaking; isn't that true?

A. Well, I think that is refining it somewhat. What [fol. 10352] you mean by your question, I take it, is that a common stock of any company, let us say, in the utility field, would be competing against any common stock in the industrial field.

Well, I believe that is true, but I wouldn't want to confine myself quite so much, because an investor might well consider a common stock in one company or one industry, whereas if he went to another company in the same industry or a different industry, he might not consider a common stock, but would be more interested in a preferred, so there I suppose you would say that preferreds were competing with common, and the reason for that is that the investor is trying to the best of his ability to size up the possibilities of this one investment against another.

Q. Well, isn't it true that an investor who is interested in investing his money in common stocks surveys the common stock market and compares the risks and returns of industrials with those of utilities before making up his mind? Isn't that generally correct?

A. Yes. To make my answer complete: if we had a client who had a certain amount of funds for investment who said that he was interested only in common stock, then, obviously, he would, himself, look over all available common stocks or have us, his investment advisors, do it for him, and then recommend those common stocks we thought best.

Q. And is it true to say that your study of the 153 stable [fol. 10353] industrial companies represents your judgment of those companies whose common stocks are most comparable in stability with the common stock of natural gas pipe line companies?

A. Well, I don't believe one could quite say that from the information that is in Chart No. 11. At least, that wasn't what I had in mind.

What I set out to do was to study the over-all risks of capital in the industrial field. Well, obviously, there are thousands of industrial companies, so I couldn't possibly, in any short space of time, cover them all, nor did I think it was necessary.

In order to arrive at a list which would at least bring it into a number that I could handle within any reasonable length of time, I followed the procedure of elimination described and which is in the record and which finally gave me 153, and because I used as my principal guiding light at the end those companies which had paid a dividend on their common stock in each year, made these 153 companies, but my findings or conclusions, so to speak, cover the over-all investors' appraisal as against a common stock treatment.

The only reason we used the common stock was to try to get at this stability of one company against another.

Q. What you wanted to obtain was a list of the most stable industrial companies?

A. That is what I was trying to get at.

[fol. 10354] Q. And that was, I take it, because you felt that it was the most stable of the industrial companies that were most comparable with the securities of natural gas pipe line companies?

A. Generally, I think that is correct.

The Witness: May I just have that question and answer read so that I can be sure the common stocks are not mixed up?

(The record was read by the reporter.)

A. Well, I don't understand quite the "comparability." The word "comparability" in other words, bothers me there.

All I was trying to do was get the over-all risk of capital in the industrial field which was unregulated, and felt that if I took the companies that had these dividend payments over a period of time which indicated the stability, that I would get an idea of what investors for over-all capital required, and that figure weighted average for a five-year period was 6.97 percent.

Now, relating that to the utility field, it seemed to me that in a regulated industry where you also were to have, as I understand it, a degree of stability because of regulation and being allowed a fair return, that in a state of competition where you live or die depending upon management ability and other factors, the weighted average for a five-year period is approximately 7 percent. Then I concluded that in a regulated industry, certainly that 7 percent would more or less prescribe a minimum, and I did not go [fol. 10355] to any greater extent by way of talking in terms of comparability, because I don't see that there is comparability shifting from the industrial field to the utility field.

Q. Well, are you saying that these industrial companies are as stable as the utility industry?

A. I don't think I would put it quite that way, Mr. Littman, but what I am saying: If you go from a regulated industry to something outside that field because, as I understand it, there were statements in the Bluefield case which I think were read, and I couldn't quote but could read it again, of other industries outside the regulated field. I went into the industrial field and selected out of that field those that had the greatest stability, but naturally were unregulated and were facing competition, and it seemed to me that if, in the face of that competition, the investors over-all were appraising that risk at around 7 percent, and those companies had a degree of stability, although they were unregulated, so that such stability would begin to approach the stability in a regulated field, that there was there some guide to be used as one additional factor in a consideration of this over-all matter.

Q. Some of these "stable industrial companies" actually had deficits in some of the ten years, even though they paid dividends in those years; isn't that a fact?

[fol. 10356] A. Yes, that is a fact, but my point is that

that is no different, really, as I see it, than the public utility field. For example, I can't give the specific dates, but some place along in the depression years—1932 or 1933—American Telephone Company, for example, paid out in dividends more than it earned, but if from one year to another you can accumulate, even though you have a deficit one year, you can accumulate earnings so that over the ten-year period the dividends you earned were out of earnings and not out of capital, why, that is about as good as you can expect. I don't think you could say that a company should earn some money each year. That is asking too much with the business cycle coming on from time to time.

Mr. Wheat: When you say "some money each year," you mean some money available for dividends?

The Witness: Yes; some money available for dividends.

By Mr. Littman:

Q. You don't go any farther than 1937 in your study?

A. No, in my study I covered just the last five years, because it seemed to me that was the most recent information, and, therefore, the most pertinent.

Q. Then, are you or aren't you saying that these 153 industrial companies are more stable than the utility industry?

A. Well, I wouldn't want to word the answer that way, [fol. 10357] Mr. Littman, because that wasn't what I had in mind.

I feel that when I go from the utility industry to any other industry there are differences immediately so that you have to recognize those differences and you can't, therefore, say that they are comparable, but my whole point of view is that the 153 industrial corporations were, so far as I can see, as stable as any industrial companies you could find.

On the other hand, I had understood that regulation of the public utility industry, among other purposes, was to add some stability to that, so that there is some stability in each group, but to say that 153 are equally as stable as the utility industry, I wouldn't want to say that. It was the next closest thing I could find outside of the utility

field for whatever additional advantage it would have to these figures.

Q. The latter part of your statement is somewhat close to our understanding, namely, that the utility industry is over-all more stable than industrial companies, even the most stable industrial companies; isn't that true?

A. There again you are pinning me down to whether they are equally stable, which is difficult. I am looking at this, bear in mind, right along from the investor's point of view, and, as I see the investor, he is here on the outside with a thousand dollars or many thousand dollars looking for a place to place his money.

[fol. 10358] Now, if he finds over a period of time that the over-all risk of capital should be less in the utility field than he could find in 153 industrial companies with considerable stability, I should suppose he would begin to shift his investments from the utility field, generally to to these 153 industrial companies, let us say, because he finds there that putting a thousand dollars in gives him about the same stability that you have in the utility industry, but a higher return, and, therefore, from that, I had concluded that the 6.97 percent would more or less prescribe a minimum from the investor's point of view, because if he can fare better from another investment than he can from something in the utility field, he will make the investment on that basis.

Q. Mr. Coffman, isn't it a fact that the capital structure of utilities is considerably different from those of industrials in that utilities have a very much larger percentage of debt capital and preferred stock?

A. Yes, I think that is generally true.

Q. It is certainly true that Panhandle Eastern Pipe Line Company has a capital structure considerably different from the average of the industrials which you show, in that it has a much larger percentage of debt capital and preferred stock than these 153 industrials; isn't that correct?

[fol. 10359] A. Well, I haven't actually taken an average of these industrial companies, but it would seem to me that your statement was true, except that to make just a hide-bound answer, I would feel better to have made the cal-

culations, but it sounds very reasonable to me, knowing what I do about the industrial companies.

Q. Well, are we agreed, Mr. Coffman, that the actual cost of the securities of the Panhandle Eastern Pipe Line Company are to be used in determining the fair return under your approach?

A. Well, as I have shown in Chart No. 26 of Exhibit 253, I used the 2.88 percent for the bonds.

Q. Pardon me. That is actual, isn't it?

A. But that actual closely approximates the average for high grade corporation bonds, so that it is more or less in tune with the present day capital market conditions. However, when you come to the preferred stock, I feel that the 6.23 percent, which is not the actual, should be used for reasons that I had developed in connection with charts Nos. 17, 18, 19, and 20, in Exhibit No. 253.

Q. Well, the actual cost of the preferred stock is shown in Chart No. 25 of Exhibit 253, to be 5.87 percent; isn't that right? A. Yes.

[fol. 10360] Q. And you have adjusted that upward, as you have, I think, heretofore explained, and I think amply enlarged upon, you have increased that to 6.23 percent, as shown in Chart No. 26? A. Yes, that is correct.

Q. Now, with that one exception of that latter adjustment, you have used for the purpose of your study actual cost of the bonds and preferred stock for the purposes of this study and your approach, haven't you?

A. Yes; and the reason that I have done that is because it so happens that in this instance that both a new issue of bonds and a new issue of preferred stock have been made, so that you had what you might call the most pragmatic test.

In other companies where there have been no issue of bonds or preferred stock, then obviously I study what the market seems to indicate.

Q. Now, that leaves, does it not, for determination by way of judgment only the proper return applicable to the common stock and surplus?

A. Generally, that statement is correct.

Q. And you judge the proper return to be 12 percent for the common stock and surplus, as shown, I believe, in your Chart No. 26 and Chart No. 25 as well? A. Yes. [fol. 10361] Q. Now, what we then are very anxious to have in the record, what we are actually seeking is common stock comparability, aren't we?

A. Well, I had thought that the subject had been explored fairly fully so far as the common stocks in the utility industry go, which are the ones we must rely on to give us some indication about what the investor is saying about common stocks in the natural gas division of the public utility industry, and I thought in Exhibit No. 65 and in Exhibit No. 253 that had been developed.

Q. Well, Mr. Coffman, might it not be very helpful to the Commission, in assisting the Commission to estimate the proper return applicable to Panhandle Eastern's common stock, to determine the investors' appraisal of risks of common stocks of these 153 stable industrial companies? Don't you think that information would be helpful and important?

A. Well, such study could be made to see what the result is. I haven't any idea, as a matter of fact, what it might show, and I would be perfectly willing to get the figures together, but it would seem to me, even after the figure, that when we considered the Panhandle Eastern Pipe Line Company, we would still want to confine our attention fairly closely to the experience of other pipe line [fol. 10362] companies, and, in that regard, we already have the evidence in the record as to what the common stocks are doing.

Q. However, there is a rather limited number of natural gas pipe line companies for comparison that you have studied?

A. That is true, but, as I think I have stated in times past on the record, so far as I know, I have included all of the natural gas pipe line companies in the industry upon which investors' appraisals can be made, which would give you all of the coverage, even though the industry is small, that you could possibly produce.

Mr. Wheat: Just to make sure of what he is referring to, I wonder if I could ask this question: when you refer to these natural gas pipe line companies, you include all

of those that you used in making up the natural gas pipe line company portion of your Chart No. 10?

The Witness: Yes, that is correct. In other words, I say that all of the companies upon which an investors' appraisal of over-all risk of capital for all natural gas companies and natural gas pipe line companies, as contained in Chart No. 10 of Exhibit No. 253 and tables supporting such chart, to my knowledge, are all the companies in this industry upon which you can get an investor's appraisal or upon which there are figures available to make such calculations.

[fol. 10363] By Mr. Littman:

Q. When you speak of all the gas pipe line companies, you are speaking of all six of them, including Panhandle Eastern, aren't you?

A. That is true, there are six, but I am saying that those are all upon which figures are available for such calculations as I have described as investors' appraisal of over-all risk of capital.

Q. There is no way for you to include, for example, Natural Gas Pipe Line Company of America common stocks that you have testified as one of the most comparable pipe line companies to Panhandle Eastern?

A. That is true. If the various securities on the great bulk of securities contained in a company's capital structure are not held or a part of it held by the public so you can get a market quotation, then obviously it is not included in the study.

Q. Then naturally that had the effect of reducing the available number of companies for the purposes of your study down to five other than Panhandle Eastern?

A. Yes, that is correct.

Q. You couldn't include Colorado Interstate Company for that reason, could you?

A. For the same reason; that is correct.

Q. Now, you have stated that you have not made a [fol. 10364] study of the common stocks of these 153 stable industrial companies; is that correct?

A. Yes, that is correct.

Q. That, I take it, was simply because you didn't have sufficient time to make such a study?

A. That is correct. I was just able to get done, as you know, what I have here and very few copies of that.

Q. I understand you were very much pressed for time.

A. Yes, sir.

Q. But if you had had sufficient time, would you have made a study of the investors' appraisal of risks of the common stocks of these 153 stable industrial companies?

A. Yes, I would have, and beyond that, I think, if I had the time I would look at new issues over a period also to see how they were moving, such as I did in the case of Northern Natural on its September 10 offering.

Q. And such a study, to wit, study of the investors' appraisal of risks of common stocks of these 153 stable companies, would, in your opinion, be a pretty good guide to be used in determining the proper investors' appraisal of risk for natural gas pipe line company common stock?

A. Well, I wouldn't make a statement just like that, because, as I say, in the last analysis it seems that for the purpose of the main study; you still have to talk in terms of regulated industry, and, more particularly, in the divi- [fol. 10365] sion, the specific division that we are talking about, and what may be shown in 153 industrials is just additional information that may give a broader view, but I wouldn't want to get it any closer than that, by saying it would be the guide or a specific guide.

Q. But it would be a very helpful guide?

A. Well, I think it would certainly be an interesting figure. How much weight can be given to it, how much use can be made of it, I don't know. I would want to think that over and give some study to it.

Q. Well, it would be just as important, if not more so, would it not, than the investors' appraisal of risk of capital for these 153 stable industrial companies which you have shown in Chart No. 11 on an over-all basis, wouldn't it?

A. Well, it would carry the same weight, I would say, as this, but my point is that I haven't used the material in Chart No. 11 directly any place. It was just an additional item to have a look at, but when it got down to working out my actual results, as you know, I have confined my attention right along to the utility field, and,

more particularly, the natural gas division of the utility field.

* * * * * * * * * *

Redirect Examination

[fol. 10366] By Mr. Wheat:

* * * * * * * * * *

Q. Now, with respect to these questions that Mr. Littman has put to you which dealt with what he termed comparative stability, is it a fact or is it not that the investors' appraisal of natural gas pipe line company securities over all indicates that investors do not, as a matter of fact, appraise such securities of such companies, in general, as [fol. 10367] highly as they do those of the 153 stable industrial companies which you have studied?

* * * * * * * * * *

[fol. 10368] The Witness: Well, I still say that that question is confusing, because—appraised "as highly"—they actually appraise the gas companies more highly than they do the 153 industrials.

In other words the figures over all for gas companies are higher than the industrial companies.

By Mr. Wheat:

Q. That is the point I was asking you about. Would you say that if an investor demands a higher return from one company than he does another, that he appraises the one from which he demands a higher return as highly as he does the other?

That is the only point of my question.

A. Well, if you will let me answer it in my own language, perhaps I can get at it better.

Q. Yes.

A. The investor is saying, from these facts shown in charts Nos. 10 and 11, that so far as his investment and his requirements for securities in the natural gas companies and the natural gas pipe line companies, he demands more as an over-all return on capital than would be indicated that he was demanding on the 153 industrial companies.

Therefore, so far as my interpretation is concerned, the investor is saying that he believes there is more risk attaching to natural gas companies and natural gas pipe line companies than was the case in the 153 industrial [fol. 10369] companies.

Q. Mr. Coffman, looking at chart No. 10 covering those various divisions of utility industry which is there shown, does the same variance in investor appraisal clearly appear?

A. I think that the information shown in chart No. 10 of Exhibit 253 shows clearly that the investors confining their attention to the public utility industry have shown that water companies in their opinion were carrying a lesser risk than companies in the electric operating utility field, and those were less than the manufactured and mixed gas companies, and the latter in turn were less than all-natural gas companies, and the all-natural gas companies were less than the natural gas pipe line companies.

It seems to me that for a five-year period those figures indicate that conclusion pretty clearly.

Q. Mr. Coffman, Mr. Litzman questioned you yesterday about some possible adjustments in the investment figure shown on your chart No. 25 and 26, which were suggested in this record by Mr. Dunn of the Commission's staff. Let me just ask you this:

I think you stated, did you not, that any change in the $77,730,535 figure which might be made would affect your earnings required to maintain credit position by the same percentage that the latter figure bears to the invested [fol. 10370] capital figure?

A. Well, I recall that question, and I remember that my answer was rather long and perhaps somewhat involved.

But what I would like to get clear, so far as my own understanding of this matter is concerned, we are talking about two things:

In the first place, throughout Exhibit 65 and Exhibit 253 I have been taking the investor's point of view and have been using total invested capital per the books of the given company.

Now I say that unless it can be demonstrated that the book figures are in error, that the investors in the given company have placed in the company, or, by use of the assets they put in earnings, have accumulated or accumulated to a total of $77,830,535, and that is the amount that the investors believe they have invested in the business and is, therefore, the amount upon which they require a return.

Now, if we go over to a different consideration, namely, a rate base, and it is then found that some other figure than total invested capital may be determined, unless it can be shown that the total invested capital is actually not there so far as the securities outstanding are concerned, the investors will still require the $5,382,677 as shown in chart No. 26 which is a return upon the total invested capital of $77,830,535, irrespective of what the rate base may [fol. 10371] be, and I thought I had made my position clear by my last chart No. 46, in which, if the total invested capital represents what the investors have in this business, and the $5,382,677 is required to keep them in position to refinance or further finance this company, when it is needed, then you can select or determine any rate base you place, but you must allow a percent on such rate base as will give you $5,382,677.

Now, as I say, I don't recall just how I answered the question before, but I believe, in this answer, I have made my point of view clear, that I had hoped I had made clear before.

. . . . . .

[fol. 10372] Q. Mr. Coffman, if you will turn to your Chart No. 8 in Exhibit No. 253. Do you have that before you? A. Yes, I do.

Q. I think during the cross examination, Mr. Littman asked you to make a mathematical calculation of subtracting the $6,576,743 shown as net working capital on Chart No. 8 from the invested capital of this company. I think you made the mathematical calculation, didn't you?

A. Yes, I did.

Q. Do you consider that the reduction of invested capital by this net working capital figure involves a realistic

assumption of any sort in connection with the operations of this company and the investors' appraisal of its risks?

A. No, I do not because here again, in connection with the point I have already made, taking the investors' point of view, the total invested capital amounted to $77,830,535 as shown in Charts Nos. 25 and 26 in Exhibit No. 253 and that is as of February 28, 1942, the total invested capital, so that, as I think I have explained before, so far as my study is concerned, you cannot eliminate that because it actually exists.

[fol. 10373] Now, any assumption other than that, it seems to me, again is talking about this matter of the rate base, whatever the Commission may determine that to be as against the thing I am talking about, namely, the total invested capital. $6,576,743 actually exists. It is there. It is a live, tangible asset.

Q. Yes. Is there anything further you wish to say on that point?

A. Well, on that point, as far as the calculations were concerned that I made before, it then comes down to a question of managerial policy. If there is to be any reduction in working capital, in other words, the working capital can be used for a number of purposes and you cannot eliminate it, so far as my study is concerned from consideration unless you determine how it is to be used.

Q. You have shown one way in which it will be eliminated during the current year, haven't you?

A. Well, on the basis of the estimated plant expenditures, I have shown that provision has already been made for its use in the amount of $6,530,900.

Q. Well, if it were not used for that purpose, what other purposes fit within what you have mentioned just a moment ago as sound managerial policy?

A. Well, if it were determined by the management that the $6,576,743 of working capital were not needed for plant [fol. 10374] expenditures which development is now under way, then obviously, the management could use the working capital to reduce the debt which it would seem to me would be the procedure to follow in view of the fact that, of the total capital structure, the debt portion is the only portion in which trouble could develop in case there

was any default in meeting the serial note payments or in meeting maturities or interest payments on the bonds.

Therefore, if a portion or all of the working capital were going to be used, it would seem to me that any reduction thereof should be made on the basis that you were paying off your debt.

Q. What effect would that have on your minimum necessary earnings?

A. Well, I do not have the figure, but I can calculate it the same as I have made the other calculations.

Turning to table supporting Chart No. 26, it is shown therein that there are Serial Notes A, B, C and D coming in various maturities from November 1, 1942, to 1945, in the amount of $5,000,000 and first mortgage and trust lien A, in the amount of $6,250,000, maturing from 1946 to 1950 and, if I were to work out a schedule on those, taking the interest on the various items, I would find that, on the first series, there is 0.75 per cent—

Q. (Interposing) That is the serial notes?

[fol. 10375] A. Serial notes of the A, B, C and D group, carrying 0.75 per cent of interest; the next group one per cent; the next group 1.25 per cent; the next 1.50 per cent; and the next 1.65 per cent which would give you an average rate for the five pieces of debt of 1.25 per cent and, if you applied that to a figure of $6,250,000 which consumes most of the net working capital as existent on February 28, 1942—

Q. (Interposing) You could retire some of the 3's or some of the preferred stock, if you wished, couldn't you?

A. Yes, you could do that but first applying it to the debt, and I will tell you why I think that is a more realistic approach.

The total reduction from the standpoint of requirements would then be $78,125 which should come off or be subtracted from the $5,382,677 of earnings requirements on the new total invested capital which would be $77,830,535 less $6,250,000 of working capital so used, giving a resultant total invested capital then left in the business of

$71,580,535 and, on that basis under that procedure, the earnings requirements then would be $5,304,552 in contrast to the figure I show in Chart No. 26 of $5,382,647.

Now, so far as the other bonds or the preferred stock is concerned, looking at it from the managerial point of view, it seems to me that to assume that working capital is not needed in the business, the only approach then you can take [fol. 10376] to its reduction is applying it against the most important maturities which are the near term maturities which are the very issues that I have just used because the longer term debt does not mature until 1960 and 1962 so that there is no immediate pressure in regard to those issues and, so far as the preferred stock is concerned, even though it carries a sinking fund, it nevertheless is still a preferred stock so far as dividend requirements are concerned. In other words, there is no possibility of default there such as you would have if you failed to meet any of the maturities in your serial notes so that, so far as I can see the proper approach, if any is to be made in regard to the reduction of working capital should, in soundness of managerial policy, follow the course of procedure I have outlined which, if it were followed, would give the results I have just stated is the record.

Q. I wish you would turn now to your Chart No. 45 for a moment. I think you have already stated, Mr. Coffman, that the three bars showing various assumptions of increasing gross and net operating revenue were taken at the points you took them merely because you took certain actual figures as shown on that chart from the history of this company? A. Yes, I did that.

Q. And I think you have already also stated that the illustration could just as well have been made by assuming [fol. 10377] various increases in gross of an even million, two million, three million, et cetera, dollars, is that correct?

A. That is correct.

Q. Now, Mr. Littman asked you some questions on Saturday as to whether or not the capital invested in this company would have to be increased in proportion to such increases in gross revenue in order to handle the business. Did you entirely complete your explanation of that situation when you answered him Saturday?

A. Well, I do not recall just the answer but the point I was trying to develop was, in the first place, in my study I did not make any consideration of increased plant that would be necessary for any increased gross revenue and for the reason that it seems to me that the consuming market at the point of consumption, in the last analysis, will determine such additions to plants as are necessary to take care of any expansion of service and that to me is a separate study. I gave no attention to that.

The only purpose I had in mind in showing the facts as shown on Chart No. 45 of Exhibit No. 253 was that if anything like the proposals made by Secretary of the Treasury, Mr. Morgenthau, should finally become the new tax law then there will be such reduction automatically by virtue of the increased tax rates in the net operating revenue as to reduce the figure for the twelve months ended February 28, 1942, for net operating revenue of $6,361,247 [fol. 10378] based upon the 1941 tax rates to a figure approximating $4,526,618. That figure, as I answered before, is less than the figure I call minimum necessary to maintain credit position of $5,382,677 as also shown on Chart No. 45 of Exhibit No. 253. It would seem that if the tax rates are to have the effect already mentioned, then one of two things must be true if the company is going to reach this figure I caption "Minimum necessary to maintain credit position" of $5,382,677. Those two things would be either an increase in gross revenue, taking into consideration new tax rates, an increase in gross revenue sufficient, after the new tax rates, to allow a net operating revenue figure equal to $5,382,677 or an increase in rates to help compensate for that difference or a combination of the two, namely, an increase in rates plus some increase in gross revenue and the only purpose of Chart No. 45 in this exhibit was to indicate that Treasury proposals and the law as it is finally developed are already having a marked effect upon this company to reduce its net operating revenue below the minimum necessary to maintain credit position and, therefore, some action either by way of management to increase gross revenue through development of further business or some rate adjustment—

Q. (Interposing) Upward?

A. (Continuing) upward or a combination of the two.

Now, I had no thought in mind as to what plant expenditures, in addition to what have already been made [fol. 10379] might be, because, as I see it, that figure will be determined solely by the consuming market in the territory served by this company and certainly the management would not add to plant to any greater extent than they thought they had a market developed to require such service.

Now, so far as any assumption that increases in gross revenue worked in direct proportion to increases in plant account, I have made no such contention. I have not studied the matter. I am merely showing that the influence of these taxes is such as to create a real problem for this and all other companies. I have not made the calculation for all other companies. I have made it specifically on the company in question.

. . . . . .

[fol. 10380] Recross Examination.

By Mr. Littman:

Q. Well, let's see how accurate it is. You have not told us anything about the capital additions, have you?

A. With the exception of the $6,500,000 approximately that was estimated for the ten months from February 28, 1942, to December 31, 1942, as shown in Chart No. 8 of Exhibit No. 253.

Q. With that exception, you have not portrayed the actualities of the situation with respect to capital additions that may be required to produce this additional gross revenue, have you?

A. No, I made that clear in my answer.

Q. Now, you know, don't you, that such capital additions as may be required to produce such gross revenue will immediately have an effect upon the calculation of the taxes, wouldn't they?

The Witness: May I have that question read, please?

(Whereupon, the pending question was read by the reporter.)

The Witness: Can we state that the other way around, that any increases in gross revenue will immediately have an effect upon the taxes?

By Mr. Littman:

Q. No, I am not talking about increases in gross revenue. I am talking about increases in your capital account. Doesn't the increase in your capital account change your [fol. 10381] taxes?

A. Well, so far as the revenue account is concerned, we are talking about the gross revenue and the excess profits and normal and surtaxes so you will have to develop your question a little further, it seems to me.

Q. We are talking about the extra allowance that the Treasury Department gives you by reason of your increased capital investment.

A. Assuming you use the invested capital credit as a basis for calculating taxes, is that right?

Q. Assuming you use either method, any method, as a matter of fact.

A. If you use the average earnings basis, I do not see that it has anything to do with it. You have got only two alternatives under the present revenue act and that is either to use your invested capital as a basis for taking your credit or else using the average earnings basis.

Mr. Wheat: You are speaking now of the excess profits tax laws, are you not?

The Witness: Yes, that is correct and also about normal and surtaxes.

By Mr. Littman:

Q. Is it your understanding, Mr. Coffman, that the Treasury Department makes no allowance for increased investment under the average earnings method? Is that your understanding of the tax laws?

[fol. 10382] A. No, that is not my present understanding but what I am saying is that, so far as any material difference is concerned, I believe it would come mostly on the basis, if you selected as your credit calculation the invested capital method, there will be some allowance, but I do not believe, although I have not made the calculations, that the amount of difference in tax would be so great.

Now, maybe I am wrong but I do not think I am.

Q. You have not made the calculations, have you?

A. No.

Q. How do you know whether you are right or wrong or how close to right or wrong you are?

A. From the calculations I have made heretofore in applying the various rates.

Q. Made where before?

A. That I have made in other connections which have given me some knowledge of how the tax actually works.

Q. Let's assume $6,000,000 of additional capital investment and tell us what the tax rate would be under the Morgenthau proposal?

A. I do not still get your point, Mr. Littman. Wherein will the calculations be any different than I have shown on page 3 of table supporting Chart No. 45 and on page 2 of table supporting Chart No. 45?

[fol. 10383] Q. Suppose you show us where on any of these tables you have given any credit by reason of capital additions. That will most certainly be required to produce this additional revenue and that will be required under your testimony.

The Witness: Will you read that question, please?

(Whereupon, the pending question was read by the reporter.)

The Witness: No, I have never said that I made any such allowance for capital additions. I answered that question very definitely in your last series of questions.

By Mr. Littman:

Q. But such an allowance would be made, wouldn't it, under the tax laws?

A. Yes, it would be but I think I answered your question on Saturday very directly and I believe the record will bear me out that I took these assumed increases in gross revenue without making any allowance for additional capital expenditures that might be necessary to create that additional gross revenue.

Q. Now, on your redirect examination, you made some references to Chart No. 26 on which is shown the invested capital as of February 28, 1942, in the amount of $77,830,535 and which also shows that the earnings required to maintain credit position, according to your testimony, amount to $5,382,677.

Now, I thought we understood each other at the conclusion of Saturday's session but the redirect examination, [fol. 10384] I am afraid, has confused me again. I would like to have you enlighten me whether this $5,382,677 figure would go down if the Commission were, for example, to find that there is a write-up on the company's books in the property accounts amounting to $1,100,000?

A. Yes, it would and that is not inconsistent with anything I have said here this morning, Mr. Littman, because, if you will recall, I said that if the $77,830,535 is an accurate figure, then that is what the investors have put into the business and would expect a return on.

Now, if there was a write-up in the books, then obviously they did not put in capital to that amount so we will make an adjustment and that will influence the figures downward. There is no inconsistency and I have not changed my statement at all.

Q. Now, your responses to some of Mr. Wheat's questions on redirect examination merely emphasized, did they not, what you believed [the] be the realistic approach, namely, for one, amortizing cash in the bank and giving a return on it provided it is reflected in invested capital, isn't that right?

A. Well, I would like to answer that a little differently than you put the question because amortization has a rather particular meaning and what I was trying to do, in answer to Mr. Wheat's question, was merely point out that if the $6,500,000, in round figures, of net working [fol. 10385] capital is to be nonexistent, we must then first find out how it is to be taken out of the total invested capital unless we could show that there was a write-up in exactly the same amount which had no justification then I can see that you would eliminate that amount.

Assuming for the moment that there is no inaccuracy in the total invested capital of $77,830,535 which includes the $6,500,000 of working capital, then I say that, from a managerial and sound business policy point of view, that the elimination or reduction of that working capital would be used to buy in the notes and early maturity bonds.

Q. Assuming that the excess working capital is paid out to the stockholders by way of dividends, then you would start reducing the earnings required from the top, namely, the 12 per cent capital rather than the bond capital, isn't that right?

A. I think I stated in my answer that, so far as sound business policy is concerned and a realistic point of view, you would first consider the funded debt because it has maturities and if they are not met or the interest on them is not met, you could be in default. It could be used for preferred stock purchase, for example, or it could be used for dividends on common stock but, if you are going to make such statements, I doubt very much whether the company could take 6½ million of dollars and distribute [fol. 10386] it as dividends, bringing its net working capital down to practically a negligible figure without having to encounter some difficulties from bond holders and preferred stockholders.

It just does not seem to me to be realistic to assume such basis. After all, there are $5,000,000 of maturities that are coming due in about the next 24 months and that is getting pretty close so it would seem to me, if you are going to use any of this working capital, you had better dispose of those things first.

Q. Mr. Coffman, suppose you tell me what happens when a company like Interstate Company, which has only common stock, suffers a reduction in over-all invested capital by reason of some of these matters that have been mentioned? Do you take it off the top or off the bottom or what is the effect?

Mr. Culton: We would like to know what is meant by "some of these matters"? The question is indefinite.

By Mr. Littman:

Q. Do you understand my question?

A. I think I understand what you are asking.

If you draw the distinction between companies that are financed by all common stock, there is no problem obviously, because common stock defines the entire capitalization so you have not any problem but, when you get to a company that has senior debt classified as to both bonds and

[fol. 10387] preferred stock, and particularly one that has near term maturities, you have got an entirely different situation.

Q. Mr. Coffman, I would like to have you turn to page 3 of section II of Exhibit No. 254 where you show a summary of your computations of investors' appraisal of risks of capital represented by the 153 stable industrial companies. Do you have that? A. Yes, I do.

Q. However, before discussing that page, I find that I have now located the chart in your Exhibit 253 which shows the working capital of the five natural gas companies.

A. What chart, please?

Q. Chart No. 42. A. Yes, I have that.

Q. Will you state from that chart the amount of net working capital of El Paso Natural Gas Company as of January 1, 1942? A. It is $8,781.

Q. Now, that is a solvent company, isn't it?

A. Yes, that is.

Q. Is it comparable to Panhandle Eastern?

A. Well, it is one pipe line company in the industry.

Q. Now, what is the comparable amount for Panhandle Eastern Pipe Line Company of net working capital? $6,000,000, isn't it?

[fol. 10388] A. It is $6,576,743 but, to get the comparable figure—well, it is half-way between December and February, so that is all right.

Q. It is close enough for our purposes? A. Yes.

Q. What was the net working capital of Northern Natural Gas Company as of December 31, 1941?

A. It had a deficit of working capital of $23,167.

Q. Less than nothing?

A. At that particular moment of time.

Q. And that is a solvent company, isn't it?

A. Yes, it is.

Q. Comparable to Panhandle Eastern?

A. It is another gas pipe line company in the industry.

Q. It is sufficiently comparable to be compared by you in these charts for purposes of determining and comparing investors' appraisals of risks?

A. Well, I think throughout I have drawn this distinction in regard to these companies.

I have said that an investor who was contemplating an investment in a given company in a given industry would look at the industry. I have done the same thing without saying that this company is exactly comparable or very nearly comparable or any other thing. I have just said I have gotten all of the companies in the industry upon [fol. 10389] which I could make a calculation.

Q. Now, I would like to have you refer again to page 3 of section II of Exhibit No. 254. Here you show the total indicated market value of capital with respect to these 153 stable industrial companies in total for each of the years 1937 to 1941, inclusive, do you not? A. Yes, I do.

Q. Now, what was the market value of the outstanding securities of these 153 stable industrial companies in 1937?

A. It was $22,692,237,000.

Q. Now, I note that for the year 1938, the amount is considerably less, isn't it, having gone down to $19,423,780,000. Is that correct? A. That is correct.

Q. Now, will you state the indicated market value of the capital in these 153 stable industrial companies for the year 1940? A. It was $19,871,449,000.

Q. Now, how much, in total, did the market value of those securities go down between 1937 and 1940? Give me the difference between the two figures.

A. It went down $2,820,788,000.

Q. Now, if one investor owned all of these securities and had purchased these securities in 1937 at the market value [fol. 10390] shown, then he would have lost, in market value, the amount of $2,820,788,000 had he held on to those stocks during those years?

A. Well, we would say that he had an indicated paper loss.

Q. Well, he would deduct it from his income tax, wouldn't he?

A. No, not unless he sold them, he wouldn't. He would like to.

Q. If he sold them in 1940, he would suffer that loss?

A. Yes, then he could take them or deduct them as a capital loss.

Q. What were the earnings available for capital, according to your chart, for the year 1937—withdraw that—what were the earnings available for capital during these same four year, 1937 to 1940?

A. For each year, you mean?

Q. No, I mean the total.

A. Well, for each of the years or just 1937 and 1940?

Q. Through—

A. (Interposing) All right. In 1937, the earnings available for capital amounted to $1,550,677,000; in 1938, $1,011,742,000; in 1939, $1,315,905,000; 1940, $1,418,677,000 and, in 1941—

Q. (Interposing) We are not going to include 1941 for [fol. 10391] our purposes here.

The total for the four years is $5,297,001,000 of earnings during those four years?

A. The total for the four years 1937-1940, both inclusive, of earnings available for capital was $5,297,001,000.

Q. Now, when you made your study of the earnings-price ratios of the securities of these companies as summarized in your Chart No. 11 of Exhibit No. 253, you did not take into account the loss in market value over this period of $2,820,788,000, did you?

A. Well, I do not quite follow that. I took the total indicated market value for each year and the total earnings available for capital for each year so that you have the relationship of earnings to price, whatever the price was, or, put it the other way around, earnings to indicated market value, whatever it was.

Q. What we are trying to get at here, Mr. Coffman, is the true earnings over this period, taking into the reckoning the loss by the investors over the four-year period in market value of $2,820,788,000. You have not made any calculation, have you, that reflects any such loss in market value?

A. I have not made any accumulated total for a four- or five-year period, no, but in Chart No. 11 of Exhibit No. 253, the section captioned, "Investors' Appraisal of Risks of Capital" is as shown for each of the years which is the [fol. 10392] relationship of the earnings available for capital to the indicated market value of capital.

Mr. Wheat: During those respective years?

The Witness: During those respective years.

By Mr. Littman:

Q. I know that is what you did. Now, suppose you deduct the $2,820,788,000 of loss in market value for the four years from the earnings for those four years of $5,297,001,000 and state the amount of the difference?

A. The difference would be $2,476,213,000.

Q. Now, that is slightly more than 10 per cent earnings over the four years on the original market value in 1937, is that right?

A. Well, yes, it would be over 10 per cent.

Q. Just a little over 10 per cent?

A. Well, it would be something over 10 per cent. I mean it is the relation of $2,476,000,000 to $44,692,000,000, so it is obvious that it is more than 10 per cent.

Q. With an indicated earnings of approximately 2½ per cent per year on the basis of the original market value in 1937, is that right?

A. That is the correct arithmetic.

. . . . . .

[fol. 10394] By Mr. Littman:

Q. It is apparent, Mr. Coffman, that the investor, even in these 153 stable industrial companies, has been taking it on the chin for the past four years, hasn't he, in so far as the market value of the securities is concerned, at least to [fol. 10395] the tune of $2,820,788,000?

A. The best indication, in my opinion, of what is happening is exactly as shown in Chart No. 11, if you will look at the indicated years, and that shows that the investors' appraisal of risks of capital has gone up so, in 1941, it was approximately 8 per cent.

Q. And one of the elements that brought this swing upward was the reduction in the market value of these securities, wasn't it?

A. You said one of the elements, did you?

Q. Yes, one of the elements.

A. That is correct. That was one of the elements. Another element, however, was that earnings showed a proportionately less decrease.

Q. There are two elements. I named one and you named the other?

A. That is correct. It takes the two of them to get at the result.

Q. Kind of fifty-fifty?

A. I do not know about the fifty-fifty but there are two elements.

. . . . . .

[fol. 10399]

P. McDONALD BIDDISON a witness, having been previously sworn, resumed the stand and testified further as follows:

. . . . . .

Recross Examination.

By Mr. Littman:

Q. Mr. Biddison, will you please turn to page 3 of Exhibit No. 251? I call your attention to lines 8, 9 and 10, which deal with the allocation of Account 759.112 under "Transmission Expenses-Operation", entitled, "Measuring and Regulating Stations Labor". This exhibit shows the pro forma consolidated expenses for 1941 adjusted for the full year's costs in Column B before allocation to be $60,230.64. Am I correct in understanding that your basis of allocation in this particular account is stated in Column C as follows:

"Expenses of equipment used exclusively for non-regulated sales allocated thereto and balance allocated to regulated sales".

[fol. 10400] Will you explain the meaning of that and tell us how those ratios were obtained?

A. The meaning of that is that since there [as] some of those stations which are used exclusively for the measurement of sales which are not subject to regulation, that the expense for measurement and regulating station labor attributable to those stations is to be allocated to non-regulated sales.

. . . . . .

Q. Briefly, how did you make your determination or segregation of the expenses of equipment which you claim are used exclusively for non-regulated sales?

A. Mr. Littman, I did not make it. I gave the directions under which the allocation was to be made. As has

been repeatedly explained, the work was done by Mr. Spacek.

Q. You gave him no further instructions with respect to this particular account than those which are set forth in Column C which I read, is that a correct statement?

A. No, sir, that is not a correct statement. He was furnished with a copy of my letter of April 8, 1942, which has been incorporated into the record in this case and, in connection with the testimony of Mr. Spacek, the instructions in my letter of April 8, 1942, embody completely and wholly all the instructions which I gave to Mr. Spacek. [fol. 10401] Those instructions are condensed in Column C of Exhibit No. 251.

. . . . . .

Q. Do you know what particular equipment is used exclusively for non-regulated sales or would that also be found in Mr. Spacek's working papers?

A. I know, in general, what it is but specifically, I couldn't enumerate it but the details of it are set out in Mr. Spacek's working papers.

Q. Suppose you state generally, then, your understanding of the particular equipment used exclusively for non regulated sales?

A. Now, the items we are referring to at lines 8, 9 and 10 on page 3 of Exhibit No. 251 relate to measuring and regulating station labor. The portion which I have instructed in my letter of April 8 to be assigned to be non regulated sales is that portion of measuring and regulating station labor required in the operation of the measuring and regulating stations used exclusively for servicing of non regulated sales. The customers to whom non regulated sales are made are listed in my letter of April 8. [fol. 10402] Q. Is it correct to say, generally, that the expenses that were allocated to non-regulated sales in connection with this account was the labor with respect to measuring and regulating the gas when it left the main line and was carried exclusively to the direct industrials. Is that a correct statement?

A. Well, it measures and regulates it upon delivery to these customers.

. . . . . .

Q. In other words, you did not intend to include any of the expenses of this character incurred in connection with measuring and regulating the gas during its flow from the well through the field lines and gathering lines and main lines until the point was reached where it was devoted exclusively to industrial sale?

A. No, sir, I did not. That is a very small fraction of total regulating and measuring station labor.

* * * * * * * * * * *

[fol. 10403] Q. Whatever the percentage is, you did not make any allocation during that part of the flow, did you?

A. No, sir, I did not.

Q. Now, you used the same description, to-wit, "Expenses of Equipment used exclusively for Non-Regulated Sales allocated thereto and the balance allocated to regulated sales", on page 3 of Exhibit No. 251 in connection with a number of other accounts, to wit, Account No. 759.122, "Measuring and Regulation Station Supplies and Expenses"; Account No. 761.2 "Measuring and Regulating Station Structures"; Account No. 762.22, "Measuring and Regulating Station Equipment."

Have I named all of the rest of the accounts on that pages that were allocated on the same basis?

A. Yes, sir.

Q. And your responses to my questions would apply equally to those accounts, would they not? A. Yes, sir.

Q. Now, let's look at page 5 of Exhibit No. 251—well, just a minute, before doing that, before leaving page 3, I call your attention to line 3, Account No. 758, "Supervision and Engineering". You have recommended that the basis of allocation be as follows, as shown in Column C, "Composite Percentages of Total Other Transmission Expenses as Allocated", have you not?

[fol. 10404] A. Yes, sir, that is correct, and that means that is to be allocated in the proportions that are found in line 33 after the items preceding that line in transmission expenses have been allocated.

Q. Now, the allocation of that particular account reflects the allocations of the other accounts under transmission expenses, does it not?

A. That is what I tried to say just previous to your question.

Q. And, therefore, of course reflects the same method which you have described with respect to these last three or four accounts we have discussed, it naturally follows, does it not?

A. As to the proportion assignable to them, yes.

Q. Yes. Now, will you please turn to page 5. In line 5 there is a very large expense account under the heading, "Depreciation, including amortization other physical depreciable property", in the amount before allocation of $2,238,589.81. Now, as is shown by this exhibit, you did not allocate any of that depreciation expense to the unregulated sales, did you?

A. Not of that particular figure but I have allocated some of the depreciation expense against non-regulated sales.

Q. Well, that, of course, appears in other lines, but I am talking about line 5, "Other physical depreciable [fol. 10405] property" in the amount of $2,238,589.81.

A. I directed that that be allocated to regulated sales as shown in Column C and it has been so done.

Q. Yes.

A. Now, I would like to point out, Mr. Littman, that what I have directed to be done in this Exhibit No. 251 is to allocate costs between two classes of business. I have done that because, in the Colorado case, that is, involving the three companies, the Commission, in substance, stated that it should be done and criticized some of the companies in that proceeding because they had not made an allocation of costs.

Now, all Exhibit No. 251 purports to be is an allocation of costs. It does not purport to be the final solution of this matter of the relative charges between the two classes of business but it is the allocation of costs which is a prelude to that determination and I think requisite for that determination.

Q. Well, Exhibit No. 251 reflects the manner in which you, in your opinion, believe the allocation of costs should be made, doesn't it?

A. Yes, when you go to allocating costs and that is all this purports to do, is to allocate the costs. I think there is another step necessary after you have allocated the costs. I have not carried out the other step but it is a [fol. 10406] matter of business judgment as to how much of profits of the one class of business ought to be paid to the other class, as a matter of fairness and equity, in business judgment.

Q. Let me see if I understand your last answer. Are you now referring to the allocation of return?

A. If you take some of the profits from the non-regulated business and credit to the costs of the other business considered as a rental charge for the privilege of using the facilities, you can consider that it has contributed to return and to depreciation.

Q. I am sorry. I do not quite follow what you have in mind, Mr. Biddison. Maybe if you would explain that in a little different way I might understand you better.

A. On page 1 of Exhibit No. 254 it is shown that before the modification from proposed new income tax rates at line 42, there is available from these non-regulated sales $651,766.70. Before the income tax of $349,062.28, there was available for income tax and return a little over $1,000,828.98. I think it would be entirely fair and just, in line with what Mr. Goodman commented last week, that some portion of that little over a million dollars should be made a charge against the non-regulated business and substantially paid to the regulated business as a fee for the privilege of using the equipment through which delivery of this non-regulated business is effected. In [fol. 10407] other words, I think you should first find out how much this non-regulated business is costing and then make some division of the profits from it.

Now, what that division should be, I think is a matter of business judgment but, in fairness, I think there ought to be some division of it in spite of the fact that the language in the Colorado case does not indicate that to be the view of the Commission.

Trial Examiner: What language is that?

The Witness: You will find that language in the decision with reference to the Colorado-Wyoming case, Mr. Examiner. I do not find this decision an easy one to understand.

Mr. Culton: You understand that the method which you have just described would be an allocation of return as return is understood by you?

The Witness: It would be an allocation of return and of depreciation.

. . . . . .

The Witness: In a rate case, I understand the earnings on rate base.

. . . . . .

Mr. Culton: (Interposing) That is the Opinion of the [fol. 10408] Commission?

The Witness: Of Opinion No. 73 involving Canadian River Gas Company, Colorado Interstate Gas Company and Colorado-Wyoming Gas Company, page 59 with reference to the Colorado-Wyoming Gas Company, it appears that the Commission's staff had prepared an allocation which the Commission did not adopt with respect to this particular company. The Commission stated and I quote:

"The Colorado Portland Cement Company, the principal main line industrial user, is curtailed regularly during system peak days. Its demand on the system peak day is, in our opinion, a proper measure of its proportionate share of demand costs than its highest off peak demand."

I judge there is a word omitted there and I think it probably should have read, "a more proper measure."

Now, I gather from that, if it does not create demand on the peak day, it does not bear any proportion of demand charges.

Mr. Culton: That is, on the Commission's method?

The Witness: Yes, sir.

Now, it is indicated in that opinion that there were some other considerations and some other principles involved in connection with the situation on the Colorado Interstate Gas Company but I do not know whether the Commission has told us, in that opinion, what they did do [fol. 10409] in the premises and I do not know from the tabulations they show whether they did what they said they did or not. I cannot tell.

I should like to add in explanation of what I have previously said that when you make some division of this $1,000,828.98 available for income tax and earnings on the unregulated business, that that necessarily involves a reallocation of income tax between the two classes of business.

By Mr. Littman:

Q. Referring again to page 5 of Exhibit No. 251, is it true that these expenses of $2,238,589 shown in line 5 include the expense for depreciating company's wells?

A. I think not. That is taken care of in the charges for depletion, wells and leases.

Q. Is it your testimony that the depreciation applicable to wells should be allocated, in part, to the non-regulated sales? A. Yes.

Q. Mr. Spacek is not here but I am going to ask you whether you could make a further check for us during the coming recess and tell us for certain whether the depreciation on the gas wells is included in this $2,238,589 figure or not? Do you have sufficient information here to make a check on that?

A. I am not sure whether I have or not. I will try it, though.

Q. Very well.

[fol. 10410] A. You see, these figures are not my compilation but I think maybe I can get a check on that anyway.

Q. We have all of Mr. Watkins' exhibits here and perhaps, during the next recess, we can make sure of the facts.

What is your understanding as to well lines. Did you recommend that the depreciation applicable to the well

lines should or should not be allocated to non-regulated sales, in part?

A. I recommend that it be not allocated, in part, to non-regulated sales.

Q. Now, those well lines, of course, carry the gas that eventually reaches the direct industrials as well as the gas that reaches the regulated sales, don't they?

A. Yes, sir, they do. In that respect, they are like the main lines.

Q. Now, gathering lines fall in the same category, I take it? A. That is right.

Q. And I think it is abundantly clear now, in the record, that you have not allocated or you have not recommended that there be allocated, to the non-regulated sales any portion of the depreciation expense of main lines. Is that right? A. That is correct.

Mr. Culton: That is if the allocation is based on cost?

The Witness: That is correct and that is all I am allo- [fol. 10411] cating here, is cost.

By Mr. Littman:

Q. Now, naturally those mains carry all of the non-regulated gas as well as all of the regulated gas, do they not? A. Certainly, certainly.

Q. And, as a matter of fact, don't they carry the non-regulated gas on peak days to a certain extent?

A. There is no capacity provided in Panhandle Eastern's system for the carrying of any of these non-regulated sales and there has been no capacity available for them above the requirements for regulated sales, requirements and commitments.

Q. Isn't it a fact that on the peak day of the past winter, 1941-1942 winter, as well as on the peak days of previous winters, these main lines have, in fact, carried unregulated gas?

A. During January, 1942, the Panhandle Eastern system experienced its greatest peak day. The system has a capacity with 500 pounds maintained at the outlet of compressor stations of substantially 250 million cubic feet per day available for sales.

On January 7, 1942, the maximum sale in the history of Panhandle Eastern was experienced in the amount of about 254 million cubic feet. On this day, the input for sale was a little bit less than the 250 million cubic feet of capacity and the 500 pounds discharge pressure at com- [fol. 10412] pressor stations was not quite maintained. Sales to the direct industries were curtailed so that, upon this day, out of a total requirement for direct industrial sales including the Anchor-Hocking plant in Indiana of about 25 million cubic feet, slightly under 9 million feet was delivered, the figure for delivery was 9,860,000. As against this actual delivery on that peak day, there was a curtailment of non direct sales to interruptible consumers of 4,242,000 cubic feet; approximately 10 million cubic feet was taken out of line storage, an amount greater than the delivery to direct industrial consumers and the Detroit market curtailed its use below the 125 million cubic feet which Panhandle Eastern is obligated by contract to devote to their service, which is substantially the amount of their previous peak takings by 15 million feet, substantially—

Mr. Chamberlain: (Interposing) May I ask right there this question— You say that that was their previous peak, 125 million?

Mr. Culton: Previous peak take, I think he said.

Mr. Chamberlain: Yes, I thought he said that.

The Witness: On March 18, 1941, Detroit took, in therms, 1,273,888 therms of gas having a heat value on that day of 1,016 B.t.u.'s and that is the equivalent of just a trifle over 125 million cubic feet.

On the succeeding day—

[fol. 10413] Mr. Culton: (Interposing) That is, the January date?

The Witness: January 9 or, specifically, on January 8.

Mr. Wheat: 1942?

The Witness: 1942, there was served to direct sales, 7,619,000 M.c.f.'s. There was curtailment of indirect sales

to interruptible customers, 6,590,000 feet; an additional 5,000 feet was taken out of storage and Detroit again, upon that date, failed by about 15 million cubic feet to take the 125 million which Panhandle is obligated to place at their disposal.

Mr. Lee: May I interrupt you there, Mr. Witness, pardon me. When you say "Detroit failed to take the amount allowed under the contract," you do not infer that there was anything in the contract that allowed them to take that lesser amount, do you, or that prohibited them from taking that lesser amount?

Mr. Culton: No, he is just talking about required capacity, Mr. Lee.

Mr. Lee: I understand but the language he used failed to state that and I thought it might leave a different inference in the record.

Mr. Culton: I think, as a matter of fact, the company needed far more gas on those particular days and they exercised their rights under the contract to manufacture gas.

Mr. Lee: That is all I want to bring out, the fact that the word "failure" does not raise any issue—

[fol. 10414] Mr. Culton: (Interposing) By "company," of course I mean Michigan Consolidated.

Mr. Lee: Yes.

The Witness: No, I mean merely they were exercising their own judgment.

Mr. Lee: And their contractual rights?

The Witness: Yes, they did not take the amount of gas which, under those same contracts, Panhandle Eastern is obligated to have available for them.

Trial Examiner: Well, if they had taken the amount that they were entitled to take, could you have served Anchor Hocking and other industrials those days?

The Witness: No, sir, if they had taken the 15 million additional which they could have taken under their contract and which Panhandle Eastern is obligated to furnish, if

they desired it, that 15 million itself would have exceeded on the 7th, by about 6 million feet the amount that was delivered to the direct interruptible business and, on the 8th, that 15 million exceeds by about 7,400,000 the amount which was delivered to the direct interruptible business.

Now, taking the curtailment of the indirect interruptible customers on these two days, the amounts taken out of storage on these two days and the amount by which Detroit's use failed to reach the contractual obligations, we have 20,282,000 on January 7 and 18,971,000 on Janu- [fol. 10415] ary 8 by which Panhandle Eastern Pipe Line Company lacked any capacity for service to direct industrial customers.

Mr. Lee: May I ask another question, if you will pardon me for breaking in here but just to clarify this, is that last type of gas that you just spoke of, that last type of customers, rather, is that what is characterized as "dump" gas?

The Witness: No, Mr. Lee, that is not quite what you would call "dump" gas. I do not think Panhandle Eastern has any sales that you can truly call "dump" gas sales.

Mr. Lee: Isn't it true that the type of customers that you last mentioned there and the gas sold to them is gas that primarily is sold to other customers and sold to these customers last mentioned when the other customers fail to take their requirements under their contracts?

Mr. Culton: Suppose you give your own definition of interruptible gas. I think you are both looking at it along the same lines but I think the witness looks at it from an engineering viewpoint and you look at it from a lawyer's viewpoint.

The Witness: There are two classes of gas we are discussing here and it so happens, in this particular instance, the two classifications fit identically the same customers.

Gas is sold directly to the customer by Panhandle Eastern. It does not go through any intermediary. In that [fol. 10416] sense, it is a direct sale. All those contracts are on an interruptible bases, that is, whenever the ca-

pacity of the system is not such that gas can be made available to these customers, service to them is curtailed.

* * * * * * *

The Witness: It is a secondary service.

Mr. Lee: That is what I am getting at and that being true, let's take the reverse of the situation you are stating here. As I understand you, you are stating the situation where, because of the fact that the Detroit company, Michigan Consolidated Gas Company, did not take the maximum it was entitled to take under the contract, that you, therefore, had an excess of gas or you had 15 million cubic feet of gas which you could sell elsewhere.

Now, let's take the reverse of that. If the Detroit company had taken all they were entitled to take, you would not have had that gas to sell elsewere, would you?

The Witness: No, sir, and they would have to cut off 17 million feet additional on the 7th of January and nearly 19 million on the 8th.

Mr. Lee: So there is nothing contractually wrong with the Detroit company and it is always contemplated that the contractual customers shall have first call and these customers' contracts you are discussing now will be filled if and when the first call allows them to be filled, is that correct?

[fol. 19417] The Witness: That is correct.

By Mr. Littman:

Q. Would you say, Mr. Biddison, in view of your testimony thus far given that the direct industrial business of Panhandle Eastern is, in reality, a by-product of its main business, to-wit, its regulated business?

A. No, I do not think it is in any sense a by-product. It is a corrolary business but I do not think it is a by-product business.

Mr. Culton: It is more an incremental business, is it not?

The Witness: Yes.

By Mr. Littman:

Q. You have proceeded in your recommendation of allocation, have you on an incremental basis?

A. No, not entirely so, Mr. Littman.

Q. Well, is it something which fairly closely approximates the result that would be obtained by allocating the unregulated business on an incremental basis?

A. I do not know how closely it would approximate it, Mr. Littman. I did not attempt to do it in that fashion and, if you approached it in that fashion, I do not know how much different your answer would be when you got through. I did not think of it in that fashion when I gave the instructions.

Q. Well, if you had allocated on an incremental basis, you would not have allocated any part of the main line ex-
[fol. 10418] pense to the unregulated business as you have done here. I mean, you do the same thing there as you have done here.

A. I think I would allocate some of that transmission expense even if I approached it on an incremental basis. I do not believe, though, if I approached it on an incremental basis I would have as much cost assigned to this non-regulated sales as I do have as a result of Exhibit No. 251 but, not having gone into it, I cannot say how much different it might be.

Trial Examiner: I suppose counsel for the company will agree that, unless the Commission should determine that the Panhandle Eastern Pipe Line Company is making present earnings in excess of a fair return, that any allocation such as is contemplated by Exhibit No. 251 would be of no effect?

Mr. Culton: That is right.

Mr. Wheat: We would take it, Mr. Examiner, that it would be an entirely moot point and that the entire business problem, as between these customers, would be something to be handled by management.

By Mr. Littman:

Q. Well, let's look at line 8 of page 5 where you show the ad valorem taxes before allocation in the amount of $633,270.40 or perhaps I should say where that amount

is shown. Am I correct in understanding that it was your recommendation, as reflected here, that none of these [fol. 10419] ad valorem taxes applicable to any of the property other than that property which is used exclusively for non-regulated sales should be allocated to the non-regulated sales?

A. That is right. I think it so states in Column C.

Q. Now, aren't ad valorem taxes paid on wells and certain other production system property which property produces the gas which is sold to the unregulated market, as well as the gas which is sold to the regulated market?

A. There are production taxes in the nature of severance taxes which, in general, in producing fields have replaced the ad valorem taxes on property of that nature. As to the specific build up of this $6,270.40, if there be any of that which is a tax on wells, that portion should be allocated back against production property before making the allocation as between regulated and non-regulated sales.

Q. Don't you know whether any of these ad valorem taxes were actually levied against the wells?

A. No, I do not at this time.

Mr. Culton: You would have to know how many wells were needed to handle the interruptible over and above what was needed to handle the firm, wouldn't you?

The Witness: No, Mr. Culton. Whatever taxes were on these wells should be allocated against production property and then split between regulated and non-regulated business in a proportion that the quantities of sales bore to the total.

[fol. 10420] By Mr. Littman:

Q. In other words, it would be done on an M.c.f. sales basis as you allocated it on page 2, is that right, generally?

A. Yes, that portion of it would be so allocated.

* * * * * * * *

Trial Examiner: What is the total volume of non-regulated sales by percentage, Mr. Biddison, roughly?

The Witness: That is shown on page 1. The regulated sales constitute 86.8 per cent of the volume and the non-regulated sales 13.2 per cent of the volume.

Trial Examiner: You said early in your testimony, as I recall it, that there were various methods of allocation to deal with the factor that you have treated in Exhibit No. 251. Is that correct? I think you said that various experts might consider the problem and, by a different process, arrive at approximately the result that you had shown in Exhibit No. 251.

The Witness: Yes, I believe I stated I thought they could go through some variation in detail and get approximately the same result.

Trial Examiner: If you are selling 14 per cent of your output to a market that is not subject to the regulation of the Commission under the Natural Gas Act. How would [fol. 10421] it be to charge 14 per cent of the total capital investment in operating costs to that class of business?

The Witness: Well, in general, Mr. Examiner, the result of that would be that the natural gas pipe line companies would cease the sale of gas on these interruptible contracts which, in general, bring comparatively low prices and their earnings would thereby be reduced and there would be no profit from that business to use as a credit against the cost of transacting the regulated business. That would be the general trend of it.

Mr. Culton: Suppose these direct sales were firm sales? Then would there be a greater reason for allocation? Instead of the sales being interruptible sales, suppose a considerable portion of the sales were direct sales and on a parity with sales for resale?

The Witness: If they were firm sales, there would be, I think, just as much reason for an allocation of the cost also. You would not have the same costs if they were firm sales. Neither would you have the same low price, if they were firm sales.

Mr. Lee: Aren't they, to all intents and purposes which they are characterized as interruptible, in effect, firm sales?

The Witness: No, they are not and they have been interrupted.

[fol. 10422] Trial Examiner: You are talking about the Panhandle system, of course?

Mr. Lee: That is right.

Trial Examiner: Are you familiar with the iron works at Pueblo served by the Canadian River line?

The Witness: With which?

Trial Examiner: The Colorado Fuel & Iron Company works at Pueblo, Colorado?

The Witness: No, sir, I am not familiar with them, Mr. Examiner.

Trial Examiner: You probably noticed in Opinion No. 73 that more than half of the gas distributed by the Colorado Company goes to the Colorado Fuel & Iron Company, did you not?

The Witness: I noticed that a very large percentage was distributed so. I do not remember the percentage but I know it was a large percentage.

Trial Examiner: And you probably noticed also in the Opinion that the statement was made that a prerequisite to the construction of the line was a firm contract with the Colorado Fuel & Iron Company and with the Public Service Company of Colorado?

The Witness: Yes, sir, and I am also impressed with the fact that that pipe line has some capacity in it now and always has had that is useful for no other purpose than the delivery of gas to that customer.

[fol. 10423] Trial Examiner: And that that line specifically is a 16-inch main, going directly to the Fuel & Iron Company plant?

The Witness: I do not recall the size of the main going to their plant but, in the main line of the Colorado Interstate Company, it is my impression from what I have read of the record and what I have known of their

operations, they have capacity in their main line system for the delivery of gas on peak days to that customer.

Trial Examiner: So you recognize the broad distinction between the circumstances of the Panhandle system and the Canadian system?

The Witness: Yes because, in the Colorado Interstate system, their capacity is provided for that customer, not for his entire requirement but for at least a portion of it. In the Panhandle system, no capacity is provided. In the Panhandle system, no capacity was contemplated. In the Colorado system, capacity was contemplated and was provided.

Now, the Panhandle system, in that respect, is comparable, as I understand the case, to the Colorado Wyoming system. In the Colorado-Wyoming system, it is their practice to cut off that direct industrial sale and the Opinion recites the fact that they do it. That is the practice of Panhandle Eastern.

[fol. 10424] By Mr. Littman:

Q. Mr. Biddison, are you prepared now to give us the requested information with respect to the depreciation on wells and the ad valorem taxes on wells?

A. Yes. During the recess, I have refreshed my memory as to how this matter was handled and while the amount of depreciation, at line 5 on page 5 of Exhibit No. 251 includes the depreciation upon wells, I directed it to be applied entirely to regulated sales because, like the main lines of this company, the requirements for wells are fixed by the demand of the regulated business.

Now, as to the item of ad valorem taxes at line 8 on page 5 in the amount of $633,270.40, while there are included in that item some small amounts of taxes that might well be allocated upon a different basis, the investi-
[fol. 10425] gation that I made at the time these instructions were given indicated that the amounts of such taxes were trivial and that for a compilation of this sort, since exactness was not obtainable in any event, that substantial justice would be done by the application of the formula shown in Column C.

Q. Is my understanding of your answer correct, that you feel that the depreciation expense of wells is applicable entirely to regulated sales?

A. Yes, sir. The number of wells and, therefore, the value of wells and, therefore, the amount of depreciation on wells, is fixed by the peak day requirements. The peak day requirements are fixed by sales for resale which are the regulated sales.

Q. Aren't those wells used to furnish gas to the unregulated customers?

A. Yes, sir, those same wells furnish gas for unregulated customers. The same well lines transport gas for the unregulated customers. The same gathering lines transport gas for the unregulated customers. The same main line transports gas for the unregulated customers. The same field measuring stations measure the gas for both classes of customers. The same compressor stations handle gas for both classes of customers.

Q. It kind of looks like the non-regulated gas is getting a free ride all the way from the bottom of the well to [Col. 10426] the lateral line used to serve them exclusively, doesn't it?

Trial Examiner: In the preparation of your Exhibit No. 231, I suppose you bore in mind the Commission's distinction between fixed costs and variable costs?

The Witness: No, Mr. Examiner, I did not classify precisely on that basis. In this Opinion No. 73, the Commission spoke of classifying those costs which were variable costs as being commodity costs and those costs which were reasonable stable in amount, that is not variable, as being demand costs.

Now, I recognize that that is a common method by which to fix a schedule of rates. I differ from that scheme in the allocation of costs in some of the details because I know from experience that some costs which are variable are still attributable to demand and some costs which are not variable are still attributable to commodity so while the use of the two classifications of costs as between fixed and variable, may be right and proper in the design of a rate structure, it may fail to do justice in an allocation of costs because fixed costs are not necessarily all demand

costs and variable costs are not necessarily commodity costs.

By Mr. Littman:

Q. Mr. Biddison, is my understanding correct that what you have undertaken to do with respect to this allocation study is to submit your interpretation of the Commission's [fol. 10427] Opinion in the Canadian River case and apply it to the facts here in this proceeding?

A. That is pretty close to it, Mr. Littman.

Q. Well, suppose you restate it.

A. But I have to acknowledge that I cannot thoroughly understand the Commission's procedure in that Opinion No. 73. I have followed that Opinion, as I interpret it, as far as I think it be right and proper to follow it but I make the distinction between the two methods of allocating these costs as to whether they are fixed or variable. I did not try to follow the line of reasoning. If I thought an item of cost was attributable to the amount of gas produced and transported, I assigned it to that regardless of whether it was fixed or variable. If I thought an item of cost was attributable to the provision for capacity, the provision for peak load requirement, I allocated that to that division of cost, regardless of whether it was a fixed amount or a variable amount.

Q. Is this the kind of allocation study that you would have made had you been instructed or requested to make an allocation study which reflects your own views rather than one which undertakes to interpret the views of this Commission as reflected in the Canadian River case?

A. It is made to reflect my own views. It is prompted by the fact that in that case the lack of such an allocation [fol. 10428] was a matter of criticism.

It does, in general, with the exceptions I have named, follow my interpretation of that Opinion.

Q. Now, you mentioned something a while ago about a step which you think, in all fairness, should be taken beyond those that are shown in Exhibit No. 251.

Now, is my understanding of your testimony in that regard correct that this allocation, as reflected in Exhibit No. 251, has the effect of assigning too much cost to the

non-regulated sales and that, before the matter be closed, there should be a credit back to the regulated sales of a portion of the profit on the non-regulated sales? Do you get what I have in mind, Mr. Biddison?

A. I think I get what you have in mind.

Q. Suppose you state it in your own language.

A. But I would prefer my own expression on the situation to your wording of it.

Q. Very well.

A. In this allocation, the non-regulated business has the use of certain facilities of the company without any charge being made against that business for such use.

Q. That is, such is the effect of the study reflected in Exhibit No. 254? A. That is correct.

Mr. Culton: That is because there is no cost for it?

[fol. 10429] The Witness: That is right. That is because they have not caused any costs for such use. Now, I think there should be a charge of some sort made against that non-regulated business for the use of that property. There should be a charge made in addition to the costs which it has caused.

By Mr. Littman:

Q. In addition to the costs shown in Exhibit No. 254?

A. Yes.

Now, it is my idea in that connection that the place to start in handling that matter is to go back to page 1 of Exhibit No. 254 and, taking the net operating revenues at line 42, add back the $349,062.28 of Federal income taxes.

Q. (Interposing) And the Federal excess profits?

A. (Continuing) and the related taxes which will give you a sum of $1,000,828.98, available for tax and return or tax and earnings. Then, on some fair basis—

Mr. Culton: (Interposing) Is there any engineering basis for a division, from an engineering standpoint?

The Witness: Not as an engineering matter, I do not know of any basis. As a business matter, I think there are ways in which it could be fairly decided. I think it requires some judgment based upon business experience to

make a fair allocation of it but there is a little over a million dollars, some portion of which could, in all fairness, be set aside as a charge against operations on the [fol. 10430] non-regulated sales and a credit against operations on the regulated sales.

After doing that, it would be necessary to reallocate this amount of Federal taxes between the two classes of business to conform with the new allocation arrived at as to the revenues available for taxes and earnings.

By Mr. Littman:

Q. In other words, your statement contemplates a further allocation beyond Exhibit No. 251?

A. That is correct.

Q. Now, you used the term "some fair basis." Are you prepared to be a little more definitive about that and give us your idea as to what would be a fair basis?

A. Mr. Littman, I do not think I should be sitting in the Judge's bench on that matter. Before anybody could make a definite statement about what he thought was fair on that matter, he would have to know what the procedure was going to be in regard to the subsequent allocation of earnings between the two classes of business and, in any event—

Q. (Interposing) Pardon me, what do you mean by "subsequent earnings"? Do you mean in later years?

A. No, in the subsequent procedure in this case of allocating return as if it were an item of cost, one should know that and then, knowing that, I think that some compromise could be reached between whether the whole million dollars should be retained or what amount of it should [fol. 10431] be charged as a rental and credited to the regulated business as a reduction in expense.

Q. Now, Mr. Biddison, you have testified in many rate cases and I understand it is your opinion that the matter of this further allocation would be a matter of the exercise of enlightened judgment by those charged with the duty of making the decisions in this case. Is that right?

A. That is right, and I further think that they should have the opinion of the experienced management in coming to their final conclusions on that matter.

Trial Examiner: That is what you are here to give.

The Witness: Mr. Examiner, I am not the management of this property.

Trial Examiner: You are the expert engineer who has been advising them and testifying about allocations. That is what you are asked for right now.

The Witness: If the Examiner wants my opinion, I will give it. It is my opinion that that $1,000,828.98 should be divided fifty-fifty.

Trial Examiner: Why?

The Witness: It is just my judgment as a businessman that would be a fair allocation of it.

Mr. Littman: You mean fifty-fifty as between regulated and non-regulated business?

The Witness: That is correct. I think that would be [vol. 10432] a fair allocation.

Mr. Culton: That is a business judgment estimate, not a mathematical estimate?

The Witness: That is right. In that way, this non-regulated business has contributed half a million dollars a year towards the reduction in cost of the regulated business and if it does not contribute something, I do not think there is any justification for having the business.

Mr. Littman: Mr. Buldison, before I dismiss you, for my part, I do not think there is any evidence in this record that tells us the approximate rate at which the gas flows through the main line from Texas east and north to Detroit.

The Witness: You mean the speed per mile?

Mr. Littman: The approximate speed per mile per hour?

Mr. Culton: That would depend on how much gas is being used, wouldn't it, for one thing?

The Witness: Yes, and upon your relative pressures but, if we say that under peak day conditions—

Trial Examiner: (Interposing) On maximum day delivery?

Mr. Littman: Yes, let's take, for instance, January 7, 1942.

The Witness: I think I can give you an approximation on it.

The rate of flow would not be a constant velocity in any section of the line. To explain that, let's consider any [fol. 10433] one section between two compressor statjons. Say we have 500 pounds discharge pressure at one station and, at the next station, that pressure has declined to 300 pounds.

Now, the quantity of gas, in pounds, flowing past any point in that section for 250 million a day flow would be constant but the velocity, in feet per second, would vary from the low figure at the high pressure to a higher figure at the low pressure.

Now, the mean velocity between those two points would be fixed by the mean pressure which is not the average of the two but is two-thirds of the difference in cubes divided by the difference in squares of pressure. That will be somewhere close, however, to the average of the two pressures which were 500 discharge and 300 inlet which would give 400 pounds average pressure.

That 400 pounds average pressure, being gage pressure, is about 415 pounds absolute and in the size of atmospheres that Panhandle measures their gas, that is 14.73 pounds. That is about 28 1/2 atmospheres at the mean pressure and, at that mean pressure, you would have the mean velocity.

Now, if we consider this to be two 24-inch lines, we would have then, with 250 million cubic feet a day output, 125 million cubic feet per day in each line and, at the mean pressure, that would occupy a space of 4,400,000 cubic feet. This 24-inch line is about 23.44 inches inside

[fol. 10434] diameter and that is equal to about 1.94 feet in diameter and gives about 2.85 square feet of area.

That will give a mean velocity of about 1,550,000 feet per day or 64,500 feet per hour or about 12.2 miles per hour.

. . . . . .

[fol. 10435] Recross-Examination

By Mr. Chamberlain:

Q. Mr. Biddison, I understood you to say a short time ago that the peak day sales or, as I assume, the maximum day sales were fixed by the sales for resale. Do I quote you correctly?

A. No, the capacity to be provided to meet the peak day sales is fixed by direct sales.

. . . . . .

Q. By direct sales—what do you mean?

A. I mean by sales other than those made directly by Panhandle Eastern Pipe Line Company—

Mr. Culton: (Interposing) You mean sales for resale—

The Witness: (Interposing) I find I have misused a word. Let me start it over again, Mr. Chamberlain.

Mr. Chamberlain: Yes.

The Witness: The capacity required to meet the peak day is fixed by the sales for resale.

By Mr. Chamberlain:

Q. And you state that as an engineering matter or as the method that has been used in this case in preparing the exhibits?

A. Well, I state that as a matter of having studied [fol. 10436] the situation. I have studied the peak day situation. I have also, from time to time in the past, checked the calculations made by Panhandle Eastern in their estimates of additions and improvements to be made to meet expected demand and I know what the practice in that respect has been as regards the handling of direct sales and sales for resale.

Q. Then the capacity that is provided is only for the sales for resale? A. That is correct.

Q. Yes. Now, let us see if we can get this record clear on the different classes of industrial sales. You spoke about dump sales and suggested that there were few of those in the Panhandle system. Is that correct?

A. No, no. I was interrogated about some dump sales, and I said I did not think that the sales in this classification of direct sales, which were all interruptible, could properly be called "dump" sales.

Q. I understood you to say that the dump sales were few, if any. I may have been hearing incorrectly.

A. I do not think I said that, Mr. Chamberlain.

Q. In other words, you took the position than that all of the sales were what are known as interruptible sales rather than dump sales?

A. All of the direct sales by Panhandle Eastern.

Q. All of the direct sales?

[fol. 10437] A. Yes, sir.

Q. Then, do you have some indirect sales that are dump sales or does the company?

A. The company has some indirect sales which are, I understand, interruptible.

Q. Yes.

A. I do not know of any of those sales that could properly be classified as dump sales.

Q. Are there some boiler fuel contracts?

A. There are some direct sales for boiler fuel.

Q. And those are not dump sales?

A. I would not so class them, as dump sales.

Q. You would classify them all as interruptible sales?

A. They are interruptible sales no matter who classifies them.

Q. A dump sale is interruptible?

A. Yes, a dump sale is interruptible but an interruptible sale is not necessarily a dump sale.

Q. Let's have the definition of a dump sale and let's have a definition of an interruptible sale.

A. I consider a dump sale is one which is sold at a price far below the cost of any competing fuel, sold with a desire to make some very small margin of profit over the costs incurred in rendering service.

Q. Then it must be sold far below the cost of competing

[fol. 10438] fuel?

A. I would so consider it before I would class it as a dump sale.

Q. And you do not figure the dump sale one in which the vendee has the facilities for immediate change-over to another fuel?

A. It may or may not have it. I do not think that is what makes it a dump sale. My view of the dump sale is it is one which is interruptible but also one which you sell at almost any price in order to get rid of it.

Q. In other words, your conception of a dump sale is one that you are tossing on the market at a very low price?

A. Yes.

Q. The distinction between interruptible and the dump sale is more as to the price received than as to the other factors? A. Yes, sir.

Q. Now; what is the interruptible sale?

A. The interruptible sale is one in which the seller has the right to interrupt service when his facilities are required for the servicing of customers to whom he has a firm commitment.

Q. And is the interruption conditioned upon notice to the customer buying the gas?

A. Generally so. It is provided that he shall discon- [fol. 10439] tinue service when notified to do so. Quite often, however, provision is made that service may be discontinued without notification.

Q. Now, in such a contract as the Universal Atlas Cement Company or such as Anchor-Hocking, would it be possible to make those contracts so that the service might be interrupted without notice or without substantial notice?

A. I presume in the contract with a cement company or with an open-hearth outfit or with a glass company, that there would be requisite some provision about giving notice as far in advance as you possibly could.

Q. Will you please refer to your Exhibit No. 251.

. . . . . .

By Mr. Chamberlain:

Q. In line 4, you place the amount of industrial gas, Column B, which I understand to be direct sales, at 6,580,812 M.c.f., do you not?

. . . . . .

The Witness: No, that is the total of those industrial sales as they were classified but, of those industrial sales, 55,203 M.c.f. to North American Refractories is a sale for resale and so classified. The balance of 6,528,609 M.c.f. is direct.

. . . . . .

[fol. 10444] By Mr. Chamberlain:

Q. Mr. Biddison, is there any difference in the interruptible industrial contracts which are designated as special industrial contracts and those interruptible industrial contracts which you have listed as direct, other than the fact that they are made through the distributing agency?

A. Yes.

Q. What are they?

[fol. 10445] A. There is this difference: On those direct interruptible sales when Panhandle Eastern wants them interrupted, it is under Panhandle's physical control to effect the interruption.

. . . . . .

Q. In the formula which you have prepared for use in Exhibit No. 251, you have, in effect, taken the increment theory in determining the operating costs of selling the non-regulated gas, have you not?

A. No, I did not and I have explained that I did not although I will say that the results of using the increment theory probably would produce a result not very far from, what I have used. I do not know how much difference there would be because I have not worked it out under that theory.

Q. Now, there is no distinction, in so far as the direct interruptible contracts and the indirect interruptible con-[fol. 10446] tracts are concerned, in so far as the cost of selling and distributing that gas, is there?

A. I do not believe there is.

Q. No, and referring to your Exhibit No. 251 or Mr. Spacek's exhibit, to be exact, you have a profit of two thirds of the gross revenue received from the gas, do you not?

A. I do not know what you mean by "profit."

Q. Well, net operating income, if you want to phrase it that way, prior to Federal income and excess profit taxes?

A. Prior to the Federal income and excess profits taxes, the amount available for tax and earnings is about two thirds of the operating revenues.

. . . . . .

[fol. 10447] Q. Now, before I go to another matter, you gave some figures as to the contribution of the Detroit company on January 7 and January 8, 1942. I read from page 9462 of the testimony in this case, of Mr. Morton:

"Question: And how much did the Detroit Company add to that for customer distribution?"

[fol. 10448] This is a reference to the maximum day of January 7.

"Answer: The Detroit Company added approximately 28 million cubic feet."

Your figures were substantially less than that?

A. I did not say anything about what the Detroit company added. I said that they lacked about 15 million feet of taking the amount which Panhandle was under obligations to furnish to them, if they desired it.

Mr. Culton: He did not say what the send-out was, Mr. Chamberlain.

By Mr. Chamberlain:

Q. You gave no figures as to what they put into the lines?

A. I did not although I had them before me and have them before me now.

Q. All right. Then the fact is that the Detroit company put in some 28 million cubic feet on January 7, did it not?

A. It is really a trifle less than that. It is a trifle under 280,000 therms so, with gas of the heating value that was delivered on that day, the feet would be a little less than ten to one in proportion to that. It is a little less than 28 million but, for practical purposes, 28 million is close enough.

Q. Well, to be exact, the figure would be 27,926,000 therms?

A. I could work it out and see but I do not want to [fol. 10449] let it appear that that 28 million is the exact figure, is all. It is a little bit less than that.

Q. You referred to the 15 million as being an amount which assisted Panhandle in serving their other customers. Was not the 28 million the amount they were assisted by?

A. I think that could only be answered after a determination as to whether there is any obligation upon Panhandle Eastern to deliver in excess of 125,000,000 and I am not in a position to answer that matter. I am sure there is an obligation to deliver up to 125,000,000, but whether there is any obligation beyond that, I am not in a position to say.

Q. The question of contractual obligations has nothing to do with that. The question is as to whether or not the 28 million was not a contribution which enabled Panhandle Eastern to keep its other customers served to that extent.

Mr. Culton: We differ with counsel's construction of what the obligation was. Manifestly, there was no contribution at all as to any gas in excess of Panhandle Eastern's contribution under the contract. We agreed to contribute to their 125 million under the contract and, obviously, there is no obligation to furnish any more than 125 million.

Mr. Chamberlain: I am trying to say there is no claim of any obligation. I am trying to get out the fact that, instead of assisting Panhandle Eastern with 15 million feet, they assisted them with 28 million feet.

[fol. 10450] The Witness: Well, it is mentally true that, as compared to delivering 138 million when they only delivered 110 million, that is 28 million feet less than Detroit would have used if they had taken natural gas for all of their requirements.

[fol. 10452] LEITH V. WATKINS a witness, having been previously duly sworn, resumed the stand and testified further as follows:

Recross-Examination

By Mr. Chamberlain:

Q. Mr. Watkins, will you please refer to Exhibit No. 179. Where, in Exhibit No. 179, will you find all of the direct industrial or interruptible industrial sales of natural gas?

A. For the period from April 1, 1932, to December 31, 1941, sir?

Q. Yes, or any part of that period.

[fol. 10453] A. The direct industrial sales made by Panhandle Eastern Pipe Line Company and any of its subsidiary companies during that period will be found in Columns H, I and J.

Q. And what were the direct industrial sales in M.c.f.'s for the year 1941?

A. As shown by this exhibit, 5,358,169 M.c.f.

That appears in Column H on line 12.

. . . . . .

Q. Now, what were the direct industrial sales in 1941 by Indiana Gas Distribution Corporation?

A. They, of course, are not shown in Exhibit No. 179.

Q. No?

A. I do not have the sales for Indiana Gas Distribution Corporation to Anchor Hocking for the year 1941 in any of the material I have with me, shown as a separate item.

Q. Do you have anything by which you can calculate what those sales were?

A. I can make a calculation, Mr. Chamberlain, which may give us the correct answer but I would not state that it was.

. . . . . .

[fol. 10454] Q. If you will get your figure, it will certainly be subject to correction if you find it is incorrect.

A. I have made no computation as to volume. I made a computation as to revenue in dollars which I find is $13,007.72 which is likewise an amount shown in pencil

on your copy of Exhibit No. 251 which may have been the amount you copied down as such sales.

Q. That is right.

A. The witness' remembrance is that Witness Spacek gave the exact amount of such sales.

Q. Yes, I think he was the one.

A. At page No. 9971 of the transcript of the proceedings in this matter for the session of April 15, 1942, at lines 23 and 24, Witness Spacek, in response to a question put by Mr. Chamberlain stated the following and I quote:

"The M.c.f. were 1,222,643, the dollars were $313,007.72."

* * * * * * * * *

Q. That would be at a price of about 25.6 cents per M.c.f.?

* * * * * * * * *

A. I have not calculated it, sir.

Q. I will waive that. Now, the direct industrial sales [fol. 10455] shown on your Exhibit No. 179 plus the sales to Anchor Hocking, as testified to by Mr. Spacek, total the amount which is found in line 4, Column B, of Exhibit No. 251, does it not?

A. I do not know, sir, I have made no computation with respect to this matter as to volume.

* * * * * * * * *

Q. Will you calculate it?

A. The difference between the volume of industrial sales, as shown by Exhibit No. 179 at Column H on line 13 and the volume of industrial sales shown opposite line 4 in Exhibit No. 251 is 1,122,643 M.c.f. which the witness believes is the volume stated by Witness Spacek at the point just referred to in the transcript of the preceding session in this matter as having been sales to Anchor-Hocking.

Q. Please refer to your Exhibit No. 55. Is it correct to say that this exhibit shows all of the direct and indirect interruptible industrial sales made by Panhandle Eastern during 1939, 1940, and the first half of 1941, where

the amounts of the accounts were $20,000 per year or [illegible] over?

A. This Exhibit No. 55 shows the sales and revenue from sales by Panhandle Eastern Pipe Line Company and subsidiary companies for those years to all direct and indirect customers whose annual purchases were in excess [fol. 10456] of the figure you state.

. . . . . .

Q. Now, Mr. Watkins, you have not filed in this case an exhibit showing the actual sales for 1941 in lieu of Exhibit No. 55, have you?

A. There has been no exhibit other than Exhibit No. 55 showing the exact data which it included, introduced in these proceedings.

Q. Do you have with you the total amount of sales and [fol. 10457] revenue of interruptible gas sold directly and indirectly during 1941?

A. I have the data from which the total amount of industrial sales for that year may be had which, however, would not be comparable to the information shown by Exhibit No. 55.

Q. And in what way would it not be comparable?

A. Exhibit No. 55 is a record which shows, in numerous instances, a portrayal of sales in a specified amount per annum. The information the witness has with respect to the total industrial sales for the year 1941 would include all industrial sales.

[fol. 10458] Trial Examiner: Perhaps counsel can clarify this matter. Mr. Biddison's testimony was positive and direct on that point, as I recall it.

Mr. Culton: Well, there is this distinction. Counsel interrogating the witness is referring to all of the sales, industrial sales. That includes indirect sales as well as direct sales. In other words, it includes the gas which is subject to regulation and that which is not subject to regulation. Mr. Biddison was only testifying with respect to the interruptible gas or the industrial gas which is sold directly by the company.

As I understand it now, he is attempting to find out how much industrial gas is sold and how much of it, sold indirectly, is interruptible. Is that correct, Mr. Chamberlain?

[fol. 10459] Mr. Chamberlain: You stated it very fair. I am trying to find out here, of course, the amount of industrial sales, direct and indirect.

Mr. Culton: Interruptible and non-interruptible?

Mr. Chamberlain: Interruptible and non-interruptible. It has been testified to here a time or two that these sales were all interruptible, as I understand it. If there happens to be two or three small ones, I do not think it would make a great deal of difference but if the company has this information, I would be glad to have it.

* * * * * * * * * *

The Witness: (Interposing) I have to withdraw my answer because I misunderstood the question entirely. I had no idea Mr. Chamberlain's question was directed to indirect industrial sales.

Panhandle Eastern would only be able to determine the indirect industrial sales made during the year 1941 by inquiry of its customers. Gas sold by Panhandle Eastern for resale under its rate schedules or its contracts may be sold by the distributing organization to industries without any knowledge on the part of Panhandle Eastern whatever.

Take the case of the Michigan Consolidated Gas Com-[fol. 10460] pany. If Michigan Consolidated Gas Company wishes to buy gas—

Mr. Chamberlain: (Interposing) I am sorry to interrupt but that has nothing to do with the sales whatever. I am asking for the sales of Panhandle Eastern.

The Witness: I cannot give it to you.

Mr. Chamberlain: You cannot give it to me?

The Witness: Not the way you ask the question, sir.

Trial Examiner: Do the company's records contain the information he wants?

Mr. Chamberlain: The witness can give it. The witness loves to play on words but the witness is wrong here. I am not asking you for the sales that a customer has made that you have nothing to do with. You have your special indus-

that contracts with your distributing utilities and I take it that all you have got in Exhibit No. 55 is that type of sales, those in which you participate—

The Witness: (Interposing) Let's see if we can understand what we are trying to get, Mr. Chamberlain.

By Mr. Chamberlain:

Q. We have got it already. All I want is a continuation in Exhibit No. 55 showing the sales to those taking less than $20,000 per year.

A. If that is all you want, the information will have to be prepared.

Q. You said you had it here a short while ago.

[fol. 10461] A. No, sir; I stated later I misunderstood your question.

Mr. Culton: I think counsel used the word "industrial", where I think he meant "interruptible".

The Witness: He used the word "interruptible" and he has used the word "industrial" until he has me in a fog.

If you want information exactly parallel to that included in Exhibit No. 55 and you want it for the year 1941, the only way we can furnish it is to obtain it. The witness does not have that information with him.

I do have the total amount of industrial sales which Panhandle Eastern made during the year 1941. That, however, as I have stated before, is not parallel information to Exhibit No. 55.

By Mr. Chamberlain:

Q. All right. What were the sales of Panhandle Eastern then in the year 1941, industrial sales?

A. You could not use February 28, could you?

Q. No, sir, I want the year.

A. I am sorry, I do not have the financial statement for December 31, 1941, with me.

Q. Well, what was the paper you were about to read from there a few moments ago?

. . . . . .

[fol. 10462] A. I do not remember, Mr. Chamberlain, anything that I was about to refer to for the industrial sales

for 1941 of Panhandle Eastern alone because most of my information has been supplied on the basis of Panhandle Eastern and subsidiary companies.

Q. Well, is it your delight now to separate them?

A. You asked for them separately, sir.

Q. That is, you interpreted my question that way.

A. No, sir, you asked for that.

Q. I am asking for comparative information to that on Exhibit No. 55.

A. I do not have it.

Q. Well, do you have it by subsidiaries, then?

A. I do not have it by subsidiaries.

Q. Do you have it for Panhandle?

A. No, sir.

Q. Do you recall a report having been made to your Board of Directors which gave that amount?

A. There no doubt were reports made to the Board of Directors which had such an amount but I do not know where your question is apropos here because very obviously, [fol. 10463] the witness would not have with him all of the matters that had been referred to the Board.

Q. I assumed perhaps you were present. Were those sales in excess of the estimate which you made in Exhibit No. 55 for the year 1941?

A. I do not know.

Q. Can you supplement Exhibit No. 55 by showing the actual sales to each of the customers indicated for 1941?

A. Each of the customers indicated, sir, or do you want Exhibit No. 55 supplemented for the year 1941 comparable to the information shown for the prior years even though there be other customers than those shown on Exhibit No. 55?

Q. Well, I am trying to find my way as to how to ask you for what I want.

Q. I was starting now with the customers indicated.

A. May I try to help you, sir?

Q. Yes, I would be most grateful.

A. Let the witness then suggest that there be reserved an exhibit number which may be used later for the introduction in the record of data for the year 1941 exactly similar to that furnished through Exhibit No. 55 with re-

spect to the years 1939 and 1940 and that, I believe, is exactly what you are trying to ascertain.

[fol. 10464] Q. That certainly is the first step.

A. Shall we have such a number then?

Q. Yes. If you will prepare that, that furnishes us with data which is contained in Exhibit No. 55 brought down to date.

Mr. Culton: What exhibit number will that be, Mr. Examiner, and we will show the exhibit number on it.

Mr. Chamberlain: I think we can include in this exhibit several other things which will save numbering a lot of exhibit.

Mr. Littman: Why not mark it Exhibit No. 55-A? It is supplemental thereto, isn't it?

Mr. Chamberlain: Yes.

Mr. Littman: I mean, that is similar to Exhibit No. 55 and, because of its supplemental nature, it could be marked Exhibit No. 55-A.

Trial Examiner: I think the suggestion is very proper and it will be agreeable to counsel, I assume, that that data, to be supplemental to Exhibit No. 55 and to be marked Exhibit No. 55-A, shall be sent to the Trial Examiner within one week for inclusion in the record with copies to every counsel?

The Witness: Mr. Examiner, I am afraid we could not do it within a week. We shall be very careful to do it as quickly as possible, sir. This exhibit requires rather minute examination of our records and may require our ascertaining some of the information from some of our customers.

[fol. 10465] Trial Examiner: That raises the question of just how important this is, Mr. Chamberlain? We have got an interminable record in this case and the Trial Examiner has no disposition to enlarge it one page.

Mr. Chamberlain: This is something that the Commission will have to have before it determines this rate case beyond any question.

Trial Examiner: What issue is the exhibit addressed to?

Mr. Chamberlain: Exactly this: Exhibit 58 or Exhibit 479 shows only direct industrial sales. The company, as I understand it, has a system of putting out special industrial sales contracts with its gas distributors. In these contracts, gas is sold usually on an interruptible basis for a given price of which the distributing utility gets a certain percentage or an agreed amount.

These sales are all made in a competitive way with other fuels. They are made now at a time when the price of competitive fuels has risen substantially. They are in a class by themselves. There would be no reduction of the price, in so far as these industrial sales contracts are concerned. As a matter of fact, there is a considerable question as to whether or not the public would not have a right to ask that they be gone over and the price raised with respect to them.

In any event, whether that be correct, or not, any reduction in the rates of this company would apply and should [fol. 10466] apply to those sales other than these special industrial contracts.

Now, the purpose of this is to segregate these contracts, get them by themselves. To make a concrete illustration, the exhibits in this case show that, in 1941, this company had revenues of, let us say, approximately—I do not have the information before me—of $14,800,000 and let us say that the gasoline extraction was $800,000, that may be a little large, but we have $14,000,000 to start with. These industrial contracts represent about $4,000,000 and this information was given in testimony by Mr. Neuner very recently.

Exhibit No. 55 shows about $3,690,000 without those contracts which produce $20,000 a year or under. The chances are that the estimates here were probably exceeded a little bit but, in any event, these contracts will be some $4,000,000.

* * * * * * * *

Mr. Chamberlain: In applying a reduction to the rates of Panhandle Eastern, the $4,000,000 would first be de-

ducted and the reduction applied to the remaining $10,000,000 for the simple reason that these contracts, taken on a competitive basis and an offset fuel basis, would not be in line for reduction.

Mr. Clifton: We do not concur in that statement of the law, Mr. Examiner.

Trial Examiner: Let me ask you this, Mr. Chamberlain.

[fol. 10467] Knowing that the proceeding is going to the Commission on a motion for an interim order, is not the question that you are now presenting a part of the question of how the reduction shall be made, if any is made?

Mr. Chamberlain: That is correct.

Trial Examiner: Following the precedents which the Commission has established in the same kind of proceedings, would not that properly be deferred until the final disposition of the case after the Commission has first determined whether or not the earnings of the defendant company are larger than the law contemplates?

Mr. Chamberlain: You could defer it any length of time you wanted to but, if they have it in the record, they do not need to defer it.

Furthermore, it is necessary here before I conclude my cross-examining of Mr. Biddison of the question of his allocations in Exhibit No. 251. He has stated here that the maximum day is dependent upon the sales for resale and that it is so determined. I must have the amount of these industrial sales which are made under the sales for resale so that I may add them to the other industrial sales to determine what capacity is necessary for these interruptible industrial contracts. His position is that there has been no construction here for the purpose of providing capacity for peak days.

[fol. 10468] Now, he interprets the matter to cover only the direct sales and states that the indirect sales are something different and apart. They are exactly the same thing only under color of a different form of contract. The price that they get for them is substantially the same and the amount of those sales is absolutely necessary to determine these capacities. It is going to be necessary, before I get

through with Mr. Biddison, that I have this information. I do not have to have it to the last thousand M.c.f. at all, but I must have it. There is no question that one-third of the total volume of this company is sold for industrial purposes. There is equally no question that they are getting about $4,000,000 for it.

Now, if we want to spar around here for hours as to whether or not it is $3,956,000 or $4,120,000, that is all right, but there is no necessity for it. This is a simple matter and it should have been done before concluding this case. It should have been given here—

Trial Examiner: (Interposing) The retort to that is, Mr. Chamberlain, you should have made your request much earlier.

Mr. Chamberlain: I have requested it a dozen times before.

Mr. Culton: I would like to have the page number shown where you made that request.

Trial Examiner: We will leave that for a moment. Have you other questions of Mr. Watkins, other than relating [fol. 10469] to this matter? If it is possible to excuse him today, I should like to do so. We can defer further discussion of this information that has just been requested until morning, perhaps.

The Trial Examiner's hesitancy is, of course, due to the fact we are trying to fix a terminal for this proceeding and when that is done, we will then set a time for briefs and we do not want to enlarge the period that we have more or less tacitly and otherwise assumed will constitute a limit for the completion and submission of the case.

Mr. Chamberlain: I had an agreement with Mr. Culton, not over twenty minutes ago, that this would be furnished. Now, the witness is on the stand—

Mr. Culton: (Interposing) That is not so. The statement is not so.

Trial Examiner: Let's get back to the merits of this. Have you other questions of Mr. Watkins?

Mr. Chamberlain: They are directed along this same line. If there is any question about this, we should take the time to consider it but we are going to have to have this information. It is directly in line with what the company itself has put in. Why, at this time, can they say it is not material when we are merely trying to bring down to date the very evidence they put in themselves? That is exactly what we are trying to do.

[fol. 10470] Trial Examiner: You say you have asked for this information before?

Mr. Chamberlain: I have asked for it many times.

Trial Examiner: I have no recollection of it and I think you should cite the page.

Mr. Chamberlain: I have not kept track of the page numbers.

Mr. Culton: When did you ask us for it?

Mr. Chamberlain: I asked you for it at various times.

Mr. Culton: You asked for it at recess.

Trial Examiner: Mr. Watkins has been on the stand many times and the Trial Examiner feels, if the matter is so important, it should have been brought before us much sooner because the witnesses have shown no reluctance to bring the material in that has been asked for.

Mr. Lee: I think Mr. Chamberlain is absolutely right. It is going to make a good deal of difference where this cut goes, if it is made, whether it goes to the householder or whether it goes to the industrialists. Of course, both of them will get some cut, if a cut is made, but it will make a good deal of difference in the proportion of the cut which goes to each class of customer and, if you will pardon me, I think it is really of major importance, Your Honor.

Trial Examiner: You will recall, however, Mr. Lee, that in the Natural Gas Pipeline Company case, the Commission [fol. 10471] first made a broad order and requested the company to file new schedules. I assume that before the matter is disposed of by the Commission as to the specific rates which shall be put into effect there may be much more opportunity for consideration of such matters as are

now presented and, incidentally, it might be remarked that the effect of War Production Board Order No. L-31 may present an entirely different problem before that final fixing of rates.

Mr. Lee: There is a great deal of truth in that, Your Honor, but, on the other hand, shouldn't this information be in the record that Mr. Chamberlain wants to get in?

Mr. Chamberlain: Mr. Examiner, you mentioned the Natural Gas Pipeline Company but you do not mention the Canadian River which is exactly in point with this one.

Trial Examiner: No, Mr. Chamberlain, the Canadian River case did not go in on an interim order.

Mr. Chamberlain: The Canadian case requires a reduction upon the first, the producing company. That would be passed on to the distributing company.

Trial Examiner: Yes, but the distinction I am making is this: The Canadian case was submitted and concluded and the Commission made a final order.

In the Natural Gas case, the motion for an interim order was presented just as we have been warned will happen here and the Commission has disposed of that case, in part, [fol. 10472] by its interim order.

Mr. Chamberlain: It had to take the evidence before it completed the Canadian case. In this case, you have first got to determine what the excessive return of Panhandle Eastern is. That has to be passed on to Michigan Gas Transmission to the extent that it buys gas. It performs the double function, one of transportation of gas for which it receives compensation and the other is the purchase of gas.

Until we get this information, we will be very poorly equipped to make figures for briefs. Furthermore, I feel it will be necessary, in Mr. Biddison's testimony, to have these figures, to have these quantities. You cannot examine him without them. You may say you can get along without the dollars, as far as Mr. Biddison is concerned, but you cannot get along without the quantities there.

[fol. 10477] Mr. Montgomery: Mr. Examiner, the Intervener wishes to offer in evidence an exhibit which, we understand, is without objection from counsel and which consists of a letter from Mr. Morton, a witness in this case, in reply to a request from Mr. Chamberlain, showing the difference in the demand charges for the calendar year 1941, the calendar year 1942 1943 and showing the increase in the cost of gas in 1942 over the cost of the same amount of gas in 1941 as being $1,005,316.

Trial Examiner: This will be marked for identification as Exhibit No. 255.

(The document referred to was marked Exhibit No. 255 for identification.)

Mr. Culton: As I understand it, that exhibit is a three-page document?

Mr. Montgomery: Yes.

Mr. Culton: May it be understood that the third page of this document is a document which had been prepared and exhibited by counsel to Mr. Morton when he was on the stand?

Mr. Montgomery: That is right.

Trial Examiner: Have you copies of this proposed exhibit?

Mr. Montgomery: Yes.

Mr. Examiner, we feel that this exhibit should be of [fol. 10478] great importance, both to the Examiner and the Commission for this reason: If it appears that on the Defendant's own testimony a reduction in rates of as high as 40 per cent or more is possible under their own showing, the Commission should take into further consideration the fact that this year the net income of Panhandle Eastern will be increased $1,000,000 over last year for the same quantity of gas and that that increase is in effect this next month. Michigan Consolidated Gas Company starts paying this higher rate, which will yield this million dollars extra, on the first of this next month.

(Exhibit No. 255 was received in evidence.)

Mr. Chamberlain: I am now presenting a copy of the contract of September 17, 1930, between Columbia Oil & Gasoline Corporation, the National City Company and Missouri-Kansas Pipe Line Company, which has been referred to in these proceedings on numerous occasions and concerning which I made an offer of the copy printed, I believe, in Volume 62 of the Federal Trade Commission Reports. It was suggested at that time that I prepare [fol. 10479] copies which could be distributed to counsel and I have included in those copies all of the supplements or amendments to that contract as they appear in that volume.

Trial Examiner: This will be marked for identification as Exhibit No. 256.

(The document referred to was marked for identification as Exhibit No. 256.)

Trial Examiner: You are offering that, Mr. Chamberlain?

Mr. Chamberlain: Yes, the Intervener offers in evidence Exhibit No. 256.

Trial Examiner: Is there any objection?

(Exhibit No. 256 was received in evidence.)

[fol. 10480] LEITH V. WATKINS, a witness, having been previously duly sworn, resumed the stand and testified further as follows:

Recross-Examination (Continued)

By Mr. Chamberlain:

Q. I have before me the transcript of yesterday's hearing and I am anxious to avoid the use of any more time than is absolutely necessary but I would like to ask the witness one or two questions with respect to the information which I wished, particularly with respect to Exhibit No. 55.

Would you refer to that exhibit, Mr. Watkins? Are the indirect sales listed in Exhibit No. 55 those arising out of what are known as special industrial contracts?

A. I think, in most instances, they are, Mr. Chamberlain, but I cannot necessarily answer your question without some qualification.

Q. Do you have any of those contracts, in which the settlement period is longer than one month?

A. I would not know that, sir, off the top of my head.

Q. Well, you mean you may have contracts in which the settlements are for the use of gas for a period longer than one month?

A. No, sir, I do not. I simply mean I cannot, by any stretch of the imagination, remember everything that is [fol. 10484] in every contract that the company has.

Q. Do you remember any contract of any kind of your company during any year that you have been an officer of it which extended credit to a company for more than one month's gas at one time?

A. My remembrance is that the settlement provision in most of the contracts is within a month's period. There are also certain provisions in those contracts, if I recall them correctly, that a purchaser of gas may not necessarily discharge that obligation within a month's period. If there be some differences as to the amount of the charge, there is a provision by which that may be arbitrated and, in certain instances, interest payments are required and so forth.

Q. There might be some exception whereby a company might not settle promptly at the first of the month, is that correct?

A. That is correct.

Q. Now, then, looking at the companies listed in Exhibit No. 55, do you recall any of those which are back on their payments two or three months?

A. Mr. Chamberlain, the witness would not have any information whatever with respect to the payments made to him by the customers shown on Exhibit No. 55 because they are not all direct customers of Panhandle Eastern or its subsidiary companies. I have no idea when the In- [fol. 10485] diana Steel & Wire Company, for instance, purchases its gas from the organization from which it

purchases and that answer would apply to many of the customers listed on this exhibit on lines 9 to 39, inclusive.

Q. But they are all made under contracts of which your company is a necessary party, are they not?

A. They are not.

Q. Is there contract there that your company does not participate in to the extent of the major part of the revenues derived from them?

. . . . . .

A. Panhandle Eastern does not have contracts directly with the indirect industrial customers. Let's get that straight.

Q. I understand that perfectly.

A. You do not ask your question as though you did, sir.

Q. Yes.

A. Now, Panhandle Eastern has certain contracts under which certain industrial customers may buy gas. The underlying contracts in such instances are not contracts between Panhandle Eastern and the user. Those are contracts between the user and the distributing organization.

[fol. 10483] Trial Examiner: Mr. Watkins, may I interrupt at that point?

The Witness: Certainly.

Trial Examiner: And refer you all to page 10465 which is a statement made by Mr. Chamberlain at the hearing yesterday. He refers to these special industrial sales contracts with the gas distributors to which you have just made reference. He then makes this statement:

"In these contracts, gas is sold usually on an interruptible basis for a given price of which the distributing utility gets a certain percentage or an agreed amount."

Is that statement correct?

The Witness: Generally it is, Mr. Examiner, but there are not a vast number of such contracts.

Trial Examiner: Is that form of contract included in the rate schedules which are on file with the Federal Power Commissioner?

The Witness: Yes, sir, it is. There is, if I recall correctly, one major contract under which such conditions exist. That is a contract dated as of August 1, 1936, between Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation. It is not a general or customary practice.

Trial Examiner: I assume counsel would agree that such sales would be regulated sales?

Mr. Culton: That is, indirect sales. Now, there is a dif-
[fol. 10484] ferent situation now as to a good many of these contracts from the situation which existed a year ago, as I understand it. Some of the sales that were formerly indirect sales may now be direct sales but we do fully agree that all indirect sales, whether they are interruptible or firm, if they are sales for resale, are subject to regulation by the Commission.

Mr. Littman: Hasn't Mr. Biddison given us and put into the record his list of all of the direct industrial customers?

Mr. Culton: That is right and we concede that all those others, which are reflected in last year's business, are sales for resale and subject to the Commission's regulation.

Trial Examiner: And have been made under prevailing rate schedules on file with the Commission?

Mr. Culton: Yes, sir.

. . . . . .

By Mr. Chamberlain:

Q. Now, do you know of any of the companies listed in Exhibit No. 55 which have failed to settle for their gas up to the end of 1941?

A. I have made no examination to determine that fact, sir. Consequently, I do not know.

Q. Have any been reported to you as having been in default?

A. They would not necessarily be reported to me.

[fol. 10485] Q. I am asking you if any of them have been reported to you.

A. No, they have not, but they would not necessarily be reported to me.

Q. You have closed the books of Panhandle Eastern for the year 1941, have you not?

A. Yes, the books have been closed.

Q. And you have prepared and distributed your Annual Report, have you not?

A. That has been done.

Q. And you have in your office determined the amount of industrial sales, both direct and indirect, made by Panhandle Eastern during the year 1941, have you not?

A. No, sir.

Q. That has not been done?

A. Not separated.

Q. What do you mean by separated?

A. We make no separation in our office, Mr. Chamberlain, of the direct and indirect industrial sales until and when the occasion arises.

Q. You did not separate them in Exhibit No. 55, did you?

A. We did not. We do not necessarily keep a running record of the annual indirect industrial sales because that information has to be obtained from other sources.

Q. Now, that opens two questions but first, I was un- [fol. 10486] aware that I asked you to separate your direct from your indirect industrial sales. I asked you, if I spoke what I intended to, whether you had the amount of your industrial sales for 1941?

A. You did not say that, sir.

Q. I am sorry. If I did not, I intended to.

A. That, sir, is included in Exhibit No. 251.

Q. Exhibit No. 251?

A. Yes, sir.

Q. And what is the figure then?

A. As shown by Column B, line 14 of Exhibit No. 251 by Witness Spacek, the total industrial sales of Panhandle Eastern Pipe Line Company and subsidiary companies expressed in revenue for the year 1941 amounted to $1,223,730.92.

Q. Now, you told me a moment ago that you did not have that separated. What does that figure you have given represent?

A. All direct industrial sales made by Panhandle Eastern.

Q. Then you did have it separated, didn't you?

A. We do not, sir.

Q. That represents, of course, your direct sales. I am asking you for your total industrial sales which would, of course, necessarily include that as you did include them in Exhibit No. 55.

A. Mr. Chamberlain, I do not believe we understand [fol. 10487] where we are trying to go. If you will observe line 17 of Exhibit No. 251, you will find there the total amount of gas that Panhandle Eastern sold during the year 1941 to gas utilities.

Q. That is right.

A. Included in those sales is certain revenue received by Panhandle Eastern Pipe Line Company from the utilities covering indirect industrial sales.

Now, we have no information assembled for the year 1941 with respect to the amount of those industrial sales by customer or otherwise.

Q. You are now referring to the indirect industrial sales made by the distributing utilities in which they sell the gas which they have purchased from you directly to their customers, are you not?

A. That is right.

* * * * * * *

[fol. 10489] Q. Now, Mr. Watkins, what I want is the amount of the industrial sales by Panhandle Eastern for 1941, including your direct and the indirect sales which, as Mr. Culton describes them, may be classified as sales by Panhandle Eastern or sales to the distributing utilities for which Panhandle Eastern receives a percentage of the sale price.

A. The witness has been trying, Mr. Chamberlain, to tell you for several hours that he does not know that amount. Our classification of accounts is such that we characterize, as industrial sales, the amounts shown on line 14 of Exhibit No. 251 which is the direct industrial sales that Panhandle Eastern makes. All of the sales that Panhandle Eastern and its subsidiary companies make to other organizations for resale are included in the amount shown opposite line 17 on this same exhibit.

Mr. Wheat: You are referring to Exhibit No. 251, aren't you?

The Witness: That is correct, sir.

Now, any segregation of the $15,725,780.73 shown in Column B opposite line 47 representing sales to gas utilities which includes the sales to them for resale for industrial purposes, will have to be developed.

[fol. 10490] By Mr. Chamberlain:

Q. Now, did you develop it for the years 1939 and 1940 with respect to these accounts of over $20,000 per year?

A. That was done, sir, and there is an exhibit in these proceedings that shows that that fact exists.

Q. All right. Now, to bring that to date, it would require you to set up in an exhibit the amount which each one of those companies purchased during the year 1941, would it not?

A. That is correct.

Q. And on your books you have every one of those figures, do you not?

A. We do not.

Q. You do not, sir?

A. We do not, sir.

Q. What account do you keep of your special industrial contracts?

A. Mr. Chamberlain, for the distributing organization to whom we sell gas for resale, we carry an account with that organization.

Q. Right.

A. We render a statement to that organization each month.

Q. Right.

A. Showing the amount of gas sold, for whatever purpose it was sold. We have no record whatever, as far as [fol. 10491] this witness knows at the moment for the year 1941 that gives us the total amount of gas sold, for instance, under a 'special industrial' contract to the Guide Lamp contract at Anderson, Indiana, which happens to be one of the organizations shown on Exhibit No. 55.

To get that information for the year 1941, we would have to compile it from twelve monthly statements. If we did not have it on those twelve monthly statements, we would then have to, in turn, go to the distributing or-

ganization to whom the gas was sold for resale and get the information.

Q. Will you state into the record how it would be possible for you to determine the amount which you would be entitled to receive on the contract with the Guide Lamp Company unless you had the figures of the volume and the sales price for each and every month?

A. I believe that has been done. It seems to me that I just finished giving you a recitation that would cover that.

Q. What you are trying to say is that you do not carry a single account in which you post the total year's results of those separate contracts and that you would have to take off twelve figures instead of one.

A. Nor do we carry a single account in which we post the monthly figure but we do have information in the office which shows the amount.

. . . . . .

[fol. 40492] A. The exhibit shows that, sir. It is not necessary to ask the witness that question.

Q. What you would be required to do would be to go to your files and take off the sales to each one of these companies for six months. Is that right?

A. That is right.

Q. All right. Then you can do that?

A. Mr. Chamberlain, we told you yesterday afternoon quite some hours ago that this could be done and at that juncture, we were about to reserve Exhibit No. 55-A to cover the development of this information for the year 1941. The record should not show any inclination on the part of the company not to supply the data.

Q. Really, I don't think it does. It shows a great disinclination to cooperate in furnishing exactly what we wish but here is the disturbing thing.

In response to the Examiner, you stated you were afraid you could not do it in a week.

A. I still say that.

Q. But all that would be required would be to take six figures off the monthly statement for each one of those

companies, add them together and add them to the six months that is already stated?

A. Of course, Mr. Chamberlain, the only thing we have [fol. 10493] to do is to answer questions with respect to this proceeding.

This witness is already, and the company too, accused of the lack of diligence with respect to our original cost studies. Day after tomorrow, I am meeting a portion of our staff in Chicago to go over our preliminary draft of the answer to the Commission's Order No. 73 which is the original cost filing. We can get this information and we will be very glad to get it but we cannot dish it up here like a short order for a hamburger.

Q. I have the greatest respect for your energy and your desire to do things but you cannot be a one-man army and this requires an ordinary bookkeeper to compile that exhibit and no one else. It does not require your time or require—

Mr. Culton: (Interposing) I want to ask counsel when, before yesterday, he has ever requested that data to be furnished. He stated on the record yesterday he had previously called for it and we asked for the page of the record but he did not give it. I again ask him when he ever asked for that information before yesterday.

Mr. Chamberlain: I told you I do not think I ever asked for it on the record.

Mr. Culton: When did you ask for it off the record?

Mr. Chamberlain: What difference does it make? We are trying to get a piece of factual information which you agreed to furnish to me.

[fol. 10494] Mr. Culton: You did not tell me then what you want now.

Mr. Chamberlain: Yes, I did. There is no use quarreling about it. This is ordinary factual information and can be compiled by a bookkeeper in an hour.

What I wish here is exactly what Mr. Watkins has stated he would furnish but the disagreements seem to keep coming. A week won't make a great deal of difference if

I get the approximate amount. I am sure that this has been already determined for the benefit of your operating committees. They could not get along without it.

The Witness: You had better let us say what has been determined and what has not and you had better let the company state how this data is to be prepared. It does not presume to tell you how to handle your law affairs.

By Mr. Chamberlain:

Q. The president of the company had practically determined what it was when he testified here some months ago and he must have had some information on which to base that testimony because he is a fairly accurate man. His testimony was it would be around $4,000,000 for industrial gas.

Now, do you recall that as being substantially the amount of industrial gas for 1941?

A. I have no opinion with respect to that.

. . . . . .

[fol. 10495] Q. Were you in the room when I read Mr. Neuner's testimony yesterday?

A. I was, but I paid no particular attention to it.

Q. All right. Mr. Neuner was asked in the proceeding known as Docket G-210 certain questions which appear on pages 505 and 506 of the transcript as follows:

"Question: Now, you have a total sales of about $14,000,000 a year?

"Answer: In dollars, our gross revenue, from all sources is somewhat in excess of $14,000,000, yes.

"Question: At the present time?

"Answer: At the present time."

This testimony was given October 21, 1941.

"Question: And your industrial sales amount to about $5,000,000?

"Answer: I do not have the exact figure in mind but I would judge from my knowledge of what our average

[fol. 10496] of industrial gas, I would say our industrial sales might account for as much as $4,000,000 a year, maybe slightly under that or it might be slightly over."

"Question: Then that would leave about $10,000,000 of sales from the gas utilities, such as Michigan Consolidated?"

Now, is it your judgment, as the chief financial and accounting officer or chief accounting officer, that the industrial sales were about 20 billion feet in 1941 and that the income or revenue from them was about $4,000,000?

A. I have no judgment with respect to that.

. . . . . .

Q. On page 506, it is stated:

"Our sales to special industrial interruptible and off peak dump industrial customers for the year will be [fol. 10497] slightly under $4,000,000."

. . . . . .

Q. (Interposing) Will you verify that and see if your industrial sales as described by Mr. Neuner were substantially as he indicated?

A. Does Mr. Neuner define his use of the words "industrial sales"?

Q. Shall I read it again?

A. You may if you wish. If that gives the description, I would like it, because the only industrial sales this witness knows of with respect to Panhandle Eastern are those shown in Exhibit No. 251 which are direct industrial sales and indirect industrial sales, for the year 1941, are included, as the witness has said several times, in the amount of gas sold for resale and is shown opposite line 17 in Column B on Exhibit No. 251.

[fol. 10498] Q. I am not concerned with what you have omitted to show. What I am getting at is a development of your Exhibit No. 55, as you know.

. . . . . .

Trial Examiner: Just a moment, gentlemen. If the data you are discussing is coming into this record, I suggest that it would be preferable to have it come in in an orderly way.

Mr. Chamberlain: I had hoped that it would

Trial Examiner: The issue, I assume, was raised by your request for an enlargement of the contents of Exhibit No. 55 which was discussed yesterday afternoon when you stated that would give you the exact information you desire if you could have it in time. The Trial Examiner then expressed a reluctance to extend the termination of this proceeding to permit that because the request has come in so late. I do not think that it is serving any useful purpose to discuss the record and the testimony in Docket C-210 which is not inclusive of exact data.

Mr. Chamberlain: I know of no reason in the world why we cannot have Exhibit No. 55 extended to the end of 1941 as all of the other exhibits have been extended. I know of no reason why we should not have the facts as to [fol. 10499] those customers coming plainly within the import of Exhibit No. 55 which had sales of less than $20,000 per year. Those are merely factual matters which appear on the books and records of this corporation.

Trial Examiner: You can raise the issue on the record if you want to and you will get a ruling.

Mr. Chamberlain: Further than that, the element of making it part of this record, even if it takes a week, is not going to be at all material because it is going to take time to file these motions and to file the briefs that must accompany them and I shall ask that the witness prepare and file an extension of Exhibit No. 55 which will show the results for the full year 1941 and that this exhibit shall be so extended as to include the sales coming within the purport and intent of Exhibit No. 55 from all of those customers whose industrial sales are under the $20,000 per year limit.

Trial Examiner: May I ask whether that $20,000 factor entered into the preparation of Exhibit No. 55, Mr. Watkins?

The Witness: Yes, sir, it did.

Trial Examiner: May I also ask how much time it would take to add these six months to the scope of your Exhibit No. 55?

The Witness: As an accommodation to the Examiner, we will bend every possible effort to have the extension ready sometime between the 26th and the 30th.

Trial Examiner: Today being the 21st.

[fol. 10500] Mr. Wheat: May I ask, Mr. Examiner, whether the [witn] that statement refers to the extension of Exhibit No. 55 alone and as such?

The Witness: That is correct.

Mr. Wheat: Yes.

The Witness: And that, of course, will interfere with our original cost work.

Mr. Wheat: It will include the companies which purchased industrial gas directly and indirectly and whose annual bill in 1941 was over $20,000?

The Witness: It will include the exact same information for the year 1941 as now shown in Exhibit No. 55 for the years 1939 and 1940 in the same manner.

Trial Examiner: Now, Mr. Chamberlain, will you please state just what importance you attach to this additional data in view of the expectation of us all that a petition for an order making an immediate reduction without final disposition of the case be presented to the Commission within a few days?

Mr. Chamberlain: I have already stated on the record the purpose of this evidence, the necessity of it. I have been asked here why I did not ask for it before.

When Mr. Watkins was on the stand before, the Examiner stated that we were not to cross-examine these witnesses except on the matter of clarity of the exhibits until they were recalled later and, to the best of my knowledge, [fol. 10501] he has not been recalled for cross-examination but he is here right at this time.

Trial Examiner: I am sorry this record fails to show the attendance of individual counsel in this proceeding but the Examiner will state for the record that Mr. Chamberlain has been absent many days during the proceeding but the Examiner has no knowledge whether Mr. Chamberlain was present during the cross-examination of Mr. Watkins which consumed several days.

Mr. Chamberlain: Mr. Chamberlain has not been absent any considerable length of time from this hearing and he has had the record when he has not been here.

Trial Examiner: Now, will you please deal with the merits of the question the Trial Examiner asked?

Mr. Chamberlain: Yes. We are faced here with an allocation that is placed in evidence by the Respondent. That has been motivated, as the record will indicate, by the decision of the Commission in the Canadian River or Colorado case. We are faced with the necessity—

Trial Examiner: (Interposing) You are referring now to Exhibit No. 251, are you?

Mr. Chamberlain: Yes, Exhibit No. 251. That is what has originated this cross-examination and the cross-examination of Mr. Biddison and the objection was made that I was asking the wrong witness.

[fol. 10502] I put this man on to get the evidence that they say he cannot furnish. Now, we are faced with the statement and I am unable to know how the Examiner can know that the Commission will make an order in this case as they did in any one case or in another case. That, to me, is not clear. In the one case—

Trial Examiner: (Interposing) Pardon, has the Trial Examiner made any such statement?

Mr. Chamberlain: I thought he did yesterday, yes. Your statement was, as I recall it, that you felt that the Commission would make an order such as was made in the Natural Gas Pipeline Company case which was and I am assuming, of course, in the event that a reduction should be ordered, that it would be of some specific amount on which later hearings could be had.

Trial Examiner: No, pardon, but the statement on the record of yesterday was that we have been apprized a motion will be submitted to the Commission for an interim order granting an immediate reduction and the Trial Examiner called attention to the nature of the order which the Commission had adopted in the Natural Gas Pipeline Company case.

That is immaterial, however. I am interested now in the merits of this pending question.

Mr. Chamberlain: Yes. I make no point of that, of course, but we must meet this thing as two companies. The [fol. 10503] evidence has been presented here now with later exhibits which would tend to show a consolidated statement of income of companies which are not consolidated and upon which they are asking, in these exhibits, for an allowance for taxes which are greater by reason of the changed ownership of the companies. These are being consolidated, as I say. Now, to determine and to allocate the revenues in this case, we must first have an allocation of Panhandle Eastern's business. We must then apply to that, to the business of Michigan Gas Transmission, such a reduction as would be necessary under the Panhandle Eastern setup. As I said yesterday, Michigan Gas Transmission has two functions, one is that of transporting gas for which it has a contract price. That is under the jurisdiction of the Commission. It sells gas. That is likewise under the jurisdiction but its costs are going to depend upon the costs and the proper return of Panhandle Eastern. Therefore, to follow this thing through as we have to do and as it was done in the Canadian River case, we must have first an analysis of Panhandle Eastern and, I think, we have a right to, if they come in with allocations of their own, we are entitled to cross examine on those allocations and we are entitled to know the facts that these are based upon. We must have them and that is what I am after here.

As far as the length of time is concerned, there seems to be no dispute about this thing except a big smoke screen [fol. 10504] is being raised right here at a time when we want to get it. The witness has just said it would take five days and, in Exhibit No. 55, there are 30 names and it will require an accountant to set down—

Trial Examiner: (Interposing) I do not think that is material, Mr. Chamberlain. We have the statement of the witness as to the time. Let's do not take the time on this record today with unnecessary discussion or argument.

Let's get to the merits of what we have to deal with.

Have other counsel remarks to make with reference to this desired information?

Mr. Montgomery: Just a moment, Mr. Examiner.

Trial Examiner: We will ask you, Mr. Watkins, to supply this data at your convenience within the dates indicated, sending through your attorneys copies to counsel, which exhibit will complete the data shown in Exhibit No. 55 to the end of the calendar year 1941. That is my understanding of what is requested.

Is that correct, Mr. Chamberlain?

Mr. Chamberlain: You mean to confine it only to those —

Trial Examiner: (Interposing) To extend the data included in Exhibit No. 55 to cover the full calendar year 1941.

Mr. Chamberlain: Plus the sales to the same type of customers who take less than $20,000 a year, the purpose being, of course, to get all of the industrial sales.

[fol. 10595] The Witness: I cannot do that in a week, sir.

Mr. Culton: That is a different matter entirely. That specific question was asked a while ago.

Trial Examiner: We will ask the witness to prepare the data to complete the calendar year 1941 on the same basis as the data which has been prepared in Exhibit No. 55 and on no other basis and to send that in, as indicated, within the time which the witness has stated would not be greatly inconvenient.

This information, it may be remarked, will ultimately be of interest and the work may be done now just as well as later but we will not retard any other matters connected

with this proceeding on account of the supplemental information.

The Witness: Will the supplemental information, Mr. Examiner, be numbered Exhibit No. 55-A?

Trial Examiner: It will and will be merely, as the Trial Examiner has endeavored to indicate, an extension of the data included in your Exhibit No. 55 to include the full calendar year 1941.

The Witness: Yes, sir.

Mr. Chamberlain: I do not know that it is necessary but may Intervener have an exception to the ruling?

Trial Examiner: Certainly, and the Trial Examiner will remark in that connection that had this request been made when Mr. Watkins was previously on the stand and under-[fol. 10596] going a general cross-examination, the request would have been honored in full.

* * * * * * * *

[fol. 10597] By Mr. Chamberlain:

Q. Mr. Watkins, have you put in evidence in this case any evidence of original cost of the Panhandle Eastern properties as defined by the present Classification of Accounts for natural gas companies by the Federal Power Commission?

A. I do not believe we have unless the fact that counsel for Panhandle Eastern stated in the record that Panhandle Eastern and its subsidiary companies would not contend for an original cost greater than the cost shown per its books could be considered as such evidence.

Q. Now, has the Panhandle Eastern accounted for the property as constructed since 1930 on the basis of cost?

A. As far as this witness knows, it has.

* * * * * * * *

[fol. 10598] Q. Well, you knew those examinations were being carried on by accountants of the Federal Trade Commission in the office of Panhandle Eastern, did you not?

A. Yes, sir, we knew they were being carried on but we were not making the studies for them, sir.

Q. Now, you studied with them, did you not?

A. No, not at all.

Q. You did not? A. No, sir.

Q. Who were the men who examined Panhandle Eastern accounts for the Federal Trade Commission?

[fol. 10509] A. I believe the examiners' names were Steele, Sternberg, perhaps a lad named Dalrymple, and some assistants whose names the witness does not recall.

* * * * * * * * *

Q. Do you have Exhibit No. 107 before you?

A. Exhibit No. 107, sir?

* * * * * * * * *

[fol. 10510] Mr. Chamberlain: This is a listing application of the $12,000,000 Panhandle Eastern Pipe Line Company 3 percent bonds.

The Witness: On the New York Stock Exchange?

* * * * * * * * *

Q. Now, on page 72 of that exhibit, which is, in effect, page 72 of the Prospectus, there is this statement:

"A (1). Property, plant and equipment is stated at cost except for $2,417,948.52 thereof assigned by the Board of Directors to assets acquired as of August 31, 1930, as a capital contribution and intangibles are stated at cost except for $2,398,402.19 thereof assigned by the Board of Directors to gas sales and purchase contracts acquired as of August 31, 1930, as a capital contribution."

* * * * * * * * *

[fol. 10511] Trial Examiner: The question was not completed. You may complete it.

By Mr. Chamberlain:

Q. (Continuing) What amount of write-up is contained in the item of $2,417,948.52?

A. Will you define "write-up," please, sir?

Q. Yes. I will define it as the increase in the ledger cost of the plant and equipment over and above the actual cost of that property.

A. This witness does not know what the actual cost was, Mr. Chamberlain, and if I may suggest, we went over

this in rather complete detail when this witness was under cross-examination by Mr. Gorman. You may recall Table No. 2 appearing on page 17 of the Federal Trade Commission report, for this same series of questions was brought into play then.

[fol. 10520] Recross Examination.

By Mr. Littman:

Q. Mr. Watkins, will you please turn to your Exhibit No. 250 which deals with the rate case expenses. I want to ask you one or two questions that I had forgotten to ask when you were last on the stand.

Calling your attention to the column headed, "Estimated To Complete," in the total amount of $135,101.05, can you advise us with respect to what is meant by the term "complete"? Does that mean to complete to the end of the present proceeding or to complete through any subsequent phases or proceedings that may or may not be contemplated?

A. It was the intention, Mr. Littman, when Exhibit No. 250 was prepared, that Column C carrying the heading, "Estimated To Complete," would portray our best judgment of the additional expenses not heretofore actually [fol. 10521] recorded necessary to carry the present proceeding to what now appears to be its final completion.

Q. Before the Commission?

A. There is no particular consideration given in these estimates, as far as the witness knows, and most of the estimates are of the witness, with respect to any side issues in the matter.

Q. How about Courts of Appeal? That might help bring to a head what I am driving at.

A. There may have been some slight consideration given to the possible matter of appeal but, if so, it is so slight that it hardly would be noticeable in this estimate.

Q. In other words, you are saying that you have not included in Exhibit No. 250 any estimated costs of carrying this cause through any appellate courts if any such occasion arise?

A. I might have been swayed to some extent by wishful thinking because certainly we and the Commission should avoid some such thing as that if it were possible at all to do it.

The answer to your question is no.

Trial Examiner: May I ask, Mr. Watkins, whether your subsidiaries include Michigan Gas Transmission Corporation?

The Witness: Yes, sir. This amount of $350,000 shown by Exhibit No. 250 includes the actual expenditures of Panhandle Eastern and Michigan Gas Transmission Corpo-
[fol. 10522] ration to February 28, 1942, and the estimate on behalf of not only those two companies but the expenditures of any of the other subsidiaries should there be such expenditures from that time to the completion date of the matter.

By Mr. Littman:

Q. Now, does the amount of $135,000-odd labeled "Estimated To Complete" cover all services estimated to be rendered subsequent to February 28, 1942, up to which latter date you have included the actual cost? Have I made myself clear, Mr. Watkins?

A. I am afraid not, sir.

Q. Well, perhaps I can state it a little differently. Does your Column B headed "Actual to February 28, 1942", in the amount of $214,898, cover all services that were rendered to that date?

A. No, it does not, but, to the extent that it does not, $135,101.05 shown as a total of Column C opposite line 13 does include any unpaid services at February 28, 1942, plus any we estimate that would be incurred subsequent to that date. The $350,000, therefore, would include such items.

Q. That helps me, in part, Mr. Watkins, but to be perfectly clear about it, can you give me some idea of the period of time covered by your estimated Column C, generally?

A. Well, my memory runs to this fact, that in the preparation of the estimate shown in Column C, at that time
[fol. 10523] we understood we were to come back here last week and clear up any further examination in the matter. There was then before us the necessity of briefing and whatever additional work of that nature had to be done be-

fore some final decision was rendered by the Commission, and our $135,101.05 contemplated substantially that program.

Q. Well, I want to be sure about this. Are you saying that the $135,000 covers substantially the services which you just described and none other?

A. Well, I have tried, in response to some of your questions, to cover probably more than the immediate answer did.

There are some charges and were some charges on February 28, 1942, that had not been presented to the company.

Q. Were they substantial?

A. Some of them, I think were, but, even if they were, they are not included in the $135,101.05, and, likewise, in the $350,000.

Q. And even if they were not substantial, they are still included in the $135,000 figure, is that right?

A. If they were not, that is to say, that any charges not actually presented at February 28, 1942, and, consequently, not included in the items shown in Column B, are included in the estimates shown opposite the respective line numbers and captions in Column C.

Q. Well, just this one further question which I think [fol. 10524] may clarify the matter a little further. Can you state approximately how much this estimated cost of $135,000 is attributable to services rendered in connection with this hearing subsequent to February 28, 1942?

A. That is to say, services to be rendered subsequent to that date?

Q. Yes. Now, if you want to give us an estimate and then check it later and supply the data in more exact detail, of course you may do so when you submit Exhibit No. 250-A. A. It will be a wild guess.

Q. Well, let's have it.

A. I should say that between $75,000 and $100,000 of the total opposite line 13, Column C, represented services yet to be rendered at the time the estimate was made.

Q. That is, yet to be rendered subsequent to February 28, 1942?

A. No, sir, I would have to change that because, if we are going to tie ourselves down to February 28, 1942, you

will recall that when this exhibit was presented, the witness stated that there had been some charges presented in the month of March, in the early part of the month of March, which had actually been recorded as a part of February work but had not actually been paid until in the month of March.

Now, there were likewise some charges which came in subsequent to the recordation of those charges which did [fol. 10525] not get in February work and consequently are in March work.

Q. Do you remember whether those amounts were substantial?

A. What I am trying to show, Mr. Littman, is that for services to be rendered, let's say, subsequent to February 28, it would be my judgment at the present time that of the $135,101.05, not more than $75,000 to $100,000 would represent charges covering services to be rendered.

Q. In [other] to assist in clarifying the matter of the estimated Column C, I am going to ask that you state, in connection with your estimated amounts, the same detail as that which you had planned to give us which was heretofore requested with respect to Column B contemplated to be submitted in Exhibit No. 250-A. Perhaps you already have that?

A. We had it in mind, sir, but our estimate will not relate to individuals. Exhibit 250-A, which is in the course of preparation, will, so far as the factual matter shown in Column B is concerned, relate itself to the person rendering the service and the type of service rendered, in the manner in which counsel heretofore asked for it. The estimates shown in Column C, for example, relate themselves to the general subject, such as other special services shown opposite line 6, and not necessarily relate themselves to the individual who performed the service.

Q. Didn't you estimate the amounts in Column C by [fol. 10526] individuals?

A. We may have approached it from that angle and then tempered it to some extent by our inability to correctly guess what charges might be rendered by one individual and what might be rendered by another individual.

Our judgment here was that these possibly were the limit, or maximum, rather, of the additional charges that

would be rendered. We might miss it a few thousand dollars as to one person and err on the short side as to another person.

Q. Will you give us a brief statement for the record at this time as to the manner, generally, in which you estimate the amounts in Column C?

A. Well, Mr. Littman, we have a rather complete record of the actual costs incurred to February 28.

Q. 1942?

A. That is correct. We have in our mind's eye a rather complete picture of the time and effort put forth with respect to such charges. We have gaged, to the best of our infirmities, what may be the time involved in the future by the various individuals and what might be their charges therefor. This estimate represents our best judgment of what future charges there might be to complete these proceedings.

Q. Am I correct in understanding that you made these estimates primarily?

A. Largely, yes, sir.

[fol. 10527] Q. Did you, in arriving at the estimated amount in Column C, ask your various experts to submit to you their estimates of the amount of their bills contemplated to be rendered in view of the services which remained subsequent to February 28, 1942?

A. No, sir, we did not and I did not personally because I knew we would not get any sort of an answer that we could use. You being an attorney would know pretty well, had we asked those dealing with this matter from the legal side, that they would have no basis upon which they could make such an estimate. The same thing is true with people rendering special services. If we could lay down in front of them the actual work they would have to do, and the time involved, they might be able to do it; but, to my judgment, it would be of no avail, it was expensive, and it would be a costly way to get nothing.

Q. In other words, this Column C represents your estimate—

A. (Interposing) No entirely mine, no, Mr. Littman. I am the prime mover behind the estimate but I did not put it in here alone. It has, I am sure, the complete concurrence of the organization, generally.

Q. Perhaps I should avoid the difficulty that you apparently have in mind by saying this estimate is the estimate of your organization, of you and your organization? A. Yes.

[fol. 10528] Q. And not the estimate of the individuals who rendered and will render the services subsequent to February 28, 1942, or thereabouts?

A. That is correct.

. . . . . .

[fol. 10529] Trial Examiner: The question the Trial Examiner asked was simply to ascertain whether we all understand this Exhibit No. 250-A which is in the course of preparation is to become a part of the record and available to all counsel.

Mr. Littman: That is right.

. . . . . .

[fol. 10530] The Witness: At page 9855 of the transcript of proceedings for April 15, counsel for the Commission asked that a reconciliation of an item of $7,350,000 and some similar amounts for the subsidiaries of Panhandle Eastern included in Exhibit No. 202, I believe, and possibly Exhibit No. 243, be prepared and submitted, and the witness was about to ask, before leaving the stand, whether or not it would expedite matters if an exhibit number was reserved for those items and we let them take the same procedure as Exhibit No. 250-A is about to take.

[fol. 10531] Mr. Littman: Yes, I think that is an excellent suggestion and I am going to ask that an exhibit number be reserved for these data.

Trial Examiner: That may be done.

Mr. Littman: One exhibit number will be sufficient, won't it, Mr. Watkins?

The Witness: Yes. If there is more than one sheet, we will tie them together.

. . . . . .

Trial Examiner: The exhibit which will be prepared in accordance with the specifications stated will be numbered

Exhibit No. 257 and it is understood it will be received in the record after the conclusion of the hearing.

* * * * * * * * *

(The Data Referred To, When Received, Will Be Marked Exhibit No. 257, And Will Be Received In Evidence.)

* * * * * * *

[fol. 10534] P. McDonald Biddison a witness, having been previously duly sworn, resumed the stand and testified further as follows:

Recross-Examination (Resumed)

By Mr. Chamberlain:

Q. Now, Mr. Biddison, the basis of your Exhibit No. 251—

A. (Interposing) Mr. Spacek's exhibit, please, sir.

Q. Well, we will start over again.

Now, the method of allocation exemplified and reflected in Mr. Spacek's Exhibit No. 251, the plan for which was formulated by you, contemplated, does it not, that the direct industrial sales do not contribute to the requirement of the provision for capacity upon peak days?

A. That is correct.

Q. Now, I quote from the transcript of your testimony on page 10018, your answer being the first one on that page is as follows:

"No, nor have I so estimated any such thing as that."

Perhaps I had better read the question before that. The question immediately before is this:

[fol. 10535] "Is this a fair statement, then: that it is your thought in your testimony here that the pipe line company has a right to take such gas as it wishes to sell on direct industrial sales, and to utilize the entire transmission facilities of the company without any return upon them, and still have their income taxes paid at these high rates as a charge to the public for the gas they get through those same transmission facilities?

"Answer: No, nor have I so estimated any such thing as that. I do think that they are entitled to transmit gas for

direct sales without allocating part of their capacity against those direct sales, so long as those direct sales don't entail the construction of property. If they entailed a construction of capacity, they certainly ought to bear the cost of the capacity."

Following that, the question was:

"Question: A few months ago, did they not have to shut off some of their customers on account of a lack of capacity?

"Answer: Yes, sir, they did.

"Question: Well, then, somebody required some capacity, didn't they?

"Answer: Yes, sir, they did, and during that period of cutoff which I have studied, I reached the conclusion fortifying my knowledge that they don't build capacity for this class of business that they had then no capacity for this class of business, and have none now for this class of [fol. 10536] business."

Do you recall that?

A. Yes, sir.

Q. I wish, to clarify your position a bit, that you would elaborate a bit upon the fact that you have stated that they have now no capacity for this class of business. What do you mean by that?

A. Well, I mean the facts, as I related them in subsequent testimony along that same point the same day and time which you referred to in the record.

Q. Do you mean that they have no capacity now for direct industrial sales?

A. I mean that their capacity is required for indirect sales and that more capacity is required to meet the demands of indirect sales than they have in the system.

Q. Is it your thought that direct industrial sales require no provision for capacity and that the indirect sales made under the same conditions do require the provision of capacity?

A. No.

Q. Well, the interruptible sale, whether it be direct or indirect, is of the same general class, is it not, in respect to the matter of a provision for capacity?

A. Yes.

Q. And neither one should be sold provided that capacity has to be built for them, should they?

[fol. 10537] A. That is right.

Q. Now, did I understand that you made a study of this company to determine whether or not it had made any construction to take care of these industrial sales?

Mr. Wheat: You mean direct industrial sales?

Mr. Chamberlain: Direct and indirect, interruptible sales.

The Witness: I have checked over their capacity calculations in advance of making extensions and betterments to their system upon several occasions, beginning back, I believe, in 1937 and it is not their custom to make provision for capacity for the delivery of the interruptible gas upon peak days.

By Mr. Chamberlain:

Q. That is, it has not been their custom to do that?

A. That is right.

Q. Now, let me ask you a question, if I can, in a concrete way to get your theory of when these sales should be discontinued for a lack of capacity.

Let us assume that at the present time the capacity of the line, and I will have to use it as the entire line, is 250 million feet per day. The demand for firm gas is increasing. When and how should these sales be handled? Should new construction be made to provide for them or should they be discontinued?

A. Neither one.

[fol. 10538] Q. Well, all right. Now, what would you do?

A. I would just make such of those sales as I could make.

Q. In other words, you would discontinue all of those sales except those that you could handle without using your peak capacity, is that right?

A. I would sell all of the interruptible gas I could sell at a price that made an earning above its cost. I would

sell it at an interruptible basis and at a rate predicated upon interruption and I would interrupt it when the capacity required it for the firm business.

Q. Then you would get more nearly into what you described yesterday as a dump sale, would you not?

A. No, you would continue making sales just like Panhandle is making to these industries and just like most other gas companies I know of do make.

Q. Then you did make a study to see how much and how often Panhandle had interrupted these contracts they now have and which you have listed as direct industrial sales?

A. I have investigated the cut-offs on it, yes.

Q. And how many years did they run without a cut-off, that is, before the first cut-off?

A. I do not know.

Q. You did not investigate that?

A. No.

Q. What period did you investigate?

[fol. 10539] A. Well, I investigated, in this instance, the winters of 1940-'41 and 1941-'42.

Q. How many were cut off in the winter of '40-'41?

A. I haven't recorded that. I could not tell you now.

Q. It was not of any particular length of time, was it, that there was any cut-off?

A. Well, there was a material cut off in February, 1941.

Q. And what was that?

A. February, 1941.

Q. What was the cut-off, though? What company was cut off on your list?

A. Well, I haven't [it] tabulated it that way so I can not answer that question.

Q. Then you did not make a completed study, at least, of the length of time that these direct industrial customers had been cut off or the number of times?

A. That is right.

Q. Now, as a matter of practice, not only with this utility but others that you know of and to which you have referred, has it not been a practice to carry these interruptible sales very steadily, in other words, to rather give them service due to the fact that they are interruptible rather than to treat them as a sale which they cut off on days of great demand?

A. No, sir, that is not the case although I do believe [fol. 10540] that there have been instances where the right to cut off has not been enforced.

Q. And there are many of these businesses which would be unable to use gas if it was cut off frequently, is there not?

A. I think possible that is true.

Q. What study did you make to determine whether the company had expended any money for construction to carry these industrial sales, the interruptible sales?

A. Well, as I say, in the past, I have checked their calculations for capacity in advance of construction and know the peak loads for which they designed and the composition of those peaks and I know there was no provision in them for the interruptible sales to be carried through peaks.

Q. Well, when did you begin to make those checks, Mr. Biddison?

A. I began to make those checks in 1937.

Q. And what was the last one you made?

A. Sometime last year.

Q. In other words, you checked last year the contemplated construction expenditures of Panhandle Eastern?

A. I did.

Q. And there was nothing—

A. (Interposing) That is, I checked their estimates for capacity. I did not check the estimates of money.

[fol. 10541] Q. No, but you checked the question of the necessity of construction of additional construction, did you not?

A. I checked the estimates made of capacity to be provided for against the loads to be cared for.

Q. And in studying the load you had, of course, the amount of the industrial sales, did you not?

A. Yes, the peak loads on it.

Q. That is right. You would have to have the peak loads on the industrial customers, would you not?

A.

Q. And you had that?

A. Yes, sir.

Q. Do you have those files?

A. No, those files are the files of Panhandle Eastern Pipe Line Company in Kansas City.

Q. I see, and they show then what the contemplated need for the extensions and improvements of the line are, do they not?

A. Yes.

Q. Now, were you not here when Mr. Morton put in his exhibit early in the hearing in respect to the pipe line capacity and the future improvements that were contemplated?

A. I have been here when Mr. Morton testified on some matters but I do not think I was here when he testified on matters of that sort.

[fol. 10542] Q. Well, do you remember what the peak day was, the maximum day, and I mean the system day, in 1941?

Mr. Chamberlain: I am asking about the peak day of the system, not about the company contract.

The Witness: I think the peak day that year was 240,394,000 of sales.

Q. That is right. Now, what part of that capacity was reserved and used on that peak day for industrial sales?

A. I do not know. I do not have it tabulated.

Q. Do you have near you Exhibit No. 40?

A. This tabulation you placed before me does not bear on that.

Q. It doesn't? Line C of Exhibit No. 40 shows the actual maximum demand on the day of the system's maximum demand in 1941; does it not, and didn't Mr. Morton so testify in your presence?

A. I do not think he testified in regard to this exhibit in my presence. I do not remember anything about it and [fol. 10543] never saw it before.

Q. Well, this exhibit shows and I ask you to confirm, if I am not quoting it correctly, that the maximum day for the system in 1941 was, as you have indicated, 240,394 M. c. f.; that on that day, the maximum take of the Detroit area was 102,604 M. c. f.; that for domestic, commercial and other sales east of Dana, it was 1,384; that the industrial demand in Indiana and Ohio was 27,708 M. c. f.; that

the other use in Indiana and Ohio was 28,676 M. c. f.; Kentucky Natural Gas maximum was 7,608, making the total east of Dana of 167,980 M. c. f.

Then it shows that the maximum day's take of industrial gas west of Dana was 38,400 M. c. f.; that the domestic and commercial for that area was 34,014. Is that not correct?

A. You have read the figures correctly from the list.

Q. Yes. Then if the exhibit—or do you want to figure that?

A. What is the question that is pending?

(Whereupon, the pending question was read by the reporter.)

The Witness: That is correct.

Q. Then on the maximum day, the industrial loads in Indiana and Ohio and west of Dana amounted to 66,108 M. c. f., did they not, of the actual capacity of that line?

A. Well, it is 27,708 plus 38,400 M. c. f. which [—] 66,108 M. c. f. out of 240,394 total peak

[10544] Q. All right. Now, what per cent was used of capacity for industrial gas of the total peak load?

A. About 27½ per cent.

Q. Well, how do you account for the fact then that no construction was made to take care of this industrial load, if, as a matter of fact, it took 27½ per cent of the entire maximum demand?

A. Well, construction was made to meet the obligation of Panhandle Eastern Pipe Line Company for the Detroit market to the extent of 125 million feet [and] day and they did not use it on that day.

Mr. Culton: Does that exhibit make any difference in industrial between interruptible and firm?

The Witness: It does not.

Mr. Culton: Or between direct and indirect?

The Witness: No, sir.

By Mr. Chamberlain:

Q. Is there anything in the Detroit contract which contemplates that the Detroit company will take their maximum day on the day of the system's maximum day?

A. Not that I know of.

Q. Would there be any reason for you to think that it would necessarily be upon the same day?

A. Yes, ample reason for it. It is a normal expectation.

[fol. 10545] Q. You would normally expect that?

A. Yes.

Q. Has it ever happened?

A. I do not know whether it has ever happened or not. I know there have been occasions on a maximum day when they did not take their peak takings.

* * * * * * * * *

Q. Have you been called upon to check or pass upon the expenditures for the future for Panhandle Eastern Pipe Line Company? A. I have not.

Q. Now, will you check Exhibit No. 46 and give us the percentage that it is contemplated the industrial sales will take of the maximum capacity which is to be provided for by that date?

[fol. 10546] A. Well, I do not know what maximum capacity was being provided for that date.

Q. Assume the capacity provided for is that necessary to distribute the amount of gas and in the method indicated by Exhibit No. 40; the column being Column H and made up the same as Column C which you have just computed?

A. Well, Exhibit No. 40 shows a total maximum day of 305,200,000 which is 55,200,000 in excess of the capacity of the system so that amount of gas cannot be served during the year 1942 by Panhandle Eastern's system.

Q. I am not speaking about 1942 at all. I am asking you about the year 1946.

A. The year 1946, the maximum day shown at the bottom of Column H is 441,900 M.c.f. How much of that is proposed to be served or how much capacity they propose to build for it, I do not know.

Q. I am going to ask you to assume that it is proposed to build such extensions and additions of pipe line as will serve the amount of gas indicated in Column H of Exhibit No. 40 which is 97,589,200 M.c.f. with a maximum day of 441,900 and I would like to know the percentage of that that is evidently allocated to industrial sales?

A. Well, industrial sales shown are 10,040 M.c.f. east of Dana and 47,500 M.c.f. west of Dana or 47,540 M.c.f. out of 441,900 M.c.f. The ratio is about 13 per cent.

[fol. 10547] Apparently there is a figure omitted there. Did you get the 41,700 of industrials for Indiana and Ohio?

A. No, I did not and that adds 41,700 to the total, making 99,240 M.c.f. out of 441,900 or a ratio of about 22½ per cent.

Q. Then if in the exhibits in this case there is a showing of the amount necessary for construction for the sale and delivery of industrial gas to the extent of 22½ per cent, it is contrary to what you have understood their policy and history to be, is it not?

A. I will say that is absolutely contrary to what their previous policy and action has been.

Mr. Culton: Do you find anything there showing they expect to furnish that much interruptible gas on peak days?

The Witness: No.

Q. That is interesting. I would like to ask you to make another computation.

Let's take Column C and now refer first to Exhibit No. 55 and I shall ask you to assume that the gentlemen, in estimating the sales for 1941, were substantially correct and this includes only those sales to customers who take over $20,000 per year. The quantity is shown in Column L.

[fol. 10548] Now, will you deduct from that the amount of the direct industrial sales less the sale to Anchor-Hocking which is not included in that exhibit and see how much of those sales are indirect?

Mr. Wheat: Was that question clear, Mr. Biddison?

The Witness: I think I know what he wants.

Well, the direct industrial sales for the year ended December 31, 1941, shown by Exhibit No. 251 at line 6 was 6,525,609 M.c.f. If we deduct that from the 20,779,710 M.c.f. shown in Column L at line 40 of Exhibit 55, you

have a difference of 14,274,101 M.c.f. Now, I do not know what to label that.

By Mr. Chamberlain:

Q. Well, all right. Are we making any—

A. (Interposing) It is hardly fish nor fowl. It is the difference between two figures that are not compiled on the same basis.

Q. Well, now let us see, are we making any error in the Anchor-Hocking sales?

A. Well, Anchor-Hocking sales is included in the 6,525,609 M.c.f.

Q. Then the result of your computation is to ascertain those sales which are indicated on Exhibit No. 55 to be indirect sales after placing Anchor-Hocking in the direct sale class; is it not?

[fol. 10549] A. No, all I can say is that it just represents the diffefence between those two figures. The 6,525,609 M.c.f. of direct industrial sales, including Anchor Hocking, includes all direct industrial sales regardless of their size while the figure of 29,799,710 M.c.f. is, as I understand it, restricted to customers over a certain size.

Q. Of course, all of your direct industrial sales are far over that restricted size, are they not?

A. Well, I do not know on that.

Q. You do not know about that?

A. No, sir, I do not.

Q. Would you mind looking at them on Exhibit 55, all appearing in the first eight lines?

A. Evidently not.

Q. They are all very large ones, are they not?

A. Those that are listed are large but there are a number of those direct industrials that are not listed there.

Q. Small ones, aren't they?

A. Well, I do not know how small they are because I do not have their consumption before me.

Q. All right. Well, you have no question about the fact that there was sold in 1941 approximately 20,799,710 M.c.f. for industrial purposes all as set out in Exhibit No. 55, have you?

A. No, I do not question the figure.

[fol. 10550] Q. You have found the amount of direct industrial sales and, by subtracting that, you find 14,274,000 of indirect industrial sales, do you not?

A. No, sir, I do not at all. I just find the difference between two figures of 14,274,101 M.c.f. It is a difference between two figures. The two figures are not compiled on the same basis. The big figure does not contain some of the customers that are contained in the smaller figure and what the thing means when you get that kind of a difference, I do not know.

* * * * * * *

[fol. 10551] Q. Mr. Biddison, all of the industrial sales which you determined to be direct industrial sales and named in your letter of April 8, 1942, to Panhandle Eastern were sales which occurred west of Dana, were they not?

A. No, sir.

Q. With one exception? A. That is correct.

Q. And that was the Anchor Hocking sale made by the Indiana Gas Distribution Corporation, was it not?

A. That is right.

Q. Now, that is indicated in Exhibit No. 55 as an indirect sale, is it not?

A. Yes, sir, it is so shown in Exhibit No. 55.

Q. The reason for that was that until the last two or three months, Indiana Gas Distribution Corporation was not affiliated with Panhandle Eastern, is it not?

[fol. 10552] A. That is correct.

Q. And when you prepared your letter of April 8, 1942, that company was an affiliate of Panhandle Eastern?

A. That is true.

Mr. Calton: You mean a subsidiary, don't you?

* * * * * * *

By Mr. Chamberlain:

Q. Now, Mr. Biddison, I want to refer to Exhibit No. 162 which is the working papers of Mr. Morton and which show a division between the direct and the indirect industrial sales west of Dana. This is shown on page 8, working sheets W. S. No. 8. Now, that gives the indirect industrial sales for the year 1940 as approximately 7 million M.c.f., does it not?

A. It does.

Q. And 4 million of direct sales, direct industrial sales west of Dana, is that right? A. That is right.

Q. It also shows the actual sales for the first six months of 1941, does it not?

A. For those two classes of business, yes.

. . . . . .

[fol. 10553] By Mr. Chamberlain:

Q. And I am going to ask you to take the sales of industrial gas for 1941 indicated on Exhibit 55 and deduct from that the amount that you now find to be direct industrial sales. That computation you have already made and, if I took your figure correctly, it was about 14,700,000 M.c.f.

A. The difference between those figures is 14,774,101 M.c.f.

Q. That is right.

A. Now, that is a mere mathematical result from making the subtraction.

Q. That is right.

A. When you subtract 20 million horses from 6 million bananas, you have got 14 million something but you don't know what and I don't know what this 14 million plus is.

Q. No, I realize that and, furthermore, when I ask you to subtract horses from bananas, you will be older than you are now, but I am asking you to make a subtraction.

[fol. 10554] Now, will you, in order to find the contribution that would be caused by that amount of gas, assuming all of the direct industrial to be west of Dana except that of Anchor Hocking and determining the load factor, will you tell us what the contribution there to the maximum day of 1941 was of that amount of gas?

A. I cannot determine it from this figure. This is not the figure to use.

Q. Now, you can determine the mathematics of that, can't you not?

A. Well, we are dealing now with meaningless figures. I will add, multiply any of them you say and you label what you want to but I am going to have to say I do not know what they are.

Q. That is all right. You have said that before. I am merely asking you to make the computation, Mr. Biddison.

A. What computation am I to make, then?

Q. I would like to find the contribution of that industrial load of 14,274,101 to the maximum day of 1941.

A. I have no information available to me here from which I can make any such determination.

Q. You have the information in front of you to find the load factor of all of the industrial gas that is reflected in Column C of Exhibit 40, do you not?

A. I have before me information on which the load [fol. 10555] factor on the industrial sales listed in that column can be determined, yes.

Q. All right. Now, you can tell what the contribution of the maximum day was from that, can you not?

A. Yes, for that gas.

Q. All right. That is a start, isn't it?

A. Not towards what you asked for, it isn't.

Q. What did you say?

A. Not towards what you asked for, it isn't.

Q. Yes, it is. Now, the special industrial gas or the indirect industrial gas is all in the chart west of Dana, is it not?

A. Yes.

Q. All right.

A. Except for Anchor Hocking.

Q. That is right, except for Anchor Hocking. Now, the Anchor Hocking gas is one billion feet out of a total of 10½ billion feet, is it not?

A. Well, in 1941 it shows on Exhibit No. 55 to have been 1,267,974,000.

Q. That was the estimated figure which is now corrected by the actual figure which you have used but it is approximately right. You say you cannot make that computation?

A. No, I cannot take 14 million feet of gas, the classi- [fol. 10556] fication on which I do not know, and relate it to a peak on here that is specified to a particular character of gas.

No, I cannot do that and neither can anybody else.

By Mr. Chamberlain:

Q. Now, I want to inquire a moment about the allocation that you directed of the Federal income and excess profits taxes. You have taken substantially what you say is the increment cost of the gas. Why did you not use that increment cost of the Federal income and excess profits taxes?

A. Well, I did not use it because on the rest of it I did not approach it from an increment basis. That would be one reason for not applying an increment cost to Federal income taxes. Another reason for not applying increment cost to Federal income taxes is this: The amount of taxes is fixed by the amount of taxable dollars and I think its proper allocation is over those dollars regardless of source.

Q. And you did not think that the proper allocation [fol. 10557] of the taxes would be to charge to the non-regulated business the amount over and above the average tax on those dollars?

. . . . . .

The Witness: I do not know what that amount would be, Mr. Chamberlain. I do not understand you on that question at all.

. . . . . .

Q. Let me approach it this way, Mr. Biddison. You are allocating to the non-regulated business merely the costs that pertained to the production facilities plus those of the—well, I should not say as a matter of operating costs—you are apportioning operating costs but you are apportioning to the return only the proportionate part used of the operating facilities plus the small amount of laterals and regulating and metering equipment that is wholly owned.

Now, you allocate to that nothing for the use of the transmission facilities. Why do you not assume then that the revenues obtained from that gas are additional to the regulated business and apply to them the tax upon the last dollars earned or upon the higher brackets of this income?

A. Because they are not the last dollars earned. They are earned concurrently with the other dollars.

[fol. 10558] Q. And earned without expense for transmission?

A. No, not without expense for transmission.

Q. Earned without expense for return to the transmission facilities?

A. Well now, I have not proposed that, Mr. Chamberlain. I have made an allocation of the costs and I have suggested that there be a charge made.

Q. That is, your recent suggestion was that there be a charge made?

A. Yes, sir, for the use of those facilities on which the transmission and sale of this gas produced no costs.

Q. Well, conceding that you made a different allocation, would you still say, as you have in Mr. Spacek's Exhibit No. 251, that the Federal income and excess profits taxes should be allocated proportionately rather than that the higher brackets of the tax should be levied against the non-regulated business?

A. I would still think that that tax should be allocated in proportion to the amounts in the various classes of accounts subject to tax.

. . . . . .

[fol. 10559] J. D. CREVELING, a witness, having been previously duly sworn, resumed the stand and testified further as follows:

Redirect Examination

By Mr. Culton:

Q. Mr. Creveling, a few days ago Exhibits Nos. 223 and 224 were offered in connection with the testimony of Mr. Hinton relating to capital expenditures south and west of Liberal compressor station to meet peak day sales of 307,000 M. c. f. and a substitute estimate of additional capital expenditures required to meet peak day sales of 338,000 M. c. f.

Exhibits were also offered in that connection by Mr. Hinton which, I believe, were Exhibits Nos. 225, 226, 227 and 228 relating to the costs of operation and maintenance south and west of Liberal compressor station under differ-

[fol. 10560] ent capacities, the capacity factors being on the basis of 307,000 M. c. f. and 338,000 M. c. f. with some tables relating to the economic expense of operation and maintenance and some to less economic expense of operation and maintenance. In the same connection, Mr. Burnham offered Exhibits 229, 230 and 231 relating to estimated expenditures required on the system for these respective capacities and these gentlemen testified that they made their estimates under your instructions as president of Panhandle Eastern.

Will you explain to the Examiner, for the purpose of the record, the reason for directing that investigation and study to be made?

A. Normally by this time in the spring, we would have made and ready for consideration tentative construction programs for the coming season. Last year, we made such an estimate and were in a position to start work on that about the first of May. Because of inability to obtain material, which was no fault of our own, we were unable to start that construction work until late in the fall, the latter part of October, as I recall although contracts had been made for material, contracts had been awarded to successful bidders and contracts had been made for the sale of gas.

As a result of our inability to obtain materials in time to be of any assistance to us all in our 1941-1942 winter [fol. 10561] through which we have just passed, we were compelled as a matter of safety and precaution, in order to be able to render service to those of our customers to whom we are obligated to render a firm service, to discontinue or curtail certain of our services to industries. Certain of those industries were or considered themselves, at least, engaged in activities closely related to the war program.

When we saw that we were not going to be able to have these facilities in operating during the winter of 1941-1942, we sent a representative of the company to every one of the industries that it was at all probable we might have to interrupt service in the case of extremely cold weather. Certain of those industries were curtailed in the month of January and, although a representative of one industry that I have in mind, in particular, stated that he would

rather take a chance on having his fuel curtailed or completely interrupted for a few days rather than to put back into service his oil burning equipment, he was one to complain most loudly to O. P. M.

Mr. Wheat: You mean when there was a curtailment?

The Witness: When there was a curtailment.

This resulted in my being called to Washington to account for this curtailment of service which I think I did to the entire satisfaction of those to whom I talked.

Mr. Littman: Pardon me, may I interrupt to ask the name of this particular customer?

[fol. 10562] The Witness: The A. P. Greene Fire Brick Company of Mexico, Missouri.

Mr. Littman: Do they manufacture brick?

The Witness: Fire bricks in various shapes used largely in boiler and steel industries.

Mr. Littman: I see, thank you.

The Witness: Recognizing the fact that we were again, during the coming winter, going to be faced with a proposition much more acute than the one of the winter through which we have just passed and being desirous of being in a position at least to have said, in case a program outlined was not carried out, that we had outlined to the War Production Board or the proper Governmental authorities what we thought we could do if it was a real contribution to the war efforts of the country. Also, through rumors and piecing together such items as a questionnaire sent out by the Federal Power Commission and from comments and questions asked by at least one member of the staff of the Federal Power Commission and from conversations with various members of the W. P. B.—

Mr. Wheat: (Interposing) You refer to the War Production Board, do you?

The Witness: (Continuing) —the War Production Board, I came to the conclusion that Panhandle Eastern Pipe Line [fol. 10563] Company was going to be called up to make a contribution in the way of fuel that we had not yet been

told about. From various items I was able to gather, it appeared to me that we might be asked to curtail certain of our regular business and divert certain gas going into our regular channels to other markets east of the territory that we then served to the extent of possibly 75 million or 100 million cubic feet per day.

For all these reasons and being cautious through experience and not being anxious to be caught napping, in order to be in a position to promptly answer any proposition that might suddenly be put up to us as to what we might do in the way of a fuel contribution to the war industry, I asked that certain studies be prepared, first on the basis that we would normally do this expansion work if there were no limiting or hindering influence. This first study and the one that we would normally follow, called for about 60,000 tons of steel.

By Mr. Cullom:

Q. By steel, you mean pipe?

A. Steel in the form of pipe and certain compressors and other equipment.

From my continual discussions with the War Production Board representatives, I was fairly well satisfied, and also from what I read in the papers, that for a small company [fol. 10564] like Panhandle Eastern to go in and take away from the various war activities 60,000 tons of steel was probably out of the question even though we would thereby contribute fuel to the amount of possibly 90 to 100 million cubic feet per day additional.

Hoping that such a program would be approved but being quite certain in my own mind that it would not, I asked our engineers to prepare a study on the basis that the same peak day could be met but that would limit the amount of steel in the form of pipe to not to exceed half of the 60,000 tons or to 30,000 tons. I was first told by their looks, if not by their words, that I was crazy. I would not admit it for that reason, at least, because a study which is the so-called less economic study indicated by adding additional compressor facilities, by taking gas from the longer life reserves of our two fields, adding cost in excess of that from which we would first normally produce it, there-

by increasing our operating costs by three or four hundred thousand dollars—

Q (Interposing) Per year?

A. Per year, as a temporary expediency, such a program was within the realm of feasibility. We could be in a position to deliver to our markets, as we estimated they might exist, 338 million cubic feet per day with 30,000 tons of steel or less.

[fol. 10565] To be even surer that we had gone the limit in analyzing our possible expansion as a contribution to the war efforts, I asked our engineers to proceed with another study which would permit us to deliver daily 307 million cubic feet or gas to our markets as we then saw them to exist or to markets which we might be told to substitute for the potentially existing markets. This would permit us to deliver daily some 55 to 60 million cubic feet more than we can continuously at present do. That is the study No. 3 referred to as the 307 million study and consists simply in the looping of the balance of our main lines, adding some loops to the Michigan Gas Transmission Corporation and a small amount of pipe in the Hugoton Field but does not consist of the major item of looping that was contemplated in Study No. 1.

All these studies have been in the recent past discussed with the War Production Board. My surmise, if it were a surmise as to Study No. 1, apparently was correct because I was told that it was an impossibility or at least seemed very improbable that there was any chance of our getting 60,000 tons of steel for pipe but that the one involving 30,000 tons or less was a very realistic one, one in which the War Production Board was vitally interested and one on which conferences are now being held.

Mr. Littman: Pardon me, Mr. Creveling. You just re-[fol. 10566] ferred to Study No. 1. Will you please give us which one that is?

Mr. Culton: That is the economic method, is it not?

The Witness: If I refer to studies by number, in order to make the record clear, I shall call No. 1 the 338 million per day economic study—

Mr. Littman: (Interposing) Pardon me. I don't want to interrupt except for purposes of clarification—

The Witness: (Continuing)—for the load factor has nothing to do with the study.

Mr. Culton: That was No. 230.

I will state for Mr. Creveling's information that the study showing the 338,000 capacity, completely looped and economically powered main line system with economic production transmission expenditures is Exhibit No. 230.

The Witness: That is No. 1.

Mr. Culton: The same capacity with less economic production transmission expenditures is Exhibit No. 231.

The Witness: That I will refer to as Exhibit No. 2, if at all.

Mr. Culton: And the study showing the daily delivery capacity of 307,000 completely looped and economically powered main line system with economic production transmission expenditures is Exhibit No. 229.

The Witness: I should have used those numbers but I [fol. 10567] was not acquainted with them.

Mr. Littman: That is No. 3?

The Witness: That is correct.

For those principal reasons, I asked to have these studies made.

Mr. Littman: Do I understand you Nos. 1, 2 and 3 to be the order in which, in your opinion, there is likelihood that they will be adopted?

A. No, sir. Near the end of my statement, I said that I was of the opinion that there was no chance of the No. 1 study being carried out this year.

Mr. Littman: I see. I have them twisted a bit.

The Witness: Yes, but you are straight now. That is the one involving the 69,000 tons of steel or thereabouts.

Mr. Littman: Yes. In other words, these numbers do not bear any particular relationship to the likelihood of their being adopted?

The Witness: Not at all.

By Mr. Culton:

Q. Which was the one you thought there was a good chance that it could be carried out?

A. No. 2.

Q. Which is the study of the 338,000 capacity?

A. The less economic 338 million per day which involves an increase in our operating costs of some three [fol. 10568] to four hundred thousand dollars a year.

Q. You said, I believe, that you had answered a questionnaire and also you had gained the impression that there had been some consultations between some of the staff of the Power Commission and some of the staff of the W. P. B. relative to Panhandle Eastern's situation in connection with furnishing gas further east.

Can you tell us how you understand that possibility would be effected or could be effected?

A. Yes. Panhandle Eastern's system, as it now exists and I use that in order to include the Michigan Gas Transmission at this time and that small piece of Ohio Fuel Gas Company line which we acquired—

Mr. Littman: (Interposing) Which lateral line runs from Muncie, I believe?

The Witness: To the State line.

Mr. Littman: To the Ohio Indiana State line or thereabouts?

The Witness: That is right.

The main pipe line system of the Panhandle Eastern Pipe Line Company, as it now exists, connects with the Ohio Fuel Gas Company at a point near the Indiana-Ohio State line substantially due east of Muncie, Indiana. It is also in the northwestern part of the State of Ohio, comes within about 14 miles of three Ohio Fuel Gas Company [fol. 10569] lines just south of Toledo but there is no con-

nection between Panhandle Eastern's system and the Ohio Fuel system at that point.

One of the thoughts advanced is that this 14 mile—

By Mr. Culton:

Q. (Interposing) Was that thought advanced by you or was it advanced by somebody else?

A. It was not advanced by me. It was advanced by the War Production Board.

(Continuing) was to connect Panhandle Eastern system with the Ohio Fuel system at a point near Toledo, Ohio. Through these two points of delivery, if we could get the gas there, we should deliver 75 to 100 million feet of gas per day which would take the place of gas produced elsewhere, principally in Ohio and West Virginia, for those markets and making that gas available for markets in the Appalachian area, principally the Pittsburgh area where it seems that there is or is about to be a severe shortage of fuel.

Q. There has been something in this record about Order L-31 of the W. P. B. Are you able to give us any views as to how its operation can or might affect Panhandle Eastern?

A. All I can answer about Order L-31 as to how it will affect Panhandle Eastern is that I do not know except that it will affect it.

In Order L-31, one of the things that is suggested as [fol. 10570] possible is the exchange of gas between pipe line companies. The basis of exchange is not set out. We are certain of the fact our business is [stipped] from the standpoint of growth and by that I mean house heating sales. Our industrial sales—

Mr. Littman: (Interposing) You mean new house heating customers?

The Witness: That is correct. Our industrial sales are limited or have a book of rules written for them. It is my judgment that it would be impossible at this time to predict with any degree of exactness the effect of Order L-31 on the business or revenue of Panhandle Eastern Pipe Line Company other than to say that, from my recent talks with the War Production Board, I am convinced of the fact

that we are going to be asked to handle much more gas during the next twelve months than we had anticipated.

Mr. Littman: By Panhandle, you mean you are—

The Witness: (Interposing) Take it through our system for some place.

Mr. Littman: For sale, of course?

The Witness: Yes, that is right.

Mr. Littman: You are going to sell more gas?

The Witness: That is right.

By Mr. Culton:

Q. Do you have any idea as to what unit price you will be able to get out of that gas?

[fol. 10571] A. I have no idea.

Q. What is the present situation with respect to local gas in Michigan?

A. In connection with the possible development of more gas for war industries, consideration has been given to providing the Consumers Power Company with compressor station facilities which would permit them to handle, through their lines and ours now in process of construction—

Q. (Interposing) Who gave that consideration?

A. (Continuing)—not only gas for their peak requirements but possibly some gas in excess up to as much as 25 million feet per day.

Also, there has been drilled near Jackson, Michigan, one gas well by the Continental Oil Company which had an open flow of 10 million feet and, although a second well drilled by the Continental Oil Company on a block of acreage in this same territory was a dry hole, both of these items have been taken into consideration by the War Production Board in an effort they are now making to solve the fuel shortage in the Appalachian area and I am informed by staff members of the War Production Board and it has also been indicated to me by a staff member of the Federal Power Commission, that they have collaborated on these ideas.

Q. Have you understood there has been any written memorandum issued?

[fol. 10572] Mr. Littman: By whom to whom, Mr. Culton:

By Mr. Culton:

Q. By anyone to anyone, between those two Boards.

A. I have understood that one was in the process of preparation by the staff of the Federal Power Commission or certain members of it which will contain their ideas as to the solution of the fuel shortage in the Appalachian territory.

Q. Under these circumstances which you have related, do you think it is possible to look into the future and determine what Panhandle Eastern's operating problems will be over the next year or two such as would be possible under ordinary circumstances?

A. The only crystal gazing that I am willing to indulge in at this time is that Panhandle Eastern Pipe Line Company is going to be one of the favored few, from the standpoint of making a real contribution in the matter of fuel for war industries and that the book of rules is going to be written by the War Production Board.

Q. And do you expect to try to follow that book of rules?

A. I expect to not only try to follow it but to try to cooperate in every way so long as I am satisfied that Panhandle Eastern is not being singled out as the one company to make sacrifices at the expense of others.

[fol. 10573] Recross-Examination

By Mr. Goodman:

Q. Will you recapitulate, for the sake of convenient reference at this point, the principal regulated markets of your company?

A. All of the markets that we serve except those which we serve to direct sales.

Q. Well now, what are the most important ones? First, there is Detroit—

A. (Interposing) No, first there is Detroit.

First, there are the markets in Kansas which are small, insignificant. Then there are the markets in Missouri

some of which are quite important, principally direct industrial sales in the State of Missouri and principally they are those to brick plants.

Then we come to the State of Illinois in which we serve various territories including Springfield, Peoria, Decatur and others. Then we come to the State of Indiana in which we serve the various communities in the northwestern part of the State with the exception, possibly, of South Bend, including Fort Wayne and going on down as far south as Muncie. Then we come into Ohio and serve some small communities.

Then we finally, at the end of our line, serve Detroit.

. . . . . .

[fol. 10574] Q. Mr. Creveling, in Kansas, your regulated markets, you say, are insignificant?

A. That is right.

Q. Now, in Missouri, how significant are they?

A. Very important.

Q. Important, what are the major—

A. (Interposing) The records will show that. I do not have that in mind.

Q. Can you name any city in Missouri?

A. I do not carry in my mind the exact communities that we serve. I do not try to.

Q. I do not mean it that way. You say that the regulated markets in Missouri are very important.

A. I said the markets in Missouri are important.

Q. Well, limit it to the regulated markets. Are they a significant factor?

A. Yes, there are some there, Jefferson City is an [fol. 10575] important market. At least, the Missourians think so.

Q. That is the most important community in Missouri that you serve?

A. That is the most important one in Missouri, yes.

Q. Now, you serve Springfield and Decatur, you mentioned?

A. That is correct.

Q. And then you serve, did you say, northeastern Indiana or northwestern Indiana?

A. Well, we serve, if you will look at our map, you will see very definitely in connection with that map what we serve. Our line crosses near Terre Haute and we serve Muncie, Anderson, Richmond, Fort Wayne and Crawfordsville, Logansport, La Fayette, and other way stations.

Q. Now, in your opinion, Mr. Creveling, would you be able to say whether or not this rather large system is more advantageous to the separate communities that you serve than would be smaller companies adapted to serve their individual requirements?

A. You would have to write more in your book of rules before I can answer that. I would have to know where the source of supply was.

Q. Well, your company.

A. You asked me to as to this company compared with a lot of individual small companies?

[fol. 10576] Q. Yes, having the same source of supply.

A. I do not think I quite understand your question but, if I do, I do not see that the communities would care whether the gas came through a large pipe line or through a small one if it came from the same source of supply and the cost to them was the same.

Q. Yes. Does your organization, with the kind of pipe line you have and the markets you have, result in any great economy to the customers along the line, that is, the principal or major regulated customers, than would be the case if these principal customers were served by individual concerns from your source of supply?

A. There is no customer that we serve indirectly that theoretically is not benefited by the fact that we serve others.

Q. So that it is your opinion, I take it, that the fact that you have a large market of Detroit is a benefit to customers along your line?

A. Just as the fact we have customers along our line, is of benefit to Detroit.

Q. Yes. Now, Mr. Creveling, when you speak of that as a benefit, you mean that everybody along the line, through his demand, makes some contribution toward a mode of rendering service which is more economical than would be the case if those customers, in substantial [fol. 10577] amount, were not on the line. Is that right?

A. My answer to your surmise is that every individual customer can be served economically at a lower rate than each one could be individually.

Q. Yes. Would that be true if customers were grouped in some way? Naturally, you do not have in mind, do you, a separate concern to serve each individual customer?

A. No, you suggested that in one of your questions.

Q. You would have in mind a reasonable grouping of territory?

A. Most certainly, yes.

Q. But your pipe line and your business, taken as a whole, in your judgment is the most economical means of serving those customers, is that right, that you know of?

A. If I knew of any more economical way to serve with natural gas, I certainly would try to do it.

Q. Well, suppose that Detroit were eliminated?

A. Yes.

Q. From the line and ceased to be a customer.

A. As of today?

Q. As of today. Would your system then be as economic with respect to the remaining customers as it is with Detroit on the line?

A. It is my judgment that our system would be as economic if Detroit were cut off today as if it were not.

[fol. 10578] Q. It would?

A. Yes. We can get other markets today.

Q. Well, you mean that you would have some other market in substitution? A. Certainly.

Q. But you still would have a system of the same size serving the same amount of gas and you would still have the situation that it is the volume of demand that makes your system the most economic compared with a smaller system. Is that right?

A. That is right.

Recross-Examination

By Mr. Chamberlain:

Q. What has been the increase in sales for the first three months of this year as compared with the first three months of last year?

A. I do not know. The record, I believe, will show that.

[fol. 10579] Q. Do you know whether those facts have been furnished for the record, Mr. Creveling?

A. It is my judgment that they have. It is my remembrance that they have. If they have not, they are easily obtainable.

Mr. Littman: Do you gentlemen on the other side of the table know?

Mr. Culton: I do not think that exhibit was brought up to date—yes, it was, wasn't it?

Mr. Littman: To February 28, 1942?

Mr. Culton: My recollection is you requested that that be continued to date and that—

Mr. Littman: (Interposing) Not I.

Mr. Culton: If you did not, of course, we can do as we have always done.

The Witness: As a matter of fact, for the first three months of this year we probably would not have a complete record of yet. That usually runs to around the 20th, the 22nd of the month before our previous records are completed so you probably do not have in this record the first three months of this year. You have two months.

Mr. Littman: We have exhibits which reflect the result of two months' operation.

The Witness: That is right.

Mr. Littman: But I do not believe we have any com-[fol. 10580] parison, for instance, of the sales in January, 1941, as compared with the sales in January of 1942 and the same with February. We do not have that, so far as I know.

Mr. Wheat: Of course one month, Mr. Littman, would not be significant, just one month standing alone.

Mr. Chamberlain: No, but three months are quite significant.

Mr. Littman: I was speaking of a series of months.

Mr. Wheat: I understand.

The Witness: Mr. Chamberlain, I want to be constructive in helping you arrive at whatever point you wish. If you have in mind the development of the fact, if it is a fact, that we have sold more gas the first part of 1942 than we did in 1941, I can say, without recalling the exact figure, that we have.

Mr. Littman: Substantially more, Mr. Creveling?

The Witness: As I recall, it is not a lot more but some more but those are facts that can very easily be developed and there is no reason for any conjecture on that.

Mr. Littman: Do you know whether the increase has been due to weather conditions or due to increased volume of sales?

The Witness: Our increase, as I recall it, has been due primarily to the gradual growth of our industrial requirements.

[fol. 10581] Mr. Littman: That is a continuous growth?

The Witness: Which started last year.

By Mr. Chamberlain:

Q. Mr. Creveling, did you have brought up to the close of March such exhibits as have been offered here which would show the increase in sales, that is, in quantity as well as revenues?

A. Is March 31 the closing date of these records?

Trial Examiner: There has been no date set.

Mr. Culton: We will be glad to prepare those exhibits but, of course, the question of time comes in again.

The Witness: The item of time comes in and I am quite certain that we are just now getting to a point in our accounting where the records for March will first become available.

Mr. Chamberlain: I think that is right but this is the 21st.

The Witness: That is right. I think just now they have become available.

[fol. 10582] Mr. Littman: Yes. Mr. Wheat, it reminds me a little bit of some of your exhibits, starting with Exhibit No. 223, et seq., that give us the alleged increases in expenses and the capital additions but do not tell us any [fol. 10583] thing about the revenue.

. . . . . .

The Witness: Mr. Chamberlain, what you would like to have, as I understand it, is pertinent statistical data on our business for the first three months of this year compared with the first three months of last year. Is that right?

Mr. Chamberlain: That is right.

The Witness: We will be very glad to have that prepared at once.

Mr. Chamberlain: And that will break down your sales so we will know which type is improving and which is going down.

. . . . . .

The Witness: We shall be very glad to furnish promptly that information for the first three months of this year compared to the first three months of last year on the basis that we usually carry it.

By Mr. Chamberlain:

Q. Now, may I ask when the contract with the Hercules Powder Company comes on your lines?

[fol. 10584] A. You mean the one near Louisiana, Missouri?

Q. Yes.

A. Whenever the plant is completed.

Q. And when is that presumed to be?

A. The last date that I have heard is about August 1.

Q. Have you made any other recent contracts for the sale of industrial gas for defense purposes?

A. We have been approached by several other industries, the largest one of which was one requiring 35 million cubic feet of gas per day for a defense industry being built about nine miles east of Lawrence, Kansas.

We have, in all cases, said to those industries approaching us: "You first make your peace with the War Production Board as to the fuel you may use and then come back to us". Some of those small ones have done that. I have in mind, as an example of that, the Bohn Aluminum Company at or near Adrian, Michigan, which started out with a requirement of 200,000 cubic feet per day and the last advice I had it is now increased to 1,200,000 cubic feet per day and I was informed yesterday that the request for that additional amount of gas probably would be approved by the W.P.B.

Q. Are there others of that nature at the present time?

A. Yes, there are others of that nature. Mr. Batten of the Michigan Consolidated Gas Company, within the [fol. 10585] past week or ten days, has told me that the demands on the system of the Michigan Consolidated Gas Company for industrial gas were increasing very greatly and we were trying to see what we could do, he and I, in order to balance out the gas we might make available for Michigan Consolidated with the predicted increase in requirements of the Detroit area for this coming winter which, as I recall it, he estimated at about 170 million feet per day of which, to be safe, he was of the opinion we should be in position to deliver 140 million.

Q. And was a contract recently entered into there with the Monsanto Chemical Company?

A. That name almost registers.

Q. Do you know about that company near Trenton?

A. No, that has not been consummated, I recall now. It is the one that Mr. Batten and Mr. Neuner were talking about. It required a line from our main line. It is down near the Trenton Channel Plant of the Detroit Edison Company. That has not yet been consummated.

[fol. 10586] Recross-Examination

By Mr. Littman:

Q. Mr. Creveling, one of the first matters which you discussed in your direct examination was the matter of the curtailment of sales to industries during the past winter, that is, the 1941-1942 winter.

Did I correctly understand you to say that you were, in fact, compelled to curtail and even wholly interrupt sales to certain industries during the 1941-1942 winter?

A. We did.

Q. And that your curtailment included not only your so-called indirect sales which are made through other utilities but also direct sales, did it not?

A. That is correct.

Q. Is it a fact that, in previous winters, you have also curtailed direct industrials? A. Yes.

Q. To a larger or to a lesser extent than was true this past winter?

A. The direct sales, I would say, might possibly have been to substantially the same extent although I am not certain but the total curtailment was greater this winter than it has been in previous winters.

[fol. 10587] Does that answer your question?

Q. Yes.

A. The reason I answer it that way is this: We have certain direct industrial sales which are really, in effect, not on the line or are off during the months of January and February. Two of those are large sales, one of them is the cement plant near Quincy, Illinois, and the other is the powerhouse near Jefferson, Missouri. They have been completely cut off on previous winters.

Q. We would not call that a curtailment, would we?

A. That is a complete interruption. Outside of those two which would be the same, I would say, otherwise, the curtailment was greater this year than previous winters.

Q. And the curtailment has been successively greater over the past five winters, hasn't it? That is to say, in the winter of 1940-1941, the curtailment was less than this past winter?

A. I do not believe a study of the records would show that. It would show that the 1941-1942 curtailment was greater than 1940-1941, but, going back of that, I do not believe you would get a gradually ascending curve of curtailment.

Q. Is it a fact that you curtailed more of the industrial sales, that is, the direct industrial sales this past winter than ever before?

[fol. 10588] A. It is my judgment that there was one other time that we curtailed direct industrial sales to practically the same extent that we did this past winter. I say that because I recall that we cut off the cement plant, the powerhouse load, and we cut the Keystone Steel & Wire down materially, on one other occasion.

Q. What year was that?

A. I do not recall but probably 1937-1938.

Q. That is the winter of 1937-1938, approximately?

A. Yes that may be off a year but we did make such a curtailment and it is my judgment that would substantially equal the curtailment of industrials this last year.

Q. You have used the term, I believe, "compelled" in describing the fact that you were forced to curtail your direct industrial sales as well as the other direct industrial sales. Does the use of that term by you imply, as I believe it does, a regret on your part that you had to curtail?

A. It implies a recognition of an obligation on our part to first serve those customers whose health and comfort depend on the gas.

Q. Mr. Creveling, in discussing certain exhibits that were offered by Mr. Burnham and by Mr. Hinton, to-wit, Exhibits Nos. 223 to 231, inclusive, you did not mention anything, as I recall it, about the load factors which are [fol. 10589] mentioned in certain of Mr. Hinton's exhibits.

For instance, in Mr. Hinton's Exhibit No. 225, he shows the estimate of operation and maintenance costs south and west of Liberal compressor station on the basis of the 307,000 M.c.f. continuous daily sales capacity with an operation at 70 per cent capacity factor.

Also, in Exhibit No. 226, he uses the same 307,000 M.c.f. figure but reflects the figures on the basis of a 90 per cent capacity factor.

In Exhibit No. 227 presented by Mr. Hinton, he uses a 70 per cent load factor called by him capacity factor in connection with 338,000 M.c.f. and, in Exhibit No. 228, he shows similar figures based upon 338,000 M.c.f. continuous daily sales capacity as a 90 per cent load factor.

A. Might I say that those are all capacity factors.

Q. Very well, I think the record shows what they are and you correct me if I should read the wrong term in referring to those figures. A. Yes.

Q. Now, did you instruct Mr. Hinton to use those two capacity factors? A. I did.

Q. Why?

A. Because the 70 per cent capacity factor is pretty close to what our normal operations have been.

[fol. 10590] Q. Now, let's stop there and say that that is close certainly to what it has been for the full year 1941.

A. That is right. On the basis of conversations that have been had with those working on the fuel problem in connection with war industries, it was my judgment and is now my judgment that we are going to be called upon to operate Panhandle Eastern Pipe Line Company facilities during the next year and possibly longer on a 90 per cent load factor.

Q. Now, may I correct you—

A. (Interposing) Capacity factor.

Q. You mean capacity factor?

A. Yes, capacity factor.

Mr. Culton: Suppose you explain the difference between load factor and capacity factor.

The Witness: A pipe line might have 100 million of maximum capacity and if it operated, handled one million cubic feet of gas per day, the load factor would be 100 per cent, when the capacity factor would be one per cent.

By Mr. Littman:

Q. Now, in your previous answer, you used the term "next year". Were you referring to 1942 or 1943?

A. I do not know in what connection I used that.

Q. Let me refresh your recollection. You were talking about the 90 per cent capacity factor.

[fol. 10591] A. I mean the first year that the War Production Board has placed upon us this load that we are talking about, whether that starts in July or June or August, it is the first twelve months thereafter.

Q. You expect the 90 per cent capacity factor to come into play sometime this summer?

A. I should say if we are in a position to make a contribution in the matter of fuel for war industries, it should come into play this summer.

Q. What will be the character of the added load which will bring about this capacity factor?

A. That I do not know. No longer ago than yesterday, it was indicated to me that there was a probability that we would be called upon to deliver 10 million feet of gas during the present off-peak period, that is, from now on until the period of peak demand again, to go into pipelines east of the territory usually served by us, a part of which might go into storage for winter use and a part of it might supplant gas now being furnished from gas wells which would be closed in and allowed to rock up in order that they might be able to produce more gas during periods of peak demands.

Q. Would that 10 million load that you just referred to be an everyday affair except for peak days?

A. As a practical matter, it probably would work out [fol. 10592] that in the summer time we would put in varying amounts that we could from day to day, putting the maximum amount every day into storage or into other uses and, on the peak days, we would supply whatever we could above the requirements of our so-called essential market which could not be curtailed.

Q. Is that the only sale you know of?

A. I do not understand that question.

Q. Is that the only prospective sale you have in mind or do you have others?

A. That is not one that we have in mind. That is one we are told about.

Q. Do you have any others? A. Yes, sir.

Q. That fall in that category?

A. That fall in the category of supplying fuel for war industries?

Q. Yes.

A. We have. We have the one that Mr. Chamberlain mentioned.

Q. The Hercules Powder Company?

A. That will come on along the first of August, near Louisiana, Missouri. That starts out with a contract of

about 8 million a day and, in recent conversation with Mr. Batten, he indicates many industries in the Detroit area [fol. 10593] are importuning him for gas.

Q. Pardon me, before you continue, the Hercules Powder Company contract will be a firm contract?

A. It will be an interruptible sale, the same as our other interruptible sales.

[fol. 10594] Q. Will it be a direct sale?

A. It will be a direct sale.

Q. Very well. Now, you may continue with your list of companies.

A. Yesterday at the office of the War Production Board I was shown a stack of applications from industries in the areas served by our pipe line through distribution companies asking for the right to use gas as a fuel.

I do not recall those all, but since I had some conversations with one of them at Adrian I do recall that.

That is the Bohn Aluminum and Brass Company, which started out with 200,000 per day and is now built up to 1,200,000 per day.

In addition to that, as I previously testified today, we have been asked, as to industry, to supply upwards of 35 million a day for some war defense plant that is going to be built about nine miles east of Lawrence, Kansas.

We are constantly being asked by distributors to whom we sell gas wholesale how much additional gas will be available for their industries.

Q. Well, the gas business looks pretty good, doesn't it, for the future?

A. If you interpret "good" as meaning large volume regardless of the net returns therefor, yes.

[fol. 10595] Q. Well, your inability to answer the question as to return is merely a reflection of your inability to presently estimate the revenue: isn't that right?

A. Both exact volume and revenue. It is my judgment that we are going to be called upon, within the next year, to furnish every cubic foot of gas to someone, that we can possibly get through our lines, and I think, if we are called on, we should make that contribution.

Q. You are going to do your very best?

A. Absolutely, yes.

Q. To meet the demand? A. That is right.

Q. Now, is a 90 percent capacity factor approximately the highest workable capacity factor that could be put into effect on your system, from a practical viewpoint?

A. The highest known one that a long distance transmission pipe line has been operated is between 93 and 95, which is the Natural Gas Pipe Line Company of America.

I would say that, because of the wider diversity of our load their entire market, as I understand it, is at Joliet, where they sell to another pipe line company which distributes it in the Chicago area.

I would say that we could hardly hope to maintain quite as high a capacity factor as is maintained by the Chicago Pipe Line Company. I think 90 is a reasonable estimate.

[fol. 10596] If it can be 92, why, we want to make it 92.

Q. In order to operate the system at the 90 percent capacity factor is it your expectation that it will be necessary to install and operate the standby compressor engines shown by Mr. Burnham in his exhibit—

Mr. Culton (Interposing): It is in all three of Mr. Burnham's exhibits.

Mr. Littman: Yes, it is in all three. They are all about the same.

A. Because of the fact that we are already engaged in making out seasonal overhauls of compressing equipment, it is my judgment that we will not be taking an unusual chance in going through the next winter season without any spare equipment.

By Mr. Littman:

Q. You mean through the 1942-1943 winter?

A. That is correct. But by the spring of 1943 it is my judgment that, if we are operating at better than an 80 percent load factor, and are going to be asked to continue to operate on a high capacity factor, we must as a matter of being in a position to render reasonable service, have sufficient spare equipment so that we can conduct continuous overhauls.

Mr. Culton: Does that mean an extra unit in each station?

[fol. 10597] The Witness: That means an extra unit in each one of our compressor stations.

By Mr. Littman:

Q. As described by Mr. Burnham in each of his exhibits —to wit, Exhibits 229 to 231 inclusive? Page 3 in each exhibit?

A. It might be interesting to you, in passing, to know that the Chicago Pipe Line Company, because it was apparent that their capacity factor would be high, from the beginning, in the original installation, installed sufficient compressor capacity to have one spare unit in each station, and they have continued to maintain that position.

Q. Now, Mr. Creveling, do you expect that there will be one idle engine at each compressor station on the peak day?

A. Yes, sir.

Q. If they were installed?

A. Yes, sir. There will be one engine that will be down being overhauled, theoretically, every day in the year.

Q. Has that been the practice of other companies, if you know?

A. Substantially so, yes, operating at capacity factors approaching 90 percent.

Q. I see. Now, referring to Mr. Hinton's exhibit No. 224, he has estimated capital expenditures south and west of Liberal compressor station required to meet peak day [fol. 10598] sales of 338,000 M. c. f.

Now, on a 90 percent load factor, according to Mr. Hinton's testimony, that will amount to annual sales of 119,512,512 M. c. f. sales on the basis of the sale measurement?

A. That is right.

Q. Now, is that the annual load which you shortly expect to be required to carry and sell?

A. I expect, for the first year, first year of operation, after conditions indicated by the War Production Board become operative, that we shall deliver for market in excess of a hundred billion cubic feet.

I would say, therefore, that the 110 billion is a realistic figure.

Mr. Wheat: Did you say a hundred million cubic feet, Mr. Creveling?

The Witness: Billion.

Mr. Wheat: A hundred billion?

The Witness: Yes, sir.

Mr. Wheat: That is an annual figure, then?

The Witness: That is right.

By Mr. Littman:

Q. Then you fully expect the start of that to come sometime this summer—the summer of 1942?

A. That is my judgment, yes.

[fol. 10599] Q. Now, you are unable, as you have testified, to state which of the various alternatives will be adopted by the Panhandle Eastern System with respect to installation of capital additions to meet this load?

You can't state definitely at this writing what method will be used, can you?

A. Which one of three [three] we will be permitted to pursue: is that your question?

Q. That is right.

A. It is my very definite judgment, although it is only a judgment figure, that the first one requiring the approximate 60,000 tons of steel for pipe is out, although normally that is the one we should do.

Q. That is the one you would like to do?

A. That is correct.

Q. And that one, as we have already agreed, is the one that is contained in Exhibit No. 230?

A. That is right.

Q. Presented by Mr. Burnham?

A. That is correct.

Q. Now, in view of the present uncertainty as to which of the alternatives of capital installations will be adopted, I take it that the Board of Directors of Panhandle Eastern Pipe Line Company has not as yet acted upon or approved any of these methods here submitted.

[fol. 10600] A. That is correct.

However, I should be greatly surprised, especially in view of the fact that the past action of our Board of Directors, if they should not make every effort to make whatever contribution seems essential, from a standpoint of furnishing additional fuel to war industries.

Q. And the decision in that regard, of course, will largely depend upon what the War Production Board thinks and orders?

A. Putting it another way, which one of these two propositions I shall recommend to my board for approval depends on the final conclusion of the War Production Board as to which one they feel that they will be able to assist us in obtaining material for.

Q. Is there any question about your being able to get the approximately 30,000 tons of pipe and the additional compressor units required to put into effect Mr. Burnham's plan of capital additions for the main line, which is included in Exhibit No. 231?

A. My judgment, from recent conferences with representatives of the War Production Board is that that is a realizable project for this summer.

Mr. Culton: That basis is the 338,000,000 on the less economic basis, isn't it, Mr. Creveling?

The Witness: That is correct. It is the one involving [fol. 10601] substantially 30,000 tons of steel and compressors in the same study.

By Mr. Littman:

Q. Mr. Creveling, in your direct examination you made some mention of the possibility of being required to make an interconnection with other utilities, the interconnection to be at the intersection of the Ohio-Indiana state line or thereabouts, said gas to be carried to the market around Pittsburgh to relieve shortage.

In that connection, is there any doubt in your mind that the Federal Power Commission will have jurisdiction over the price at which you will sell that gas to other utilities?

A. Among other things—many other things—I am not an attorney. I do not wish to express a legal conclusion.

Q. Well, such a sale would be a resale to another utility, wouldn't it?

A. That is correct.

Mr. Wheat: Do you mean a sale for resale?

Mr. Littman: That is what I meant to say.

By Mr. Littman:

Q. It would be a sale to another utility for resale, wouldn't it?

A. That is right. Just as the sale to us at some other point where some other pipe line might cross us would be a sale to us for resale, which is also within the realm of [fol. 10602] Order L-31.

Q. Well, it is not your idea that Order No. L-31 of the War Production Board prescribes any prices at which gas shall be sold; if you have such a paragraph in mind I wish you would point it out to me.

A. Very unfortunately, there is no indication that, from our standpoint, it will be sold at a profit. What I meant, Mr. Littman is this: that in L-31 there is a provision for interconnection of main transmission systems.

We might be required—or, putting it a litttle differently, the Chicago Pipe Line Company or the Northern Natural Gas Company might be required to deliver gas to some place where their line crosses ours, which we might carry hundreds of miles, and deliver to some other utility.

L-31 is silent on the price at both ends, which is a little confusing to us.

Q. Well, if the Federal Power Commission has jurisdiction over the price, then of course we will set the price presumably on a reasonable basis; there is no doubt about that in your mind, is there?

A. Without saying Yes or No to that, I am not certain what the emergency power of the War Production board is.

Q. Now, Mr. Biddison has made a study of allocation, which is reflected in Exhibit No. 251.

According to Exhibit 251, and according to Mr. Biddison's testimony, it appears, as an upshot of that allocation, [fol. 10603] that your compnay is earning something like

—or something in excess of—one hundred percent on its property allocated to that direct industrial business. Does that comport with—

A. (Interposing) I hope my board of directors has their attention called to that.

Q. Well, does that one hundred per cent profit comport with your idea of the actual earnings that you are making on that portion of your property devoted and allocated to direct industrial sales?

A. I think Mr. Biddison's allocation is as fair and exact an allocation as can be made on the basis of a fair interpretation of Order No. 71.

Mr. Culton: 73.

The Witness: 73. That is the Colorado Interstate case.

By Mr. Littman:

Q. You mean the opinion?

A. The opinion. Well, we are beginning to think of these opinions as orders.

Mr. Littman: Well, they have orders that are issued in connection therewith.

The Witness: That is right.

Trial Examiner: That is a good attitude, Mr. Creveling.

The Witness: We hope that we shall not have to change it.

[fol. 10604] A. I think I know what you have in mind, Mr. Littman, and I might say to you frankly that I think that is a crazy idea.

By Mr. Littman:

Q. What is a crazy idea: Mr. Biddison's allocation or what?

A. No. The idea of taking two classes of business and trying to divide, as is tried in this proration.

I can't see how it is possible to not recognize both classes of business, when each business contributes something to the other.

Now, unfortunately that isn't apparently the position that some members of this Commission had in mind, but nevertheless it is my opinion.

I think each one contributes something to the other, and that should be recognized.

I have only been in the gas business since 1954, and up until recently we have always considered that to be the case.

. . . . . .

By Mr. Goodman:

Q. In your business, Mr. Creveling, do you make use of any allocation between regulated and nonregulated business—that is, allocation of jointly-used assets—in determining what you will charge your nonregulated customer? [fol. 10605] A. It may be heresy to say so but we try to charge our nonregulated customers all the traffic will bear.

Mr. Littman: You are in competition with other fuels there?

The Witness: We are in competition with other fuels, direct competition with other fuels, such as coal and oil.

Mr. Goodman: You answer the question that I asked you "No": is that right?

. . . . . .

A. I think the answer to that is No, Mr. Goodman.

By Mr. Goodman:

Q. You charge what you can get?

A. That is correct. So long as we do not discriminate between users in the same class of business.

Q. And so long as it gives you something above your out-of-pocket cost?

A. That is correct.

The Witness: Is that good business?

Mr. Goodman: In my opinion it is.

By Mr. Littman:

Q. In other words, in your opinion your company is not earning any such profit—

[fol. 10606] A. (Interposing) That is correct.

Q. (Continuing)—as one hundred percent on its unregulated business?

A. That is correct.

Q. And if you are filling out a questionnaire for any governmental agency, such as the War Production Board, or in response to any inquiries by the Truman Committee, you wouldn't say, would you, that you were earning anything like a hundred per cent on your direct industrial—

A. (Interposing) My answer would be: I do not know.

Q. And that is because you operate your business as one unit?

A. That is correct.

Q. I take it, from your responses here, that you consider these allocations as a somewhat unrealistic thing?

A. Your observation is correct.

Mr. Culton: You didn't mean that Mr. Biddison's attempt to allocate in accordance with the views of the Power Commission in the Colorado case was unrealistic?

The Witness: No. I simply mean that this was an unrealistic set-up.

. . . . . .

[fol. 10607] Mr. Culton: That is, any attempt to allocate return, as between regulated business and unregulated business: is that what you meant was unrealistsic?

The Witness: That is correct.

Mr. Littman: Well, you mean Mr. Biddison's entire theory?

The Witness: Mr. Biddison's theory was fine. If you are going to allocate it theoretically you should allocate it on the basis of the investment and the expenses incident to each part of the business.

By Mr. Littman:

Q. But it is theoretical?

A. That is correct.

Q. And not practical?

A. That is what I am trying to say.

. . . . . .

[fol. 10613] (The documents referred to were received in evidence as Exhibits Nos. 223 through 231.)

Mr. Littman: Now we take up Exhibit 249, which was presented by witness Watkins, entitled, "Pro Forma Consolidated Income Account for the year ended December 31, 1941, as Adjusted to Give Effect to Federal Income and Federal Excess Profits Tax Rates Proposed in Recommendation of Secretary of Treasury Morgenthau on March 3, 1942, Before House Ways and Means Committee."

We object to this exhibit simply because these proposed tax rates are, as the evidence clearly shows, not in effect, and the exhibit deals wholly with a hypothetical problem.

[fol. 10615] (The document referred to was received in evidence as Exhibit No. 249.)

Mr. Littman: We have an objection to Exhibit No. 250, entitled, "Panhandle Eastern Pipe Line Company and Subsidiary Companies, Statement of Rate Case Expenses in Connection with Federal Power Commission Consolidated Dockets G-200 and G-207, including actual cost to February 28, 1942, and estimated cost to complete."

[fol. 10617] (The document referred to was received in evidence as Exhibit No. 250.)

Mr. Littman: Mr. Culton, is my understanding correct that that takes us through from 223 to the end?

Mr. Wheat: Now there is 232 to 248 inclusive.

Mr. Culton: I understood that all of them were admitted except the ones that counsel specifically mentioned. He said he had no objection to the others.

Mr. Littman: I have no objection to any others in the series to which you alluded, Mr. Culton.

Trial Examiner: That commences with 233 and extends through—

Mr. Littman: No; 223.

Trial Examiner: Those have been received. The series from 223 to 231 have been received.

[fol. 10618] Mr. Culton: 232 to 248, there are no objections, and I assume they will be received.

(The documents referred to were received in evidence as Exhibits Nos. 233 to 248 inclusive.)

Mr. Wheat: You have received 249 and 250, and, I think, 251 is now without objection.

Trial Examiner: Noobjection, Mr. Littman, to Exhibit No. 251?

[fol. 10619] (The document referred to was received in evidence as Exhibit No. 251.)

Mr. Wheat: Now, Mr. Examiner, 253 and 254 have been received.

Trial Examiner: 252 was received on the 15th.

Trial Examiner: 255 and 256 have been received today and 257 has not.

Mr. Littman: 257 has been reserved for a response by Mr. Watkins to one of my requests.

Trial Examiner: I failed to take the designation for that. Will you give it to me, if you can, someone? Well, never mind.

[fol. 10620] Mr. Littman: Mr. Examiner, I think perhaps I can facilitate matters that will bring us up to Exhibit No. 223.

Now, with respect to all of the exhibits from No. 170 through Exhibit 217 we have objection to only one exhibit in that series.

Mr. Wheat: Well, Mr. Littman, those exhibits 170 to 195 are already admitted.

Mr. Wheat: Now, then, 196 has not yet been admitted, and 198 has not, but then there are a number of hiatuses. That is why I thought your general statement might not be as clear—

Trial Examiner (Interposing): They were received up to 196, and 196, 198, 199—

Mr. Wheat (interposing): 202, 206, 207, 208 and 210 to 217 inclusive, are offered but not yet received.

Trial Examiner: That accords with my record.

[fol. 10621] Mr. Littman: Then all I need to say about these exhibits is that we have objection to Exhibit 196, which deals with an adjustment giving effect to Secretary of Treasury Morgenthau's proposed tax laws?

Trial Examiner: That is a consolidated income statement?

Mr. Wheat: That is a pro forma consolidated income account for the year ended December 31, 1941.

(The document referred to was received in evidence as Exhibit No. 196.)

Mr. Littman: We have no objection to any exhibits subsequent to Exhibit 196, other than those we have already mentioned.

Trial Examiner: 198, 199 will be received.

Mr. Littman: Pardon me. May we have an objection to Exhibit 199—I am sorry—which also reflects the proposed tax law recommended by Mr. Morgenthau. I take it you will make the same ruling.

[fol. 10622] (The document referred to was received in evidence as Exhibit No. 199.)

Trial Examiner: The exhibits numbered 210 to 217, both inclusive, will be received.

(The documents referred to were received in evidence as Exhibits 210 through 217.)

Mr. Wheat: Was 202 received, Mr. Examiner?

(The document referred to was received in evidence as Exhibit No. 202.)

Trial Examiner: Just a moment. We are up to 206, 207, and 208.

[fol. 10626] Trial Examiner: The Trial Examiner will rely upon the privilege granted by the rule and will direct that [an] single copy of this exhibit be included in the original file of the Commission and that no other copies be made. This is in view of the statements of counsel, and with that condition, Exhibits 206, 207, and 208 will be received.

(The documents referred to were received in evidence as Exhibits 206, 207, and 208.)

Mr. Wheat: Mr. Examiner, with that understanding, may I turn now to some prior exhibits which I believe really have been left out of the formal admission by inadvertence? I refer, first, to Exhibits 19 to 31, inclusive, offered by Witness Smith. Those were identified back on pages 423 and 422 of the transcript.

[fol. 10627] Trial Examiner: These were not omitted by advertence, but we have through the record assumed they have not yet been ruled upon.

[fol. 10631] Trial Examiner: The Trial Examiner is aware that there will be at some future time further proceedings in connection with this matter, and in view of the possibility that there may be such future proceedings and further hearings in this proceeding, the exhibits to which objection is made will be included, and all from 19 through 36 will be received.

(The documents referred to were received in evidence as Exhibits 19 to 36, inclusive.)

[fol. 10632] Mr. Wheat: It is understood, Mr. Examiner, is it not, that Exhibits 42 to 46, inclusive, have been received in evidence?

Trial Examiner: The interruption was more serious than I supposed, and those exhibits will now again be received.

Mr. Littman: I think they should be so handled at this point, because the official reporter's index of that day's—or, table of contents—of that day's hearing did not carry those exhibits as having been admitted, and so perhaps it might be well to have it admitted here.

(The documents referred to were received in evidence as Exhibits 42 to 46, inclusive.)

Mr. Wheat: Now, Mr. Examiner, the next exhibit that my present record shows not to have been admitted is [fol. 10633] No. 61 of the Witness Friday.

Mr. Wheat: Mr. Littman, that is correct, everything up to 61 is admitted, from 47 down to 61. They are all in, as my record shows.

(The document referred to was received in evidence as Exhibit No. 61.)

[fol. 10635] Mr. Wheat: Now, then, we come to Exhibit 73 of Witness Watkins, which by some inadvertence, I did not offer when I was offering Exhibit 72 the other day.

(The document referred to was received in evidence as Exhibit No. 73.)

[fol. 10636] Trial Examiner: 73 and 74 and 76. If there is error in the Trial Examiner's record and they have not been received, they will now be received.

(The documents referred to were received in evidence as Exhibits 73, 74, and 76.)

Mr. Wheat: What about 75?

Trial Examiner: 75, Mr. Littman suggests he wishes to discuss.

Mr. Littman: Mr. Examiner, there are certain objectionable parts of Exhibit No. 75. I think I shall attack this exhibit by way of a motion to strike. I shall direct my motion to strike against those portions of Exhibit No. 75 which deal with reproduction cost sometimes called market value of lease. Here this market value is expressed as of February 1, 1937, which date is pretty much passe, so far as our immediate interests are concerned. I move to strike that part of page 16 which commences with the first paragraph: "The value of gas at the well" and so forth, down to the end of that page; I move to strike page No. 17, and the first full paragraph on page 18, and the last full paragraph on page 18. I also move to strike page 20, page 21, page 22, and page 32 of Exhibit No. 75.

Your Honor will recall that you have heretofore sus-
[fol. 10637] tained our objection to a similar exhibit which was offered by Mr. Wallace dealing with this same subject, to wit, market value, so-called, of natural gas leaseholds.

. . . . . .

Mr. Culton: No, sir, we don't care to be heard, Mr. Examiner, except to point out that this deals with real estate, and irrespective of whether or not it is the only value which is to be taken into consideration, our contention is that it is evidence of the fair value which we have a right to have considered by the Commission.

Trial Examiner: You do present it as evidence of some value not recorded on the books of the company?

Mr. Culton: That is right.

Trial Examiner: And the exhibit, as a whole, is addressed to that purpose?

Mr. Littman: No, your Honor.

Mr. Culton: No; just certain portions of it, Mr. Examiner.

Trial Examiner: I mean these portions that are objected to.

Mr. Culton: Those portions of it are a part of the report which Mr. Davis made in February, 1937. We offered his entire report. That report dealt both with his prediction of the amount of gas which might be produced and also with the value of the reserves.

[fol. 10638]

As I understand it, the objection is made to that portion which deals with the value of the reserves.

We say that that evidence is pertinent evidence proffered for the consideration of the Commission along with all other evidence in the case in arriving at the present value.

Now, obviously, if the only value which can be considered by the Commission is the original cost as reflected on the books, this does not purport to be that original cost, but we do not so understand any decision.

Therefore, we think that this evidence is admissible.

Mr. Littman: By the way, I might state again, your Honor, that aside from our very strenuous legal objection to any evidence of fair value of reserves, that this exhibit speaks as of February 1, 1937, which seems to be pretty much out of date and which was, of course, superseded if ever anything was superseded, by Mr. Wallace's treatment of this same subject, which your Honor has already ruled to be admissible.

Now, even if fair value were admissible, in this case, of what use would fair value, as of February 1, 1937, be to us here today? I submit, none whatever.

[fol. 10639] Mr. Wheat: Mr. Examiner, the next one that I have on my list may have been handled. I may be wrong in this. It is Exhibit 93, and along with that are Exhibits 96 and 97, which were offered by counsel for Michigan Gas Transmission Corporation.

. . . . . .

Mr. Littman: Exhibit No. 96, according to my records, was excluded at page 8232 of the transcript because it contained an estimate of the cost of rate case proceedings.

. . . . . .

Mr. Wheat: What about 93 and 97?

Mr. Littman: 97 was excluded at page 8332 of the transcript. That dealt with the purported variation in purchasing power of the dollar as related to gas plant.

Mr. Wheat: What about 93?

Mr. Littman: Your Honor will recall that Exhibit No. 97, in reality, was considered to be a reproduction cost [fol. 10640] study.

Mr. Littman: I beg pardon. 93?

. . . . . .

Trial Examiner: That was excluded, I think, on the 31st of March.

Mr. Wheat: Now, Mr. Examiner, the next one that I have—I think there were two offered by Commission's counsel, 106 and 107. I don't recall that those ever were admitted or offered for admission, but the next ones that we have on our list are 108, 109, 110, and 111, which are letters from Mr. Biddison to Panhandle Eastern Pipe Line Company in various years in respect to accruals for depreciation, depletion, and amortization.

These exhibits have been used by Mr. Smith in his study and by others. I offer them now for the record.

Mr. Littman: No objection.

Trial Examiner: The exhibits marked for identification as 106, 107, 108, 109, 110, and 111, will be received.

. . . . . .

Mr. Littman: Has your Honor ruled on Exhibits 106 and [fol. 10641] 107?

Trial Examiner: I admitted all of them, 106 to 111, both inclusive.

(The documents referred to were received in evidence as Exhibits 106 to 111, inclusive.)

. . . . . .
